This simply means that on the present occasion, as on others of the sort, the keynote for the general movement of the period has been sounded, but that business revival pursues a slower and more deliberate path of recuperation than does the Stock Exchange, and that, therefore, people who are watching the business outlook must now return to studying the other influences of the moment. This is itself in the nature of reaction from the mood of six or eight weeks ago, when Wall Street rushed to the conclusion that the more favorable skies, at Washington and on the money markets, signified that no further clouds were to be looked for. Such expectations always and necessarily invite disappointment. Even if the stock market had continued without interruption its remarkable advance of January, we should still have been compelled to take into account, if we were wise, the possibility of unpleasant incidents in sequel to last year's financial strain, or of an awkward turn in the Mexican situation, or of resumption by individual Congressmen of their menacing attitude towards capital.

Paris may possibly provide some material for the first of these developments; Mexican affairs are more or less in the hands of chance, and Congressmen who cannot get bills and resolutions passed can at least introduce them and make speeches on them. Yet one needs only to consider the special incidents of the hour in these quarters and their reception by the financial public to be convinced that apprehension, in each of these directions, has been much allayed. "Trouble at Paris" would be a far more negligible matter, with the European money situation what it is today, than if it had occurred, say, last November. Mexico in 1914, with the American public entirely disapproving anything that would involve the United States in war, is a very different affair from Cuba in 1898, with our people ap-

parently spoiling for a fight, and Congressmen's wives appearing in the gallery wrapped in American flags.

Congress itself displays surprising calmness and deliberation in its severely critical examination of the pending company legislation. But as yet, the business community is doubtless waiting to see results rather than tendencies, and tangible results take time. It is therefore quite in line with proper conservatism that even the stock exchanges, having given their first and emphatic prognostication, should relapse into cautious expectancy. In due course, we shall know just what kind of sequel, in the broader field of trade and industry, was foreshadowed by the market of which the London *Economist* observed that the culminating week on the Stock Exchange was "the most remarkable, in some respects, in the memory of any of its members."

Probably many readers would be interested in fuller treatment than The Nation's space permits, of many problems there discussed. They may frequently find such treatment in THE UNPOPULAR REVIEW. Several articles in the number for January-March are by writers closely identified with The Nation. In fact, the objects and spirit of the two periodicals are as nearly the same as can be possible for a weekly and a quarterly.

The principal difference is that the weekly is naturally fuller in treating passing events, including publications and plays, than a quarterly could be without being stale. Thus the two supplement each other—the weekly supplying the fresh treatment of current matter, the quarterly supplying the fuller treatment of interests more abiding.

Specimen copies of the current issue of THE UNPOPULAR REVIEW will be sent to any address, subject to return or payment at pleasure. Price 75 cents, subscription $2.50 a year.

By ELLEN KEY

The Woman Movement

Translated by M. B. Borthwick, A.M.

With an Introduction by Havelock Ellis.

$1.50 net. By mail $1.65.

"One of the profoundest and most important pronouncements of the woman movement that has yet found expression. . . . . Intensely modern in her attitude, Miss Key has found a place for all the conflicting philosophies of the day, has taken what is good from each, has affected the compromise, which is always the road to advancement, between individualism and socialism, realism and idealism, morality and the new thought. She is more than a metaphysical philosopher. She is a seer, a prophet. She brings to her aid psychology, history, science, and then something more—inspiration and hope."—*Boston Transcript.*

Love and Marriage

$1.50 net. By mail $1.65.

"She represents Universal Motherhood in its highest potency, in its broadest and sweetest sense. This is her deep, womanly achievement in the citizenship of the world—infinite capacity for loving and suffering, for devotion and sacrifice—but, above all, for hoping, and hoping in the face of everything. These are the distinguishing qualities of this much decried, but much more beloved woman, Ellen Key."

The Nation

VOL. XCVIII—NO. 2540 THURSDAY, MARCH 5, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

Some Scribner Spring Publications

The American Japanese Problem

By Sidney L. Gulick, D.D., M.A., Professor in Doshisha University, Late Lecturer in the Imperial University, Kyoto, Japan. *Illustrated.* $1.75 *net; postage extra.*

This book forms the first and only clear, comprehensive description of the Japanese situation in California, and discusses from every viewpoint the probable and possible effects of the Japanese in this country as immigrants and citizens.

The Ascent of Denali (Mt. McKinley)

By Hudson Stuck, D.D., Archdeacon of the Yukon. *With two photogravures, a map, and thirty-two illustrations from photographs by the Author.* $1.75 *net; postage extra.*

The account of the first ascent of Mt. McKinley, the highest mountain on the North American continent.

Second Nights

By Arthur Ruhl, author of "The Other Americans," etc. $1.50 *net; by mail,* $1.64.

A perfectly charming chronicle of the chief features and phases of the metropolitan theatre within the past few years. The point of view is wholly unprofessional, and the text, unweighted by the responsibilities of the first-night critic, is intimate and familiar.

Plays by Björnstjerne Björnson

Translated from the Norwegian, with Introductions, by Edwin Björkman. Each with frontispiece. $1.50 *net; postage extra.*

"Love and Geography."
"Beyond Human Might."
"Laboremus."

The Fugitive

By John Galsworthy. 60 *cents net; postage extra.*

It gives the story of a young woman who lives in the face of the world. Its two principal male characters represent the two poles of the modern masculine viewpoint.

Auction in Ten Lessons

By Grace G. Montgomery. *Revised Edition.* $1.00 *net.*

The Latest Developments of the Game: "The High Spade Bids," "The Over-Call of Partner's No-Trump or Trump Bids," "The Pre-emptive Calls," "The Nullo Declaration," are fully discussed in this Revised Edition.

New Guides to Old Masters

By John C. Van Dyke, Professor of the History of Art at Rutgers College and author of "The Meaning of Pictures," "What Is Art?" *In 12 volumes. Each, with frontispiece,* $1.00 *net.*

The notes of which each volume is composed were made in the presence of the pictures themselves, and revised and rewritten during successive visits. They are arranged under the names of the painters placed in alphabetical order, with the gallery numbers. Any picture in a given gallery can be readily found by ascertaining from the picture-frame or catalogue either the name or the number.

The Volumes

Ready

London—National Gallery, Wallace Collection. With a General Introduction and Bibliography for the Series.

Rome—Vatican, Borghese Gallery.
Madrid—Prado.

The Religion of Israel

By Professor H. P. Smith, D.D. $2.50 *net; postage extra.*

Dr. Henry Preserved Smith is already well-known as a Biblical scholar, through his commentary on the Books of Samuel and his volume on Old Testament history. In "The Religion of Israel" he traces the historical development of the religious beliefs and practices of the Hebrews.

Moral Leadership and Other Sermons

By Leighton Parks, Rector of St. Bartholomew's Church, New York. $1.00 *net; postage extra.*

Notes of a Son and Brother

By Henry James. *Illustrated.* $2.50 *net; postage extra.*

This is the continuation of the account, in "A Small Boy and Others," of the early years of William and Henry James and their brothers, with much about their father and their friends. The story of the life in Switzerland and Geneva, and later on in Newport and Cambridge, tells not only their own experiences but a great deal about such men as John LaFarge, Hunt, Professor Norton, Professor Childs, and Ralph Waldo Emerson, who was a close friend of Henry James, Senior. The description of the Civil War time and of Wilkinson James's experiences with Colonel Shaw's colored regiment are particularly interesting. The illustrations are from drawings made by William James in the early part of his career when he was studying to be a painter.

The Lives of the Presidents of the United States

Edited by James Grant Wilson. *Four volumes, with many illustrations from portraits by eminent artists and photographs selected with great care.* $7.50 *net.*

These four volumes cover the entire period of our national life from George Washington to Woodrow Wilson. They are composed of short biographies, each one complete in itself, of all the Presidents of the United States. Written by such men as John Fiske, Carl Schurz, George Bancroft, John Hay, Owen Wister, and Josephus Daniels, present Secretary of the Navy. Each is the product not only of a literary skill that makes it unusually interesting to read, but of that accurate historical knowledge and balanced judgment which makes it an authentic picture of one of our presidents and of his time.

Hebrew and Babylonian Traditions

By Morris Jastrow, Jr., Ph.D., Professor of Semitic Languages in the University of Pennsylvania. 8*vo.* $2.50 *net; postage extra.*

An important and extraordinarily interesting study of the relationship between the Hebrews and the Babylonians, devoted primarily to pointing out the *differences* between Babylonian myths, beliefs, and practices, and the final form assumed by corresponding Hebrew traditions, despite the fact that both are to be traced back to the same source.

CORPORATE PROMOTIONS AND REORGANIZATIONS

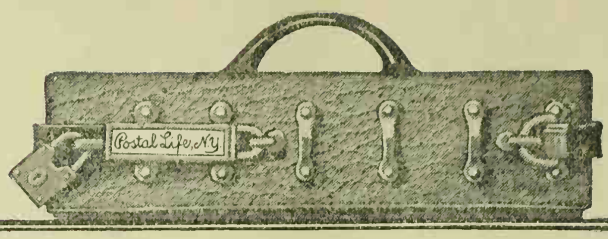
By ARTHUR STONE DEWING, sometime Instructor in Economics in Harvard University

HARVARD ECONOMIC STUDIES, VOL. X.

8vo. Cloth. 670 pages. $2.50 net.

No adequate generalization can be made concerning the failures of trusts that is not based on a study of concrete cases. This volume is a case-book of the promotion, failure, and reorganization of more than a dozen large industrial combinations. Though mainly a study in finance, it treats also of economic and legal aspects, and the bearing of government regulation.

HARVARD UNIVERSITY PRESS
CAMBRIDGE MASSACHUSETTS



The Postal Life Insurance Company pays *you* the Commissions that other Companies pay their agents

THE POSTAL LIFE is the only Company that opens its doors to the public so that those desiring sound insurance-protection at low cost can deal **directly** for it, either **personally** or by **correspondence.**

Whether you call or write, you make a **guaranteed** saving corresponding to the agent's commission the **first year,** less a moderate advertising charge. This first-year **Commission Dividend** ranges up to

40% of the Premium on Whole-Life Policies

POSTAL LIFE BUILDING
35 Nassau St., New York

STRONG POSTAL POINTS

First: *Standard policy-reserves,* now nearly $10,000,000. *Insurance in force nearly* $50,000,000.

Second: *Old-line legal reserve insurance*—not fraternal or assessment.

Third: *Standard policy-provisions,* approved by the State Insurance Department.

Fourth: Operates under *strict State requirements* and subject to the United States postal authorities.

Fifth: *High medical standards* in the selection of risks.

Sixth: *Policyholders' Health Bureau* provides one free medical examination each year, if desired.

In **subsequent** years you get the **Renewal Commission** other companies pay their agents, namely 7½%, and you also receive an **Office-Expense Saving** of 2%, making up the

Annual Dividend of 9½% Guaranteed in the Policy

And after the first year the POSTAL pays **contingent dividends besides,** depending on earnings as in the case of other companies.

Such is the POSTAL way: it is open to **you.** Call at the Company's offices, if convenient, or **write now** and find out the exact sum it will pay **you** at **your** age—the **first year** and **every other.**

POSTAL LIFE INSURANCE COMPANY

The Only Non-Agency Company in America

WM. R. MALONE, President

35 Nassau Street, New York

See How Easy It Is

In writing simply say: *Mail me insurance-particulars for my age as per* THE NATION for March 5.

In Your Letter be sure to give
1. *Your Full Name.*
2. *Your occupation.*
3. *The Exact Date of your Birth.*

No agent will be sent to visit you; the Postal Life employs **no** agents.

Assets: nearly **$10,000,000**

Insurance in force nearly: **$50,000,000**

NOW READY
GREAT JURISTS OF THE WORLD
From PAPINIAN to VON IHERING
BY VARIOUS AUTHORS
With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth,* $5.00 *net.*
The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.
☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

THE TREASURE. **Kathleen Norris's** New Novel. By the author of "Mother," etc. A new novel by this popular author, redolent again of the home atmosphere. *Illustrated. $1.00 net.*

THE RECONNAISSANCE. By **Gordon Gardiner.** A novel of striking power and originality, a vivacious story of adventure.
Colored frontispiece. $1.35 net.

POETRY. DRAMA

THE TRAGEDY OF POMPEY. By **John Masefield.** The latest work of this powerful poet. *$1.25 net.*

CHITRA. By **Rabindranath Tagore.** An idealistic lyrical drama by the spiritual Bengali poet-philosopher. *$1.25 net.*

THE FOOTHILLS OF PARNASSUS. By **John Kendrick Bangs.** A delightful selection of this entertaining poet's best verse.
$1.25 net.

ART

THE PRINCIPLES OF GREEK ART. By **Dr. Percy Gardner** (Univ. of Oxford). An interesting analysis of the psychological and artistic attributes of Greek art. *Illustrated. $2.25 net.*

EDUCATION

A CYCLOPAEDIA OF EDUCATION. Edited by **Dr. Paul Monroe** (Columbia Univ.). The most important of the encyclopaedias. Just completed. *Five vols. Illustrated. $25.00 net the set.*

TRAINING THE GIRL. By **Prof. William McKeever** (Univ. of Kansas). One of the sanest contributions towards the education of girlhood. *Illustrated. $1.50 net.*

GOVERNMENT. POLITICS

THE AMERICAN DOCTRINE OF JUDICIAL SUPREMACY. By **Dr. Charles Grove Haines.** The origin and development of judicial control over legislation. *$2.00 net.*

AMERICAN GOVERNMENT AND POLITICS. By **Charles A. Beard.** A new, revised edition of this important work for students and the general reader. *$2.10 net.*

ON POLITICS AND HISTORY. By **Viscount Morley,** O.M. A world-wide review of past, present, and future public policy. *$1.00 net.*

WHIGS AND WHIGGISM. By **Benjamin Disraeli.** A companion volume to the great statesman's biography of his piquant political writings. *$3.00 net.*

SOCIOLOGY

WHERE AND WHY PUBLIC OWNERSHIP HAS FAILED. By **Yves Guyot.** An exhaustive expert treatise on state ownership and operation in different countries. *$1.50 net.*

VIOLENCE AND THE LABOR MOVEMENT. By **Robert Hunter.** A dramatic, historical narrative of the labor conflicts of the last half-century. *$1.50 net.*

FINANCE

A THEORY OF INTEREST. By **Clarence Gilbert Hoag,** A.M. A sincere attempt to solve correctly the problem of interest, introducing some important modifications in the theory of value. *$1.25 net.*

AGRICULTURE

FARM STRUCTURES. By **K. J. T. Ekblaw** (Univ. of Illinois). A practical work enabling the farmer to solve his building problems.
Illustrated. $1.50 net.

SCIENCE

THE CHILDHOOD OF THE WORLD. By **Edward Clodd.** A work which describes the source of the human race, its institutions and culture. *Illustrated. $1.50 net.*

THE ELEMENTARY PRINCIPLES OF GENERAL BIOLOGY. By **James F. Abbott** (Washington Univ.). A lucid statement of fundamentals for student and general reader.
$1.50 net.

THE UNCONSCIOUS: The Fundamentals of Human Personality. By **Morton Prince** M.D., LL.D. An introduction to the study of abnormal psychology. *$2.00 net.*

RELIGION. PHILOSOPHY

THE REFORMATION IN GERMANY. By **Prof. Henry C. Vedder.** A vivid, accurate narrative of the great religious struggle of the 16th Century from the economic standpoint.
$3.00 net.

THE FAITH OF JAPAN. **By Tasuku Harada** (Pres. Doshisha Univ.). An admirable interpretation of Japanese ethical and religious belief.
$1.50 net.

THE PROPHETS OF ISRAEL. By **Dr. Moses Buttenwieser.** A luminous study of the great literary Hebrew prophets. *$2.00 net.*

The Nation

NEW YORK, THURSDAY, MARCH 5, 1914.

The Week

A question of good taste always arises when men formerly in high office speak of their successors. Both ex-President Taft and ex-Attorney-General Wickersham have several times taken occasion to refer to the work of the Wilson Administration. Mr. Taft has done it in a handsome way. He has spoken of the President's "admirable leadership"; and the other night expressed generously his gratification at the ratification by the Senate of the arbitration treaties—a result which he himself had vainly tried to procure. Mr. Wickersham has no doubt sought to appear equally considerate and even gracious in dwelling upon the methods and plans of the new Administration, but we suppose it is the nature of the special topic to which he has addressed himself to make him a little rasping in manner. It seems impossible for the holder of one theory of controlling monopoly to speak of another without saying something nagging. We do not say that Mr. Wickersham is not right to free his mind about the proposed Trust bills. A part of what he has said has been marked by excellent sense. But for him to keep on saying it, and always in the guise of a former Attorney-General, will expose him, we think, to the charge of displaying *trop de zèle*.

That far-off battle-cry of "Let the people rule" will be remembered with a sense of oddity by those who catch the accents of the controversy now agitating Pennsylvania Progressivism. In the holy war against Penrose and the Democrats there has already come a revolt against the method by which a select group met last week at Harrisburg and entrusted the party banners to a slate of three: Gifford Pinchot for United States Senator, W. D. Lewis, of the University of Pennsylvania Law School, for Governor, and Percy Smith, of Pittsburgh, for Lieutenant-Governor. Progressives of the Philadelphia County Committee, who have never before thought of "boss-rule" except in connection with the old parties, apply it unreservedly to the fifty men who "fixed the ticket" at the State capital. Some inkling of the Progressive dilemma may be gathered from the defence of the fifty through Robert C. Blair's statement in the *Public Ledger*. Had the slate not been privately arranged, the voters would have disregarded the strategic requirements of geographical distribution of candidates, and there would have been loud outcry from slighted districts that Flinn had dominated the situation.

Most of the seventeen Republican Senators whose terms expire on March 4 of next year were elected before either of two important events had occurred: the adoption of the Seventeenth Amendment and the formation of the Progressive party. Perhaps Mr. Smoot, of Utah, has nothing to fear from the former, but there is bad news affecting him in connection with the new party. A combination of Democrats and Progressives, it is reported, has been made against him, and a candidate agreed upon. This candidate, Mr. J. H. Moyle, has twice been the Democratic candidate for Governor; and, although a Wilson man, is agreeable to the Progressive leaders. Such a rumor a year ago would have been regarded as the work of an enemy of the Progressive party, but recent happenings make it sound plausible. Despite the Colonel's denunciations of "deals," in his absence his followers are learning how to make them, as they clearly showed the other day at Albany in electing a Progressive for State Treasurer. The spectacle of Progressive leaders meeting to designate a candidate, as if there were no such thing as primaries, is not new. How serious the alliance may be for Senator Smoot may be judged by the fact that, while Taft carried the State in 1912, his 42,000 votes fell about 20,000 votes below the combined vote for Wilson and Roosevelt.

Attention is called by the American Publishers' Copyright League to a recent customs ruling, affecting the importation of books, which seems to be amazingly stupid even in a realm where the gods have so often fought in vain with *Dummheit*. The case is one of a special and limited class of books. They are the scholarly works, the art monographs, the volumes of research, for which there is, in the nature of the case, but a small market. When published in England, there is no motive for taking out copyright or printing them here, since it would not pay. But the practice has long been for American publishers to agree with an English house to take over half the cost of production of an edition of, say, 2,000 copies, and import their share, basing their invoices on the actual cost to them. The result has been to make both the publication and sale of such books possible, and to place them within reach of the American purchaser at a price lower than he would otherwise be compelled to pay. But now along comes a Treasury instruction to break up this old practice, ordering, as it does, that these books shall be valued at their market price in England. Not what the importer actually paid for them under his special and useful arrangement, but what he would have paid if he had bought a dozen copies in London, is made by this owlish ruling the basis on which duties must be reckoned.

Of that indispensable artistic process, the "warming-up" to a piece of work, there are no exponents like our State Legislatures. The Virginia Assembly, which, according to the Norfolk *Virginian-Pilot*, has just "awakened with a start" to the fact that only a fortnight of its sixty days is left for its full programme of work, is the latest to assert this preliminary necessity of hitting on just the right mood. "Of eleven important bills of a general nature," we read, "the Legislature has passed only two." Among those on which decision is earnestly looked for are a primary bill, a direct-tax reduction bill, a game bill, an initiative and referendum bill, and a workmen's compensation bill. The imperative appropriation bill was not even on the calendar. In pledge of making an end of this dawdling, it is hopeful to note the announcement of meetings of the committees of rules, to devise swifter procedure. This habit of waiting for the pressure of the last moment to force action is so widespread, and Legislatures learn so little from one another or from their predecessors in the matter, that it is strange that none of

our experiment-station States has reduced the length of session below the present minimum of forty days. Something like Dr. Johnson's severe rebuke to those who await inspiration is needed, that even legislative work can always be attended to if men will but "set themselves resolutely to it."

Another Governor has dared to do something unprecedented, and this time it is the Governor of Massachusetts. Instead of sending a message to the Legislature, Gov. Walsh appeared in person before the Committee on Constitutional Amendments to urge the initiative and referendum. Yet he was careful to explain that he means to employ this method of getting his ideas before the legislators sparingly. Gov. Foss used special messages, but the difference in the attitude of Executives on this point is shown by the refusal of Gov. Draper upon one occasion even to send a message, upon the ground that it would be interference with the Legislature. The action of Gov. Walsh is mild in comparison with that of Gov. Wilson during the first legislative session of his term. Nugent had arranged a coalition with the Republicans to beat the Geran bill for popular primaries, and, not content with that, undertook to persuade the Democrats in the lower house to repudiate the Governor's programme. The first step was to be a conference on the Geran bill. Wilson, of course, heard of the conference, and politely asked to be invited. It would have been so much more awkward to refuse than to comply that the invitation was issued. The rest is history. After four and a half hours, of which the Governor was on his feet for three, the conference, called to repudiate the bill, made it a party measure.

The Springfield *Republican* draws attention to the fact that one of the late Senator Teller's historical distinctions was his drafting of the resolution embodying a self-denying ordinance which was adopted by Congress on the eve of the war with Spain. "While it did not prevent the acquisition of the Philippines," says the *Republican*, "it did force the establishment of the present Cuban Republic, much to the disgust of many patriots who believed Cuban annexation to be the logical outcome of the hostilities with Spain." Our contemporary might have made the claim of the Teller resolution even stronger. For not only the establishment of the Cuban Republic, but even more distinctly its preservation, is to be put to the credit of that declaration. The supporters of the Teller resolution insisted on its being made an integral part of the resolutions adopted by Congress in response to President McKinley's message, which were virtually our declaration of war. By it the United States not only disclaimed "any disposition or intention" to gain possession of Cuba, but expressly promised "to leave the government and control of the island to its people." Even so, there was widespread expectation that, at the first sign of trouble in Cuba under a native government, the island would drop into our lap.

All this is worth recalling, not only for its interest in relation to Senator Teller and to Cuba, but as an illustration of the potent influence upon national history which may be wielded by the bare assertion of a principle. It was not merely as a form of words, or a salve to his own conscience, that Teller was so determined to have this pledge inserted in the war resolutions; he and those who supported him felt that it would be a real safeguard against "criminal aggression," and the result proved them to be right. It was the absence of so definite a safeguard concerning the Philippines that made possible McKinley's drifting into the policy of "benevolent assimilation"; and it was the defeat, only by the casting vote of the Vice-President, of Senator Bacon's resolution relating to the treaty of peace with Spain, that prevented this protection from being thrown over the people of those islands. A most remarkable instance of the efficacy of an assertion of principle, in a wholly different domain of statesmanship, is the declaration in the Sherman silver-purchase act of 1890, that it is "the established policy of the United States to maintain the two metals on a parity with each other upon the present legal ratio, or such ratio as may be provided by law." This protection from the danger—which soon turned out to be so real and so imminent—of a sliding away from the gold to the silver standard was brought about, not as in the case of the Teller resolution, by a stout champion of principle, but by a master of the art of compromise; yet it proved of invaluable service to the country.

Socialists who emphasize the world-wide solidarity of their party should be happy to call attention to a French definition of their cause. What is Socialism? asks the *Parti Ouvrier*. "Nowadays, it is a profession carried on by keen young men of the bourgeois class, who perceive that the surest way of making a success is to play upon the demagogic spirit of the masses." This sarcastic criticism springs, of course, out of politico-social conditions peculiar to France, but the situation it calls up would not amaze our West, where the copper miners forbade Victor Berger to testify before the Congressional Committee. The *Parti Ouvrier's* further protests against the Parliamentary bargainings of elected Socialists for political power and personal profit all seem to get down to a fundamental suspicion: are these men true red, or simply disguised exploiters of the workingmen? And there is, as another paper remarks, a triumphant banality about its proposition that "no sooner does the party attain certain possibilities than it becomes a vast syndicate of electoral appetites."

To the figures by races of New York city's population in 1910, the Census Bureau adds an analysis of the mother tongues of the foreign-born whites and their children. English rather surprisingly holds its own against German and Yiddish. Nearly one million of our foreign stock, 21 per cent. of the whole population, were born of English-speaking parents; 861,980 of Yiddish or Hebrew, and 841,889 of German. This virtual equality among the three tongues is maintained with considerable uniformity throughout the boroughs; in Brooklyn and Richmond English led; in the Bronx and Queens, German, and in Manhattan, Yiddish. But nowhere was English worse than second. In Manhattan, where Yiddish claimed 533,444 of the foreign-born, or of the first native generation, English was the mother tongue of 469,626, while German fell to 337,403. In the whole city, 549,444 reported Italian as their mother tongue, and 116,161 Polish, with others bringing up the rear. In comparison with the country at large, it is, of course, Yiddish which looms up; and when we consider from how many sources English-speaking and German-

speaking immigrants are drawn, its total of 19 per cent. of the city's entire population is impressive.

LELAND, Miss., February 24.—Sam Petty, a negro, accused of having killed a Deputy Sheriff, Charles W. Kirkland, was shot by a mob of 300 men to-night, and his body burned.

Petty, wanted on a trivial charge, killed Kirkland with a shotgun when the officer entered a cabin late to-day, in which the negro had taken refuge. Petty was captured by a posse, bound, and placed in an oil-soaked dry-goods box, and the match applied. A moment later the man, his clothing aflame, broke from his fastenings and started to run, but before he could gain headway was shot dead.

The body was put back in the box, fresh inflammables were piled about it, and within half an hour it was burned to ashes.

No comment could add to the revolting horror of such a story. We do not wish to discuss it in any way. But we should like to ask our Southern contemporaries, in all sincerity and candor, two questions. Can they name any other civilized, or even semi-civilized, country in which such fiendish savagery is practiced? And if they cannot, how do they feel about the distinction which, through the supineness of the authorities and of public opinion in their section of the country, is thus conferred upon the United States of America?

Resignations in advance, for the purpose of giving the appointing officer a power of removal, not expressly conferred, have been declared void by an Illinois court. The case has a national interest, since it arose out of the fight against Mrs. Young, Chicago Superintendent of Schools. The Mayor has the power of appointing the school trustees, but not of removing them. It has been the custom, however, for such appointees to give him power of removal by placing in his hands formal letters of resignation upon taking office. It was this weapon that enabled Mayor Harrison to get rid of enough of Mrs. Young's opponents among the trustees to prevent her non-election for another term from being final. Mayor Harrison was so thoroughly convinced of the viciousness of the practice that he had already declared he would never resort to it again; but it is well to have this attitude made compulsory. Not the least significant aspect of the decision is that, in making it, the court looked beyond the technicalities to the intent of the law. The decision will probably not affect Mrs. Young's position, as the case will hardly reach the highest court before the expiration of the term of the ousted trustees.

An investigation of one public school in Manhattan shows that the pupils study at home, on the average, nearly three hours a day. Yet the subject is not for the pedagogical expert to dismiss with a dogmatic word. Two months ago, in Chicago, Mrs. Young undertook to eliminate study after hours from the programme of school children. But speedy protest came from the mothers. They were friendly not only to application, but to a scheme which, as one put it, "lets us know that our children are not on the street at night." It is scarcely a part of the school's responsibility that home conditions make it dangerous to free children from task-work after hours; or that home conditions often make such study painful or profitless. But any aspect of the question emphasizes the necessity of striving towards some form of coöperation between home and school in the matter.

In a recent competition to fill two vacancies in the Department of Languages at the Naval Academy, not one college graduate applied, although the universities were solicited for candidates. Accordingly, neither of the men chosen was a college graduate. This incident is interpreted as having a direct relation to the salaries paid and to the tenure of office. The Superintendent of the Academy is credited with the remark that civilian instructors should not be retained more than three or four years. What this policy would mean for the training of the midshipmen it is unnecessary to state. The attempt to get rid of civilian instructors altogether is still fresh in the minds of those interested in the Academy. As a remedy for one feature of the situation, a bill has been introduced in Congress systematizing the promotion of civilian instructors and increasing their pay. The total increase provided for the twenty-seven civilian instructors is about $6,000 a year, or the amount that is spent every year by the Pacific fleet in firing salutes. As the salaries named in the bill are $3,000 for professors, $2,500 for associate professors, and $2,000 for instructors, the measure appears to be anything but extravagant.

If what Nietzsche called our constant revaluation of social values is to go so far as revision of the feminine estimate of fashion, the State is the obvious agency to set it on foot. Yet there is a breath-taking quality about the crusade which the University of Wisconsin is leading against "the delusion of new hats." We are informed that Miss C. Schmit, the State University's expert, is training 500 women in an art which she says will make them rivals of Paris; and the Milwaukee *Sentinel* reports that the formation of societies to speed the movement is growing apace. Opposition of male taxpayers, outside of importing circles, is scarcely expected. The only reason for distrust of the programme is the very democratic clear-headedness of the enterprise. Fashion, in all its vagaries, has its excuse for being in the precise qualities that Wisconsin would take out of it. But if the University succeeds in this newest "extension" it will overtop all its sisters.

It is given to very few men to hold a double claim on immortality. Such was the happy fate of Sir John Tenniel. He will be remembered by one audience as the artist who drew Britannia at the bier of Lincoln, and by a larger audience as the pictorial creator of Alice, the White Rabbit, and the Mad Hatter. In his work for *Punch*, humor was not his strongest trait, though it was by no means a quality he lacked. His political satire was of a broad sweep, and his best-known work was hardly satire at all, but, as in the case of the famous cartoons we have mentioned, a penetrating comment, delivered with dignity and emotion. Nevertheless, on the technical side there is a strong resemblance between the actual kings and ministers whom he drew for *Punch* and the much more interesting potentates, duchesses, and politicians to whom he gave such startling reality in the pages of Lewis Carroll. In both fields there was the same solid draughtsmanship, the gift of creating figures in the round, endowed with a fine sense of dignity and self-possession. Difficult as it is to imagine what *Punch* might have been without him, it is still harder to think of the Cheshire Cat as emanating from any other pencil than Tenniel's.

THE WILSON TOUCH.

We know, by long tradition, of "the Nelson touch"—that indefinable stamp of personality and of genius which the great Admiral used to put upon a plan of battle. The thing is as fascinating to study in politics as it is in war. What a lift and refreshing it is to those whose business compels them to follow public affairs, when a statesman arrives who breaks the old conventional moulds, and invents and displays new methods all instinct with his own individuality! This is what President Wilson has been doing for the past twelve months. Tuesday marked the end of his first year in office. During that period, it may safely be said that American politics has been more interesting—we do not say more exciting—than for a generation.

It is one of those cases in which the way of doing things is, in a sense, more important than the things done. For once you know the method, you can infer future results. And it is President Wilson's method which has impressed all observers, even more than his extraordinary record of achievement. Upon the latter, it is not necessary to dwell at length. The facts are known to all. Even the President's opponents agree that the *res gestæ* of his first year outbulk the record of the ordinary Administration's four years. We need only consider the bills actually passed.

What, then, has been his secret? Where are the hidings of his power? It is impossible to put one's finger precisely upon the pulse of the machine. But we can note how it operates. We can observe the method, even if we cannot nicely measure the dynamic thrust behind it. And it is evident that the first element in the Wilson touch is a perfectly clear and definite idea of what is wanted. Ex-President Taft remarks this in his recent generous appreciation of Wilson. He declares that the President knows perfectly what he desires before he goes to Congress to get it. And, of course, this intellectual grasp of his subject persists in all his personal discussions with Congressmen. He can out-argue them because he has outthought them. The vague men go down inevitably before the definite man. It was Mirabeau, we believe, who predicted the rise of a French politician at the time of the Revolution, saying of him: 'Look out for that man. He knows just what he wants, and he means precisely what he says."

In the process of execution, Mr. Wilson has shown how to be effective without being noisy, how to bring about what amounts to a revolution with the quiet air of a man taking a stroll in the country. He has displayed an audacity fitted to take one's breath away, yet he has done it with smiling ease and unconcern. No thunderings in the index have preceded it, no loud echoes of the storm have followed. The impression is that he has simply been doing the most natural thing in the world. Such was the air which he threw about his first going to Congress to read his message in person. He almost made it appear like a dropping in to afternoon tea! Why should he remain upon his "isolated island of jealous power," the White House, when by going to the other end of Pennsylvania Avenue he could have a pleasant neighborly time with his "colleagues" in Congress? In the face of such an attitude, talk of "usurpation," or of tyrannical domination by an overbearing Executive, falls flat. It is impossible to erect a man chatting by the fire into a man on horseback.

All this looks easy, as Wilson has done it, but let anybody else try it! Any work of perfect skill looks easy to those who do not know what tense effort lies behind it. And President Wilson has not spared labor. His method is one thing; the energy he has put into it is another. Such inspiring and drive as have come from the White House since March 4, 1913, take it out of a man. But the President has prudently conserved his strength. He has not stretched himself thin over the whole country. Only two set speeches, if we remember aright, has he made in public during the past year. If other Presidents have made themselves cheap by going everywhere, Wilson has consulted both his work in hand and the dignity of his office by staying in Washington. If others have talked on every conceivable subject, he has held his verbal fire until the time came when he could make it telling. The net impression he has made is that of a strong man following a course which he had carefully marked out for himself in advance; his time not his own, but for public business; relaxation only for health and not for the delectation of busybodies and cronies; with the constant application of a will that has a spring like fine steel to the dispatch of great affairs.

We are told that we must make allowance for Wilson's "luck." Circumstances were so uncommonly favorable to him. Very well; imagine him dying a week after inauguration and Marshall dealing with the same circumstances! It is useless to try to get away from native power and political genius. They work their will with ease where others would fail miserably. It is doubtless true that President Wilson will have to face a certain reaction. His prestige will not always seem so undimmed as now, his authority so great. But come what may, he has already revealed to his countrymen a public character in whom they will delight, if they agree with Emerson that nothing is more inspiring than to note the facility with which a man of native force will move among ancient conventions.

WAR BY ANY OTHER NAME.

Nobody desires war with Mexico, but no end of people want to do something or other that would be war, yet that they would call by some other name. Such legal and moral confusion has many times arisen. It is at the bottom of the attempt to make out the possibility of such a thing as a "pacific blockade." This is, in reality, very much the same as saying a loving crack over the head, or a friendly shooting. So, to-day, in our Mexican trouble, certain persons would invent smooth-sounding names for rough things. They would not begin hostilities against Mexico, oh, no! They would merely send a polite military expedition into Mexican territory. They would have 1,000 American marines set out for Mexico City with every protestation of friendship. The Governor of Texas would dispatch a force of rangers across the Rio Grande to bring back the body of an American citizen who had been hanged on Mexican soil, and incidentally, we presume, to teach the Mexicans to know their place. That this would be warlike, does not seem to occur to Gov. Colquitt.

This drawing back from the blunt naming of acts in accordance with their harsh reality is perhaps creditable to the hearts of those who do it. They do not like to think of war outright. The humane sentiment of their age is strong upon them. A battle-field would be as

ghastly a sight to them as to any of us; and so they resort to all kinds of phrases and masked descriptions implying that they do not intend to march the country into a bloody war. But however amiable may be this shrinking from so much as speaking of horrid brutalities, it does not argue well for the reasoning powers of those who display it. We may say a good word for their hearts, but we cannot retain much respect for their heads. For there is no use in trying to escape the hard facts, or in seeking to sprinkle rose-water over human shambles. Gen. Sherman's definition cannot be amended so as to read that war is—a place we do not like to mention. And if the nature of war is what we know it, acts of war are acts of war, no matter what we fastidiously call them.

It is in this form, unpleasant but unescapable, that the problem forces itself upon President Wilson. Others may talk loosely; he cannot. Impulsive gentlemen in Congress or out of it may propose fantastic schemes to settle Mexico's hash, all of them implying armed coercion, though all of them are described as not at all tantamount to war, but the President has to look at things as they are. For him international law still exists, even if others ignore it. The rights of nations are realities to a man who is acutely aware that he is dealing with them, and that they are sensitive and may become explosive. Now, all this is, we do not question, the reason why Mr. Wilson took occasion last Thursday to let the newspaper correspondents know that he is inflexibly opposed to all these warlike measures. He, as President and as Commander-in-Chief, must sharply discriminate between what can be done by diplomatic representations, couched in urgent language though these may and ought to be, and what may have to be done by arms. The two cannot be mixed up. Bayonets remain bayonets even when festooned with flowers.

In this attitude President Wilson is clearly right. His Mexican policy, as a whole, and up to the present, cannot be called a success in the sense that it has achieved the result desired. That any other peaceful policy than the one he has pursued, however, would have worked any better, it would be impossible to prove. But Mr. Wilson's course with Mexico has at least been highly successful thus far in one important respect. It has avoided war. It has tended to calm and not to infuriate the American people. It has brought the country into close and good relations with European Powers, and paved the way for a perfect understanding as to the ultimate steps to be taken, when the time comes to take them. And accordingly the President is wholly correct in refusing to countenance proposals which would infallibly mean that we should blunder into war. If war must come, as a last dread resort, it is for our Government to face it with open eyes. It is not a thing to be tricked into. We should be guilty of incredible folly if we were to make experiment of some of the disguised war-measures put forward by happy-thought statesmen and haphazard newspapers, thinking that they might safely be toyed with, and then find that they plunged us into a woful and desolating struggle.

UNEMPLOYMENT.

A National Conference on Unemployment, holding its session in New York in the depth of winter, would in any year attract the interest of all who are concerned in the problem of bettering the condition of the laboring masses. This winter, the extent of unemployment, though by no means so great as it is sometimes represented, is more than usual, and the usual amount is bad enough.

That the situation has been exploited, here in New York, by the I. W. W., for the promotion of turbulent discontent and the stimulation of revolutionary ideas, need not concern us greatly. The artificial character of the demonstrations at the churches has been manifest from the start, and, thus far at least, the attempts of the I. W. W. agitators to make a commotion have fallen extremely flat. Commissioner of Charities Kingsbury states that the city has not turned away a single man who has applied at the Municipal Lodging House this winter; and though in the early part of January there was dreadful crowding, arrangements were soon made to give the overflow from the Lodging House comfortable quarters on the recreation pier, which was enclosed and provided with cots and a kitchen. To give them decent lodging and food in this way, and moreover to adopt such measures as the city is pursuing to get a moderate amount of work out of the men, so far as possible, in return for what they receive, is far better than to throw churches open, where neither the accommodations nor the oversight can be as satisfactory as in the shelters provided by the city and managed by its officials.

But refusal to be hysterical over a situation which is not novel, or in any high degree abnormal, does not imply indifference to the large question to which it is related. On the contrary, the closer they are to the normal, the more do the sufferings and losses of the unemployed impress the importance of the general problem with which the Conference on Unemployment was concerned. Our country has been backward in relation to this problem, as it has in relation to other problems of industrial betterment; but it may be expected that from now on the subject will receive the attention it deserves. The three main lines of improvement suggested are the establishment of public labor exchanges, the diminution of seasonal unemployment through more provident and considerate organization of production, and the introduction of insurance against unemployment. The last of these presents great difficulties and dangers, and cannot be safely undertaken except after the most careful inquiry and with the most maturely thought-out precautions. The second, though it may possibly be promoted by governmental measures, presents itself primarily as a matter to be looked after by able and large-minded employers of labor. But the first—the establishment of labor exchanges—presents no inherent difficulty. Moreover, it has behind it a large amount of successful experience in several European countries, and has been tried and found useful in some of our own States.

On this subject, a committee appointed some months ago by the trustees of the City Club of New York recently made a report, in which, after a succinct survey of the facts, it recommended the establishment of a State Bureau of Employment, and made a tentative draft of a bill for that purpose, preparing also a tentative budget of expenses for this bureau, based on the experience of Illinois, Indiana, and Wisconsin. An annual expenditure of $75,000 is set down as the minimum required to make the work effective. We believe that any

one who gives attention to the subject will be convinced that the expenditure of a much larger sum than this would be justified provided that the bureau was soundly conducted. Whether we consider the general economic interests of the community, or the diminution of the charges on the State from pauperism and invalidism, the undertaking appears to be entirely legitimate.

The resolutions adopted by the Conference at its meeting on Saturday recommend the establishment in the Federal Department of Labor of "a Bureau of Distribution, with power to establish employment exchanges throughout the country to supplement the work now done by State and municipal bureaus, to act as a clearing house of information and further the distribution of labor throughout the country." They also urge upon the Legislatures of the various States "the establishment or reconstruction of free State employment agencies," and lay down the principles to which these should conform. The leading place, we observe, is given to the principle "that appointments and tenure of office be governed by the merit system and be placed beyond control of political parties." How much of the backwardness of our country in the difficult problems of the modern industrial régime may be due to that instinctive fear of "politics" which has been the inevitable fruit of the spoils system! Among the workers for all good causes involving governmental action, that fear is a constant subject of solicitude and uneasiness; and they are unanimous in the conviction that upon the exclusion of politics and of the spoils idea the success of any such scheme as that of the proposed labor exchanges is vitally dependent.

THE ULSTER DIFFICULTY.

Full reports of the speeches in the House of Commons on Irish Home Rule at the opening of Parliament do not make the crisis appear less threatening, but they do help to clear up some of its aspects. The Prime Minister and the Attorney-General, speaking for the Government, held throughout a conciliatory tone, expressing a willingness and even eagerness to arrive at some honorable adjustment of the Ulster difficulty, but they also insisted that no proposal had been put before them which could be entertained, and, indeed, strongly argued that the Unionists had no solution at all to offer. Was it a general election? But if one were held, and the Liberals won again, Ulster would no more submit to an Irish Parliament than she will now. Her attitude is simply that she will not have Irish Home Rule under any conditions, this year or at any time in the future. If a province can thus interpose an absolute veto upon Parliament, orderly government by Parliament is obviously at an end. If the Conservatives came into power, Connaught could with as much right set the Government at defiance.

Mr. Asquith's speech was very calm but of great power. He showed again his ability to put into half an hour what others would consume two hours in saying with less force. On one point, he was completely destructive of the Unionist position. This is that the Home Rule bill was sprung upon the country without notice, that it was never passed upon by the electors, and that no one ever supposed that the Parliament Act would be taken advantage of to make it law without the consent of the Lords. But Mr. Asquith adduced some new evidence on that subject with deadly effect. He recalled the fact that when the Parliament Act itself was pending in 1910, the Unionists protested that it would lead straight to Home Rule for Ireland. With that in mind, they moved an amendment to exclude from its scope "all bills for the delegation of administrative or legislative powers to subordinate Parliaments." In support of this the entire Unionist strength in the House of Commons was rallied, Sir Edward Carson himself declaring that then and there was the only chance to defeat Home Rule. But the amendment was voted down, 351 to 245, and in the general election which followed in December, the Liberal party was returned to power with the distinct understanding that the Parliament Act would be made use of to carry Home Rule within three years. With what face can it now be said that the whole thing was forced without warning upon an unsuspecting Parliament and electorate? What is really aimed at, as Mr. Asquith asserted, is the tearing up of the entire Parliament Act. The leader of the Conservatives, Mr. Bonar Law, has, it is true, stated that the Conservatives would not seek to repeal that act, if they gained power, but they are plainly endeavoring to nullify it now.

Much was said in the debate about the possibility of Home Rule with Ulster excluded. The Prime Minister, having declared that the Government would shut no door upon hope of compromise, professed himself ready to consider even that alternative if it could be presented in a workable form; but no one on the Unionist side was willing to go into details. Sir Edward Carson's position is, frankly, that he favors the exclusion of Ulster simply because it would wreck the entire Home Rule bill. His words are: "The Government says that if Ulster is left out, Home Rule will be impossible. I agree. Therefore I will vote to leave it out." This is what the Unionist solution by exclusion comes down to.

When it comes to the details of excluding Ulster, difficulties thicken. Mr. Redmond pointed them out. What was meant by Ulster? It was a province of nine counties, sending to Parliament 17 Home Rulers and 16 anti-Home Rulers.

Of the nine counties, five contained large Catholic and Nationalist majorities. It was a province in which, taken as a whole, Catholics were not very far short of half the population. If there was excluded the city of Belfast, there was a Catholic and a Nationalist majority for the whole province. Any one who came to argue the question would find it difficult to argue in favor of the exclusion of the whole of Ulster. Presumably what was meant by the right honorable gentlemen were the four counties of northeast Ulster. There was a Home Rule member in the House for each one of those four counties. In the County of Down the percentage of Catholics was 31.6, in Antrim 20.3, in Armagh 45.3, in Derry 41.1, in Derry City 56.2, and in Belfast 24.1.

Mr. Redmond affirmed with reason that to talk of settling the great question of Irish Home Rule by excluding the four Protestant counties was ridiculous. He added that he knew of no man or no party in Ireland—no spokesman for Ulster—that approved of any such suggestion as a basis for the settlement of the Irish question. It is brought up chiefly to darken counsel and make trouble.

This fact, however, does not disguise the real and grave problem which Mr. Asquith has to try to solve. He is apparently trusting to time and conciliatory words and further "conversations" between the Government and the leaders of the Opposition. By means of such conferences more than one political crisis in England has been surmounted.

It was, for example, through a "conversation" between Mr. Gladstone and Lord Salisbury that the acute controversy over the extension of the suffrage in the eighties was appeased. Something of the sort may be compassed within the next few weeks. Meanwhile, Mr. Asquith refuses to be rushed. He will not make his own proposals until he is fully ready. They will unquestionably be of a kind to afford the inhabitants of Ulster every reasonable guarantee. If these are rejected, then it is plain that the Government will press forward, confident in the appeal which can be made to the law-abiding sense of the British people and to the considerate judgment of mankind.

OUR INERTIA IN FIRE PREVENTION.

"As far as can be learned, the fire originated in the cellar, and it is said to have been caused by an overheated furnace." This statement was made in reference to the fire which swiftly and completely destroyed Mrs. W. K. Vanderbilt's large and beautiful new country house on Long Island a week or so ago. Since that time, a fire, likewise originating in the basement, and at or near the furnace, has destroyed the Morristown Library, with its valuable and in large part irreplaceable collection of books. Nor is either of these losses of an unusual character. Fires starting in the cellar or basement of large country houses, hotels, and public buildings, and resulting in their complete destruction, are matters of familiar occurrence. Yet the adoption of measures entirely within the reach of the owners of such buildings—whether private individuals, stock companies, or public bodies—and entailing only a very moderate expense, would suffice to make such disasters virtually impossible.

Even fireproof construction of buildings as a whole has been so reduced in cost in recent times that the difference between the price of such a building and that of the ordinary inflammable kind is far from being so serious as it formerly was. But without going to that expense, the risk of fire can be very greatly reduced. The thing to aim at is the isolation of fire, the prevention of its spread from the point at which it originates. This can be accomplished, as regards the cellar furnace and its neighborhood, by fireproof floor construction separating the cellar from the first story. A concrete or steel-and-tile floor can be easily put in at an increase of cost above ordinary wooden joist construction that would hardly be noticeable in the total cost of a large building. In addition to this, and especially in places where the services of a fire department cannot be promptly obtained, the installation of some simple system of automatic sprinklers in basements, near the heating apparatus, and also in kitchens and laundries, commends itself as an obvious safeguard, and offers no great difficulty in the way of expense.

Another most effective measure of protection is the erection of a fireproof division wall, cutting the whole house into two parts. Such a wall may be built of brick or concrete, and would run right through the house, from cellar to roof; it would be provided with concealed sliding metal doors at all openings, and could be entirely hidden within partitions, so as not to mar the artistic effect of a residence. Such a wall would not only be a fire-stop, but also be an invaluable life-saving device. It is on this account that the recent factory legislation so strongly discriminates in favor of buildings with fire-walls of this nature. We are informed, on excellent authority, that a wall of this kind, even in large country houses or hotels, would rarely add more than a thousand dollars to the cost of the building; and it would be a sure means of preventing the spread of flames from one part of the building to another.

What makes our inertia in these matters the more remarkable is the fact that information about them is accessible in exact and authoritative form. By merely writing to the National Fire Protection Association, which has now been in existence nearly twenty years, with its executive office at Boston, one may obtain without cost the results of the experience of competent experts on every aspect of the problem of fire prevention. The Association has issued a great number of pamphlets, in which are laid down the standards which have been found desirable in regard to almost every point concerning safe construction, and protection against fire. Failure to adopt these standards, or indeed to give anything like adequate thought to the question, can be regarded only as an instance of that easy-going disregard of comparatively remote danger which characterizes the national temper in so many directions. It may be quite true that this is a "defect of our qualities"; but that does not prevent it from being a serious defect, or from working out grave consequences, whether in such a matter as the fire danger or in the broader questions of politics.

There is another point which the inflammable nature of the country mansions of our millionaires, and of expensive hotels in summer and winter resorts, should serve to impress. If, as is obviously the case, it is indifference or inertia that is the explanation of this state of things, it is foolish to ascribe the absence of proper fire safeguards in factories wholly to the devilish hard-heartedness of a grasping capitalism. The owner may be terribly to blame for not taking his responsibility more seriously; but he no more expects his mill to burn down than Mrs. Vanderbilt expected her new house to burn down, or than the guests at the Windsor Hotel expected to be burned alive. That is no reason for not making stringent laws, and enforcing them with the utmost rigor; on the contrary, it makes such laws and such enforcement all the more indispensable. But it is a very good reason for not becoming hysterical, for not ascribing to the fiendishness of capital what is in the main an exhibition of a heedlessness we all display in our own personal concerns, and in our everyday life.

THE VOGUE OF THE INEDITED.

Unlike Gray, wishing for endless new novels by Marivaux and Crébillon, the modern magazine publisher longs for an inexhaustible supply of old manuscripts —never before published. In the rage for the inedited some editors threaten to become what Bersot predicted of historians—ragpickers. Authors who complain of the dead hand in literature will have to enlarge their grievance. They may even, for the benefit of literary posterity, soon be expected to advocate a union agreement that every scrap of writing shall be got into the definitive edition of each man's works, or destroyed. The habits of a De Quincey, moving from room to room with a wake of manuscript for future discoverers; of a Browning, patronized by spinsters whom he lets copy his fourteen-year-old verse;

of a Madison, storing away papers of the Federalist type for centenary publication, must begin to seem intolerable to authors already cramped for space. Let the unearthed manuscript be intrinsically good, and it is produced with a fanfare of critical trumpets; let it be so poor that the unhappy ghost is pacing the shores of the Styx at the thought of its becoming known, and it throws new light on his youth, or some mooted episode of his later life.

Looking at the matter in a general way, we can easily believe that the author foresees, as the happiest chance, the possibility of walking, a century after death, into the office of a leading periodical and shouldering out of line, with classical arrogance, the most eminent flesh-and-blood writer there. And it is equally easy to analyze the publisher's pleasure in at once trading on a golden, long-fixed reputation, and yet offering one of its productions as fresh as if from the hand of a novice, written expressly for the readers of 1914. No doubt it is curiosity, partly intellectual, partly vulgar, on which the appeal is based. The titillation of a great name, the expectancy of some *chef-d'œuvre inconnu*, or chip of one, reaches to crowds who know the name alone. A hitherto unpublished story by Stevenson would be seized upon by thousands who had never read the works by him everywhere accessible, or even skimmed their cream. But the publisher has in mind also a love of the literary past. He not merely makes that past current, but carries us back to it. Every one has some time felt a wish to reconstruct the thrill that, we fancy, all England's little Cranfords felt when they were awaiting the next number of "Pickwick"; or London society at the announcement of a new novel by the Wizard of the North. To be ourselves the first to lay eyes upon some such writing, miraculously hidden from its own time and carried down to ours, is insensibly gratifying. Its appearance flatters, moreover, the feeling that we have stolen a march upon our ancestors; not alone in gleaning something they overlooked, but in recalling our improved critical perspective, as regards their own literature. They moved among its productions blindly, where we have long since culled and chosen; and the fact is never more patent than when some survival of their age emerges to be appraised and docketed among its author's work, by standards more or less universally sanctioned.

With much in all this to applaud, we ought to avoid the appearance of mere literary sycophancy. To fawn on an author by rummaging drawers for trivial notes, the rough sketches of his completed designs, shavings from his chisel, does him neither service nor homage. Always in point is Sainte-Beuve's reproach to "messieurs les érudits" for their digging up what is better left buried. Half the merit of any artistic performance is in its reticences, and their violation is the work of a resurrectionist. There is little addition to knowledge or to admiration in recent reproductions like *Cornhill's* of Browning's infantile poems, or the *Mercure de France's* of certain suppressed letters of Nietzsche's. Such reproductions are not untypical of several which have appeared in American periodicals. The fault has, of course, been carried outside the world of periodicals, a striking example being the appearance lately of the first volume of Gustave Flaubert's "Premières Œuvres," the full set to contain his lucubrations from his thirteenth to the end of his seventeenth year!

The final arbiter must necessarily be good sense and good taste. It is for public as well as publisher to exercise both. Only in this way can old manuscripts new-published be both fair to the past generation and profitable to the present, while performing a real function in helping to emphasize the continuity of literature.

LYRIC POETRY.

Lyric poetry has in large measure been spared from the blight of overzealous scholarship by the difficulty to define it. There used to be a legend at a certain university that only two beings in the world knew what lyric poetry was, God and Professor ———; and that God wouldn't tell, and Professor ——— couldn't tell. Other forms of literature have been searched and classified according to the well-known prescription for the study of types. But the lyric has presented a smiling defiance to such treatment. It has a piquant quality like life itself, springing up where least expected, a flower in a cranny. Formerly it was thought sufficient to divide poetry into epic, dramatic, and lyric. What was not the first two was, generally speaking, the last. This was a good enough working basis.

Recently scholars have taken to looking at the lyric more narrowly. Prof. E. B. Reed, whose bulky volume on the subject was reviewed in the *Nation* of September 19, 1912, gives the following definition: "All songs, all poems following classic lyric forms; all short poems expressing the writer's moods and feelings in rhythm that suggests music, are to be considered lyrics." Difficulty arose when Professor Reed attempted to enforce his tests. He accepted sonnets because some of them, notably in the days of Elizabeth, have been set to music; yet Wordsworth's genius was styled unlyrical because "he has not left us a single song." And the book shows many other curious instances of selection and exclusion. Prof. F. E. Schelling's recent volume on "The English Lyric" (reviewed in the *Nation* May 8, 1913) adds nothing new to the foregoing statements. "The primary conception involved in the term 'lyric,'" he says, "has always to do with song; and it is the song-like quality of the lyric that falls most conspicuously into contrast with the epic or telling quality of narrative verse. . . . So, too, the lyric is concerned with the poet, his thoughts, his emotions, his moods, and his passions. . . . With the lyric subjective poetry begins." The latest to match his skill with this elusive type is Mr. Ernest Rhys,* the editor of Everyman's Library: "Lyrical, it may be said, implies a form of musical utterance in words governed by overmastering emotion and set free by a powerfully concordant rhythm. So soon as narrator or playwright, carried out of the given medium of personal feeling, begins to dilate individually on the theme, that moment he or she surely tends to grow lyrical." The musical test, it will be noted, is abandoned in the second sentence, where Mr. Rhys applies his definition; and, unless one must infer that personal feeling in verse inevitably draws upon music, it is of little practical use. The looseness of Mr. Rhys's conception is quite typical of his practice. Beginning with early forms which were certainly sung, he later accepts sonnets and certain dramatic soliloquies; but as if feeling guilty over his small use of the musical requirement, he periodically refers to an underlying "singing mode," "singing idiom," or "hidden note." The early portion of the volume has to do with metrical developments, especially the transition from alliterative verse to rhyming schemes, and with the flexibility bestowed on English poetry by borrowings from the French. As the book progresses, its treatment may be described as scarcely more than literary history.

I.

I have no desire to hazard a new definition, but merely wish to consider

**Lyric Poetry.* By Ernest Rhys. New York: E. P. Dutton & Co. $1.50 net.

whether the scope of lyric poetry is not immensely different from that usually assigned to it. All may admit that the lyric and song originated in much the same impulse—the desire to express personal, often inarticulate, feeling; and that the two may at times still be closely allied. It would require no magic rod to strike a gush of song from the lyrics of Burns, or from the light stanzas scattered through Shakespeare's dramas, even if the particular airs to which they were set had been forgotten. But this is very different from implying such an accompaniment for all pieces that commonly pass as lyrics. The discussion will be forwarded by a glance at certain developments in music itself. Such is its present state that critics would probably be as perplexed to agree on what is meant by "lyric" in music as others are to say what the word conveys as regards verse. Whereas formerly lyric music must above all else have melody, some composers, notably Debussy, are now depending instead on harmony, coloring. When he wishes to describe the play of moonlight on the water, Debussy resorts to a series of tinkles broken by syncopated glissandos and mingled with something like whispers. His "Reflet dans l'eau" shows an entirely different treatment from Nevin's woodland sketches. Both men have essayed to speak for nature. The latter has made her tuneful, and in any age would be accounted a true lyrist; Debussy, accepting certain features of nature as in themselves the embodiment of lyric sentiment, has been content to decorate, to sophisticate. He has replaced melody—one of the traditional marks of the lyric—by dexterous harmony; and through this "programme" variety of music has carried the lyric into close association with other musical types.

Manifestly, then, those critics who stick for a musical basis of the lyric should distinguish the kind of music meant. "Lycidas" suggests music no more strongly than many portions of "Paradise Lost," or, if so, does not recall the pure melodies which critics would still unite in terming lyrical. Nor can much significance be extracted from the fact that the sonnet owes its form to a combination of stanzas which usually went with song, or that in some instances the sonnet itself has received a musical arrangement. Certainly within the last three centuries composers of sonnets could never have had the thought of music in mind; and only such supersensitive ears as Mr. Rhys's could possibly discover a "hidden note" of song at the bottom of, say, Shakespeare's lines beginning

Let me not to the marriage of true minds
Admit impediments.

If they convey any note, it is Milton's epic organ tone. One might go further and say that they are less lyrical as regards pure sound than Macbeth's memorable lament after hearing that his wife is dead. If by "musical basis" critics would mean melodious song, they would have little difficulty in classification, though this would exclude the majority of selections found in the "Golden Treasury."

In endeavoring to hold to a conception of the ancient Greeks we have really confused their ideas. They recognized the kinship of the lyric and song, though they did not use it as a strict test, but also the more general relation of poetry and music. If lyric verse was sung, so were the epic and large portions of the drama, and the instrument of accompaniment might, at least in the first two instances, be the same, the lyre. Yet it is true that to most minds to-day the lyric appears to have a prior claim to a musical alliance. Partly this is because it is the only one of the three poetic divisions which continues to be set to music—a thoroughly arbitrary distinction. But more especially it is because the beginnings of poetry, like the beginnings of music, were "lyrical," in the sense that they fell easily into the jingle of song. This must have been the reason for the style, "lyric Apollo," to characterize the god of poetry and music, who was rooted in their ancient traditions. And down the centuries lyric verse and lyric music have furnished enough examples of early uncomplicated melodies to keep the two, in human instincts, subtly bound together. "O my luve's like, a red, red rose" has not advanced far in rhythm beyond poetry in an elementary stage, which, of course, only heightens its homely freshness. The movement of Keats's "Ode to a Grecian Urn" has no such implication, and though it might set an ancient Greek to chanting, it does not so affect us moderns. In retaining, despite the inconsistencies of our practice, a musical basis exclusively for the lyric, we are but emphasizing the stream of, as it were, primordial poetry which still runs through it, though it also runs through the drama and epic in less degree. It is heard now and again in "Samson Agonistes" and in Homer's episode of Nausicaa.

II.

I have referred to a present tendency in lyrical music to replace melody by skilful harmony playing over choice aspects of nature. Something much akin to this has long been operative in lyric poetry. Off-hand one would not think of turning to Petrarch for an illustration. Coming on the heels of the troubadours, whose songs he laid under heavy contribution, he would surely seem to give the strongest reinforcement to the musical test. Nearly always there is music in his language, and some of his stanzas were obviously intended to be sung. But here again the test is not decisive, for his sonnets are no more melodious than parts of Chaucer's narrative, such as the lines

And smalë foulës maken melodye
That slepen al the night with open eye,

or than much of the "Divine Comedy." In the hands of all three authors poetry of whatever type still betrayed its twin-birth with music.

Petrarch's greatest influence on others came undoubtedly from his peculiar use of nature. It was not original with him, but his expertness gave it the widest currency, and then and there created the nature cult which still has adherents. In illustrating his love for Laura he connected her with nature's treasury. Her curls were tossed by the gentlest breeze, the laurel was instinct with her presence, the stars gained in lustre by resembling her eyes, her footsteps consecrated the meadows, the flowers that brushed her were an inspiration henceforth, and a stream once visited by her thereafter murmured music. Sappho had furnished charming natural settings, but it was left to Petrarch to bring nature and love into fusion. French and English caught up his manner until no mistress was worthy if unattended by nature's store of tenderest fragrances, colors, and sounds. The insincerity of many of these writers does not remove the fact that nature was then made an almost indispensable accompaniment of what passed as lyric poetry. The thought of music might be absent from the poet, but nature must in some fashion serve him. From continual use in this way certain natural features came to have an almost independent lyric value, especially the stars, the dawn, a stream, and flowers. Though the vogue of flower poems such as Spenser, Shakespeare, and Milton yielded to, was enhanced by a special sentiment which each flower acquired, their main effect was the sheer beauty bestowed by long lyric associations. And in a more general way Spenser and later Thomson were content to rest the value of whole lyric stanzas upon a lovely array of sweet natural details.

Nor has the practice been neglected by more modern writers. In the case of "Fiona Macleod" it attained the proportions of a naturalistic *rêve*. Individual details of nature had received from centuries of poetic use (so we may suppose he felt) such an accumulation of emotional value that merely to pronounce their names was enough to furnish a lyric background; much after the manner of any catalogue of ships which, ever since Homer's famous list, has been apt to start in the mind a reminiscence of epic poetry. In not a few of his poems William Sharp gives little more

than an enumeration of these alleged lyric features, as in the following lines:

There is in everything an undertone . . .
Those clear in soul are also clear in sight,
And recognize in a white cascade's flash
The roar of mountain torrents, and the wail
Of multitudinous waves on barren sands,
The song of skylark at the flush of dawn,
A mayfield all ablaze with king-cups gold,
The clamour musical of culver wings
Beating the soft air of a dewy dusk,
The crescent moon far voyaging thro' darked skies,
And Sirius throbbing in the distant south,
A something deeper than mere audible
And visible sensations.

Sharp's tendency—which is shared by many, among them Maeterlinck, I suspect—to see a "rainbow of feeling" in any nosegay of nature is most similar, it must be admitted, to Debussy's way of imputing subtle, fleeting emotions to his formless chromatics. I have pursued this speculation to illustrate the danger of exalting a poetical accompaniment, whether it be song or nature, to a test of type.

III.

The other test usually employed to mark off lyric poetry is personal, subjective emotion. Like many other words that come trippingly from the tongue, these are meaningless unless strictly interpreted. Taken to signify merely the language of feeling, as they generally are, they lead nowhere. Is Horace's pleasant quarrel with Lydia, is many a pretty trifle by Austin Dobson, subjective emotion simply because both poets have used words of the heart? Was Robert Herrick subjective when he chaffered in the conventional conceits of his day? Are we to ignore the fact that the troubadours had a special motive for proclaiming a Blanche or a Diana to be a nonpareil? And there is the whole class of so-called lyrics which retouch ancient mythology, such as the Anacreontic of Cupid stung by a bee, whose sentiments are artificial by the nature of the case. Are they, too, subjective? But even when held to denote the poet's expression of his own sincere feeling, as I construe it, the subjective test furnishes no simple rule of thumb; for how shall we be sure when a poet is feigning?

There is, for instance, the sonnet sequence of Thomas Watson, which he openly declared to be merely an exercise in a fashion of the day. Now, oddly enough, it sounds in parts not less sincere than similar works of his time; and probably other writers, if pressed, would have had to confess that they, too, were merely playing at a game. Nor is it reasonable to accept, as Professor Reed would do, a sonnet as being necessarily a truer chart of an author's own sentiments than are various lines in a play. If there was a Dark Lady, who shall say that the views on life and death in "Hamlet" were not in part the poet's own? If there is a ring of sincerity in the lines of Sonnet LIV:

O! how much more doth beauty beauteous seem
By that sweet ornament which truth doth give!

it appears to be present also in

There's a divinity that shapes our ends,
Rough-hew them how we will.

In attempting to reach a man through his works one has to penetrate the veil of art, whatever the form of the poem chosen. In any case, the author reacts *poetically* upon a given theme or situation, and unless the poetical equation is clearly understood, a critic would be rash to say that here the poet's heart lies bare. Take an individual sonnet unconnected with a sequence or a literary vogue. Its metrical arrangement, especially in the Italian form, and its requirements of balance, climax, and point are too complex, within such small compass, to be adjusted readily to a poet's feeling without causing some sacrifice to art. Milton, determined to speak his mind on the atrocity at Piemont, in the sonnet commencing

Avenge, O Lord, Thy slaughtered saints,

almost broke down the sonnet structure, employing a loose construction suggestive of Biblical utterance. Even while we marvel at the happy result, the impression obtrudes that here the art of the sonnet received the smallest toll on record. In some other sonnets, Milton, supreme poet that he was, so mastered the medium he worked in as to make his perceptions seem spontaneous; and Keats undoubtedly had similar success. But this does not mean that the poetical equation is not present for the critic to solve.

The mechanism of a sonnet may be thought of as an alembic which distils a poet's sentiments. Its effect is too subtle to be often detected by the critic. Yet any one who has written a sonnet (as who hasn't?) realizes that the mood in the finished product is apt to differ from the original conception, and that the transforming power of art is operative when least we think of it. The predicament of the lyrist who would be sincere may be illustrated by a modern tendency in the drama. The desire to represent life on the stage exactly as it is brings the finicky realist face to face with certain insurmountable conditions of dramatic construction. There is the element of time. Try as he will, he cannot make the stage square with life. Crises do not form with the celerity of stage convention, and in numerous other respects the dramatist of things as they are has to admit himself balked.

This directing power of artistic form increases, naturally, according to the intricacy of the type used. A drama or epic may impose a large number of external conditions, and quite conceal the author's own feelings. They are there, nevertheless, and could be sifted out if the laws of artistic construction were accurately known. By contrast, the lyric in general puts few restraints upon the poet. Particularly in open stanzas he would seem to have a good chance to express his very self. The language of Wordsworth's "I Wandered Lonely as a Cloud" is so simple and direct as to leave no doubt that it came straight from the heart. But between the extremes represented by this poem and by such an impersonal performance as an Æschylean play the degree of subjectivity varies so much, whatever the literary form, as to make personal feeling a tricky test of type. It is hard, for instance, to imagine Wordsworth concealing his own feeling even in a drama. And Schiller's "Wilhelm Tell" is in many portions as close an index of his feeling as is his simplest lyric.

IV.

Francis Palgrave, searching for a principle of selection for his "Golden Treasury," held the term lyrical "to imply that each poem shall turn upon a single thought, feeling, or situation." He ignored the tests of music and personal emotion and included in his collection eminent poems of supposedly single and continuous inspiration, in a word, all varieties of relatively short poems. The soundness of his definition might be disputed on the ground that, Poe's well-known views notwithstanding, "Paradise Lost" is the embodiment of but a single mood, albeit a huge mood. Yet if slightly arbitrary, Palgrave's distinction, which is based mainly on extent rather than on kind, is immensely convenient in practice; and I know of no other which would be usable for an anthology.

Looked at in the light of what has been said, the poems in Palgrave's collection show, it is true, certain characteristics which grow out of their brevity. Admitting that even a small structure, like a sonnet, has its artistic alchemy, it naturally lacks the resources of poetic works of considerable compass. Why is it, for instance, that Desdemona's simple utterance, "If you say so, I hope you will not kill me," is supreme poetry? It is because these prosaic words are released from a situation which has been long preparing and which in itself is surcharged with imagination. Not being included in a plot, the lyric as defined by Palgrave must depend much upon its surface value—upon graceful conceits, poignant turns of thought, choice of detail, and the piquancy of its seeming artlessness. It obviously has not the artistic framework to support any large measure of

sentences which, save for the metre, are prose. So no one can conceive of a short poem including the following passage from "All's Well that Ends Well":

O! were that all. I think not on my father;
And these great tears grace his remembrance more
Than those I shed for him. What was he like?
I have forgot him: my imagination
Carries no favour in 't but Bertram's.
I am undone: there is no living, none,
If Bertram be away.

Yet in their proper place in the play these lines are effective. Not that the short lyric's appeal is always superficial. Though superficial in artistry, it has in general been occupied with ideas and feelings as old and deeply planted as life itself. Thus the simple line, "Gather ye rosebuds while ye may," symbolizes a fundamental tragedy. And only the slightest poetic heightening is absolutely required when the theme is a lyric standby, owing to the carrying power of the implicit sentiment.

But richness of surface, though usually an essential of the short poem, is not a safe distinction. Poets like Shelley would never have been satisfied, even when writing drama, with anything less than a succession of individually glowing lines; and Milton and Shakespeare, while not given to Shelley's excess of fancy, resorted to figures in many instances where another might have used plain, dignified language, trusting to the poetic structure to carry it. Shakespeare has, indeed, many passages in his plays which bear a striking resemblance to poems generally accepted as lyric. Take Macbeth's lament, previously referred to:

She should have died hereafter;
There would have been time for such a word.
To-morrow, and to-morrow, and to-morrow,
Creeps in this petty pace from day to day
To the last syllable of recorded time,
And all our yesterdays have lighted fools
The way to dusty death. Out, out, brief candle!
Life's but a walking shadow, a poor player
That struts and frets his hour upon the stage
And then is heard no more: it is a tale
Told by an idiot, full of sound and fury,
Signifying nothing.

Is this less "lyric" in effect than the following lines of similar content in Pindar's eighth Pythian Ode?

In a little moment groweth up the delight of men; yea and in like sort falleth it to the ground, when a doom adverse hath shaken it.

Things of a day—what are we, and what not? Man is as a dream of shadows.

Even if we were to go back to the test of subjective emotion, Macbeth's words would still qualify as lyric. The sharp situation in which they are uttered makes them appear to be entirely the expression of personal feeling.

It is quite possible that the lyric, except in Palgrave's practical use of the term, means little more than a poetic quality. It comes close to signifying what is conveyed by the vague phrase "pure poetry." That is to say, when poetry is manifestly functioning effectively—namely, distinguishing itself from prose—it is lyric. This condition is not prescribed necessarily by brevity, though it is obviously more difficult to sustain poetry at great length. On the other hand, a plot may at times furnish a lyric, or poetic, intensity hard to attain in a short poem. Shakespeare and Milton, superb poets that they were, contrived to be almost constantly lyric even while they were, respectively, dramatic and epic.

V.

There is lyric form—in Palgrave's sense of a relatively short poem—on the whole a natural distinction, since it describes a large body of poetic practice. And there is lyric sentiment, or coloring. The latter is so bound up with the very nature of poetry that to isolate it is impossible.

Some such discussion of the lyric as I have attempted here ought, if pursued further, to clarify opinions as to poetry in general. Too often the complaint has been made that Pope, for example, was not a true poet because he employed to so great an extent the language of reason. In the first place, it would be well for his critics to define this term "reason"; and, secondly, to consider passages of his, not as detached units, but as portions of large structures whose artistic effect Pope relied upon very much. An examination of this kind would greatly discredit the study of poetry *in vacuo* and the tendency to overprize, especially in long poems, a glut of romantic imagery.

NEWS FOR BIBLIOPHILES.

There will shortly appear at auction in New York the original Revolutionary journal of Cadwallader Colden, son of the famous Lieutenant-Governor of the Province of New York. It will be remembered that the Lieutenant-Governor was a violent Loyalist who adopted every means at his command to frustrate the growing tendency towards revolt by the American colonists, and in consequence was cordially hated and harshly treated by the Sons of Liberty. His third son, Cadwallader, inherited the estate of Coldengham, in Orange County, and resided there during the greater part of his life. His father was away from home most of the time on public business, and Cadwallader's education devolved on his mother. Her influence, together with his natural proclivities, inclined him to farming, but he also held the political views of his father. He occupied various minor public positions in the town and county and was considered so influential that when, at the outbreak of hostilities, he publicly announced that he was for the King and Parliament, the American leaders decided to keep a careful watch on his movements.

The journal begins with an account of his arrest, November 26, 1776, by order of the Committee for detecting Plots and Conspiracies, which sentenced him to be sent to Boston, there to remain under the direction of the Selectmen of that town. During his imprisonment he was subjected to many petty annoyances and some rough handling, of which he complained in his numerous petitions to the Committee and the State Convention. Receiving no reply to any of his petitions he quietly ignored the sentence of banishment and returned home. He was again arrested, on March 2, 1777, and examined by a Committee composed of Philip Livingston, John Ten Broeck, and Christopher Tappan, by whom he was paroled and ordered to remain in Kingston.

Here he wrote the following:

Private thoughts and resolutions on reading the Resolves of Convention, by which I find that the oath to the pretended Independent States is again to be tendered or on refusal am to have leave, or rather compelled to move with my family to New York. As I have ever looked upon these inhabitants of these American Collonies as enjoying the greatest share of blessings and liberty, both Civill and Religious of any people in the known world, and this I have heard confessed by the most judicious; notwithstanding of which, as long as I can remember I have known and heard of evil and discontented spirits among us, who by their writings and other practices, have been endeavoring to overturn this happy constitution both in Church and State, and to fill the minds of people with groundless jealousys and uneasyness. Therefore I concluded that our troubles and unhappy disputes with the Mother Country proceed more from the aspiring and ambitious views of some of her sons, together with a rooted inveterosy against the *Church*, than from a design in Great Britain to *inslave* a brave and free people, and that she yet means to *restore us to both Law and Liberty*, and therefore I have ever been opposed to such measures, as I thought were brought about with no other view but to advance this grand scheme of Independency or Republic government, which (I confirmed) however it may gratify the ambitious and malignant views of some men, will never leave the country at large so happy a people as they were, and might for ages have remained. And as for barely professing these sentiments, I have been abused, insulted, threatened and condemned to banishment, unless I would take the oath of allegiance to this imaginary state. This I have refused to do in modest, but as positive terms as I could, at the same time willing to give any security for my remaining neutral during the present disputes, yet still the oath is now urged upon me, tho' I have declared that should I be vile enough to take it, I should not think myself bound by it—and notwithstanding this declaration, I am yet now promised that if I will but take the oath, I shall remain with my family quiet and undisturbed. Temptations great indeed (but that I may not be led into Temptation is my daily prayer). Shall I now to avoid a little temporary uneasyness and inconveniency give the lye to all my former conduct and even appeal to the majesty of Heaven to confirm the lye—God forbid—Shok-

ing thought that one Christian can expect this from another!—No, the idea of being *torn* from my family, distressing as it was to me never suggested such a thought, and now that the temptation is less (by the punishment for non-compliance being softened) and that it has pleased God to put it into their hearts to let me remove with my family—Resolved, In the Name of God, let me go.

Inserted in the journal is a copy of his letter to the Convention refusing to take the oath and asking for a pass for himself and family to remove to New York. This was refused, and he was ordered to await the action of the Convention.

He was again arrested on May 1, and thrown into jail at Kingston, from whence he was sent aboard one of the sloops of the prison fleet on the Hudson River. Many pages are devoted to his sufferings and interesting experiences while a prisoner. They tell of starvation; of filthy conditions; of his companions, some of whom were taken from his side to be executed for treason; of the escape of prisoners from the sloop and his reasons for remaining behind; of his numerous letters and petitions to be released; and of his transfer on parole, September 1, to reside at the house of Capt. Vanduesen, at Hurley.

On the advance of the British troops above the forts of the Highlands all prisoners were sent away except Colden and another, who protested so strenuously that they were allowed to remain.

After the departure of the British, Colden was again placed on parole in the house of Jacobus Hardenberg in Hurley until November 5, 1777, when he was transferred to Nine Partners in Dutchess County, and after an appeal to Gov. Clinton was allowed to go home. In July, 1778, he was again summoned before the Commission for Detecting Plots and Conspiracies and asked to take the oath of allegiance to the State of New York, and on his refusal was ordered to remove with his family within the enemy's lines before August 3. He at once went to New York, but left his family in possession of his estate. On January 13 he wrote a memorial to Sir Henry Clinton, asking to be appointed to some office, and set forth his services and past sufferings. This memorial is virtually a summary of the contents of the journal, with one important addition:

That in April, 1777 an officer or messenger charged with dispatches from the Commander in Chief at Canada to Sir William Howe, passing through the country, and being pressed, fled to the house of your Memorialist for protection, which he not only received, but your Memorialist hired guides who conducted him safe, at the risque of their lives; and on suspicion of this your Memorialist was again committed to the common jail, but happily for him the Rebells could not prove the fact or he would undoubtedly suffered death.

The journal ends at this point, but it may be surmised that Colden never received preferment at the hands of Sir Henry Clinton, or his lands would have been confiscated two years later by the general confiscatory act.

The only portions of this journal which appear to have been published are some of the petitions to the Committee of Plots and Conspiracies which were printed in their reports; and as the authentic experience of a Tory farmer of New York who wished to remain neutral, its historical value can scarcely be overestimated. H.

Correspondence

THE ROMAN LIBERALS TO LINCOLN.

To the Editor of The Nation:

Sir: Among the echoes of Lincoln's assassination in Europe one that is little known in America is the action of the Liberals of Papal Rome on the receipt of the news of the Liberator's death. The war for emancipation in the United States had not been without its emotional effect on the struggling Italians, especially in Rome, where the future was not yet clear. Regretting that the Roman Unionists, "still severed from the bosom of the great Italian family," had not had "from the theocratic powers still in control, a worthy interpreter of their sorrow for the horrible crime," the Liberal Committee proceeded to independent and tangible action. The *Agger* of Servius Tullius had recently been excavated in Rome, and the name of the early Roman King was heralded as the champion of popular liberty against patrician oppression. A group of young Liberals, headed by Domenico Ricci, Alessandro Doria, and Pietro Jonni, secretly removed from the *Agger* a block of stone, on which was cut the following inscription in Latin: *The Citizens of Rome Dedicate to Abraham Lincoln President of the United States This Stone from the Agger of Servius Tullius That the Memory of These Champions of Liberty May Be Passed on United to Posterity. MDCCCLXV.* The memorial was delivered to Mr. Stielmann, American Consul at Leghorn. It was embarked, August 4, 1865, on the English steamer Uhla for the United States. The Uhla, however, was wrecked on the Bermudas in September of that year. Inquiries of the donors at Washington and with Mr. Stielmann received no reply. F. Gerardi, writing in *Fanfulla della Domenica*, February 25, 1912, shows that the stone was saved from the wreck and for some time lay on the beach in the Bermudas, whence ultimately it disappeared. So far as we know, no recognition of this courtesy was ever received from the United States. Arthur Livingston.

Columbia University, February 27.

FAGIN'S SCHOOL.

To the Editor of The Nation:

Sir: The school for pickpockets which Dickens describes in "Oliver Twist" has always had a romantic appeal. The gutter-snipe apprenticed to the thief in order to learn the trade of scientific robbery from an "efficiency expert" is a peculiarly fascinating subject. It is not surprising, therefore, now and then, to find this legend of the thieves' school told as sober fact in memoirs. It makes a traveller's tale almost as irresistible as the miracles of the Indian jugglers.

"The Reminiscences of Michael Kelly," singer at the Theatre-Royal, Drury Lane, published in 1826, contains an account of such a school at Naples. Kelly was arrested in that city one evening in the year 1799 and compelled to pass a night in prison, for striking a Neapolitan in a quarrel at the theatre. Among his fellow-prisoners was "a captain of Calabrian banditti" who had been, in earlier days, a "hero of the pickpockets on the Largo di Castello." During this "jolly night" the ex-pickpocket and professed bandit told "many of his exploits, and something of his education. When a boy he had been placed at a school, where his trade was regularly taught. A large figure, made of straw, was placed in the middle of a room, about which [the figure] were arranged watches, trinkets, pocket-handkerchiefs, &c. The master of the school (and a very great master of arts he was) stood by and gave instructions. No one was allowed to be an adept, or [to be] fit to take the field, till he could rob the figure without being observed or deranging a single straw." The parallel with Fagin's methods is certainly striking. "Oliver Twist" did not appear in *Bentley's Miscellany* until 1837 (Jan., 1837-Mar., 1839), the same year that Dickens arranged to write his "Memoirs of Grimaldi." In reading theatrical anecdotes and reminiscences for the latter purpose, Dickens may have obtained a hint for Fagin's school from Michael Kelly. J. R. Crawford.

Yale University, February 28.

THE PEOPLE'S WANTS.

To the Editor of The Nation:

Sir: Perhaps the strongest defence ever made in behalf of sensational journalism is that it gives the people what they want. Of course, as I said in a letter to the *Nation* of March 18, 1913, the same plea is made with equal justice by the saloonkeeper. But, Mr. Editor, I believe that if the people have a hearing, collectively or individually, they will not declare in favor of the ordinary newspaper, to say nothing of the particularly "yellow sheet."

Some time ago I asked twenty-five college presidents to point out three defects of the American newspaper. From the score of replies received, only one offered voluntarily a favorable comment following the adverse criticism. I reproduce three of these letters:

President George C. Chase, Bates College, Me.:

First, the space, prominence, and detail with which newspapers present accounts of crimes, family difficulties, suits for divorce, and kindred matters connected with the lower qualities of human nature and appealing to instincts which should be regulated and held in check rather than stimulated. Under this head might be included the minute and sometimes coarse descriptions of boxing matches and similar exhibitions.

Second, the violation of the sacredness of personal and of family life by bringing to the public incidents and peculiarities that can serve no good purpose, but that cultivate in newspaper readers an impertinence and often a morbid curiosity in regard to persons and experiences in which the public can have no worthy interest.

Third, the space given to unimportant things, such as the dress and bearings of persons taking part in social functions.

President Frank L. McVey, the University of North Dakota:

The chief fault in American newspapers is their failure to appreciate proportion in the presentation of news. This is true not only in the assignment of space, but in the emphasis placed upon minor events and facts.

A second fault is their over-use of headlines and the presentation of startling and sensational matter really detrimental to public morals.

Third, a lack of sincerity, and the evident desire to make a story for the story's sake rather than for the sake of news.

President Benjamin Ide Wheeler, the University of California:

The first censurable feature in American newspapers, which I should like to mention, is the feeling apparently held by the newspapers that each of them must take some stand on some current question. I think it would be better if they avoided taking a position, particularly on political questions. They would be less likely to be tempted into "coloring" the news.

The second bad fault lies in the desire of every paper to make "a story" out of a plain occurrence of fact. We do not want the news written up; we want the news. Many newspapers chop up the good materials which are given them and then hang them up decoratively on a presentative slab. We want more complete and unadulterated documents.

Again, it is a vicious habit of many newspapers to lead you down to the bottom of a column on the first page and then suddenly announce that the narrative is continued on page 4, column 7. This is only one of a number of false principles now being applied to the formal makeup of newspapers. I wish newspapers would spare us the horror of illustration and colored ink.

But these opinions, which are very typical of the views expressed by college presidents throughout the United States, represent only a small class of the people. What about other professions, or even the "masses"? In answer to one of my letters, a class of more than forty students in journalism in the University of Oregon canvassed about all the trades and professions and representative citizens in private life in the city of Eugene. Few persons showed any reluctance to talk, and in only one instance was there a wholly favorable view expressed. I reproduce verbatim an account of a single interview:

The greatest defect of our American newspapers is sensationalism [said the president of the First National Bank]. And by sensationalism I mean the printing of rot and untruth and that which maliciously stirs up the people. Most of our papers give only half of the story. They want to give the people the wrong impression. Take, for instance, the case of banks: in New York we read that a certain bank was making hundreds of thousands of dollars interest on a small sum of money which represented their own capital. The newspapers printed this to stir up antagonism, but they did not consider all the rest of the capital which this bank had out, which was in excess of their capital, and would have thus greatly lowered the per cent. of their interest.

The second defect the banker believes to be the printing of stuff that is not news:

By news I mean that which is of interest and value to all the people. A nasty little scandal in Eugene is not news to people in other cities, and yet such an occurrence would be printed in many of the big Eastern papers.

Again, in a Middle Western city I requested a class in journalism to make a similar canvass. Lawyers, bankers, teachers, physicians, and ladies and gentlemen in private life were interviewed, and the results were strikingly similar to those given in the two cases above. Finally, reports obtained in a slightly different manner from a city in a Southeastern State are closely in keeping with the opinions I have reproduced.

Thus it would seem that the people are not getting what they desire in this case any more than they were getting what they desired when they bought canned goods and patent medicines previous to June 30, 1906. An indictment of the ordinary American newspapers might read:

They have appropriated and distorted the methods of fiction and advertise the result for fact. They are, therefore, properly classed with adulterated food products, patent medicines, and with all frauds practiced upon the public for the sake of profit. They are degrading to the taste and morals of the public, especially our youth. Surely, that which goes into one's head deserves the same scrutiny as those products which enter the stomach.

CHAS. V. STANSELL.

Ottawa, Kan., February 25.

HARDY'S "TRAGIC POSSIBILITIES."

TO THE EDITOR OF THE NATION:

SIR: Writing in the *Nation* of February 12, under the heading "Tragic Possibilities," Mr. L. A. Noble has asked: "In the terrestrial scheme developed by the novels of Hardy's maturity is not the influence of woman synonymous with that of nature?" I, for one, cannot think so.

The tragic possibilities of which Hardy makes use lie deeper. To discern them, we must first recognize that in the novels of his maturity he portrayed woman with scientific theories of determinism, environment, heredity, and the survival of the fit, dominant in his mind. Secondly, we must recognize that nature is for him not the "cold, passionless, unloving mother to whom the sorrows, fears, and aspirations of man are indifferent because unknown" — as Watts-Dunton says in describing the scientific feeling; nor is she the *Natura Benigna* of Wordsworth's holy plan; but the *Natura Maligna* of the pessimist. When we recognize these two facts, we must discern that, creating characters with the aid of scientific data, and then betraying them to hostile circumstance, Hardy reveals the malignancy of nature from the point of view of the unfit who do not survive. In the terrestrial scheme which this original point of view develops lie the tragic possibilities.

HARRY W. HASTINGS.

Hanover, N. H., February 27.

THE FOOL'S MATE.

TO THE EDITOR OF THE NATION:

SIR: It seems ungrateful to pick at so generous a review as that in the current number of the *Nation* of Murray's "History of Chess," yet one may legitimately criticise the remark: "Enabled the players to bring a strong attack against their adversaries in the first four or five moves, rendering, indeed, a 'fool's mate' possible within the first four." Is not the "fool's mate" the one achieved in two moves, whereas the ordinary four-move mate is the "scholar's mate"?

O. R. HOWARD THOMSON.

Williamsport, Pa., February 15.

[Your reviewer can only state that for the past fifty years he has known the four-move mate in question by the title of "Fool's Mate." The two-move mate to which your correspondent doubtless refers (P to KB 3—P to K 3; P to KKt 4—Q to KR 5) implies such criminal complicity on the part of White that it certainly deserves a more dyslogistic name than folly. Whether the crime in question should be entitled Suicide or Treason (to our Sovereign Lady Queen Caissa) is a matter which I did not know had been determined, certainly not by any of the "authorities," who naturally do not discuss so elementary a blunder. However, in the matter of calling names, it seems to be a question of depositing your coin and selecting your epithet. Your reviewer, for this occasion only, prefers folly to scholarship.—THE REVIEWER.]

A BOOK OF SEA STORIES.

TO THE EDITOR OF THE NATION:

SIR: Some years ago, when I was in search of information regarding early editions of Carlyle's "Heroes," I sent a brief request to readers of the *Nation* for help. Their response was immediate and most helpful. No unknown scholar in a corner could ever have received more generous aid. Encouraged by that experience, I venture to appeal to them again.

When I was a boy in Ontario, many years ago, I borrowed from an old American gentleman a book of sea stories, shipwrecks principally. It was an American book, I feel certain, but it contained an account of the loss of H. B. M. Atalanta, sloop-of-war, at the mouth of Halifax harbor in 1813. The narrative (there were many "narratives") contained the letter of the first lieutenant to his mother, describing the wreck. The book can be identified by a ringing ballad, which I have never seen since. It begins:

A jolly comrade in the port, a fearless mate at sea,
When I forget thee, to my hand false may the cutlass be!
And may my gallant battle flag be stricken down in shame,
If, when the social can goes round, I fail to pledge thy name!
Up! up! my lads, his memory! We'll give it with a cheer,
Ned Bolton the commander of the Black Snake privateer.

The verses go on to tell how Bolton fought the Spaniard, how the Black Snake grounded on a "cutting coral reef" near the hostile coast:

The Spaniards shouted from the beach, but dared not venture near.
Too well they knew the mettle of the daring privateer.

When she gets off the reef, she is in a sinking condition; she has no boats, and her commander "carries on" and sails her till she goes down all standing, with her crew carousing and cheering on the deck.

I do not recall the title of the book, and inquiries at various centres have been fruitless. I should be grateful for any information on the subject.

ARCHIBALD MACMECHAN.

Dalhousie University, Halifax, N. S., February 23.

EDEN PHILLPOTTS'S SCHOOLBOY STORIES.

TO THE EDITOR OF THE NATION:

SIR: Your reviewer of Eden Phillpotts's boy chronicle, "From the Angle of Seventeen" (*Nation*, January 29), is mistaken in saying: "It is so unlike anything else by Mr. Phillpotts that one can hardly believe it is his." It was in 1900 that Corkey Minimus made his first appearance, as one of the several artless heroes in Mr. Phillpotts's delightful sketches of British school life, "The Human Boy" (published by Harpers), and there must be many readers who still remember that engaging youth's desperate battle with Bray, the cock of the Lower School, and the fateful "match with neckties" that preceded it.

This book of schoolboy stories is so delicious in its humor, its vitality, and its rendition of genuine boy atmosphere, that it has always seemed to me to rank closely with "Stalky & Co." The chronicler of "From the Angle of Seventeen" must be Corkey Minimus, for it will be remembered that in 1900 Corkey Major was "a mere learning machine in the Sixth"; and Corkey Minor was the lucky chap who was saved fagging for exams. by something happening to his right lung, so he had to go on a fine trip to Australia in a sailing ship. Corkey Minimus was ten at that time, and in the Lower Fourth. HELEN E. HAINES.

Pasadena, Cal., February 21.

Literature

COUNT PASOLINI'S RAVENNA.

Ravenna e le sue grandi memorie. By Pier Pasolini. Rome: Loescher.

Ravenna, unlike Rome, Florence, Venice, and many other Italian cities, has not a complete history such as lends itself to orthodox literary treatment; were the whole of its story set forth from remote origins down to the present day, much of it would prove of very little interest, and of purely local importance. But it has had its moments of great celebrity and glory, when for a short time it became a centre of world interests and its name was in all men's mouths. Count Pasolini has set about writing the history of his native town in the only way it should be written, for he has not attempted a consecutive narrative, but has chosen out the really great periods and episodes and devoted his whole attention to them, discarding the dreary records of colorless obscurity under Byzantine officials or Papal legates and of civil strife under native rulers.

The stirring events which from time to time made Ravenna famous, and the men of universal celebrity who were associated with the city, are dealt with in the author's pleasant original style, coupled with profound knowledge and laborious research. The aspect of Ravenna as we see it to-day offers close parallel to the character of its history, for the dull brick walls and obscure streets are lit up here and there by gorgeous visions of gold mosaics and splendid palaces. Count Pasolini lets us see the whole brilliant pageant of Ravenna's memories; emperors, generals, Byzantine exarchs, pontiffs, and poets pass through the city amid a blaze of color.

Ravenna first springs into fame in the year 50 B. C., when Julius Cæsar occupied it with his legions while awaiting the answer of the Senate to his ultimatum. He had declared himself ready to lay down his arms if Pompey did the same; otherwise he should have to defend his own rights. Having received no satisfactory reply, he set forth from Ravenna, crossed the fatal Rubicon, and moved towards Rome to found the Empire. "Five hundred years more, and the Roman Empire, after having handed over to the Christian Church the idealism and organization of a universal jurisdiction, and after having exercised over the world an irresistible fascination and an influence which survives to this day, was to come to end at Ravenna."

Galla Placidia is the next great figure appearing in the city's history, the Empress who, in the dark days of triumphant barbarism, impersonated the Roman Empire, the Roman idea, the Roman Church. Her mausoleum is one of the most splendid examples of mosaic decoration, or rather we should say of mosaic architecture, in existence, and her memory still lives in Ravenna as that of the good queen who protected the poor and insured them their rights. Romulus Augustulus had his capital at Ravenna until, in 476, after a skirmish in the Pineta, where his few troops were defeated by Odovakar, king of the Heruli, he was deposed, and the Roman Empire fell. Under Theodoric Ravenna became the centre of a great and splendid experiment—the fusion of Roman and Goth into one powerful nation and the establishment of toleration as the basis for ecclesiastical policy. For Theodoric, although himself a Goth, was so thoroughly imbued with the Roman idea that he wished to continue the traditions of Rome amid his own Gothic people, while he believed that Arian and Catholic could dwell peacefully side by side. For many years this double plan succeeded admirably, until the uncompromising bigotry of the Eastern Emperor Justin and his persecution of the Arians aroused Theodoric's Gothic and Arian prejudices and drove him in his later years to cruel persecutions of the Catholics.

Ravenna springs into fame once more during the reign of Justinian and Theodora. Belisarius occupied Ravenna for Justinian in 540, and for 212 years the city remained under Byzantine rule as represented by the exarchs.

During a period of nearly eight centuries the history of Ravenna was of slight interest, until its connection with the great name of Dante attracted the attention of the world. It was at Ravenna that Dante spent the last years of his troubled existence, and there, enjoying the hospitality of the house of Da Polenta, he finished the "Divine Comedy." Count Pasolini sheds much light on the poet's last years, and gives an account of his diplomatic mission to Venice, where by his political tact he saved his host, the lord of Ravenna, from the ire and cupidity of the *Serenissima.*

After the death of Dante, Ravenna again lapses into obscurity, until the battle of Ravenna in 1511. To this event the author devotes a long chapter, for he deems it peculiarly important as being the first battle of the modern age, for it was the first to be decided by the use of artillery. In 1797 Ravenna is again talked of, owing to the remarkable personality of its archbishop, Monsignor Codrouchi, whose friendship with Napoleon exercised some influence on the Emperor's ecclesiastical policy. Twenty years later we find Byron at Ravenna, which became the scene of his love episode with the beautiful Contessa Guiccioli. But this was far more than a *grande passion*, for the fair Italian inspired the English poet with a deep love for her country and a keen desire for its resurrection. The long last chapter of the book tells of Garibaldi's connection with Ravenna. The subject is to some extent familiar to English readers through the stirring pages of Mr. Trevelyan's "Garibaldi's Defence of the Roman Republic," but the present work contains much fresh material collected from unpublished sources, and the recollections of the few living witnesses. The story of the hero's flight through forest, canebrakes, and marshland with the Austrian soldiers and Pontifical gendarmes ever at his heels, his movements hampered by the necessity of caring for his dying wife Anita, is set forth in eloquent language by the author, who feels all the emotion of the episode and succeeds in imparting it to his readers. "The tragedy of Anita, which takes place between Rome and Ravenna, the two classical and Imperial cities," as Carducci wrote; the tragedy of the faithful and fearless wife who, after having risked and suffered so much, succumbs exhausted in the arms of her husband, the hero,

"pursued to death throughout the land,"

is perhaps the most beautiful, surely the purest and most patriotic, of the many tragedies which for nineteen centuries love and warfare have shown us:

> Su la marina dove il Po discende
> Per aver, pace co' seguaci sui.

CURRENT FICTION.

Horace Blake. By Mrs. Wilfrid Ward. New York: G. P. Putnam's Sons.

It has become rather fashionable to begin the novel, instead of ending it, with the hero's marriage; the next logical step is to begin with his death. Something like this Mrs. Ward has done. The first of the three parts of her book tells the story of Horace Blake's last days and death. Blake is a brilliant dramatist, in his philosophy cruelly cynical, in his life utterly corrupt. His wife is a strong woman, brought up in an atmosphere of skepticism, who has forgiven and shielded Blake in her ambition for his fame. Attacked by a baffling and mortal disease, Blake goes to Brittany for rest. He takes with him not his wife, who wearies him in his weakness, but his daughter, who has been brought up by Mrs. Blake's sister in entire ignorance of her father's character. Before his death in Brittany Blake successfully exerts himself to win his daughter's love, and becomes a convert to the faith of his boyhood.

The story proper is concerned with his influence after his death upon three persons: his wife, his daughter, and Stephen Tempest, who has visited him in Brittany, has fallen in love with his daughter, and has been selected by his wife as his biographer. Each is ignorant of essential parts of Blake's life. The daughter, Trix, knows only of his last days. Mrs. Blake will hear nothing of that period, regarding Blake's conversion as a cowardly surrender to superstition. Tempest has known Blake only after his conversion. The fuller knowledge of Blake which comes to them all puts Tempest in an intolerable position, shakes to the foundations the poise and philosophy of Mrs. Blake, and nearly crushes Trix. All three characters are analyzed with a good deal of subtlety. But the real achievement of the book is its successful portrayal of a man of genius.

The Light of Western Stars. By Zane Grey. New York: Harper & Bros.

In "Desert Gold" Mr. Grey gave us a stirring melodrama, written against a background of the plains and desert mountains of the Southwest. "The Light of Western Stars" has a similar setting, described with the same imaginative sweep and vigor. But the story itself is far inferior to "Desert Gold." The author has fallen back upon conventional material—the rich and beautiful Eastern girl transplanted to the West, and the English lord among cowboys. He has taken over his opening situation from Charles Alden Seltzer's "The Trail to Yesterday." In both books the Eastern heroine, arriving alone at night, comes into the power of a more or less drunken cowboy, who forces her to go through the form of a marriage with him by threatening to shoot the priest or minister. In both cases the cowboy turns out to be an admirable man whom the heroine is ultimately glad to claim as a husband. The original suggestion for this situation may perhaps have come from Moody's "The Great Divide." If we add to the conventional elements, borrowings, and repetitions certain up-to-date properties, such as a high-powered automobile and a number of Mexican rebels of the most villanous type, we have summed up the book pretty well.

The Butterfly. By Henry Kitchell Webster. New York: D. Appleton & Co.

If there are any dull pages in this frolicsome tale, the reviewer did not find them. It is the sort of story that seems to have written itself, for the sheer pleasure of it. Brinsley Butler, the narrator and hero, is a stage-struck but sensible professor of drama in a State university not far from Chicago. When Elaine Arthur, the famous dancer, comes to town, Butler calls upon her fiancé, a classmate of his, in the hope of being invited to meet her. "There is," he begins, "I think you will admit, a certain piquancy about getting kissed by mistake." He never finds out who kissed him, but from the time when, waiting in his classmate's room at the hotel, he has this experience, adventures and mysteries crowd thick upon him. He is suspected of complicity in a murder; he is involved in a scandal and quasi-elopement; he loses his university position and recovers it through the wiles of the delightfully impossible Elaine. With each succeeding situation the mystery surrounding Elaine grows deeper. All questions are satisfactorily answered; but if the reader can guess the solution, he ought to become a detective. The book is a most entertaining mixture of mystery, fantasy, and farce.

Liliecrona's Home. By Selma Lagerlöf. Translated from the Swedish by Anna Barwell. New York: E. P. Dutton & Co.

This is a story of more general appeal than anything else by this writer, and her accession to the Nobel honor roll will bring new readers to the translation. It is an idyll full of delicate feeling and fancy, and not without a touch of northern magic. The beloved home of Maia Lisa is on enchanted ground; we are not unduly surprised when her wicked stepmother turns out to be an evil water-sprite, and vanishes in the ghostly depths of her lost Black Lake. Before that happens, much suffering comes to Maia Lisa. The good old pastor, her father, is under the spell of the malignant spirit who has usurped his home. Not until his daughter's good health, good name, and happiness seem to have been destroyed beyond hope, are his eyes opened.

Maia Lisa is sweet and genuine, the eternal maiden with a personality as real as it is fragile. Liliecrona, her lover, is a less credible person, a ladies' hero, the dark, mysterious male of fiction. He is made a little ridiculous by the inadequacy of the past crime over which he wills to brood. However, Maia Lisa does not see anything absurd in him, his past, or his fiddle, and that is the main thing. Enough for us that in the end she succeeds in winning him out of his dark mood to the heaven of her love, which is fated to be "Liliecrona's home."

THE ROMANCE OF THE MIDDLE AGES.

Mont-Saint-Michel and Chartres. By Henry Adams. With an Introduction by Ralph Adams Cram. Illustrated. Boston: Houghton Mifflin Co. $6.

Of this unique and fascinating volume it would be difficult to give an adequate idea without quotations more extensive than the limits of this review will permit. The circumstances of its publication were sufficiently unusual to arouse high expectations, wide curiosity, or skeptical doubts, according to one's temperament. Privately printed by Mr. Adams for distribution among his personal friends, it fell into the hands of Mr. Ralph Adams Cram, the well-known architect, who was so profoundly impressed by its literary charm and its historical as well as artistic importance that he urged the directors of the American Institute of Architects to procure its publication under their *imprimatur.* It is a testimony at once to their wise judgment and to the merits of Mr. Adams's work that they adopted the suggestion; and the compliment thus paid to Mr. Adams is the more signal in the fact that the Institute rarely engages in the publication of extra-official documents, and that it insisted on this undertaking in the face of Mr. Adams's too modest reluctance. The reader or the reviewer may find himself hesitating to follow to the full extent of the superlatives in Mr. Cram's Introduction, but he will certainly understand and pardon its enthusiastic tone, if he possess a spark of responsiveness to Mr. Adams's persuasive humor, or of appreciation for literary charm, or of interest in the history, art, literature, and spirit of the Middle Ages.

The title of the book and its publica-

tion by the Institute of Architects suggest an architectural treatise; but only 197 of its 401 pages are concerned with architecture; the remainder are devoted to the poetry and learning of the Middle Ages. The real subject of the two groups of essays which make up its sixteen chapters is the mediæval spirit in its threefold manifestations in architecture, poetry, and philosophy—chiefly the French mediæval spirit—and the dominant and emphatic note or motive of these studies, though by no means their exclusive note, is the adoration of womanhood, as expressed in the worship of the Virgin, in the poetry of the trouvères, in the history of Abélard and Héloïse, in the "Miracles of Notre Dame," in the plan, details, sculptures, and windows of the Cathedral of Chartres. The author disarms criticism at the outset by his disclaimers of architectural or historical erudition, and by his declared purpose to write not an historical treatise for scholars, but an exposition of French mediæval thought and feeling for "tourists," and these his personal and intimate friends, his collective "niece" as he whimsically explains in his preface. In spite of his disclaimers, the reader, thus hospitably received into the group whom Mr. Adams as Uncle accompanies to the Mont Saint Michel, thence through Normandy to Chartres, and after that through the pages of various poets and scholars, realizes that his guide is a scholar, a profound student of art, literature, and life, and an enthusiast, gifted with a genial and subtle humor that enlivens and illumines every subject he teuches. The great merit of the book, however, lies less in its scholarship than in its sympathetic effort to penetrate to the core and kernel of mediæval thought and feeling. One may not agree with the claim for the south tower of Chartres (a claim which the author, indeed, does not specifically endorse, but evidently approves) that "it is the most perfect piece of architecture in the world." The architectural student will certainly wish to correct the statement on page 67 that the dome of St. Peter's at Rome was building between 1507 and 1517, at which time it had not even been designed; and when the author contends, on page 112, that the architect of Chartres "might at least have brought the vaulting of his two new bays, in the nave, down to the ground," the reader detects one of the very few loose and ambiguous statements in the volume. In spite of these, and possibly a very few other minor slips or doubtful assertions, Mr. Adams's architectural analyses and criticisms are accurate and illuminating. In discussing Chartres he places himself in the twelfth century, assumes its point of view as he feels it, gravely credits the Virgin herself with a personal share in its design, and pictures this superb cathedral as her special shrine. "You may," he says, "if you really have no imagination whatever, reject the idea that the Virgin herself made the plan; the feebleness of our fancy is now congenital, organic, beyond stimulant or strychnine, and we shrink like sensitive plants from the touch of a vision or spirit; but at least one can still sometimes feel a woman's taste, and in the apse of Chartres one feels nothing else."

This quotation must suffice for a sample of the flavor of the book. The discussion of the windows of Chartres is delightful and valuable, as is the description of the cathedral itself, and the account of the Mont Saint Michel. The second half of the book is devoted to chapters on The Court of the Queen of Heaven, The Three Queens, Nicolette and Marion, Les Miracles de Notre Dame, Abélard, The Mystics, and Saint Thomas Aquinas. The same genial humor, the same qualities of style, the same point of view, pervade these chapters that characterize the studies of architecture. There are copious quotations of the original texts, with admirable translations set over against each. This review must close without an attempt at criticism of these chapters, leaving that task to scholars specially qualified to pick flaws and correct errors in this field of erudition.

The book is one to be read aloud, or conned by the winter fireside, and he must be a hard-headed and skeptical reader who can wholly resist the insidious lure by which it seeks to draw him out of his twentieth-century sophistication and materialism into the dreams and visions of a by-gone age; into a sympathetic understanding of what we call its superstitions and of the marvellous works which were their fruit.

Nietzsche, sein Leben und seine Werke. By Richard M. Meyer. Munich: C. H. Beck.

The Philosophy of Nietzsche. By Georges Chatterton-Hill. New York: D. Appleton & Co.

The Philosophy of Friedrich Nietzsche. By Henry L. Mencken. Boston: Luce & Co. $1.50 net.

These three books, which rank in importance in the order above mentioned, have this common feature among others, that they are all products of a sympathetic understanding of Nietzsche's main doctrines. Each is a defensive exposition. Mr. Mencken, in his jauntily written book, which now appears in a third and enlarged edition, goes still further. Adopting all of Nietzsche's philosophy, except the doctrine of Eternal Recurrence, he is chiefly interested in applying it to problems of the present day.

Mr. Chatterton-Hill has produced a thoughtful if not a profound book, and has succeeded in treating his subject much more objectively than Mr. Mencken. His chapter entitled Theory of Knowledge is a valuable discussion of a point which recent criticism is coming more and more to emphasize, namely, Nietzsche's view of the relativity of truth. The book as a whole seems rather loosely constructed and contains some needless repetitions. There are at least two errors of fact: the date of Nietzsche's death is given as 1899 instead of 1900 (p. 55), and La Rochefoucauld is assigned to the eighteenth instead of the seventeenth century (p. 99).

Professor Meyer, of the University of Berlin, is well known as the author of the standard "Geschichte der deutschen Literatur des neunzehnten Jahrhunderts." He brings to the study of Nietzsche vast general reading, a detailed knowledge of the particular questions at issue, and an almost boundless enthusiasm, which, however, does not wholly blind his critical judgment. His volume comprises nearly 700 pages, exclusive of bibliography and index. The preliminary chapters, dealing with the "fulness of time," the preparation for Nietzsche's appearance, contain some of the most stimulating matter of the whole book. Especially the chapter on Verwandte Naturen suggests many ingenious parallels and comparisons, with perhaps too great leaning on the philosophic and literary side, and not enough regard for scientific movements. Darwin, for instance, who bulks so large in Mr. Mencken's book, receives but scant consideration. About 75 pages only are devoted to biography. The point of greatest interest here is the author's guarded reference to Nietzsche's insanity. He adopts the now generally accepted theory of paresis as against paranoia, though he does not think that the paralysis necessarily went back to venereal infection. Then follows the main section of the book, a discussion of the various writings of Nietzsche in their chronological order.

Professor Meyer is stanch in the opinion that Nietzsche had a coherent philosophy, which, however, was developed vertically rather than horizontally. The vagueness inevitably attendant upon such an unsystematic presentation is the cause of the doubt which still exists, for example, as to the meaning of the term Uebermensch. Was the Uebermensch to be an individual or an ideal for the élite of the race? Those who seek here a definite answer to this question will not be greatly enlightened, for Professor Meyer is almost as wavering and uncertain as Nietzsche himself. His final opinion, however, appears to be that Nietzsche inclined more and more to the collectivistic notion.

The handling of the doctrine of Eternal Recurrence is more satisfactory. It is well known that this came to be

Nietzsche's favorite dogma, and that he embraced it with almost mystic ardor. It added, as Professor Meyer shrewdly points out, just that poetic, irrational touch necessary to convert his philosophy into a religion. The current objection that this doctrine destroys the value of the Uebermensch theory, Professor Meyer is able to refute with convincing neatness. For Nietzsche, he argues, the *development* of the will to power was more than power itself. Becoming, not being, was his highest ideal. Hence it follows that in his eyes even "progress in a circle" was infinitely preferable to any static condition, even though it were upon the very heights of existence. He also conceived of truth itself in terms of becoming rather than of being. This biological view of truth gives him, in his critic's opinion, an assured position in the history of philosophy, making him in a measure a forerunner of James, Poincaré, M. Bergson, and—*longo intervallo* —Mr. H. G. Wells.

Professor Meyer touches lightly on what is crass and offensive in Nietzsche —his exaggerations and perversions, his intolerance and his intemperate abusiveness. He describes him in terms of hyperbolic praise as "der positivste Denker der Neuzeit" and "der gedankenreichste Schriftsteller, der je gelebt hat," and in the concluding paragraph of the book he adds the amazing statement: "Wir haben die Erneuerung des Reichs erlebt, und wunderbare Grosstaten des erfindenden Menschengeistes, und Friedrich Nietzsche." It appears that to Professor Meyer, although he eschews the name of disciple, Nietzsche has been a moral, intellectual, and artistic tonic.

The appearance of Professor Meyer's book at this late date coincides curiously enough with a marked decline of Nietzsche's influence in Germany, and probably also in the rest of Continental Europe. It is very doubtful whether the book, authoritative as it is in many respects, will do much towards stemming this receding tide. Most people will probably continue to find in Goethe the best of Nietzsche without the latter's aberrations. It should not be forgotten that the term Uebermensch was first used in "Faust," and that the concept itself is there almost full blown. If the gospel of effort, of the unfolding of the will to power, is to be preached, nowhere in Nietzsche has it been better done than in the lines:

> Wer immer strebend sich bemüht,
> Den können wir erlösen,

or in those other familiar verses from "Faust," which Mr. Chatterton-Hill is so fond of quoting:

> Nur der verdient sich Freiheit wie das Leben,
> Der täglich sie erobern muss.

We have also from the aged Goethe this brief formulation of the dynamic conception of truth, with its almost startling anticipation of Pragmatism: "Ich habe bemerkt, dass ich *den* Gedanken für wahr halte, der für mich fruchtbar ist, sich an mein übriges Denken anschliesst, und zugleich mich fördert."

One would be willing to spare a hundred pages or so of Professor Meyer's somewhat diffuse book in exchange for a chapter on Nietzsche's literary influence. But possibly the subject is too large for a mere addendum to the present volume. At any rate, here is a task which is still to be done, and which, competently accomplished, would furnish an illuminating contribution to the criticism of contemporary life and letters.

What Men Live By: Work, Play, Love, Worship. By Richard C. Cabot, M.D. Boston: Houghton Mifflin Co. $1 net.

There is little in the style of this New Englander to suggest his Transcendental forebears, yet the spirit of Transcendentalism broods upon his pages. Individuality, fidelity to self, is the cornerstone of his working philosophy, and it must be a creative fidelity, conscious of the mystical or symbolic relations of things. The substance of the book is expressed most compactly in its closing sentences:

> Work falls flat, play and art become sterile, love and worship become conventional, unless there is originality, personal creation in each. I must do my job in my own way, find an individual outlet in the symbols of art or game, and an individual answer in love and prayer, if I am to feel at home in the world. Yet this individual note is no cry in the void because it claims brotherhood with all future and distant notes. . . . By originality and symbolism, then, the home of our spirit is consecrated, but still more clearly, perhaps, by our free and final allegiance. Our will is needed to invest the world with its own divinity. We hoist a flag and take possession once for all with a sort of "cosmic patriotism," grateful for our escape from chaos and the dark.

What means have we of escape from the confusion and wear-and-tear of modern life? This would be one way of putting the question to which Dr. Cabot here suggests an answer. He has approached it by the direct road of his own work as a physician. The problems of the care of the tuberculous, the neurasthenic, the unmarried mother, suggested the broader problem. So by degrees it came to him that the only solution was to get back to life, to "real life," a life made up of all the elements which contribute to health of body and spirit. That these elements are four—work, play, love, and worship—he did not fancy to be a discovery of his own, but a truth of which we are all obscurely conscious: "We know where we are travelling, but we need a time-table to remind us of details."

The interplay of these four elements is here presented as "the end of life and the sole worthy end." Governments, systems of education, the cure of soul or of body, are of value as they are directed, consciously or unconsciously, towards such interplay. "This is our justification for the enormous machinery and the costly ugliness of civilization. This is the essential of that 'more abundant life' which many prophets extol without defining." The writer is specific in his protest against attempts to merge or identify these forms of real life. Each of them has its own value and dignity as a means of escape. Work is not play, or love worship, but none is of the utmost efficacy without the others. Work goes a long way by itself with active, sanguine men, but the remedy for sad or anxious ones is more likely to be found elsewhere. In his chapters on the nature and function of work (which he admits is his own favorite remedy), Dr. Cabot is especially vigorous. He distinguishes work from play on the one hand and drudgery on the other; has a word to say for "commercialism"; and sharply challenges the familiar contrast between work of the mind and of the body: "Let us abolish terms like 'physical culture' or 'mental training,'" he cries. "To be concerned with either one's mind or one's body is a morbid practice. One should be occupied with tasks that make us forget both mind and body in the higher union of both." Equally energetic is his denunciation, in the chapter on Play and Its Enemies, of seriousness, once so highly accredited in New England. Seriousness, he says, is one of the many things worth having in the background —and keeping there. Absolute seriousness is "a residual state into which one relapses when one has nothing better to do or say." We are serious when dull or relaxed, just before sleep or just after waking. Playfulness, on the contrary, is a sign of vitality and health, the instinct of re-creation. So far the reader will have no difficulty in accompanying his guide. When, however, after laying down the principle that art and play fulfil the same function, he proceeds to identify them, one's bump of caution begins to throb. Baseball is an art, and is to be grouped with dancing and drama as among the three popular arts of America. The social graces are "minor arts." Humor, speaking, threading one's way deftly in a crowded street, anticipating another's wish, smiling—these are "minor arts." Or "sciences," if we are to use words so loosely!

The chapter Trance in Play begins by describing ecstasy as "the goal and climax to which musician, painter, dancer, poet are leading us." It is a state good in itself, but "if we cling to that climax and try to prolong it, we

may easily slide over into a sort of Nirvana where life is quenched." This is the danger to which the æsthete succumbs, as also practitioners of "swinging, rocking, chewing gum, and any formless type of music, dance, or verse." A slow, monotonous rhythm is narcotizing in effect—" 'Move on' is the watchword of the Lord, obeyed in every live play and art, as it is in every animal tissue that holds off death by reincarnation."

We have wished merely to suggest the flavor of this book, since it is not a book to be conveyed by citation or summary. The sections dealing with the functions of love and worship are the most difficult portions of the writer's task, but here pure seriousness keeps its rightful place in the background as naturally as in the earlier chapters. In short, the book practices what it preaches, has the unforced humor, the vigor, the blitheness of mental and bodily and spiritual health. In this day of halting phrases and half-thoughts it has the beneficent quality epitomized in that old phrase of Dr. Cabot's fellow-New Englanders: "good for sore eyes."

Government Ownership of Railways. By Samuel O. Dunn, Editor of the *Railway Age-Gazette.* New York: D. Appleton & Co. $1.50 net.

Mr. Dunn has written a useful book and its publication is well timed. The information as to government-owned railways in the various countries of the world is given in simple and readable form and bears every appearance of accuracy. The author's discussion of the respective merits of government-owned and privately-owned railways is characterized by moderation of language and sound common-sense, even though it is clear that he is a thoroughly convinced advocate of private ownership and operation.

Naturally, the chief interest in the book is in the light that it throws upon the situation of the United States as a possible field for government ownership. Two main considerations are apparent from Mr. Dunn's facts and arguments. One is that public ownership is the more successful the further the system of government is removed from the democratic ideal. Prussia and Japan are the two countries which make the best showing of government railway operation. The other is that under public ownership the tendency is for rate tariffs (freight) to be made upon a rigid distance basis, as against the principle universally adopted under private ownership—namely, what the traffic should bear. The rate-systems of the United States—about half-a-dozen in number, all mutually connected—have all been constructed on the latter principle under which interregional competition has been maintained and regional monopoly avoided. The effect of government ownership would be ultimately to establish purely distance tariffs, and this would, ultimately, destroy the interregional competition and establish regional monopoly. Mr. Dunn admits that there is more danger of harmful discrimination under private ownership than under government ownership, but regulation has already removed a good deal of this, and can in time remove most of the rest.

Mr. Dunn quotes Mr. William M. Acworth, the English railway authority, as saying that the United States will approach "the brink of nationalization" more closely than it has yet done, "and will then start back on the edge of the precipice and escape by some road not yet discernible" (p. 5). As a matter of fact, the pending application of the railways in classification territory for a horizontal increase of 5 per cent. in freight rates seems to the reviewer to be a most important milestone on the road to nationalization. If the Interstate Commerce Commission shall recognize the principle that rates may rise as well as fall, then it may be said that the danger of government ownership will be materially less, even though the amount of increase allowed be small. But, on the other hand, should the principle be denied, we shall have advanced a long step nearer to the unwelcome goal. For as soon as it becomes impossible to get a reasonably free supply of private capital for the railway, the demand for government ownership is likely to become vociferous.

It is to be hoped that Mr. Dunn's book may find many readers, meanwhile, for it is a powerful piece of evidence against nationalization of railways—at all events in the United States.

Notes

Among the miscellaneous announcements in Macmillan's spring list are included: "The Story of Phædrus: How We Got the Greatest Book in the World," by Newell Dwight Hillis; "The Flight and Other Poems," by George Edward Woodberry; "The Foothills of Parnassus," by John Kendrick Bangs; "Stories from Northern Myths," by Emilie Kip Baker.

Mississippi Valley Historical Review, a new quarterly published by the Mississippi Valley Historical Association, will begin to appear June 1. The managing editor is Prof. Clarence W. Alvord, of the University of Illinois.

For the enthusiastic student of the works of Thomas Hardy "Thomas Hardy's Wessex" (Macmillan) will be valuable as a book of reference. For any who care to follow for themselves in the footsteps of Tess or Jude or any other of Mr. Hardy's characters through the country that he has made his own, identifying real places and scenes with their fictitious counterparts, this volume will be quite indispensable. The author, Hermann Lea, has made the Hardy country his hobby for twenty years. He has been over the whole of the ground more than once, and there can hardly be a place mentioned in either the novels or the poems susceptible of identification which has escaped his searching scrutiny. The book is illustrated with 240 excellent photographs, numbered to facilitate reference, and with a map of Hardy's Wessex in which real and fictitious names are distinguished by the use of different type.

In style somewhat like the Tudor and Stuart Library, but in modern type, the Oxford University Press has brought out an edition of Erasmus's "Praise of Folly," in John Wilson's translation which was first published in 1668. For frontispiece there is a good photogravure reproduction of the portrait of Erasmus which was painted by Quentin Matsys in 1517 for presentation to Thomas More. The introduction is furnished by Mrs. P. S. Allen, who gives a sufficiently clear and full account of the Fool Literature which was started by Sebastian Brant's "Narrenschiff" in 1494 and went careering over Europe. She tells also the story, so far as it is known, of the conditions under which Erasmus wrote his "Moriæ Encomium" while staying at More's house in Bucklersbury. Her comments on the "Encomium" itself are sound, but she might, we think, have developed a little more clearly the idea of the higher illusion which, like Plato's "divine *mania,*" is so strangely mixed up by Erasmus with his amusement over the simpler follies of mankind. It has always seemed to your reviewer that the grace and mischief in the pun on the word *Moria* rested on Erasmus's perception of something like the same mixture in More himself of the divine illusion with a wit that did not always disdain the commoner folly. Mrs. Allen has done well in selecting Wilson's translation rather than Chaloner's or Kennett's. The original spelling has been retained, but the punctuation has been modernized and the text paragraphed. A few coarse words have been omitted.

Those who care to have a fuller account of the hospitable household in which Erasmus wrote his "Praise of Folly" may be glad to hear of Randall Davies's book on "The Greatest House at Chelsey" (Lane). Life in the mansion which Sir Thomas More built for himself in what was then a mere village was on a larger scale than at Bucklersbury, where the famous visit of Erasmus took place, and he himself was more in the eye of the world, but in tone the two establishments were no doubt the same. Mr. Davies comes to his subject as an antiquary and historian, and his pages lack the intimacy of Miss Manning's charming tale of "The Household of Sir Thomas More"; but they have the advantage of not transgressing the actual documents. Diagrams of the mansion and of the grounds and a number of illustrations, including excellent reproductions of Holbein's portraits and the family sketch, lend reality to the narrative. As for the life itself, before the evil days of Henry's persecution, that cannot be better described than by the words of Sir

Thomas in a letter to his wife after the burning of his barns:

Therefore I pray you be of good cheer, and take all the household with you to church, and there thank God both for that he hath given us and for that he hath taken from us, and for that he hath left us, which if it please him he can increase when he will. . . . I pray you with my children and your household be merry in God. . . .

It would be hard to find a prettier phrase in English letters than that last. But this was not the spirit that ruled always in the great house at Chelsea. Some of the vicissitudes through which the place passed may be guessed from the list of its owners given by Mr. Davies in his preface: Sir Thomas More, the first and second Marquises of Winchester, Lord and Lady Dacre, Lord Burghly, Sir Robert Cecil, the Earl of Lincoln, Sir Arthur Gorges, the Earl of Middlesex, the great Duke of Buckingham, the younger Duke of Buckingham, the Earl of Bristol, the Duke of Beaufort, Sir Hans Sloan—by tho last of whom it was demolished in the year 1740. In that period of barely two centuries it probably saw as much of the various manners of mankind as any house in the neighborhood of London. Mr. Davies, already known for his antiquarian studies of Chelsea, gives a fairly vivid picture of the successive occupants. Not the least interesting of these is the Earl of Lincoln, who, if the letters do him no injustice which Mr. Davies prints by permission of the present Lord Sackville, was as fine a specimen of Elizabethan madness as one would care to know. One of these letters, from Sir Robert Cecil, is a complaint to "Our very good Lord" because, "when her Majesty did lately ride abroad, and was accompanied with the Scottish Ambassador, she was very desirous to have gone into your house and gardens; from whence she was kept out in so rude a fashion, as we protest unto you your enemies wanted not a color to say it was by your direction." Another letter is from Lincoln's stepson to Cecil, complaining in behalf of his mother:

. . . whom he [Lord Lincoln] threatens to abandon if she makes any means to depart his house; which to prevent, he keeps her locked up like a prisoner, without suffering her either to write or hear from any of her friends, having appointed to guard her an Italian, a man that hath done divers murders in Italy and in the Low Countries, from which he fled into England; from whom I protest she has just cause hourly to fear the cutting of her throat.

We cannot follow the further fortunes of the house. The occupant in whom Mr. Davies seems to show the most interest, after its builder, is the Quaker gardener, one Edmund Howard, who took care of the place for a while before the last owner demolished it. From Howard's artless autobiography, which has been published in the *Friends' Quarterly Examiner*, he quotes several quaint passages—a fitting close to a rather unusual book.

Mr. Walter Heape, of Trinity College, Cambridge, has written a volume on the feminist movement, which he approaches as a student of biology. The title of his book, "Sex Antagonism" (Putnam), indicates the aspect of the subject that is uppermost in his mind. The most arresting feature of his study is his carrying of sex antagonism back historically to the primitive practices of exogamy, which he attributes to "the instinctive sexual impulse of the Male to find a mate who will stimulate him," and of totemism, which he regards as a feminine creation having special relation to maternity. His conclusion is uncompromising: "For the present the man is very patient with his woman-kind, and is remarkably silent concerning the discomforts he himself is subject to; perhaps for these very reasons he will act with all the more force when the proper time comes for action."

If Mrs. John Clarence Lee had intentionally striven to prejudice her readers against her story of "Across Siberia Alone" (Lane), it is difficult to see how she could have chosen a more effective way than her selection of an American wedding in Shanghai for her first chapter. This chapter is ultra-personal, it is supra-sentimental, it is everything that the rest of the book is not. From the moment that she starts on her trans-Siberian trip at Dalny, one reads with delight, and one has no desire to stop until Moscow and the end of the little book is reached. Somewhere the writer mentions Marie Claire, and it is a great compliment to say that in this work we find the same strong simplicity, the same elusive attraction. The traveller has no greater adventures than over-presuming officers and objectionable "persons," but every happening, however trivial, both on the train and at the two-day stops in Irkutsk and Tomsk, is of keen interest. The vast waste of this great continent, the few splendid cities built chiefly by exiles, political and criminal, the omnipresent soldier, and the peasant and his poverty are all made very vivid and real, and one closes the book with more facts fixed firmly in mind than would result from the perusal of many more pretentious but less clearly written volumes.

Mr. George Macaulay Trevelyan has gathered into a volume entitled "Clio, a Muse, and Other Essays, Literary and Pedestrian" (Longmans) eight papers written by him in the last few years. The most important, "Clio, a Muse," gives a survey, brief but illuminating, of the different fashions which have prevailed in the writing of history during the past two centuries. Coming down to recent times, he shows how history cannot be a "science," in spite of the common delusion that whatever is examined by the "scientific method" must be a "science." He shows also how the study of documentation, the analysis and criticism of "sources," is no more history than the physiological examination of the parts of the body is portraiture. He makes an effective plea for the imagination, and, naturally, he concludes that history, in the high sense, must be "literature." The various studies which are passed off as history, though they may be valuable each in its field, flourish with borrowed plumes. Nobody mistakes a doctor's thesis on Chaucer's metre for poetry; but the corresponding mistake is common among the professors of history. Mr. Trevelyan characterizes in a few pregnant pages the principal English historians of the last century. He sees signs of a change in England, where a revulsion from Teutonic pedantry has resulted in the revival of the noble conception of history. A similar revival has already made headway in France. With what is perhaps unconscious sarcasm, Mr. Trevelyan tells the "scientific historians" that the literary side of history, which they pretend to despise, demands hard labor. His essay is very lively and ought to be read by every teacher of history. Lovers of good writing will read it anyhow. Of the other papers, that on George Meredith deserves particular mention, and the speculation on what would have happened if Napoleon had won Waterloo is ingenious.

To write a history of "Torquemada and the Spanish Inquisition" (Brentano's) in English in these days, and ignore the fact that the late Henry Charles Lea ever contributed anything to our knowledge of the subject, demands a perhaps unenviable courage. This feat, however, has been performed by M. Rafael Sabatini; at least, there is no indication, either in his footnotes or in his fairly ample bibliography, that he ever read or even heard of the masterly four volumes of the "History of the Inquisition of Spain." Yet, on the other hand, it would be most unjust to imply that Mr. Sabatini's work is entirely without merit. He partially atones for ignorance of Lea by a very considerable acquaintance with the various Spanish writers, ancient and modern, on his subject (Llorente and Fidel Fita are his main reliance). His work is certainly non-partisan—"written neither in the Catholic interest, the Protestant interest, nor the Jewish interest." The author "holds the view that on the score of intolerance it is not for Christians to cast a stone at Jews, nor Jews at Christians, nor yet Christians of one sect at Christians of another." And lastly, Mr. Sabatini's book is interesting. The personal element is emphasized throughout, while the institutional side falls into the background; a number of characteristic anecdotes (taken from such writers as Pulgar and Bernaldez without any effort to test their veracity) add vividness and life. The valuable account of the trial of Yucé Franco, published by Fidel Fita in the Boletín de la Real Academia de la Historia, is now made accessible to English readers for the first time. The illustrations are well chosen and well executed. Mr. Sabatini's book is scarcely to be regarded as serious history; but for those whose stomachs are not strong enough to digest Mr. Lea's great work it will prove a not entirely unworthy substitute.

A very satisfactory piece of work is Dr. J. I. Gorfinkle's edition of "The Eight Chapters of Maimonides on Ethics" (Columbia University Press; Lemcke & Buechner). Maimonides is important not only for the history of Jewish mediæval ethical philosophy, but also for the whole European ethical thought of the period, and his "Shemonah Perakim" ("Eight Chapters") gives his system briefly and clearly. To make the work easily accessible to Jews it was necessary that it should be translated into Hebrew, and this task was well performed by

Ibn Tibbon, a contemporary of Maimonides. But in the course of time the text of his translation became corrupt, and a critical edition was desirable. Such an edition is here offered by Dr. Gorfinkle, who has consulted numerous manuscripts and printed editions and compared these with the Arabic original, having throughout the competent aid of Professor Gotthcil and Dr. Henry Malter. The Hebrew text is amply provided with textual notes; an annotated English translation is added, and in an Introduction the editor gives an outline of the thought of the treatise. The small well-printed volume will be welcome to students of the history of ethical philosophy.

The three large volumes of "Unpublished Correspondence of Napoleon I, Preserved in the War Archives," which Ernest Picard and Louis Tuetey have recently edited under the superintendence of the Historical Section of the French Army Staff, have been issued in attractive English translation (Duffield). The commissions appointed by Napoleon III, which published the official thirty-two-volume edition of Napoleon I's Correspondence during the Second Empire, were sensitive about revealing material which might tarnish the glory of the founder of the Imperial Dynasty; they, therefore, omitted such documents as were deemed politically inadvisable. Others were omitted because the material was so vast in amount. Since the completion of the official edition in 1869, therefore, there have appeared many small supplementary collections of Napoleon I's unpublished letters, of which the most important are those by Hüffer, Bingham, Du Casse, Schlossberger, Lecestre, and Brotonne. A full bibliography of them is conveniently given by the present editors in their introduction; to it should be added Arthur Chuquet's "Ordres et Apostilles du Napoléon I" (3 vols. 1911-12).

The 4,942 documents which Picard and Tuetey publish are all from the archives of the War Department, and are arranged chronologically from December 4, 1804, the date of the coronation, to the close of the year 1810. They cover the campaigns of Austerlitz, Jena, Friedland, Wagram, and the beginning of the troubles in Spain and Portugal. They do not throw much light on the tactics of battles, because Napoleon's orders on the field of battle went directly to commanding officers and did not find their way back to the archives in Paris. They do contain an invaluable mass of material upon the preliminary strategy of the campaigns as seen in the orders for the assembling and movement of troops. They exhibit Napoleon's superhuman mastery of detail—his untiring attention to shoes, saucepans, overcoats, biscuits, and fortifications, as well as to men, money, and guns. These documents are thus an invaluable source for a study of his genius as an organizer of armies. They moreover illustrate his generosity in pardoning and restoring officers to command and in making money gratuities, his personal influence over his men, his care to prevent straggling and disorder in the rear, and his heavy contributions levied on conquered peoples. These documents are, however, only a supplement to the official edition of the Correspondence (still untranslated), and must be used in connection with it. The lack of an index is regrettable.

In "Madame Tallien," translated into English with illustrations (Lane), a French journalist, L. Gastine, describes at length the wanton career of a young woman who was regarded by her contemporaries as one of the most beautiful of creatures. Theresia Cabarrus, of Bordeaux, wife and divorcée in turn of the émigré Marquis de Fontenay, and of the Terrorist and traitor to the Terror, Tallien, finally settled down after 1805 with a third regular husband, the Prince de Chimay. As Princess de Chimay she lived much of her later life at Brussels and died in 1835. She was the mother of eleven children who bore various surnames; seven of them were perhaps really the children of her legal husbands. The easiness of her virtue was so notorious that even Bonaparte would not have her at his imperial court, though she had been the intimate friend of Josephine and though Tallien had stood as one of the witnesses of his marriage to Josephine. Writers hitherto, notably Arsène Houssaye in the biographical fantasy of La Belle Tallien entitled "Notre Dame de Thermidor," have woven a mass of legend about Tallien and his wife, who were regarded as the instruments of Robespierre's overthrow on the Ninth Thermidor. M. Gastine ruthlessly tears this legend to shreds. He condemns Tallien as either the ringleader or the accomplice in the hideous massacres of August and September, 1792, in the butcheries of La Vendée, in the cowardly, treacherous deportations under the Directory, and in wholesale robberies which brought many families to starvation and death. "It is revolting that such a wretch should have been suffered to live on till he was fifty-three." The chief traits of his beautiful wife appear to have been her vanity, immorality, and unscrupulousness. Though the author overshoots his mark with exaggerations and repeated denunciations, and though he does not always carry conviction because of lack of logic or of documentary authority, his book is nevertheless of value as a corrective to the uncritical, legendary accounts of the Talliens which have obtained hitherto.

In "Our Southern Highlanders" (Outing Publishing Company), Mr. Horace Kephart has written a faithful and readable account of a highly interesting people. For a century and more these mountaineers have needed a pen which should tell their story plainly. A too plentiful fiction, liberally besprinkled with "we-uns" and "you-uns," and cast in romantic form, has misrepresented them long enough, and made them the object of popular astonishment. Mr. Kephart's book is virtually a journal of his several years' stay in the Southern Appalachian Mountains. The highlanders—a name unknown to them—are a people of a century ago, both in manners and customs. But it must also be remembered that they are perhaps the most self-reliant of any group of people in this country, are hardy, and have many virtues. Their "blood-guiltiness" and their violence with rifle or pistol have been overdone in the popular mind. In reality, they are an easy people to get along with, if one does not offend their dignity and self-respect; and a traveller stopping with them is absolutely safe. They are hospitable, and, if the questioner is honest in his inquiry, they are frank. Mr. Kephart brings out all these points, and makes clear, as well, the entertaining quaintness of their talk and life. The reviewer knows of no better story-tellers in the world than these mountaineers, especially when recounting a hunt, like the account given by Mr. Kephart. The larger part of the book is devoted to the anecdotal description.

A fifth volume, embracing titles from Polytechnics to Zwingli, of "A Cyclopedia of Education" (Macmillan), edited by Paul Monroe, completes the work. As a reference book for facts in educational history and biography and concerning national and State systems of public instruction and educational institutions, the work fills a distinct want and is of unquestioned value. There has been no work of similar scope in our language, and the seeker for information concerning the educational organization of Wisconsin or Utah, or Russia or Uruguay, and the inquirer who has need to learn the denominational affiliation of William Jewell College or the date of Emma Willard's petition to the Legislature of New York, will hereafter turn naturally to this encyclopedia. The biographical notes are good, with excellent bibliographies, especially noteworthy in the present volume being the article on Rousseau. Dr. Ellwood P. Bubberley's articles also on the educational systems of several States are comprehensive and concise. A large amount of information is contained in the articles on Universities and American State Universities. Subjects related to practical and industrial education receive the emphasis, rather than topics of interest in classical and liberal culture. Virgil and Xenophon find mention in the present volume, although together they are accorded less space than either the Ventilation of Schools or Education for the Secretarial Profession. The radical school superintendent, who desires to introduce classes in millinery and shop-work, will find help for his propaganda, while the old-fashioned master, who is striving to keep alive on the earth a knowledge of the Greek tongue, can only be grateful that he has not been entirely forgotten. There is entire absence of criticism in the articles on the various institutions; many of them read like a prospectus or a section of the catalogue, and were written by interested officials. Consistency has not always been maintained, the article on the State of Vermont stating that "the State maintains no higher institutions of learning of its own," while the following article describes the University of Vermont as a State institution.

The first illustrated edition of Macaulay's "History of England" is in process of publication (Macmillan). It is to be in six large volumes. The first, which has just appeared, contains above seventy illustrations, besides a dozen full-page plates in

color. In the preface to this volume, the editor, Charles Harding Firth, regius professor of modern history at Oxford, sets forth the principle governing the selection of the illustrations. These include portraits of both the leading and the minor personages of the time covered, caricatures, maps and plans, places and buildings, broadsides, ballads, and autographs. Rude engravings now and then are not scorned, since they are sometimes the only pictures obtainable; sometimes they represent the popular conception of some prominent figure. All sorts of collections, famous and obscure, have been drawn upon, among them the National Portrait Gallery, of which Macaulay was one of the original trustees; the medals struck in England, France, and Holland, some of which were satirical; and private possessions. Especially interesting are pictures which Macaulay himself had in mind when he wrote, as "the drawings of English landscapes made for the Grand Duke Cosmo," broadsides which he mentions in his footnotes, and ballads from the Pepys Library at Magdalene College, Cambridge, which, although least known of all the great collections, was consulted by Macaulay more than any other. The editor, while recognizing the desirability of a critical edition of the History, has not thought "an illustrated edition of a British classic . . . the proper place for a critical commentary." He seems to promise one, however, in saying that "it has seemed best to reserve any critical observations for a separate publication." The volume which has appeared contains examples of all of the various sorts of illustrations mentioned above, beautifully reproduced. To say how much such well-chosen pictures add to the interest and the value of the text is unnecessary.

Major-Gen. Joshua L. Chamberlain, Surveyor of Customs at Portland, Me., since 1900, who died on February 24, was born at Brewer in 1828. He was graduated from Bowdoin College in 1852, and received an A.M. degree in 1855. In the same year he was graduated from the Bangor Theological Seminary. He received the honorary degree of LL.D. from Pennsylvania College in 1866, and from Bowdoin in 1869. He was appointed lieutenant-colonel of the Twentieth Maine Infantry on August 8, 1862, and colonel on May 20, 1863. He served with great distinction through the Civil War, in the course of which he was awarded the Congressional medal of honor for conspicuous gallantry at Gettysburg, was promoted by General Grant to a brigadier-generalship on the field of battle at Petersburg, and was brevetted a major-general, United States Volunteers, March 29, 1865, being appointed to command the parade at the formal surrender of Lee's army at Appomattox in the following month. After the war he was elected Governor of Maine, and served from 1866-71. Before the war General Chamberlain was professor of rhetoric and oratory at Bowdoin from 1856-62, and at the close of the war he served in the same capacity, and from 1871-83 he was president. He was United States Commissioner to the Paris Exposition in 1878. General Chamberlain was a member of numerous historical societies, and was the author of a number of books dealing with historical and political topics.

The Rev. Samuel Rolles Driver, D.D., regius professor of Hebrew at Oxford, and canon of Christ Church since 1883, died on Thursday of last week. Dr. Driver was born in 1846, and was educated at Winchester College and at New College, Oxford. He was placed in the first class in the School of Literæ Humaniores in 1869; was Pusey and Ellerton Hebrew Scholar, 1866; Kennicott Hebrew Scholar, 1870, and gained the Houghton Syriac prize, 1872. He became a fellow of New College in 1870, and was fellow and tutor from 1875 to 1883. He received the following honorary degrees: D.Litt., Dublin, 1892; D.D., Glasgow, 1901; Aberdeen, 1906; Litt.D., Cambridge, 1905. From 1876 to 1884 he was a member of the Old Testament Revision Company. He became a fellow of the British Academy in 1902, and a corresponding member of the Royal Prussian Academy of Sciences in 1910. He was the author of numerous treatises on Biblical and Hebraic subjects, among which may be mentioned his "Isaiah: His Life and Times," 1893; "An Introduction to the Literature of the Old Testament," 1909; "Notes on the Hebrew Text of the Books of Samuel," 1912. He was also joint-editor of the Holy Bible, with various renderings and readings from the best authorities, 1888; and joint author of "A Hebrew and English Lexicon of the Old Testament," 1906.

Science

Commercial Gardening. Edited by John Weathers. London: Gresham Publishing Co. 4 vols.

When we consider the time, skill, and thought devoted by the English to their gardens, it is not surprising that one of the most complete works in this field published in recent years should have come to us by way of London. The editor, himself a commercial gardener of note, has associated with him in his work ten other experts of the soil, each of whom adds his own informing account of a particular specialty. The first volume takes up in order the science of plant growing, the method of propagation, and the different soils in an interesting and readable way, especially from the botanist's point of view. The chapters on manures are full of valuable aid, and in them we are cautioned against the pitfall so many of us (who are too busy to experiment in our gardens or too willing to take the last word of the fertilizer agent) are prone to fall into, namely, the assumption that because a crop like turnips, for instance, takes up from the soil 112 pounds of nitrogen, 33 pounds of phosphoric acid, and 148 pounds of potash, therefore those different plant foods must be returned to the soil forthwith in the form of commercial fertilizer or stable manure. As a matter of fact, "the soil is by no means deficient in these foods," and "in the Broadbalk Field, Rothamsted"—that world-famous agricultural experiment station—"it has been found that a soil which had been cropped, but not manured for fifty years, still contained 2,500 pounds of nitrogen, 2,750 pounds phosphoric acid, 6,750 pounds potash, and 62,250 pounds of lime to the acre at a depth of nine inches." Certainly these figures are remarkable, and our cultivators would do well to bear them in mind. Mr. Weathers then goes on to point out that if the money spent on a ton of "special" artificial manure for one acre were spent in digging the soil to the depth of one foot, it would bring from seven to ten acres into a most satisfactorily fertile condition.

Insects, both beneficial and injurious, are discussed at length, and it is put very forcibly before the reader that, "although Nature has sent many insects to plague the cultivator of plants, it has also provided antidotes in the way of birds of all kinds—ichneumon flies, ladybirds, lacewing flies, tiger and other beetles, frogs, toads, lizards, hawk flies, spiders, and even slugs—by which they may be kept in check. Unfortunately"—and here the author sounds a note of warning which we in America have even more reason to heed than our English cousins—"with the many poisonous washes now in use . . . the cultivator is slaughtering his friends as well as his enemies. Indeed, he is practically not even on speaking terms with his friends, and in many cases would not recognize them as such if he saw them. It would, indeed, be well worth while to make a special effort to cultivate colonies of ladybirds, ichneumon flies, lacewing flies, and hawk flies, especially as these, by sheer force of numbers, would readily suppress the various destructive aphides and caterpillars."

The second volume is devoted to the raising of hardy and semi-hardy herbaceous plants, bulbs, and flowers suitable for marketable purposes, arranged alphabetically, and to this formidable list are added plants for the greenhouse as well as water plants. This admirable arrangement enables the garden-lover to look up at his ease the exact plants desired and to find full information concerning them as to seed, care, and general cultivation.

The third volume is wholly given over to fruits, and while the introductory chapters, giving the cost of starting a commercial orchard in England, are interesting and informing, we turn instinctively to that part of the book which describes minutely the growing of those luscious small fruits and wall-grown peaches, plums, and pears so often seen in England; for where is the real garden-lover who does not long for

a row of the magnificent English gooseberries, not the green, sour, puckery kind with which we are so unfortunately familiar, but the large red and white ones, the size of blackberries? The thought of an acre of gooseberries yielding four tons and a profit of $125 net is not unpleasant, but most of us would be satisfied if, after reading Mr. Weathers's directions, we might find ourselves with a modest row of three or four healthy bushes.

In the first part of the last volume we find advice as to the growth of trees, shrubs, vines, and woody climbers, directed to the nurseryman and his customers. Like the list of flowers, this is alphabetically arranged, and although we are not told, except in a general way, how to cultivate and care for these trees and shrubs, yet those of us who are lovers of such plants know full well that the essential point in the case is always whether the particular specimen we are ambitious to grow is suited to our local climatic conditions, and as no general treatise could possibly attempt to throw light on such a point we think the author showed judgment in confining himself merely to a general and practical description. The remainder of this volume is devoted to vegetable gardening, and here every step is carefully taken up. We are told the secrets of hothouse management, and how to start and operate a French garden successfully, which requires a capital outlay of about £630 for two acres, while the returns run about £860.

Special mention should be made of the beautiful colored plates and excellent photographs throughout the book, and also of the chapter on garden surveying, levelling, and the useful mensuration tables. Nothing has been overlooked in these volumes, yet the author has condensed his great mass of material into a practical and useful book, both for business and pleasure.

The death was reeently announeed of Horaee Bolingbroke Woodward, the eminent geologist and authority on British stratigraphy. Mr. Woodward, who was born in London in 1848, was for some time an assistant in the library and museum of the Geologieal Soeiety, and in 1867 joined the Geologieal Survey, where he was best known for his work on the strata of the Jurassie age. He was president of the Geologists' Assoeiation, 1893-94, and in 1909 the great prize of the Geological Soeiety, the Wollaston gold medal, was awarded him. Mr. Woodward was an industrious writer, of much literary ability. Among his prineipal works may be mentioned his "Geology of England and Wales," and his edition of Stanford's "Geological Atlas," as well as several survey memoirs, including three volumes on the Jurassie roeks.

Prof. Georg Joaehimsthal, of the University of Berlin, direetor of the Berlin University Hospital for Cripples, died on Sunday in his fifty-third year. Professor Joachimsthal was one of the foremost experts in Germany on physical malformations, and was the author of numerous works bearing on the subject.

Drama

SHAKESPEARE AT THE SAVOY.

LONDON, February 20.

When the manager of the London theatre is in doubt, he plays Shakespeare —unless he happens to be Sir George Alexander, when Oscar Wilde is his winning card. It comes, therefore, as no surprise that to an unusually dull season Granville Barker and Lillah McCarthy should now offer what brand-new relief they can with the latest version of "A Midsummer Night's Dream" —at the Savoy. Not that they have much dulness themselves to atone for; except for an occasional indiscretion, like Bernard Shaw's "Androcles and the Lion," their performances are among the best worth seeing in London. Few other managers have as stimulating a record, and it must be admitted by the most amiable critic that the present dramatic season has so far been an empty one.

It needs but a glance at the principal theatres to understand the need of something to stir the London dramatic world out of its lethargy. At the Little Theatre is Chesterton's "Magic," childish in plot, full of the cheap cleverness and cheaper paradox Shaw brought into fashion, saved by one delightful piece of acting—Fred Lewis's impersonation of an inconsequent duke. This play has received a new lease of life by a reduction in the price of seats, and is advertised by the portraits not so much of the author as of the author's large Falstaffian paunch. To such depths has the serious drama fallen that the dramatic author refuses to allow the actor the undisturbed monopoly of personal glory in advertisement, but, making capital of a physical peculiarity, amounting almost to deformity, adorns the inner walls of the theatre with caricatures and photographs of himself, and the outer walls with his silhouette on the posters.

At the St. James's, Sir George Alexander struggles with poor success to give life to the English translation of Bernstein's "Attack," a drama that is as the poles apart from English life and English thought, and it is no surprise to hear that the end of the struggle is announced for next month. Tree, at His Majesty's, has returned to a previous triumph, "The Darling of the Gods," Japanese and Chinese themes being in favor for the moment. The Authors' Producing Society, discovering no home genius to encourage, turns to Brieux as the present exponent of thought and progress. At the Queen's, Hale Hamilton, a delightful actor if he finds the farce or comedy to give him a fair chance, has been showing, with "The Fortune-Hunter," just the sort of play it is a mistake for America to export to London, or to exploit at home, for that matter. It is a play that seemed to take me back to the remote days of "Solon Shingle," or "Lord Dundreary," or any other of the old-fashioned machines that had nothing to do with the expression of character, but everything with its exaggeration. I have read in the last number of the *North American Review* that the American dramatist is now concerned with ideas and literature, but I, as an American, deplore the care he takes to conceal the fact in the examples of his work that cross the Atlantic. At the Royalty, C. B. Fernald's "Pursuit of Pamela," now finishing its run, shows that there is one American —though his work is now less identified with America than with London, where he lives—who has some respect for literature; for it is the literary touch in the dialogue, and the feminine charm of the principal character, as well as the author's good fortune in finding in Miss Gladys Cooper the right actress for the part, that give vitality to a comedy so light and graceful that, without the right interpretation, there would be little of its lightness and grace left on the all too solid boards of the English stage. At the Kingsway, or just moving from it, Lydia Yavorska, the Russian Princess Bariatinsky, is playing to crowded houses a travesty of "Anna Karenina" and making up by a lavish display of the latest fashions for whatever is wanting in her acting and whatever may hurt the sensitive ear in the harshness of her English. At the Strand, "Mr. Wu," after first failing to please the public fancy, has taken strong hold, as it deserves to do, for, though not distinguished as drama, it has its merit and its strength as melodrama, supplying at least one good thrill; and emotion of any kind is about the last thing the London theatre nowadays abounds in. The fact that whatever interest I have found of late in this theatre should centre about a melodrama helps to explain to the puzzled critic why the legitimate drama has such hard work to compete with the music-hall and the "cinema," and also, incidentally, why the time has come for that periodical revival of Shakespeare upon which it depends for a periodical revival of popularity.

As the present revival is due to Granville Barker and Lillah McCarthy, it is almost superfluous to add that its chief interest is spectacular or pictorial, for the memory is still fresh of their rendering of "A Winter's Tale" and of "Twelfth Night," in both of which the interest was concentrated upon the set-

ting rather than upon the acting. But, indeed, when the popularity of Shakespeare to-day is analyzed, no one can question that it is less Shakespeare than the new use made of Shakespeare to which he owes his irresistible attraction —less the beauty of this scene or that than curiosity as to whether it will be omitted or restored, less the music or philosophy in the verse than the costume of the actor who recites it. It is because the chances for infinite variety in the interpretation are so many that Shakespeare proves an invariable draw. I cannot imagine that anybody could any longer sit, as we sat in my youthful days, through those *macaronic* performances, when the famous Italian actor would give us on our American stage his Hamlet or Macbeth or Othello in Italian, while a company made up of the veriest hacks that could be got together would present the rest of the cast in English. Under those conditions only interest in the play, or reverence for the poet, made Shakespeare endurable. Revive the conditions, and I question whether as dramatist he would now outlive them—whether, at a crisis, he would save the situation. You have only to listen to his verse as delivered by the actors at the Savoy to realize how little he counts with them in comparison to the dress they put on to spout his lines in, and the stage upon which they strut for the spouting. The last thing the English actor seems to learn is how to use his voice. It is the first thing the French actor is taught, which is why the longest rhodamontades of Racine may become music in his mouth. In the mouth of the English actor, Shakespeare is usually unintelligible rubbish. The beautiful lines in the "Midsummer Night's Dream," as a rule, are delivered in much the same see-saw sing-song that is now the classic delivery on the English pantomime stage. Even Lillah McCarthy, as Helena, fails to get much meaning or any rhythm into her longest or shortest speech.

But if the actors' voices were trained to express the finest shades in Shakespeare, the honest critic would still have to confess that "A Midsummer Night's Dream," as a play, drags heavily in parts. It has scenes of great beauty, scenes of genuine humor; it transports us to a fairyland full of fragrant flowers and sweet conceits, where it is always pleasant to wander. But it has also scenes of deplorable tediousness, scenes that are no better than handy pegs upon which the fairy interlude is rather clumsily hung. The rustics pall after a time; the lovers are sad bores; the mortals are almost all the fools Puck finds them. So many liberties are taken with Shakespeare that the wise stage manager might be forgiven were he to go as little further than his predecessors and cut down the play ruthlessly, sacrificing everything save its loveliness and its poetry, which would then fill one crowded hour with sheer delight.

As it is, at the Savoy, the play most certainly is not the thing. Nevertheless, the performance gives one plenty to think about. There is no reason why in the theatre the eye should not be pleased as well as the ear. The Greeks knew it when they built their theatres open to the sky and within sight of the sea, or under the shadow of the hills. The modern reformer of the theatre can talk and preach of hardly anything else, though when it comes to settling just what should please the eye, he reveals his limitation as a prophet. Reinhardt, the much-vaunted, runs to excess almost as inartistically as does Tree at His Majesty's. Gordon Craig, basing practice on an irreproachable theory, runs to affectation. He advocates simplicity, but understands it so little that his simplicity disturbs and annoys, where the Greek simplicity rested, the eye. At the Savoy, Granville Barker, or I should say Norman Wilkinson, who is responsible for the "decoration of the play," is modern enough to have aimed at simplicity above all, and not Greek enough to attain his aim without tumbling headforemost into affectation.

The general scheme at the Savoy is admirable: it fails in detail. The stage is the now familiar "apron-stage" used for such revivals. The woodwork enclosing it and the drop curtain are white and severe, giving the theatre as a result the feeling of repose that you get in a room with pale bare walls and little furniture. The scenery is scarcely more elaborate. Painted curtains are the background for the shorter scenes. Trees, in long strips of rich blue and green curtain, fall against an unbroken flat hanging of purple, and, in a formal design, surround the space in the wood where Titania sleeps or holds her revels, and the lovers come wandering, busy with their foolish game of cross-purposes. The palace of Athens is an affair of stately white steps, and white columns just touched with black, and behind them walls of black and rose and white. Neither palace nor woodland is like anything belonging to real life, and for that reason is all the more in keeping with the fantasy of fairyland. But this simple setting—simple, that is, in intention—has its disturbing elements. It is difficult to get altogether away from the artist who designed it, to lose one's self in fairyland. Fairyland seems bewilderingly burdened with the most modern fads and fashions. One curtain, in its embroidered pattern, suggests a return to Morris's mediævalism; another recalls a Japanese print; a third savors of the Post-Impressionist's landscape. Memories of Gordon Craig and of Ricketts hang about woodland and palace. Fantastic the "Midsummer Night's Dream" may and should be, but not a puzzle to set the audience groping for the clue to its jumble of styles and fancies.

It would be absurd to criticise the costumes for archæological inaccuracy or inappropriateness. Mortals and fairies are as free to dress as they will in Shakespeare's Athens as in his Bohemia by the sea, and very picturesquely they profit by this freedom under Mr. Wilkinson's direction. The fairies strike a distinctly new note. No more by wings and wands alone are they to be distinguished from mere mortals, but by their color. For they are golden fairies, golden from head to toe, their hair and faces as gölden as their raiment. And the effect is not only novel, it is beautiful. Moreover, their faces are so carefully painted that as they pose, standing or sitting, motionless when mortals draw near, a high light seems to fall here and there on a cheek or a nose or a brow, and figures and groups are turned into bronze. In the midst of these fantastic bronze beings Puck flutters to and fro, a brilliant streak of scarlet, his face ungilded—a link between the golden fairies and the mortals clad in garments of many colors and many fashions—garments that run to crude crimsons and yellows, to shapeless tunics, to peg-top trousers, to grotesque helmets, to all the eccentricities now in vogue on the ultra-modern stage. So clad, the mortals make a restless, chaotic crowd, leaving beauty to the fairies, seeking to charm by the ugliness, the discord that gives the keynote to modern self-conscious art. The variety of conflicting influences grows wearisome as the play goes on, forcing you to forget Athens and Shakespeare. Throughout, costume and pose are forever recalling Beardsley as the chief source, to whom the most modern of modern innovators owe their inspiration. You see him everywhere—in the gay, distorted little form of Mustard Seed as in the outline of some golden figure set against the white wall; in the long, stringy hair as in the huge bows on the shoes of mortals and fairies; in the daintily dotted muslin of a tunic as in those irrepressible peg-top trousers. It is extraordinary how many are the proofs of the growth of his influence with the years.

The music and the dances, arranged by Cecil Smith, bring still another element into this curious medley, for these are of English folk origin, the "Bergamask," as solemn and humorous a dance as has ever been danced on any stage, an irresistible bit of fun and gayety with which to end probably the most interesting version of the "Midsummer Night's Dream" seen in the modern theatre. But the interest is too long-spun-out to last: that is a great

fault of this new version. A greater fault is the sense of effort felt from beginning to end—the effort to be at the very topmost height of every modern fashion in art. This has no place in fairyland or in Shakespeare's Athens. In the attempt to rescue the stage from the exaggeration of modern realism, its valiant deliverers threaten to precipitate it into a worse exaggeration of the last fad, the last artificial pose in what is called modern art. N. N.

Prof. C. M. Gayley's second volume of "Representative English Comedies" (Macmillan), appearing a full decade after the publication of its predecessor, deals with the later contemporaries of Shakespeare. Ben Jonson, as he would doubtless agree was only proper, is represented by three plays out of the five, "Every Man in His Humour," "The Silent Woman," and "The Alchemist"; he is a collaborator also in the fourth, "Eastward Hoe," along with Marston and Chapman; and the fifth, "The Merry Devil of Edmonton," is by an unknown hand. All of these plays are accessible elsewhere, but it is something to have them assembled, with sound texts and special introductions by scholars of distinction, and prefaced by a substantial essay from the pen of the general editor. In the course of this, Professor Gayley finds no cause to question the judgment of the world, which has treasured the comedies of Shakespeare, but has willingly let die, so far as the public stage is concerned, all but one, Massinger's "New Way to Pay Old Debts," of the 250 comedies produced by his later contemporaries. But Professor Gayley endeavors to explain it partly by an analysis of contemporary theatrical conditions and partly by a critical examination of the comedies themselves. The present study concerns itself chiefly with Jonson, Chapman, and Marston. A third volume, soon to appear, will consider the work of Fletcher, Dekker, Middleton, and Heywood.

The matter of the "stage quarrel" or the "war of the theatres," upon the intricacies of which Professor Gayley does not enter, finds fuller illustration in Prof. Josiah H. Penniman's edition of Jonson's "Poetaster" and Dekker's "Satiromastix" in the Belles-Lettres series (Heath). Of all the plays which ingenious conjecture has drawn into the outbreak of personal satire indulged in by some of the leading playwrights during the two years before and after the turn of the century, only these two are clear documents in the case. Whether Marston made fun of Gabriel Harvey, and Jonson of Anthony Monday, and both of them of Daniel, we can scarcely be certain; the boundaries between personal and general satire are not easily discernible at this distance. What may have been Shakespeare's part in the matter, for he bore a part, is also far from clear, but we at least know that Jonson confessed himself "provoked," and in the "Poetaster," acted in 1601, staged Marston as Crispinus, and Dekker as Demetrius. At the end of the play, in Cæsar's presence, Horace (Jonson) administers a dose which purges the wretched Crispinus of his "wild outlandish terms"—"magnificate," "prorumped," "obstupefact," and the like. Dekker replied by inserting into a comedy he apparently had on hand some scenes which set forth Horace struggling in the throes of composition and crowned at last, in the presence of the triumphant Crispinus and—no less—of William Rufus, with stinging nettles for "his stinging wit." Eventually, the matter was patched up, for Marston dedicates his "Malcontent" to Jonson in 1604, and the next year Jonson goes to jail with Chapman and Marston, for making sport of King James in their joint comedy, "Eastward Hoe." Professor Penniman brings all this discussion down to date.

The reported engagement by Charles Frohman, for a long term, of Phyllis Neilson-Terry is an interesting item of theatrical intelligence. It would be unwise, perhaps, to accept at their full face value all the printed encomiums upon her acting in the London press, but there is every reason to believe that she is an actress of rare natural ability and unusual physical charm. Her father belongs to a family famous on the stage for generations, while her mother, Julia Neilson, if she has never quite fulfilled the promise of her earliest years, has won an enviable reputation in comedy and emotional romance. Miss Neilson-Terry has already taken her place among the most popular leading ladies of the day, and has found critical acceptance, not only in Shakespeare—as Juliet, Rosalind, and Viola—but in the heroines of Goldsmith and Sheridan.

King George has become the patron of the London Garrick Club, in succession to King Edward, who was president from 1867 until his accession, when he became the patron. The Garrick Club was instituted in 1831 "for the general patronage of the drama; for the purpose of combining a club on economical principles with the advantages of a literary society; for the formation of a theatrical library and works on costume; and also for bringing together the patrons of the drama and gentlemen eminent in their respective circles." Its original home was in King Street, Covent Garden, where Douglas Jerrold, Charles Dickens, Albert Smith, Thackeray, Robert Keeley, Charles Kean, Clarkson Stanfield, and a number of other celebrities of the time assembled.

Sir Herbert Tree will be seen, next autumn, in a new dramatization of "David Copperfield," by L. N. Parker. It has been so arranged that he will be able to double the parts of Peggotty and Micawber.

The London *Times* pays a strong tribute to the acting of Walker Whiteside in "The Melting Pot." It says:

His conception of the part is a wonderfully powerful dramatic study. Mr. Whiteside has played the part in America for three years past, and one feels that the actor himself has fallen under the spell of the ideas which Mr. Zangwill puts forward. He suggested with great skill the nervous, dreamy temperament of the young Jew emigrant, and in the one really dramatic scene which is afforded him—when he finds that the father of his Gentile lover is the man under whose orders his relatives have been massacred—Mr. Whiteside diplayed a force of intense passion of which one had hardly suspected him up to that point. If the author could see his way to omit one or two speeches bodily, the performance would be all the better.

At the close of the run of "The Attack" at the London St. James's Theatre, Sir George Alexander will produce—probably early this month—a new comedy in four acts, by Alfred Sutro, entitled "The Two Virtues."

Music

A FANTASTIC FRENCH OPERA.

The latest novelty produced at the Metropolitan Opera House, Charpentier's "Julien," demonstrates that it is not always an advantage for a composer to write his own librettos. It was so to Wagner, and it was, perhaps, to Charpentier when he wrote his "Louise," that realistic picture of low life in Paris which brought him fame and fortune; but in the case of his latest work it has proved a decided handicap. The poem of "Julien" is the most extraordinary farrago of fantastic allegory and realism imaginable. A good "opera book" should tell at least the main outlines of the plot to the eyes of the spectators, but so far is this from being the case in "Julien" that even after a second reading of the libretto one feels in doubt as to its writer's intentions. There are some effective and imaginative lines, but as a whole the poem is obscure, chaotic, phantasmagorical.

Of Charpentier's "Louise" some admirable performances were given at Oscar Hammerstein's Manhattan Opera House in 1908, with a cast including Mary Garden, Bressler-Gianoli, Zeppilli, Trentini, Dalmores, and the late Charles Gilibert, who gave a most realistic and powerful impersonation of the laboring man whose daughter, Louise, elopes with the poet Julien. He throws his chair after her when, after an angry scene, she runs from the house and is lost in the wilds of Paris. "Julien" may be looked on as a sequel to "Louise" inasmuch as the poet and Louise again appear in it; but that, apart from a few bars of music, is the only connection between the two operas. The earlier one is a series of vivid pictures of Parisian life in street, home, and shop, realistic in its music as well as its spoken lines and its scenery; whereas "Julien" is a poet's dream, ending in an agonizing nightmare.

This new opera—if opera it may be called—consists of a prologue and four acts, with eight tableaux. In the prologue, Julien occupies, as winner of the Prix de Rome, a room in the Villa Medici with Louise, who, waking up, finds him asleep in an armchair. The four acts of the opera may be regarded as the presentation to the spectators of his dreams. This, at any rate, is the

case with the first act, which is filled with dream maidens, worshippers of beauty, and other fantastic creatures, the background revealing the Temple of Beauty on the Holy Mount. A change of scene shows the Dark Valley, from which arise the agonized voices of Hapless Poets. A third change takes us to the interior of the temple, in which Louise is seen as the incarnation of supreme beauty.

The second act takes the spectator to a picturesque valley in Hungary. Julien deplores the fate of the peasants, who chant their songs of labor. One of the girls—who has the face of Louise—invites him to remain, but he repulses her and passes on. The scene of the third act is on the coast of Brittany, near Julien's birthplace. His old grandmother tries in vain to win him back to religious belief. She, too, has the features of Louise. In the last act Louise appears again as a young woman—a woman of the streets. A noisy crowd indulges in merrymaking in front of the Moulin Rouge. The characters of the preceding scenes reappear in grotesque attire, transformed into beasts, Julien and Louise join them, singing the praises of bestiality. The mob wrecks the showman's movable theatre. A phantom vision of the Temple of Beauty is seen in the background; Julien curses it and sinks at the feet of his intoxicated companion.

Critical opinion is divided as to whether the whole opera or only the first act is to be considered a visualization of Julien's dreams. Those who believe the latter will find it difficult to explain how Louise, in the third act, can appear (except in a dream) as Julien's grandmother; and how will they account for the vision of the Temple in the last scene? However, it is hardly worth while to consider the question seriously. Opera librettos enjoy more than their share of poetic licenses, because the music is supposed to cover a multitude of sins. Unfortunately, in this case the music is almost as weak as the libretto. There are a few reminiscences from "Louise," and here and there one comes across diluted borrowings from Wagner and other composers. The best things by far in the score are excerpts from an early work by Charpentier, "La Vie du Poète," composed for solo voices, chorus, and orchestra. Though entitled a "symphonie-drama," it is not in the least dramatic, judging by the excerpts included in the opera. The fatal defect, indeed, of "Julien" is that it is not a music-drama, nor even an opera in the usual sense of the word, but rather an acted oratorio. While it has some splendidly effective choruses, there is little melody of a distinctive or alluring kind for the voices. No attempt is made, in the Hungarian act, to introduce local color in the music. There is much beautiful orchestral tone-painting, which sometimes makes one forget the poverty of invention. Much of the music is dull and inflated. The final scene in Montmartre, though vulgar and noisy, is really the best in the opera, as it has at least the merits of sincerity and realism. In it one recognizes the real power of the genius who, in "Louise," so charmingly translated into music the diverse sounds of Parisian street life.

Although Geraldine Farrar and Caruso, the two most popular operatic artists in the world, headed the cast, "Julien" won surprisingly little applause at the Metropolitan. Inasmuch as it was not a success in Paris, where it was produced last June, and no other manager has cared to accept it, one wonders why it was staged here, especially in view of the fact that so many of the French masterworks are neglected at the Metropolitan Opera House, among them "Carmen," the operas of Massenet, and those of Saint-Saëns.

Siegfried Wagner has completed a new opera, entitled "Der Heidenkönig" ("The King of the Heathen").

Mr. Kalisch, the eminent London critic, endorses the suggestion made by Tobias Matthay, in his new book on "Musical Interpretation," that pupils should be started on modern music, and work backwards to Bach and others.

Arrigo Boïto is at the head of a committee which has been formed with the purpose of making music obligatory in all the elementary and high schools of Italy.

"Agnete," an opera by Prof. Julius Röntgen, who was for years one of the most intimate friends of Grieg, has been produced with great success at Amsterdam. It has previously received the first prize offered by the Netherlands Operatic Association of The Hague.

Arnold Schoenberg wrote a long and flattering letter to the members of the Queen's Hall Orchestra, after they had played some of his music. In it he made some remarks about the orchestras of Germany, which will surprise those who think that in that country everything is as it should be:

> I must tell you that on the Continent, as far as my knowledge goes, there are at the most only two orchestras which could be compared with you: the Amsterdam Orchestra and the Viennese Philharmonic. I must say that it was the first time since Gustav Mahler that I heard such music played again as a musician of culture demands. I presume that this letter will be published, and that is the reason I mention this fact, so that it should be taken note of by some of our German orchestras which have too much false pride to learn what is expected of them at the present time.

Putnam Griswold, the greatest operatic basso America has produced, died on February 26, following an operation for appendicitis. Mr. Griswold was born in 1876 in Minneapolis, but at an early age moved to Oakland, Cal., where he sang in churches and at concerts. In 1900 he went abroad to study, first at the Royal College of Music in London, and then in Paris. Proceeding to Germany, he made his début in Frankfort, where Col. Savage heard him and engaged him for Gurnemanz in the English production of "Parsifal." After finishing his engagement with Savage, he went to Berlin, where he studied bel canto with Franz Emmerich and soon became the leading bass of the Royal Opera. This led to his engagement at the Metropolitan Opera House, where he quickly became a favorite.

Art

In "Colonial Architecture for Those About to Build" (Lippincott), Messrs. Herbert C. Wise and H. Ferdinand Beidleman have made a welcome addition to the record of the architectural activities of the colonial period; for those who deal with this subject are usually tempted to concentrate their attention upon the developments in New England and the South, and to overlook the work done in Pennsylvania, New Jersey, and Delaware, to which the authors of the book before us limit themselves. No one who examines the illustrations in the book can fail to note that a special character was given to the work done in this region by the particular traditions of the settlers, although these were felt rather than clearly formulated. Certain of the buildings referred to have a dignity and charm which is surprising when one considers the lack of training of the designers, which was but one of many serious limitations under which they worked; but it must be confessed that a large proportion of them show too clearly the result of these limitations. As our authors well say (p. 204), "There are those who claim perfection for all things ancient, and disparage the new. Sentiment, did we let it, would weave a spell over the imagination and breathe a mist before the eyes." It is to be agreed that this sentiment is an important æsthetic element, and should be welcomed as such in our judgment of the beauty of any work of art. But there can be no surer obstacle to advance in architectural design and appreciation than the over-emphasis of this sentimental influence, which tends to blind us to crudities and actual ugliness. Such we find all too often in the work considered in this interesting historical survey. The historical matter given by the authors, indeed, adds much value to the book as a whole. It is very well printed and illustrated by no less than two hundred and seven excellent photographic reproductions.

In "Répertoire de l'art quaternaire" (Paris: Leroux) Salomon Reinach offers a most useful corpus of bone scratchings, cave paintings, and statuettes of the earliest periods. A brief survey of the discoveries in the field of Quaternary art shows a gradual accumulation of excavated objects, mostly incised bones, from the year 1834 to the present. The discoveries of cave paintings are of recent date, mostly after 1900, though as early as 1879 the little daughter of Sautola noted the animal paintings on the

roof of the Altamira cavern. M. Reinach's repertory comprises something more than 1,500 outline illustrations arranged on 189 pages and illustrating perhaps 700 separate objects. M. Reinach estimates that as many more pieces may remain unpublished in the portfolios of the Abbé Breuil and other explorers. It was a good service to make this provisional collection of materials every year becoming more confusing. The arrangement is alphabetical by localities, but full indexes make it easy to consult the illustrations topically or by museums. The captions are sufficiently explanatory, and the whole work is conducted with that good sense and orderliness which one expects of the learned conservateur of the Museum of St. Germain. In running through the outlines we are most struck by the considerable variety of the work. In the cavern of Lortet we find a really splendid naturalism; in the Madeleine a flaccid sort of schematism; in Batuecas near Salamanca a rigid, fairly pictographic schematism. Altamira seems to represent a semi-conventional stage lying artistically between Lortet and Madeleine. Except for a few incidental cuts, M. Reinach has excluded the rock engravings of Scandinavia, North Africa, and the Rhodesian caves as of uncertain antiquity. We hope he may be moved some day to collect, if not a corpus, at least a representative anthology of designs which have so much in common with the art of the cave men.

Charles Calverley, the sculptor, who died on February 25, was born in Albany, N. Y., November 1, 1833, and came to New York in 1868. Mr. Calverley was known especially for portrait busts in bronze of Horace Greeley, John Brown, Peter Cooper, and Elias Howe. He was elected an associate of the National Academy of Design in 1872, and three years later was made a full academician. His best work is the bronze statue of Robert Burns in Washington Park, Albany.

Sir John Tenniel, who died in London last Thursday at the age of ninety-four, was the last survivor of the brilliant group of artists and humorists who contributed to build up the reputation of *Punch* in the latter half of the nineteenth century. He joined the staff as second cartoonist in 1851 on the retirement of "Dickey" Doyle, and succeeded John Leech as leading cartoonist on the latter's death in 1864. From that date until his retirement in 1901 he drew a cartoon for *Punch* regularly week by week except on about ten occasions. Two, at least, of his cartoons have become classics, that representing Britannia laying a wreath on the death-bed of Lincoln, and the famous "Dropping the Pilot," illustrating the resignation of Prince Bismarck in 1889. As the illustrator of Lewis Carroll's "Alice in Wonderland" and "Alice Through the Looking Glass" Tenniel is known to an even wider public than that which became familiar with his work in the pages of *Punch*. He also illustrated "Lalla Rookh" and "The Ingoldsby Legends." Sir John Tenniel was a member of the Royal Institute of Painters in Water Colors, and received his knighthood in 1893.

Albert Neuhuys, the Dutch painter, of the school which counted the brothers Maris, Israels, and Gabriel, who died recently in Switzerland, was born in Utrecht, June 10, 1844. He began the study of art with Gys Gravanger, a local teacher. After working in Utrecht for several years, he went to the Antwerp Academy of Art, and then to Amsterdam, where he took up the style for which he is best known, the painting of homely Dutch interiors and peasant families. He was a friend of Anton Mauve and Alma-Tadema.

NOW READY
THE AMERICAN YEAR BOOK for 1913
D. APPLETON & COMPANY, Publishers

The Poetical Works of William Drummond of Hawthornden
With "A Cypresse Grove." Edited by L. E. KASTNER, M.A., University of Manchester. With Bibliography, Notes, Index, Facsimiles, and Portraits. In 2 Volumes. 8vo. $6.75 *net.* (Postage 38 cents.)

In preparing this edition of the works of the seventeenth-century Scottish poet, access was had to the Drummond originals belonging to the late Lord Crawford and the University of Aberdeen. By reason of its comprehensiveness and the large amount of new light which is thrown upon Drummond and his work, this is likely to become the standard edition.

THE COMPLETION OF A GREAT WORK
Oman's History of England
From the Earliest Times Down to the Year 1900
Written by various authors under the direction of and edited by
C. W. C. OMAN, Oxford University
Author of "The Art of War in the Middle Ages," "A History of the Peninsular War," etc.
Complete in 7 volumes. Sold separately. Each $3.00 net. By mail, $3.20.

"Possesses uncommon literary distinction and should find a wide field for usefulness not only as a work of reference, but as a 'popular' history. Indeed, it is difficult to recall any similar undertaking in whieh the fundamental requisites of the art of history-writing have been so admirably met. . . . May be safely recommended to the student who would learn what the latest researeh has to teach him, and to the educated public who, though no more than the student, desire history served in an entertaining way."—*Literary Digest.*

THE VOLUMES ARE:

I. England Before the Norman Conquest.
Being a History of the Celtic, Roman and Anglo-Saxon Periods down to the year A. D. 1066. By Charles Oman, M. A., All Souls' College, Oxford.

Our Monthly-Income Policy *Insures* Your *Insurance*

OF course you know that the claim under any insurance policy in any established old-line company like the Postal Life, will be settled according to contract.

Next to Government itself, Life Insurance is the safest of all institutions, and your beneficiary—wife or daughter, let us say—will get what's coming—and promptly.

But the all-important question for you to consider is: "What will she do with the money?"

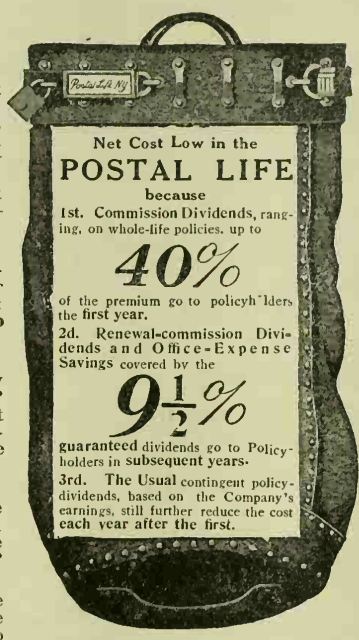
Does she know how to hold on to it? Will she invest it safely? Will her investment continue safe?

Or will she let some relative or friend or promoter handle the money for her?

And will there be any of it left at the end of one or two years, or five at the latest?

If not, all your thoughtfulness, and sacrifice, and expenditure, will have gone for naught, or nearly so.

You didn't insure your insurance.



Net Cost Low in the
POSTAL LIFE
because
1st. Commission Dividends, ranging, on whole-life policies, up to
40%
of the premium go to policyholders the first year.
2d. Renewal-commission Dividends and Office-Expense Savings covered by the
9½%
guaranteed dividends go to Policyholders in subsequent years.
3rd. The Usual contingent policy-dividends, based on the Company's earnings, still further reduce the cost each year after the first.

BUT such need not be the case. You intended the insurance to take your place and to supply the steady income you supplied, or a portion of it at least.

You can provide now for that very thing simply by arranging a Monthly Income Policy.

Then your beneficiary—wife, daughter, son, or parent—will get the proceeds in monthly payments for life or for a term of years, as you may specify.

And your beneficiary can't get it in any other way, and—best of all—nobody else can get it.

It is a trust, not administered by one or more individuals, but by a perpetual corporation subject to governmental control.

Any judge, any reputable lawyer, or court official will recommend a Monthly-Income Policy, since they have so often seen the proceeds of insurance frittered away with resultant poverty and suffering.

Better insure your insurance.

Why Not Investigate?

Of course, the Postal Life issues all the standard forms—**Whole-Life, Limited-Payment Life, Endowment, Joint-Life, and Child's Welfare:** all these are yours to choose from.

But what we think you will be especially interested in knowing about is our **Monthly-Income Policy**, and how much it will cost you to **make sure** that your beneficiary will receive an income of from $10 to $500 a month throughout life or for a fixed term—let us say twenty years.

POSTAL LIFE BUILDING

Call at the Home Office or simply write and say:

"**Mail full particulars about your Monthly-Income Policy as mentioned in**

THE NATION for March 12."

And be sure to give:

1. **Your full name.**
2. **Your occupation.**
3. **Your exact date of birth.**
4. **Your beneficiary's name and date of birth.**

STRONG POSTAL POINTS

First: *Standard policy-reserves* now nearly $10,000,000. *Insurance in force* nearly $50,000,000.

Second: *Old-line legal-reserve insurance* — not fraternal or assessment.

Third: *Standard policy-provisions*, approved by the State Insurance Department.

Fourth: Operates under *strict State requirements* and subject to the United States Postal Authorities.

Fifth: *High medical standards* in the selection of risks.

Sixth: *Policyholders' Health Bureau* arranges one free medical examination each year, if desired.

Official information with exact figures will be promptly forwarded by mail. No agent will be sent to visit you; the benefit of his commission goes to you because you deal direct.

NOW READY
GREAT JURISTS OF THE WORLD
From PAPINIAN to VON IHERING
BY VARIOUS AUTHORS
With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth*, $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

JUST PUBLISHED
ALGEBRA OF LOGIC
By LOUIS COUTERAT. Authorized Translation by L. G. Robinson; with a Preface by Phillip E. B. Jourdain, of Cambridge. Cloth $1.50.

"This is much the simplest and most concise exposition of the subject, which has been treated much more extensively and ponderously by other representatives of symbolic logic—for instance, Boole in England, Schroeder in Germany, Peano in Italy, and Peirce in the United States.

"Couterat's treatise is fitted to serve as an introduction to the study of mathematical logic. Mr. Jourdain's preface is of an historical character, and gives a very thorough account of the development of the subject, and the various phases of it especially emphasized by each of its different representatives."

PROBLEMS OF POLITICAL EVOLUTION
By **Raymond Gettell,** Northam Professor of History and Political Science, Trinity College, Hartford, Conn.
8vo, cloth, 400 pages, $2.00

This volume formulates and traces the evolution of fundamental problems of government. Drawing material from many sources, and applying scientific methods of treatment, the author brings out clearly the evolutionary nature of political progress, the connection between institutions and environment, and the constant need for adjustment and compromise in political development.

At a time when social and political questions are arousing so great an interest, this discussion will prove of great practical value, not only to teachers and students of history, political science, sociology, and economics; but to all citizens intelligently interested in the problems of present-day democracies.

LONGMANS' RECENT PUBLICATIONS

A Colonial Governor in Maryland

Horatio Sharpe and His Times, 1753-1773

By Lady Edgar. With 19 Illustrations and Facsimiles. 8vo. Pp. xvi+311, $3.50 *net*. (Postage extra.)

This is an historical work recounting the events from 1753 to 1773 through which Horatio Sharpe lived while Governor of Maryland.

The most important of these events relate to the war with the French, the main incidents of which are told in some detail. Political measures of less magnitude are also related, and there are extensive quotations from contemporary documents.

"Students of the colonial period have for some time felt the need of biographical works dealing with men like Governor Sharpe . . . whose career was 'distinctly interesting' and 'illumines a most fascinating period.' More especially has it been recognized that sufficient attention has not been directed to the important and difficult part played by the colonial executive. . . . Sharpe's administration covered a period peculiarly adapted to the study of the position, functions, and problems of a colonial governor. . . . A large part of the book is made up of long but pertinent excerpts from Sharpe's correspondence and the *Maryland Gazette*. This does not make the volume less interesting, for the excerpts are skilfully woven into a very readable and entertaining narrative. . . . One of the most interesting features of the book is the glimpse which it affords of social life in the eighteenth century. Some well-selected illustrations of colonial homes help to make this more vivid. The volume is concluded by a biographical sketch of the proprietors and a history of the province compressed into less than fourteen pages."—*E. I. McCormac, in the American Historical Review.*

The Wanderer's Necklace

By Sir Rider Haggard, author of "She," "Allan Quatermain," etc. With Colored Frontispiece and 3 Other Illustrations. Crown 8vo. $1.35 *net; by mail*, $1.45.

"There is plenty of incident of the most stirring sort. . . . It is a fascinating tale of adventure, and in its telling lacks nothing of that persuasive charm of which Mr. Haggard has so many times shown himself a master."—*N. Y. Times.*

"This is good romance. An excellent piece of work from a veteran hand, and an interesting story as well."—*N. Y. Tribune.*

"If Sir Rider Haggard is given the praise that is his due he will receive the highest award due the story-teller. He knows and he practices his art with the assured skill of a master, and what more can any man do?"—*E. F. E., in the Boston Transcript.*

The Nation.

NEW YORK, THURSDAY, MARCH 12, 1914.

The Week

President Wilson's message to Congress on the Panama tolls was a masterpiece of condensation. In less than 500 words he said all that is necessary, and with a force and impact that must go deep into the mind of Congress and the country. The gravity of his appeal is enhanced by his brevity. Some issues are too serious to be drenched in language. In the highest matters, saith the Preacher, "let thy words be few." The President has laid this to heart. And if there is truth in Voltaire's saying that it is not the books of many pages which move men to great social changes and even revolutions, but the broadside, the pamphlet, the thin volume all aglow with passion, it is certainly true that Presidents are not heard for their much speaking; that long and wordy messages to Congress which nobody reads cannot have the effect of a swift and direct utterance which all can take in in five minutes, and which is yet couched in such terms as to compel thought and thought yet again.

It was necessary that the President should state his personal conviction that the Panama act violated the Hay-Pauncefote treaty. This he did unmistakably. Long study of the matter has convinced him that Congress was betrayed into thinking it had a power which it had really parted with by treaty. If Mr. Wilson did not devoutly believe this in his own heart, he could not have gone to Congress with his moving appeal. But he does not rest the case on his own belief. He points, rather, to the consensus of opinion everywhere except in the United States; and throws himself upon Congress as the Executive who is directed by the Constitution to conduct foreign affairs, asking for the removal of an obstacle to a good understanding with other nations, and so to the success of our own country in dealing with great problems, to solve which we acutely need the good will and help of European Powers. We do not see how Congress can possibly reject his plea.

Mr. Oscar Straus is not of those who put the inviolability of party platforms above that of an international treaty. He openly repudiates the Progressive tolls-exemption demand of 1912, observing that a question of public honor is one in which partisanship, as well as campaign planks, is to be thrown to the wind. It is in the spirit of his declaration, "I honor the courage, statesmanship, and international conscience of the President when he appeals to the highest motives," that support from all three parties promises to be given the repeal bill in Congress. When both Democratic and Progressive leaders take the view of Mr. Straus, not much is left of the "sacred party pledge" of which Senator O'Gorman and some others would make so much.

The resignation of John Bassett Moore from the State Department is much to be regretted. So much is evident from Mr. Wilson's own words of thanks and praise. It is not necessary to go into the question how deeply Mr. Moore was dissatisfied with the conditions under which he worked—it is unfortunately quite clear that he was dissatisfied—to point out that this leaves the State Department without a single trained adviser and diplomatist in high place, if we except Mr. Adee. Without him there could, of course, hardly be a State Department, for, while Secretaries and counsellors come and go, Mr. Adee goes on forever. The loss of Mr. Moore is, therefore, peculiarly severe at a time when the President's most difficult problems are foreign ones, and there is considerable lack of confidence, not in his Secretary of State's earnestness of purpose, but in his tact and diplomatic knowledge and ability. Unless the President can promptly find another man of Mr. Moore's quality and experience, the prestige of the State Department will be still further impaired. In appointing Mr. William Phillips he has chosen just the right kind of young man for Third Assistant Secretary of State, one with experience abroad. This is a step in the right direction, a recognition at last that fitness and training do count. So far, the State Department has seemed to be run on the theory that its work can be done by any one; and Mr. Moore's resignation must, for the moment at least, intensify the widespread dissatisfaction with conditions in it.

Gov. Colquitt and his Rangers ought to place themselves under the command of Senator Penrose, of Pennsylvania. For he has discovered the way to make war peacefully. In the statement which he issued on Sunday, as at once his own bid for reëlection and an attack upon President Wilson, he lays down his position. He is opposed to war with Mexico. He has "never advocated political intervention in Mexico." All that he would do is to notify the Mexican authorities, civil and military, that they will be held responsible for "depredations to Americans or their property," and follow up this notice by "sending American troops to the threatened point to enforce the same." This beats the Texas Rangers hollow; and if President Wilson had a proper sense of patriotic duty, he would at once appoint Boies Penrose general in command of an invading army that is against intervention, and would scrupulously refrain from acts of war.

It will be interesting to see what the advocates of a big navy can contrive to say in reply to the appeal which a group of distinguished women has addressed to members of Congress. Every one of the six points of the appeal will put the Hobsons to their best efforts to make an answer that will stand investigation. Will they deny that arbitration has never been refused us when we have asked it; or that, with the exception of a brief war which we began, we have been at peace with the whole world outside of this continent for a century; or that, although we have maintained the Monroe Doctrine, we have got along with a small navy; or that Japan neither can nor cares to rear its horrid head against us; or that the man who sells guns is the last man to give impartial advice regarding the need of guns; or that we are losing by preventable diseases yearly many times as many as we have lost all told by foreign bullets? The whole matter is put into a nutshell in the sentence: "Nations, like men,

must prepare to deal with reasonable probabilities, not with fantastic possibilities." This is almost as statesmanlike an utterance as the ordinary Congressman could make!

The custom of delivering messages in person suffered a slight check the other day when Gov. Blease, removing his coat, suggested that he had a few blows to deliver along with his message. Physical and intellectual appeals are too contrary to mix well, and we can but think that it would be much better for the intellectual to precede the physical. Otherwise, the former might occasionally not be made at all. Broad-minded Americans will sympathize with the belligerent Governor. Here was an Executive to whom the letter of the law is killing, but whom its spirit maketh very much alive, compelled to listen to a mere Representative raise the technical point that the Governor was not within his Constitutional rights in addressing the Legislature in person. What would become of political aspiration if it were to be confronted at every point by the statute-book? In particular, what would become of rare souls like South Carolina's leading citizen? If the Columbia legislators know their business, they will encourage him to pour out his heart before them, for they may never see his like again.

The "Nuisance Act" which went into effect in Tennessee on Monday shows how every State prohibition law requires ingenious enforcing legislation. Directed against the three largest cities, Memphis, Chattanooga, and Nashville, which have defied the rest of the State to close their saloons, it compels obedience by putting the execution of the law in the hands of the judiciary. No more can recalcitrant officers balk its operation; hereafter, on complaint of ten taxpayers, armed with proper evidence, the courts are authorized to step in directly and close, as a "public nuisance," any place where liquors are sold. The saloons were shut at midnight with an avowal by the police that thereafter the cities would bow to the law they had fought, as town against country, for two years. The necessity for such a measure implies a sad reflection upon the ordinary guardians of local peace and order.

We suggest that Mr. George W. Perkins should address an open letter to the players of the National League and American League, proving that the age of competition is dead; and see what sort of answer he will get. If it were Rudyard Kipling who came up the bay last Friday on the Lusitania; if it were William II with the announcement that he was open for lecture engagements, the publishers and the lyceum agents would hardly have shown so much agitation as marked the arrival of the Giants and White Sox. Baseball "magnates" swarmed over the Lusitania, baseball "moguls" apparently went down on their knees to their players, holding between their clasped hands contracts for the players to fill out with their own terms. The record baseball salary has now been pushed up to one thousand dollars a year more than the salary of an Ambassador to the Court of St. James's. One player had a long-standing grievance against his club president involving unpaid salary. "The question was settled by the president handing over the amount in cash." Messrs. Tris Speaker, Mathewson, Tinker, and other baseball stars whom the advent of the Federal League has made happy, would decidedly disagree with Mr. Perkins on the decay of competition.

The detailed statement by J. P. Morgan & Co. to the chairman of the New Haven Railroad, as published in Monday's papers, answers conclusively the loose charge that the road had somehow been "bled" by its bankers to their own advantage, and that such a process was responsible for the company's present condition. The firm presents transcripts from its books, showing an exceedingly moderate average profit, whether in case of underwritings or of commissions as fiscal agents of the company. In several of the underwritings, prior to the "fiscal contract" between the New Haven and the bankers, there is reported an actual and substantial net loss by the banking house. In the matter of commissions on purchase or sale of securities for the railway, the commission paid to J. P. Morgan & Co. ranged from 1-16 of 1 per cent. to 1½ per cent. Considerably more than half of the amount thus financed carried a commission of ¼ of 1 per cent. or less. Regarding the insinuations made that the firm must have obtained some large indirect or ulterior profits in these various transactions, the banking house now states to the chairman of the company:

> Answering your specific inquiry, we beg to state that none of our firms, nor any member of them, ever had any interest in any properties, such as the Westchester, the steam railways, the trolley lines, or the steamship companies, acquired by the New Haven Company or any of its subsidiary companies.

The only exception to this comprehensive statement, it is pointed out, affected a relatively small holding in a wharf and terminal property, inherited by Mr. Morgan and transferred by him, on the basis of an outside appraisal, to the New Haven at that company's request.

It is on the now somewhat celebrated purchase of the New York, Westchester & Boston by the New Haven that public interest has specially converged. The formal opinion of Interstate Commerce Commissioner Prouty, last June, declared this to be "an enterprise which has cost the New Haven Company $12,000,000 in excess of the value of its property on its own showing," and further stated, as a result of examination of the New Haven's books, that "so far as those records go, this money has vanished into thin air." The Messrs. Morgan now submit book entries and official correspondence to show that the firm's advances of capital in connection with the operation were made as fiscal agents of the New Haven, for the account of the company and under its instructions, and without profit to the banking house. Mr. Oakleigh Thorne, who was interested in the financing of the Westchester undertaking, declares in an interview that the New Haven "obtained on the investment a return that justified the deal," and that the assertion that $12,000,000 "vanished into thin air" is absurd. But Commissioner Prouty's opinion rested on the fact that the New Haven's payment exceeded by that sum the company's own official statement of the tangible value of its property. The fact that J. P. Morgan & Co. have cleared themselves from the imputation of undue profits on their own account, therefore, leaves the question open, Was this payment, so largely in excess of estimated value, warranted? If it was not, then it ought to be ascertained whether any one, responsible for the transaction, obtained a wrongful pecuniary profit. If it was, then the truth

of the matter ought to be made public, in justice to all concerned. The Interstate Commission, under the instructions of Congress, is now engaged in an investigation which should answer these questions.

The figures of unemployment in Chicago, resulting from a canvass made by the Police Department at the request of the Federal Commission on Industrial Relations, are extremely interesting. The total number of unemployed men (we give the nearest thousand throughout) was found to be 46,000; and of these 38,000 were residents of the city. These figures are so vastly below any such percentage of the population for Chicago as was presented by the number of unemployed men given in the A. I. C. P.'s estimate for New York, as to make it in the highest degree probable that the latter number was far beyond the fact. The Chicago police census may be more or less imperfect, but it is safe to assume that it is a close approximation to the truth. Out of the 46,000, the number set down as "honestly hunting work" is 33,000, leaving 13,000 of the kind that are not of this type. Thirteen thousand is also the number that are classed as "skilled workmen," and many of them must be accounted for by the building trades. In these the exceptionally high pay during the season goes far to balance the off-season unemployment, which is counted on in advance, and thus the number of skilled workmen who can be supposed to be suffering great hardship does not appear to be at all formidable.

The leaders of the I. W. W., an organization consisting almost entirely of leaders and organizers, are bound to protest against the peculiarly infamous nature of the persecution to which they have been latterly subjected. We are not referring to the arrest and imprisonment of the "army" which has been investing the churches in this city. Arrest and imprisonment are a species of attack which the I. W. W. welcomes as a form of martyrdom which is essential to the ultimate triumph of their ideas. A much more cruel form of persecution was brought into play by Gov. Johnson of California, when he offered work to the unemployed crusaders at Sacramento on their way to Washington. It was almost as brutal an assault as the declaration made by the charity authorities in this city, that there was no need for the unemployed to march on the churches, since the city's resources were sufficient to take care of everybody who applied for food and shelter. This is inhuman warfare. Gov. Johnson and the heads of the Municipal Lodging House in New York might just as well have called out the army and the police against the I. W. W. demonstrators. Such action would have interfered less cruelly with their plans.

The paradox that it is the exclusiveness of *cum laude* and *magna cum laude* degrees which leads our university youth to think that they are not worth trying for seems a somewhat perilous basis for college policy, but Princeton has boldly made use of it. That it has an element of truth has been proved by the British universities, with their wholesale distinction between "honors" and "pass" degrees. The English student who will not put on the higher steam required in an attempt to avoid the "pass" degree is a sorry young man; and even in Scotland, where it has lately come to represent a formidable standard, he is distinctly below the average. The adaptation of the British plan which the Princeton faculty has just announced includes not merely an equally broad distinction between the degrees with honors and without honors, but a requirement that each candidate for honors must enroll, in general, early in his course. It is thus hoped to mark off those who loaf through on a bare margin, and, by furnishing a more general incentive for intellectual distinction, foster a college sentiment that any student not aspiring to honors labels himself at the outset as wanting in academic self-respect. About 60 per cent. of the first class eligible have already enrolled. This experiment in making scholastic distinction democratic, while still keeping it high in significance, will be watched with interest by other colleges.

Mr. Asquith's proposals, in the matter of the Home Rule bill, have been accurately foreshadowed in the recent press reports. In undertaking to allow each county in Ireland to vote on the question whether it will come under the Dublin Parliament, the Prime Minister goes over, by so much, to the Unionist demand for a plébiscite, and also for the exclusion of such parts of Ulster as may decide to be excluded. The offer has been coldly received by Bonar Law and Sir Edward Carson, but this was to be expected. The Unionists would not be really enthusiastic over anything short of complete surrender by the Government. Yet it is plain that the Prime Minister's proposal is shrewdly conceived as a means, if not of final and peaceful solution, at least of postponing the crisis and giving the country ample time to think the matter over. Moreover, it is a plan that cuts very deep, logically, into the Ulster contention. This has been that Ulster Protestants simply would not submit to the Catholic majority of Ireland. But if that is so, the Protestant majority—a very small one—in Ulster cannot demand that the Catholic minority in the province submit to it. What Mr. Asquith has done is to suggest that the splitting-up process, on which Ulster has insisted, be carried a little farther. There is no likelihood that the plan will meet with early acceptance, but neither can it be rejected out of hand, as Sir Edward Carson's plea for a modification shows; and to have gained time for consideration is much.

In view of the fact that with the arrest of the South African labor leaders the backbone of the strike movement was broken, it would now appear that by expelling the strike leaders from the country the South African authorities have only given an enormous amount of free advertising to the cause of their opponents. Had the leaders been allowed to remain in Africa under detention, the probabilities are strong that the pacification of the country would have proceeded very much as it did. Premier Botha and his fellow Ministers could hardly have contemplated the possibility of the imprisoned men being liberated by an armed uprising. In jail at Pretoria, or Johannesburg, Messrs. Bain, Poutsma, and their associates would have been no greater source of embarrassment than they are to-day, in view of the remarkable expression of protest in Great Britain against the arbitrary act of the South African Government. The question of Imperial citizenship would not have been thrown open as it has been.

SHORT CUTS TO THE MILLENNIUM.

It must be confessed that the whirlwind reformers of this poor old world and all that is therein are getting on. One objection which used to be made to their plans no longer serves. A common remark upon vaguely benevolent schemes to make the earth over formerly ran like this: "What you say may be all very well, and certainly does honor to your heart, but you must admit that such ideas can never be enacted into a statute. To draw a bill embodying your proposals is beyond the wit of man. And you must perceive that, no matter how fine are your speculations about the future, they can never be reduced to practice unless they can be stated in terms of law."

If this once had power to put to confusion impatient yearners for the millennium, that power is now lost. Every man of them is to-day ready with his little bill to provide a short cut to peace and plenty and the earthly paradise. Consider, for example, two bills lately introduced in the Massachusetts Legislature. One of them, House bill No. 1,861, proposes to abolish poverty by the easy method of re-defining it. Section 1 provides that "all poverty existing in Massachusetts shall be regarded and treated as a disease." One sees the simplicity as of genius in this. The moment you are compelled by law to conceive of the poor man as a sick man, you instantly see the need of a "new type of physician" to treat him. Such a type is specified in the bill, to be "trained and paid by the State"; and, thereafter, the same sort of "organized warfare" which we now wage against tuberculosis, for instance, shall be made upon the twin-disease, poverty. What could be more severely practical?

The other bill—House bill No. 1,864—is more ambitious but equally confident. It proposes nothing less than "the intelligent, voluntary reorganization of society upon lines embodying modern ideas, to establish justice, social efficiency, and happiness." This looks like a large order, but the means prescribed are as large as they are loose. The thing is to be done in convention assembled. All residents of the State, as well as "individuals and organizations in any part of the world," are to be summoned to convene "next autumn or winter," and "submit plans" for making all things new. Some of these are to be laid before the Legislature for "immediate adoption," though others are to be held back until "general arrangements are completed." As between these two bills, the Springfield *Republican* thinks that the Legislature will prefer the scheme of a "perpetual welfare congress," since "in time it might talk its head off, with no harm done."

Such flighty projects are not, of course, to be considered an alarming sign of the times. The bills will probably be heard of no more. They may have been introduced merely "by request." It is impossible to imagine their having a serious backing or receiving serious attention. At the same time, they suggest the sort of ideas that are afloat, and the great ease with which they now get an airing and even solemn embodiment in a proposed piece of legislation. Behind any particular display of folly of this kind there lies the larger folly of supposing that poverty can be abolished, and society completely reorganized—if only people would put their heads together, draw a suitable bill, put it on the statute-books, and then thank Heaven that they are done with *that* job. We have always had with us the panacea-men, and the men with skeleton keys guaranteed to unlock every door that bars the race from progress; but the symptomatic thing is that they are getting both more numerous and more pushing. Entirely convinced that their favorite social remedies are infallible and also easy to understand, they cry out that a chance ought to be given to the people to vote whether they will accept the remedies or not.

It would be wholly unfair to class with the Massachusetts freak bills the proposal in New York to submit to a referendum the plan of halving the tax on buildings in this city. In favor of this measure a petition was presented to the Legislature last week, signed by several thousand names. Now, we should never think of asserting that they and the promoters of the bill are crack-brained. Their project is one on which there is a great deal of serious argument to be advanced, on either side. But the point is that the plan is obviously one very involved, very hard for even the closest students to form a sure judgment upon, and one that is as ill fitted as could be imagined for inviting an off-hand popular verdict upon. Yet a single-taxer will not hesitate to affirm in print that the scheme is so "perfectly clear" as to be just the thing to be submitted to popular vote. We suppose that the electors would merely be asked to say whether they wanted their rents reduced! That would align the proposals with those which Jack Cade submitted to a referendum—namely, that the three-hooped pot should have ten hoops, and that in England seven half-penny loaves should be sold for a penny—and on which he got triumphant popular support. It is very easy for a King Gama to lay question-begging projects before the electors, with the result that

> This people mild politely smiled
> And voted them delightful;

but this neither removes the difficulties nor averts the consequences.

THE ASSOCIATED PRESS.

A meeting was recently called at Cooper Union in this city as a protest against the suit for criminal libel brought by the Associated Press against the editor and the cartoonist of *The Masses*, a Socialist monthly publication. Into the merits of that lawsuit we do not propose to enter. But what is the state of mind at the bottom of the sympathy manifested for the assailants of the Associated Press? That state of mind was pretty fairly represented by Amos Pinchot, the first speaker at the meeting. "It doesn't matter about Mr. Noyes," said Pinchot, "but it does matter if the Associated Press is a common carrier and a monopolistic concern which gives out only such information as will lead to conclusions desired by the officers in control of it."

Now of course neither Mr. Pinchot nor anybody else believes, or means to be understood as believing, that the Associated Press literally "gives out only such information as will lead to conclusions desired by the officers in control of it." And it is not worth while to quarrel over what is obviously a bit of rhetorical license. But, if he is sincere—and we do not question his sincerity—his words indicate a belief that there exists at least a distant approach towards such a state of affairs. He believes—and doubtless good men and women believe with him—that there is systematic and deliberate suppression of news by the management of the Associated Press, and that on a great scale.

That these good people are victims of

a delusion, we do not hesitate to say. To prove this would indeed be difficult; all we can attempt is to show the nature of the delusion, and to give some idea of the kind of nourishment on which it is fed. In the course of a year, there are hundreds of thousands of items of news handled by the Associated Press. Among them it must inevitably happen that some fail to get proper attention; once in a long while an item of importance must even fail to get on the wires at all. This may arise through accidents of haste; it may arise through the incompetence, or the dishonesty, or the partiality of the local man on whom the Associated Press relies for its supply of the news of a given place. Now, if a social or economic reformer is eagerly watching for any sign of the corrupting influence of capital, he is bound to find omissions which relate to the matter he has at heart. The astonishing thing is that so few instances of this kind have been seized upon. But the *nature* of the instances is even more significant than their paucity.

A single, but striking, example of this must here suffice. Prof. E. A. Ross, in an article in the *Atlantic Monthly* on "The Suppression of Important News," presented just one instance in the field of political news of a general nature. When the Supreme Court of Oregon sustained the constitutionality of the initiative and referendum, the news, he says, was not sent out to the press of the country. We have not taken the trouble to find out whether this is true or not. But assuming it to be true, what is the conclusion we are rationally to draw? Did the Associated Press expect to keep it a secret that the people of Oregon were going to continue to have the initiative and referendum? Does it try to keep the annual results of the Oregon referendum votes secret? Is it likely that the Associated Press was so solicitous about the suppression of this particular bit of news, when it sends out every day news a thousand times more revolutionary or radical in its nature? These questions answer themselves; that they should not have occurred to a man of Professor Ross's intelligence is remarkable evidence of the way in which prejudice may paralyze judgment. And any one who uses his judgment must see that precisely the same consideration rules out, as having no significance whatever, nearly all the isolated instances of alleged suppression that are cited. They are few in number; and in kind they can be matched a thousand times over by items far more objectionable to "capitalism," which are promptly flashed over the wires and conspicuously printed in the newspapers.

Now to say this is not to say that the Associated Press is faultless; not even that it is free from grave defects and shortcomings. In the matter of the West Virginia labor troubles, for example, it is not impossible that it may have fallen far short of what might properly have been expected of it. One of the really serious weaknesses of its system is that frequently—though by no means always—it is slow in rising to the gravity of a situation. For its news from the thousands of points—other than the principal centres—whence its dispatches come, it must depend normally upon local men, men connected with the local newspapers; and it is thus exposed to the danger of being supplied with news colored in accordance with the interests or prejudices of the locality or the attitude of a particular paper. For this danger it ought to be on the lookout; and as soon as a situation begins to present aspects of great general interest, it should send an able and trustworthy special representative to the spot. This it actually does do very frequently, and the duty is more clearly recognized now than ever before; but there are undoubtedly cases in which it has been remiss, with unfortunate consequences. But it is one thing to charge it with not coming up to the full measure of an extremely high and arduous responsibility, and an altogether different thing to accuse it of wilful and systematic suppression. The falseness of the accusation none know so well as those who are most intimately acquainted with the actual working of the Associated Press.

AMERICAN UNIVERSITY PRESSES.

At Yale's recent alumni gathering, when graduates flocked back to see the University in workaday clothing, no new thing was exhibited with more pride than the Yale Press. Treasurer Day, as the Hartford *Courant* reports, "opened the eyes of the alumni when he told them that many who had never heard of Yale were led by the fame of the Press to look into the fame of the University. He said that one of the largest orders recently came from Japan. The Press already had 125 volumes to its credit, and spread Yale thought broadcast about the world, and encouraged worthy scholarship generally, not confining itself to Yale." President Hadley remarked in his speech that the Yale Press had just published a volume by one of the professors which nearly every important firm in America had rejected, and was fast making money on it! He added, of course, that the object of the Press was to issue such books without thought of loss or gain. Either way, the Yale alumni may well take pride in such an institution as in nearly half-a-dozen of our universities has of late years become prominent—the endowed university press. Its possibilities are fast forcing attention outside academic circles.

The actual achievement of such presses is considerable. It is, moreover, of surprising breadth when one takes into account how carefully each university press has limited its scope and ambitions. The formal statement of the press established last year would serve for all: "Inaugurated primarily for the publication of books of a highly scholarly character, the Harvard University Press aims to aid in the advancement of knowledge by making possible the wide distribution of the work of the foremost scholars of the world. It does not plan, however, to compete with the commercial publisher, since its chief function will be the issuance of books not commercially profitable." The Princeton Press, housed and equipped in 1911 by gift of Charles Scribner, '75, was organized under the act providing for "associations not for pecuniary profit," and specifically chartered "to operate a printing and publishing plant for the promotion of education and scholarship." Yet how much can be accomplished under this severe programme is shown by that older establishment, the University of Chicago Press. Its assortment of astronomical and mathematical signs, special type-setting apparatus, with fonts of Syriac, Arabic, Greek, Hebrew, and Ethiopic characters, were the jealous pride of President Harper in the 'nineties. Many of its 26 widely circulated journals would be impossible to any but an endowed press. Such recent titles among its 650 books as Loeb's "Mechanistic Conception of Life," McLaughlin's "The Courts, the Constitution, and the Parties," Bronson's "American Poems,"

and others are calculated to excite envy in the ordinary publisher. The publications of the Yale Press are of sufficient general interest to repay general advertising. Yet these works involve no departure from the original purpose.

As to the value of such a Press to the university world, it lies necessarily in scholarly publications, and in giving permanence to the results of scientific research. To set down the function of a university press as "relating the humanities to the general national life," is largely mistaken. There is no end to the difficulties the faculties would meet if they began to seek mouthpieces of this colossal sort. The presses are maintained to encourage the investigation of fact, by taking works which the ordinary book-world refuses, and yet giving them a wider currency than they would get in the ordinary form. Exact scholarship of a petty, burrowing kind has already stimulation enough; but the university presses, standing midway between such scholarship and the writing of books for the commercial public, can lift it to a higher, freer range. They can be invaluable, moreover, in encouraging specialized *magna opera* that would otherwise be unattempted. An exhaustive grammar of the English language, for example, is a desideratum admitted to have been stifled by the certain prospect of refusal on any terms by any publisher. It would be unfortunate, as President Hadley implied, if in the whole mass a book of wide intellectual appeal did not often crop out. Works that active and able professors are always producing for the general publisher might be included for the specific purpose of inviting general attention to the lists of the university presses.

It is true that the university reviews interpret their mission broadly, and have even been stated to fill the gap with the cultivated public which the "popular" magazine has left. But their distinction from the journals of scholarship has always been clear. They print formal essays of a critical character, and exploit a field of abstract thought. They stand apart from the university presses, which have to represent not only the guardianship of knowledge and the critical reworking of ideas, but the search for concrete, buried truth. Properly, of course, the reviews are simply one phase of the general university press movement; the alliance between learning and printing must take on many sides. It is this whole alliance which is significant of the awakening of our universities to their opportunity to disseminate learning far beyond the campus, "not merely from time to time, but all the time."

SPADES AND SHOVELS.

The "repeal of reticence" Miss Repplier calls it in her *Atlantic* paper, this frenzy of plain speech on subjects proper and improper—mostly improper—that characterizes public discussion today. At one end of the scale the college professor who believes sincerely in the necessity of teaching a certain amount of sex hygiene to children; at the other end of the scale the Broadway manager who has capitalized the brothel; between the two a whole army of writers, speakers, educators, agitators, more or less intelligent, more or less sincere, who have been working on the single assumption that the evils of the world need only to be sufficiently advertised to be cured—this is the situation. Let the reader consult Miss Repplier's extremely forceful statement for himself. He will disagree with some of the things she has to say. He will agree with most of the things she has to say. We have little doubt that he will agree with her main thesis, which is that noise and progress are not synonymous; that the Puritanism which is so bitterly flagellated was a Puritanism of utterance which did not stand in the way of a fair appreciation of the facts of life; and that in general the trumpeted revelations of social evils are largely the emphatic way a young generation always has of announcing the discovery of things which their fathers have known all along. But for the moment we are less concerned with the amount of good and bad involved in the abolition of reticence than with the causes that have brought about this remarkable change in our habits of speech.

The emphatic note, or the hysterical note, as one may choose to call it, was struck first some ten years ago by the "muckrakers." We use the term in no invidious sense. There are few people nowadays who will deny that, along with a vast amount of exaggeration, the great magazine crusade which began roughly with Mr. Lincoln Steffens's "Shame of the Cities" has been productive of some good. How far the magazine crusade was merely a symptom of the Social Awakening we now speak of, how much it was an accelerating cause, it would be difficult to determine. The point is that in the discussion of public problems the academic note made way for the loud note. The high pitch may have been due to sincere conviction, or it may have been merely blatancy, as with "Frenzied Finance." But the key for public discussion had been set. Later the note grew more and more shrill, until, in accordance with the law of physics, it resolved itself into silence. But at the beginning there was a certain justification. In speaking of bosses, of grafters, of the entire family of leeches that had attached itself to the government of our cities and States, there was an excuse for not mincing words.

The habit of loud speech received a new impetus from the woman movement—suffrage in its narrower aspect, feminism in its broader connotations. The application of the muckraking rhetoric to feminism was all the more natural because the woman movement is so intimately a part of the social agitation which opened out of the campaign against political misrule. It was impossible to speak of bosses and political corruption without speaking of the vicious saloon and the brothel, those twin supports of bossism. To what extent our reticence in the terminology of sex is due to the very genius of the English language, and to what extent it is due to Puritanism, hardly matters; the fact remains that where other nations used plain terms we were in the habit of employing euphemisms or circumlocutions. We spoke—and for that matter still speak very often—of "unfortunates," of "the social evil," of "resorts."

But in the striving for more and more emphasis on the one hand, and on the other in the great numbers—young men and women for the most part—who gave themselves sincerely to social service, the straight-from-the-elbow vocabulary was bound to make its way. Young men and women who went down to the tenement districts, who began to concern themselves with nurseries, settlement houses, dance halls, moving-picture theatres, with the entire life of the poor among whom the reticences, the privacies, and the delicacies of life are apt to undergo considerable modification, naturally acquired the habit of

plain speech. To the degree in which the lives of these young women from the well-to-do families became less sheltered, their vocabulary became less sheltered. Thus the way was prepared for the technical discussions of problems of sex morality and of race improvement.

Behind such specific causes working for the abolition of reticence is the outstanding feature of our national psychology, our genius for throwing ourselves with unrestrained enthusiasm and credulity into what we are doing. The process may not last; it usually does not last, because of this very excess of energy we apply; but the habit is there. Because we are a nation of business men, other nations are accustomed to call us a practical people; what they mean is that we are an intense people. We work hard and play hard and break down from overplay as from overwork. We are not practical. We are a nation of believers in patent medicines and panaceas. The latest thing that comes along is sure to regenerate the world. It may be eugenics, it may be the Boy Scouts, it may be the direct primary, it may be grated peanuts. Grated peanuts are not merely a food; taken in sufficient quantities they will make us successful in business, purify our politics, adjust our industrial problems, and solve the servant question.

OFFENSIVE COLLEGE "LOYALTY."

The reasons why a man should have a feeling of gratitude, or even devotion, to his college are so plain that they do not need to be stated. To put it on the lowest ground, he is a beneficiary of the institution in which he was educated. What he got was furnished to him at less than cost. The opportunities which he enjoyed represented charity, and possibly sacrifice, on the part of those who endowed his college; or else a free gift from the State. To be insensible to all this would argue him an ingrate. It is no particular credit to a graduate to be what is called "loyal" to his Alma Mater. The virtue, if it be a virtue at all, belongs to the negative class. To display it is no merit, though to be without it would be a disgrace.

In a true and just sense, also, a college man should cherish grateful remembrance of his teachers. They did their best for him ungrudgingly, often, as he is compelled to admit on later reflection, having to work on most unpromising and refractory material. In opening his mind and enlightening his ignorance, they did him as great a service as it often falls to one man to bestow upon another. Not to have a proper sentiment in return for all this would be most unworthy. Something of this must have been in Herder's mind when he said that a scholar who attacks his teacher "bears Nemesis on his back and the sign of reprobation on his forehead." All right-minded college men agree to that. In this and many other significations of the word "loyalty" that might be mentioned, they fully concede and act upon their duty to be loyal to their college.

There are, however, certain extensions or perversions of the idea which they balk at and resent. One of the worst of them is the fantastic notion of college "loyalty" which has grown up in connection with undergraduate athletics. It has often been exposed. The Headmaster of Phillips Andover recently wrote about it in the *Atlantic* with both wonder and severe condemnation. How does it come about that a set of ordinarily decent and manly and honorable young fellows apply an utterly false and indefensible moral standard to athletics? How is it that they will condone and even applaud trickery, wink at cheating, and keep silent in the presence of manifest falsehood? Why, it is because they are bidden to do so in a spirit of intense loyalty to their school or college. And, of course, the thing spreads into graduate life. An alumnus is looked upon as a poor creature who will not go and cheer himself into a frenzy, and chill himself into a rheumatism or a fever, at one of the "big games."

Upon another strange form of graduate college loyalty we feel bound to say a word. Every alumni association must know the type of man we mean. He is the graduate, of anywhere from five to twenty-five years' standing, who makes himself a perpetual nuisance and offence through excess of what he calls "loyalty." In his case, it moves him to be forever babbling about the "dear old college," or else calling upon everybody he meets to yell for the class of 1890. He infests college reunions, clapping strangers on the back and putting his arms about college mates, and shouting that he never can forget the time when Jones made a hit with the bases full. At every college dinner he gets tremendously effusive, as a result either of drink or a rush of sappiness to the head, and makes a speech declaring that if he could only let you see his heart you would see that all his blood ran blue, or white and green, or orange and black, as the case may be. This terrible college loyalist is the getter-up of all kinds of uncouth and impossible alumni "movements." He is all the time proposing new funds, or passing around subscription-blanks, or writing impudent letters to people whom he does not know demanding that they join his particular organization, or send him a thumping contribution, all for the greater glory of the college to which he is so insufferably loyal.

He is ordinarily so dull and thick-skinned, this type of graduate, that it is almost hopeless to seek to wake him to his folly, or make him see how offensive he renders himself to his fellow-alumni. But if any word of ours could penetrate the dark of his intellect and his sensibility, we could wish that it might rouse him to perceive that a man who has nothing to brag of but his college degree has a poor excuse for boasting. If he learned anything worth while during his college course, he should have learned not to behave like a bounder; and if he has not learned anything since—as he usually makes it too plain that he has not—he ought somehow to be made to feel that his insistent and protesting identification of himself and all his interests with the college through which he somehow scrambled, is not the highest compliment to his Alma Mater. There was a time in this country when the name Loyalists meant something hateful. Such some forms of loud-sounding college loyalty might easily become.

MISCELLANEOUS GERMAN BOOKS.

It seems rather early to be writing the memoirs of Young Germany. But since Germany has abandoned the tradition of honoring its poets only after their death and is celebrating their fiftieth birthdays, why should not these poets begin their reminiscences as soon as they like, unless on the ground that age brings perspective? Max Dauthendey's "Gedankengut aus meinen Wanderjahren" (Munich: Albert Langen) suffers from the short-distance view of forty-six years. Yet it is an interesting attempt; for the author's recollections

are more than autobiographical, they trace the evolution of his generation, spiritual and æsthetic. The thread that runs from Flaischlen's "Martin Lehnhardt" and Hauptmann's "Einsame Menschen" to the first part of Dauthendey's memoirs is readily recognized. His was not an individual but a typical case. Religious doubts tortured not a few of the young men in the last quarter of the century, before a reading of life based upon science set their minds at rest. The conclusions at which Dauthendey arrived under the influence of his philosophical friends differ little from the monistic philosophy which has taken the place of dogmatic creeds among the intellectuals of his generation. But there are many pages in the two volumes in which the individual and not the type speaks, and these pages have an intimate charm.

Dauthendey's strong attachment to the soil of his fathers, his love of his mother tongue, his faith in the love of woman and the durability of the marriage tie, are expressed with simplicity and sincerity. Nor has his love of home a note of that nationalism which by overemphasis becomes repulsive. His first impressions of Italy, based upon a very brief visit to Venice, are puerile. England he visited with a more open mind and in a more receptive mood. Scandinavia won his sympathies by subtle beauties of nature and a certain freedom of line in the physical build of the people as in their habits of life and mode of thought; eventually it also captured his heart. But his attitude towards France and the French is perhaps the most surprising: it has no trace of the pride of the conqueror, which still colors much that is written by Germans about France. He is not uncritical, but he refrains from censure. A journey to Greece makes very fascinating reading. The voyage around the world is rather briefly disposed of. Not the least interesting features of the work are the references to his contemporaries, native and foreign; his impressions of Richard Dehmel, Frank Wedekind, Stanislaus Przybyszewski, Ola Hansson, Laura Marholm, Ellen Key, Obstfelder, Strindberg, Munch, and others. He draws their portraits in few words, yet succeeds in making them live. Although he dwells in the earlier part of the work upon the systematic manner in which he tried to school himself in the æsthetic principle of his generation, to see things as they are and record them as he had seen them, the two volumes are singularly free from the objectionable features one meets in the writings of other adepts of the naturalistic creed.

The theological and clerical controversies associated with the name of Jatho are revived by the publication of a book, entitled "Zur Freiheit seid ihr berufen" (Jena: Eugen Diederichs), with a preface by his son, Carl Oskar Jatho, beginning with this significant quotation: "Er suchte eine heilige Welt, nicht eine heilige Kirche." The book contains sixteen sermons, the first being the one delivered by the famous pastor in Trinitatis Church in Cologne, five days before he was removed from the pulpit by the judgment of the Evangelical Synod of Prussia. The others were given in various meeting-halls in Barmen, Elberfeld, and Cologne in the two years before death claimed him. The publisher deserves credit for having undertaken the reproduction of the sermons from the shorthand notes of a student, which the deceased had pronounced absolutely trustworthy.

A book of unique interest, not only for the general reader but also for the student of the Reformation, is entitled "Aus Luther's Heimat" (Eugen Diederichs), and has for its author Georg Putzke, a native of Eisleben, who has illustrated the book with most attractive pen-and-ink sketches of his own. He treats Eisleben as a city of monuments, devotes a chapter to the Luther landmarks of the town, to the castle of Mansfeld, which suggests comparisons with Heidelberg, to the tombstones of the Mansfeld country, to the "Hausmarken" which, with the family arms and the signatures of the artists and artisans, are found on many tombs and houses, especially in Eisleben. There is also a chapter on the "Eisleber Steinbibel," which deals with the twenty-nine sandstone tablets in the Annenkirche, the work of a sculptor of the sixteenth century, representing scenes from the Scriptures. Other chapters recount tales of provincial folklore. The book is a mine of suggestion for the historian and archæologist and of information for the mere tourist. One closes the book with the impression that, quite regardless of its close association with Luther and the Reformation, Eisleben is worthy for picturesqueness and unadulterated mediævalism to be ranked next to the popular Rothenburg ob der Tauber.

Another volume which must have been a welcome publication of the holiday season is the "Bayernbuch" (Albert Langen), a book of five hundred pages, with a nosegay of old-fashioned garden-flowers as a cover design. It is an anthology of Bavarian authors covering ten centuries and presenting one hundred names. The editors, Ludwig Thoma and Georg Queri, do not attempt to classify the authors according to any literary standard or any label whatsoever, and have arranged them alphabetically. It is a rather appropriate coincidence, however, that the first author, Engelhart von Adelnburg, is also one of the oldest, and that the second to last selection is by "Meister Kuonrat von Würzeburc." The student of German literature will be surprised to find in the book a number of names not especially associated with Bavaria, among the older writers Wolfram von Eschenbach, Nithart, Tanhuser, and Rosenplut.

A most extraordinary work is a small, illustrated volume, "Im Palast des Minos," by "Sir Galahad" (Albert Langen). The author's familiarity with the work of British and American archæologists and his admiration for Arthur Evans make it a unique tribute to Anglo-Saxon research. But apart from that it stands in a place by itself in the literature of archæology. For scientists delving through the dust of ages are rarely able to shake off a certain traditional dryasdust manner. This is the special merit of "Sir Galahad"; he has produced as readable and attractive a book on the subject as if he had indulged in a brilliant *causerie* on some vital problem. For he reconstructs before the reader's eyes the world of those Greeks that lived long before Hellas and Mycenæ, three thousand years before Christ, a dark-skinned, long-headed, beautiful race which inhabited the Mediterranean basin since the stone age and whose palaces and homes, tools and games we have known only for a few years. The initial sentence gives a fair idea of the original point of view and of the style:

> Das Märchenbuch ist der Baedecker des Archäologen. Wo Töchter aus dem Blut der Sonne im Haupt der Kröte den Smaragd erlösen—wo Holde mit Unholden ringen—Taten tosen um Blut und Gold—harrt immer ein Wirkliches der Enterdung.

"Sir Galahad" points to Schliemann, who, intoxicated with the reading of Homer, set out to discover the Homeric world, and remarks that Arthur Evans, too, read Kingsley's tale of the birth of Zeus in the Dictæan cave before he set out for Knossos and began to unearth the palace of Minos. "In der Geographie ist jedes Märchen verlässlich wie eine Generalsstabskarte" and others are apparently clever paradoxes, but contain great truths.

One could go on quoting indefinitely from this book, rich in information and in suggestion. That the author who hides his identity under the pseudonym "Sir Galahad" completed it at Pebble Beach Lodge, California, is likely to whet curiosity.

A. von Ende.

NEWS FOR BIBLIOPHILES.

Every scrap or detail bearing remotely or nearly on Charles Lamb's life or writings is of interest to his admirers, of whom there are doubtless as many in America as in the land of his "kindly engendure." In this belief, I offer the following report of a law-suit in connection with the "Tales from Shakespeare"—the first fruits of the joint literary labors of Charles Lamb and his sister. It is copied from a manuscript in my possession, which, I should judge, was meant for publication; but whether it was printed is unknown to me. There is no

indication as to the name of the reporter.

Before transcribing the account, it may be well to preface it with some remarks on the "Tales" while they were still in the making. The first reference to them is in a letter written by Charles Lamb to Manning shortly after the latter's departure for the East, "to plant the cross of Christ among barbarous Pagan anthropophagi," as Lamb, with characteristic inexactness, puts it. The date of the letter is May 10, 1806. Lamb writes: "She [Mary] says you saw her writings about the other day, and she wishes you should know what they are. She is doing for Godwin's bookseller twenty of Shakspear's plays, to be made into Children's Tales. Six are already done by her, to wit, 'The Tempest,' 'Winter's Tale,' 'Midsummer Night,' 'Much Ado,' 'Two Gentlemen of Verona,' and 'Cymbelline.' The 'Merchant of Venice' is in forwardness. I have done 'Othello' and 'Macbeth,' and mean to do all the Tragedies. I think it will be popular among the little people. Besides money. It is to bring in 60 guineas. Mary has done them capitally I think you'd think. These are humble amusements we propose."

Later, on June 2, Mary tells her friend, Sarah Stoddart, afterwards the wife of William Hazlitt, that her Tales "are to be published in separate story books, I mean in single stories, like the children's little shilling books. . . . Charles has written Macbeth, Othello, King Lear, and has begun Hamlet; you would like to see us, as we often sit, writing on one table (but not on one cushion sitting) like Hermia and Helena in the Midsummer's Night's Dream; or rather like an old literary Darby and Joan: I taking snuff, and he groaning all the while, and saying he can make nothing of it, which he always says till he has finished, and then he finds that he has made something of it."

Early in July they have only six to do to complete their task, and the writing of these is to occupy Charles's "holidays" —"all to be spent at home."

On December 5 Lamb informs Manning that the Tales "are near coming out, and Mary has begun a new work," and on January 29, 1807, the work in two volumes is sent off to the Wordsworths at Grasmere. Lamb's comment is as follows: "I am answerable for Lear, Macbeth, Timon, Romeo, Hamlet, Othello, for occasionally a tail piece or correction of Grammar, for none of the cuts and all of the spelling. The rest is my sister's: We think Pericles of hers the best and Othello of mine—but I hope all have some good. 'As You Like It' we like least." Then, in a postscript: "I had almost forgot. My part of the preface begins in the middle of a sentence, in last but one page after a colon, thus:—*which if they be happily so done &c.* The former part hath a more feminine turn and does hold me up something as an instructor to young Ladies: but upon my modesty's honour I wrote it not."

Several of the Tales were printed separately—how many, and when first published, cannot be stated positively. Four were offered for sale in London last April by Messrs. Maggs Brothers. These were "Timon of Athens," 1808; "King Lear," 1808; "Romeo and Juliet," 1808, and "The Merchant of Venice," 1809, and they were priced at £125, £105, £52.10, and £105, respectively. Some ten years or so previously, four others were noted in a catalogue of another London dealer, viz.: "The Winter's Tale," 1809; "Othello," year not stated; "A Midsummer Night's Dream," 1811; and "Cymbeline," 1811. These four Tales had been bound in one volume. Each one in both of the foregoing series contained three plates, whereas when the "Tales" were issued in 1807 in two volumes, only one appeared with each tale. In addition to the above-mentioned copies, seven others are in the possession of Mr. T. J. Wise, a well-known English collector. It would be interesting to know if others are in the collections of American bibliophiles.

The first publisher of the "Tales," both separately and in the collected edition, was William Godwin, who also produced all the other juvenile books written by Charles and Mary Lamb. Some years following the first publication, the unsold copies of the two-volume edition were handed over, along with the copyright, to Baldwin & Craddock, who were the plaintiffs in the law-suit, the account of which is now given. It is not mentioned by Talfourd or Procter and does not appear to have been known to Lamb's recent biographers or editors. The legal proceedings are not, so far as I have been able to discover, referred to in the Law Reports of the day, and only the barest notice of the trial was made in the London *Times*.

The MS., which fills four small quarto pages, is headed:

JOINT AUTHORSHIP. LAMB'S TALES FROM SHAKESPEAR.
BALDWIN & CRADDOCK AGAINST TILT.

A case of considerable interest as regards the rights of joint authors came on before the Vice-Chancellor on Thursday [August 11, 1836]. The facts, so far as we could catch them, were these: In the year 1806-7 the late William Godwin, who then carried on business as a Bookseller in Skinner Street, published a work bearing the title of "Tales from Shakespear, designed for the use of young persons, by Charles Lamb." In the preface to the work, the Author states that in the tales taken from the Tragedies, Shakespear's own words have been used with very little alteration, but that in those from the Comedies "I found myself scarcely ever able to turn his words into the narrative form &c". When Godwin's stock was disposed of, Messrs. Baldwin & Craddock became the purchasers of the copies on hand and copyright of these Tales, though it does not appear that Godwin held any legal assignment of the latter from the Author. Charles Lamb died in December, 1834. In the early part of the present year Mr. Tilt determined on adding the "Tales from Shakespear" to an elegant series of the English Classics which he is now publishing at a low price. When the work was in course of printing, Mr. Moxon, the Bookseller who acts as trustee under the will of Charles Lamb, heard of it, and called at Mr. Tilt's shop, but not finding him at home, left a message with his shopman that the copyright of the work had not expired inasmuch as the whole of the tales from the Comedies were written by Miss Lamb, and that therefore by publishing the work he would render himself liable to an injunction. The work was notwithstanding published in the month of June last at one-third of the price of the edition published by Messrs. Baldwin & Co.

Mr. Knight, who appeared for the plaintiffs, moved the Court to grant injunction to restrain the defendant from proceeding with the sale of the said work. The case was indeed so very clear that he did not see upon what ground the application could be opposed. In support of the application two affidavits were put in, one by Messrs. Baldwin & Co., proving that they had purchased the copyright of the work from Godwin and the other by Mr. Moxon that the exceedingly delicate state of Miss Lamb rendered it impossible to procure any affidavit from her without the greatest risk, but that he had been assured by the late Charles Lamb that his sister was the Author of the Comedies and that he —Mr. M.—had given notice as above stated to Mr. Tilt "several months ago." Messrs. Baldwin & Co., who held no legal assignment of the Copyright of the work from Charles Lamb, have since the publication of the edition which formed the subject of the present motion, obtained for the sum of fifteen pounds a conveyance of the same from Miss Lamb.

Mr. Turner, who appeared for the defendant, contended that the work having been published for thirty years as Charles Lamb's, and that Miss Lamb having, it might fairly be presumed, parted with her interest in the work to her brother, so as to vest the copyright in him, that in the absence of all notice to the contrary it was not competent for her to now come forward and seek *brevi manu* to restrain his client from its publication. He referred to the decision of the Court in the cases *Platt* v *Butten*, and *Rundle* v *Murray*, in both of which the works which formed the ground of these actions having been permitted by the authors to be published as the property of others for years, the Court refused to interfere. He questioned indeed if the facts above stated did not amount to an abandonment of Miss Lamb's copyright at any rate they formed sufficient ground for the court to refuse the present application.

Mr. Knight replied.

His Honour in giving judgment said that the work having been published for so long a period as the unquestioned production of Charles Lamb, the defendant had a perfect right to avail himself of the work on the expiration of his—Charles Lamb's—copyright. Now as it did not appear that notice of Miss Lamb's claim had been given till the defendant had gone to the expense of purchasing types and paper for printing this edition —for he could not allow of such looseness of expression as the "several months ago" used in the affidavit—he could not interfere in the matter. Injunction Refused. S. Butterworth.

Correspondence

A REINCARNATION OF TOUCHSTONE.

To the Editor of The Nation:

Sir: It is a remark of an excellent critic (Prof. C. T. Winchester, in "A Group of English Essayists") that a good deal of Touchstone lives again in Charles Lamb. The remark is arresting and, upon second thought, convincing. For Touchstone was no mere clown. He was philosopher as well as jester. Whimsical, sympathetic, eccentric in phrase, he captured even the melancholy Jaques—who says, if the text be correct at this point, "Good my lord, like this fellow." And the Duke replies, "I like him very well." Truly, Touchstone and Lamb were both preëminently likable men. The acid of their wit never curdled the milk of human kindness in them.

Lamb would not have been offended by the comparisons. Indeed, on many an occasion he deliberately set out to play the clown. He never made any effort to please strangers whom he disliked, and was consequently often taken for a mere buffoon. Carlyle's cruelly inaccurate verdict upon him, especially the phrase "ghastly make-believe of wit," is notorious. There was little in common between Carlyle and Lamb. Elia would probably have admitted that this Caledonian was one of his "imperfect sympathies." Consider, too, Lamb's treatment of the unfortunate controller of stamps who persisted in asking Wordsworth foolish questions. It would have seemed to a stranger both presumptuous and irresponsible. As the controller gravely inquired whether Milton was not "a great genius," Lamb, snatching a candle, cried with mock politeness: "Sir, will you allow me to examine your phrenological development?" Wordsworth's "my dear Charles!" failed to subdue his risibility, and he had finally to be conducted from the room, still murmuring his longing to examine the gentleman's bumps.

This is the true Touchstone vein. For the moment the clown seems to have extinguished the philosopher; but turn to the "Essays of Elia," and the latter reappears. The essay in which Lamb most resembles Touchstone the present writer believes to be "The Two Races of Men," in which the author discusses in his happiest vein the borrowers and the lenders, designating the former as "the great race." Such a passage as the following is decidedly reminiscent of Touchstone:

> He applieth the *lene tormentum* of a pleasant look to your purse, which to that gentle warmth expands her silken leaves, as naturally as the cloak of the traveller, for which sun and wind contended! He is the true Propontic which never ebbeth! The sea which taketh handsomely at each man's hand. In vain the victim whom he delighteth to honor struggles with destiny; he is in the net. Lend, therefore, cheerfully, O man ordained to lend—that thou lose not in the end, with thy worldly penny, the reversion promised.

The love of whimsical phrase exhibited in this and in most of Lamb's essays is, though individual, not dissimilar to Touchstone. And Lamb was inordinately fond of seventeenth-century English. Although he writes intentionally a mixed style, for humorous purposes, there is a strong flavor of the antique.

There was nothing ancient about Lamb's humor, however, except his diction and style. No man's humor is more thoroughly individual, more thoroughly an effluence of his own personality. And so with Touchstone. Nevertheless, in his courtship of Audrey, "a poor virgin, sir, an ill-favored thing, sir, but mine own," he might be replaced by Lamb with scarcely a jar, so similar are their quizzical natures. Lamb's humorous remarks on "The Behaviour of Married People" are well known, as should be also his amusement upon watching his friend Hazlitt's wedding, when he was so overcome with mirth as to incur danger of being removed from the church.

Touchstone, not being a principal character in "As You Like It," is not drawn at sufficient length to enable one to compare him with Lamb fully; but the likeness is in several respects surprising. The affection in which the clown is held shows that he possesses an unusually sympathetic nature; and this, of course, is a famous trait of Lamb's. In other circumstances it might have been more fully depicted in Touchstone, but in "As You Like It" there is no occasion for this. He is a faithful companion to Rosalind, and especially to Celia, but no sentiment is developed on the subject, despite their dependence on his protection in their flight from the court. Touchstone's chivalry is, like Lamb's, unassuming.

There is one interesting contrast: Touchstone seems quite in harmony with the forest of Arden; hut Lamb, a Londoner born and bred, cared little for the country. His comments on such a place as Arden would have been distinctly worth while. Touchstone's remark upon arriving at the forest is about what we might imagine Lamb as uttering in a similar situation: "Now am I in Arden, the more fool I. When I was at home, I was in a better place, but travellers must be content."

In his letters he perhaps comes even closer to Touchstone than in his writings for the public eye. They exhibit much of the clown, thus proving that this was always a central element in Lamb. Life was a precious serious business to him, with a mad sister on his hands; but he contrived to regard it usually as a jester's court. And if any one objects to considering Lamb as a clown or jester, objects to comparing him to Touchstone, let that person read some comments on Touchstone towards the close of "As You Like It," after he has been analyzing the "lie seven times removed"—a bit of philosophizing quite in Elia's vein. Jaques, the Hazlitt of the play, says: "Is not this a rare fellow, my lord? He's as good at anything, and yet a fool." And the Duke replies: "He uses his folly like a stalking-horse and under presentation of that he shoots his wit."

When we think of Lamb's mournful jest, "The wind is tempered to the shorn Lambs," written to a friend after one of Mary's homecomings from her periodical visits to an insane asylum, how vividly does the Touchstone element appear in him! To these two indomitable optimists, the one fictitious, the other real, everything was opportunity for mirth.

New York, December 5.

CONSISTENCY.

To the Editor of The Nation:

Sir: In your issue of February 26, under the caption "Bristow vs. Common-Sense," you join Senator Owen in pointing out "what everybody in his senses knows to be true, that there are a great many things in the promiscuous and hastily concocted deliverances of platforms which cannot be thought of as binding the party to a given course of action in the future, no matter what may happen."

This, to my mind, is contrary to all your previous conclusions on the subject when William Howard Taft was President your attacks for his failure to reduce the tariff, as he had promised in his platform, were continuous. You were quite right in doing this if you really believed it, but the situation was decidedly harder for President Taft, with a Congress frankly hostile to him, than it is for President Wilson to-day, with a Congress generously favorable towards him. Then, too, you have forgotten your repeated attacks on former President Roosevelt. You have always insisted that he should have uncompromisingly supported any issue advocated in his preelection campaigns. Even when he is on his vacation in South America you are eager to reveal some discrepancy in two consecutive words he may breathe. Imagine the language of protest in your esteemed columns had Theodore Roosevelt dared to repudiate any minor statement put forth in his platform! And yet you coincide with the words that "the idea of fettering a party for all time [by promises embodied in its platform] is the height of absurdity."

I quite agree with you in your judgment that a party must not be held too closely to the words issued in its political planks, but I find it amusing to note the bold inconsistency in your vacillating demands on Woodrow Wilson and your iron-bound demands on Theodore Roosevelt. I am not criticising your views on this subject, but I do believe that consistency should not be sacrificed on the altar of partisan enthusiasm.

CURT H. REISINGER.

New York, March 3.

WESLEY'S WORDS.

To the Editor of The Nation:

Sir: I am sure that not all readers of the *Nation* will accept as satisfactory the explanation made in your last week's issue by Mr. Sherman of his attribution to Wesley of the sentiment, "Better to rule in hell than serve in heaven," nor aside from this quotation will all accept his comparison of Wesley with Cobbett as happy. Doubtless, all strenuous lives have something in common, but it seems to me unfair to refer to Wesley the well-known quotation from Milton's Satan and place him in comparison with such a man as Cobbett, even if it can be proved that in a single instance he applied these words to himself. The two men may have been equally *masterful*, but the keynote of Wesley's life was *service*, while that of Cobbett was *selfishness*, and I am sure that whatever Wesley's faults or however absolute his rule, his disposition to *serve* was supreme. All historians, including Professor Winchester, quoted by Mr. Sherman, bear out this contention. But the only authority we have for supposing that Wesley ever applied the words of Satan to himself is an obsolete pamphlet of 1792, by the Rev. Alexander Gordon, quoted in the Dictionary of National Biography.

I am quite certain that several millions of Wesley's followers, comprising the largest body of Protestants in America, would count it more appropriate that, if the words of Satan were to be used to characterize Cobbett, they should be

quoted from their usual source, rather than referred to Wesley on so slender authority, and that candid and intelligent men of other affiliations, including Mr. Sherman, will accept this as a not unreasonable attitude of mind.

UNWELCOME EVIDENCE FOR IMMORTALITY.

TO THE EDITOR OF THE NATION:

SIR: In the minds of most people the belief in personal immortality rests chiefly upon two foundations: the teachings of Jesus and His own resurrection; and a more or less positive conviction that the conservation of moral and spiritual energy demands an opportunity for activity beyond this present life. To believers in immortality it might seem that any kind of proof would be welcome. It possibly, therefore, sounds a little ungracious to speak of unwelcome arguments for a proposition which is by no means universally accepted.

The recent utterances of Sir Oliver Lodge and the more recent death of Mr. Alfred Russel Wallace have brought to the front a so-called scientific argument for immortality which bids us accept the revelations of the mediums as evidence that personality is continued after death. We are told that if these leaders of physical and biological science are convinced of the truth of these revelations, the rest of us ought, joyfully and unquestioningly, to fall in line. Much is made of the splendid scientific skill of Sir Oliver Lodge which has been brought to bear upon these problems, and it is pointed out that men of this class are unusually well fitted to pass judgment upon their claims to consideration. To me the point does not seem to be well taken. The training of a great physicist is not the best preparation for undertaking investigations of this character. Let us consider, for example, one of the best-known investigations of Sir Oliver Lodge. It is a disputed question in physics whether the earth drags the ether with it in its motion through space, or whether the ether remains at rest relatively to the earth's motion. Professor Michelson's celebrated experiment tended to show that there was no relative motion. Sir Oliver Lodge, by rotating two metal disks in opposite directions, reached a different conclusion, because he found no shifting of the interference fringes. It is unnecessary to set down the technical details of these experiments, but attention is called to the fact that the experimenters placed absolute confidence in the conditions under which they were working. They may have neglected certain factors in the experiments, or they may have reached conclusions based upon insufficient data, but when they asked Nature a straightforward question they got a perfectly straightforward answer. It never entered their minds to question this. If scientists were obliged to add to the difficulties of their investigations, the task of detecting whether or not Mother Nature might be playing tricks upon them, their labors would at once cease.

Granted that spiritualistic phenomena are proved facts, no one would be better able than Sir Oliver Lodge to express the spirit forces in dynes, or to measure their rate of transmission in centimetres per second. But nothing in his training as a man of science would entitle him to be compared with a man like W. J. Burns in the matter of detecting possible fraud.

An immortality of dignity and service has a well-nigh universal appeal. An immortality of table-tipping and joint-cracking and banjo-playing; an immortality of concern for the trifling and the frivolous, has, most fortunately, a limited appeal. We are justified, then, in referring to such purported evidence for human immortality as unwelcome. For the dignified veiled picture of a future life which Jesus gave us, we should find little to substitute which would add to human knowledge or human happiness.

JAMES S. STEVENS.

BILLBOARDS AND ATTRACTIVENESS.

TO THE EDITOR OF THE NATION:

SIR: Your recent editorial on "Village Improvement" certifies, quite correctly, to the "dreariness of most Western, Atlantic, and Southern villages." The methods you suggest as likely to better this condition do not, however, include that most practicable means of village beautification—the extension of the signboard system.

Who that has witnessed the civic transformation that has been wrought in recent years through the multiplied use of billboards for advertising purposes has failed to note the increasing attractiveness of the average American city? Wherever the eye rests is the imposing, compelling, gratifying work of the sign painter or billposter. Vacant lots or naked brick walls are rarely visible. Facts, and illustrations of soaps, cigars, subdivisions, soubrettes, circuses, and what not, greet one everywhere. The weary commuter, homeward bound from his daily toil, sees from the car window not the scenery but the signs. He is delighted and refreshed, and feels that urban existence is not without its æsthetic charms.

But in the village, be it Skykomish or Baraboo, Palatka or Monrovia, the signboard has not to a like extent contributed to the gratification of eye and mind. True the great tobacco companies have not failed to provide the smaller centres with their ten-by-twenty-foot patronage (generally facing the right-of-way for the benefit of railway passengers, however), and every passing circus agent's car has fired a broadside of posters against defenceless barns (the idea must have originated with old P. T. Barnum—he of the "right idea"), but generally the billboards in small towns are not many in number or varied in interest. This deficiency must be remedied. The city should not monopolize the advantages of open-air advertising.

Perhaps it is too much to request that the advertising agencies extend their lumber and paint propaganda into the smaller villages. And the country merchant can do little. Obviously, assistance must be provided. It is respectfully suggested that upon an appointed day—to be known perhaps as Village Beautification Day—each student of the public schools be requested to bring a board or nail or material suitable for the application of paint; that on such day a citizens' committee provide for the erection and maintenance of as many signboards as may be required to make the town truly attractive. With this aid it would no doubt be possible to secure the further coöperation of certain of the national advertisers who profess to favor the outdoor advertising methods.

COMMERCIALIZED LEXICOGRAPHY.

New Standard Dictionary. One volume; nearly 3,000 pages; over 7,000 illustrations. New York: Funk & Wagnalls Co. $30.

Whether well done or ill, this imposing volume must be conceded to mark an instructive stage in English lexicography. It shows wrought out to the very limits that conception of a dictionary which sets store by the treating of a maximum of verbal items. With a thesaurus of the English language—construing "English" liberally to take in the various Latinate nomenclatures of science—it incorporates many thousand entries of the sort offered by various hand-books, viz., abbreviations, foreign proverbs and phrases, mythological names, a gazetteer of place-names, and a biographical dictionary which, listing many names of living men, now pushes into the field of a "Who's Who."

No sharp line, of course, can be drawn about the field of a dictionary. Its definitions must, in the case of words meaning things or processes (*e. g., dynamo, lithography*) overlap the field of the encyclopædia; in the case of other words (*e. g.*, names of knots) definitions must give way to pictures if any precise meaning is to be conveyed. Within this legitimate borderland the New Standard Dictionary has large assortments of information effectively presented. Condensed essays, such as appear at *croquet, cross;* tabulated classifications, such as enlarge upon *dye, language;* diagrams, such as that showing the moves of chess-men; and excellent illustrations, some in colors, as at *spectrum*, all clarify terms that would get little from a bare lexical statement. So much of true dictionary work can be done by pictures and diagrams that it is regrettable to find many pages of valuable space given up to pictures merely catchy to the uncritical eye. Thus, while the interesting terms *plain hunt, bob, grandsire, dodge* are left unintelligible for lack of a small chart of *change-ringing*, the quite self-defining term, *steel construction*, is

made a pretext for picturing the Woolworth building, and full-page plates devoted to *safety devices, fire department, police* and *postal services, railroad* and *telegraph equipment* seem to have strayed into the dictionary from the Sunday supplement.

Such frankly popular features, of course, affect the plan of the book in no such radical way as does its claim to treat 450,000 terms. When in 1909 Webster's New International raised its total to 400,000, even the uncritical must have surmised that these mounting additions to the vocabulary represented not actual growth in the language, but mere inclusions from an indefinitely available fund—inclusions that will afford rivalry between dictionaries so long as their publishers can count on numerical totals to make a commercial appeal. This appeal, it is to be hoped, will get its *reductio ad absurdum* in the New Standard. One need examine but three classes of terms to see that they can swell the book's bulk without adding appreciably to its value. First, the Latin names of plant and animal species represent at most but a selection from the lexicons of science; of *orchidaceæ* alone nearly 5,000 species can be listed whenever a bigger showing is sought. Next, the free formatives *anti-, contra-, pro-, pre-, re-, un-, -able, -less, -ize*, etc., supply "perpetual nonce-words" at will. The New Standard gives thirty-six columns of such words under *un-*, and the list might be doubled, if the mere fact of occurrence is to warrant their inclusion. And, third, the entering of phrases can go on so long as the verbal kaleidoscope holds out to turn! Many phrases, of course, are real sense-units, calling for definition. Thus, *semicircular canal* (overlooked by the Standard editors) has a specialized application in the anatomy of the ear. But no such warrant can be shown for *Japanese art, Italian opera;* and one fails to see why, having accorded dictionary treatment to *moderately heavy wood, education for efficiency*, our editors stopped short of *moderate variable winds* and *votes for women*. This indiscriminate glutting of the vocabulary may even conceal a failure to note useful additions to the language. Thus, while the Standard now incorporates the native Philippine words (*anabo*, a grass; *anac*, a son; *anay*, white ant; *aral*, to teach, etc.), which its supplement of 1903 listed in shoals, it has missed such genuine new words as *cacogenics* (answering to *eugenics*), *cafeteria*.

It will, of course, be pleaded that such accretions, after all, do not impair the book's serviceableness to those whose concern is with literary English. The standard words of the language are all there in their places, and the other matter one is free to skip. One must, indeed, grant that if words are to be sought in it but once or twice a fortnight on the chance needs of a miscellaneous reader, it matters less what their neighbors are on the dictionary page. Chaucer's *athre*, "in three directions," though incongruously crowded among *Athole*, a district in Perthshire, *Athor*, the Egyptian goddess, *Athos*, Dumas's hero, and *athrepsia*, the disease, is nevertheless accessible to a random and vagrant curiosity. But if the dictionary is to serve the language student and the writer, it cannot simply open up a heterogeneous welter amidst which the standard words *apparent rari nantes*. Students of a literary text can get no cumulative mastery of its diction, unless each turn to the dictionary brings up not only the one word sought, but a fringe of reinforcing impressions as to other words in the same field. The writer wants his word displayed with its cognates and derivatives, for these suggest by-senses and possibilities of phrasing. From such workers, a short experience of searching out their staples of mental exchange among gastropods, towns in Ohio, Biblical worthies, and zymotic diseases will draw the protest that the English language has here got lost in the ruck.

The sheer numbers of items defined, moreover, leave little space for that kind of information which a dictionary should offer in untrammelled completeness. A treatise on words that is expected to serve schools and colleges in the study of English must do for the lexical features of the language what an advanced grammar does for its syntax. It should aim, of course, to give a biography of each word. This, to be sure, is often something of a problem, since important words like *cast, head, power*, develop their meanings in no such chronological single file as appears in a column of definitions. But the misleading serial treatment imposed by exigencies of printing can be offset by little prefatory analyses, as in the Oxford Dictionary, or by small diagrams such as Greenough and Kittredge's "Words and their Ways" suggests for *power, treacle*, showing where meanings have branched off simultaneously from a common point, or where they have alternated generalizing and specializing forces. Furthermore, it should give an abundance of illustrative quotations. A word does not get all its expressive value or its limitation conveyed by bare lexical statements; it must be seen in action. The dictionary, again, should apply to synonyms, perhaps also to philosophical words involving questions as to the *nature* of meaning, the results of such semantic work as that of K. O. Erdmann's "Bedeutung des Wortes." Finally, it should afford a view of the word's affinities and special bearings: etymologies should note its doublets (*cross, crucial, crucifix, crusade, cruise, crux*); definitions should take at least passing note of *loci classici* (as the Oxford Dictionary does under *tell*, for "Every shepherd *tells his tale*"), and of important translation-meanings, especially in the English Bible, as for *sin, spirit, redeemer*, in Jonathan's "sin" (2 Sam. xiv, 38), "The *Spirit* of the Lord" that came upon Samson, and "I know that my *redeemer* liveth."

With these considerations in mind one can quickly gauge the serviceableness of the New Standard in the field of word-study. Biographical treatment of the word it deliberately sacrifices for the sake of putting the chief current meanings first. Thus *bedlam*, for which the sense-development was (1) the London hospice of St. Mary of Bethlehem; (2) this hospice as an asylum for the insane; (3) any mad-house; (4) a tumult, the Standard treats in the sense-order (4), (3), (1 and 2). The end of setting the more important meanings in relief could surely be served better by the use of large and small type. Quotations, again, are sparse. Indeed, one can hardly proceed with this inquiry without noting the conception of lexicography betrayed by the managing editor in his account of the treatment of quotations in the Standard. In the *Journal of the Royal Society of Arts* for October 24, 1913, he says:

> With dictionaries immediately before him, usually seven in number, and other reference books available, he [the definer] created a definition that did not infringe the rights of any one of the books. . . . Next, quotations were selected to illustrate the various meanings of words. These quotations were verified and edited, then attached to the work of the definer.

This procedure would actually invert the order of treatment by which sound definitions are made. Quotations are the fountain-source of all definitions. If the English lexicographer of to-day must work with the Oxford Dictionary before him, it is because that work supplies an unsurpassed fund of accurate evidence in its quotations. Its definitions, and the definitions of all other dictionaries, are simply interpretations of the evidence, and can be made the basis of further defining only with the risks that attend working at second hand. The New Standard shows repeatedly what these risks are. Thus, *acreman*, for which Webster's New International has: "O. Eng. Hist. The man whose duty it was to lead and manage the common plow team," the Standard renders: "The man who led and managed the ordinary plow-team." But quotations show that "common" here means not "ordinary" but "held in common" (by the folk of the manor or village). Of the stock words of the language which are the unique field of the dictionary it must be said that in general the Standard's treatment is bald and superficial. Thus *sicker*, to which the Oxford Dictionary accords two interesting columns, it disposes of

in the line: "*sicker*, a. [O. Eng. & Prov. Scot.] Safe; sure." *Tear* (the verb) gets no notice in its quaint sense of "blaspheme," although under the separate rubrics *tearer*, *tearing*, the editor would have found "these God *tearers*," "the *tearynge* of Goddis name." *Take*, on which the Oxford Dictionary (issue of April, 1912) bestows six pages—not counting those devoted to its phrases—affords a test of the Standard editors' work where they could not profit by the careful digesting given by Webster's New International to the Oxford material published prior to 1909. After its first three definitions, which are fairly elaborated, it gets a treatment scant, vague, and devoid of any real analysis. Thirty-four transitive and fourteen intransitive senses file down the column in almost random order, and with phrasing so loose as at once to overlap one another and to miss the point of—

> No fairy *takes*, nor witch hath power to charm.

So far, it might be pleaded that these strictures assume a more literary purpose than the New Standard professes, that it is to be fairly judged only as an example of its type: the omnium gatherum designed not for word-study but for occasional reference, and claiming as such no other merits than workableness and accuracy. Now, workableness in a dictionary is a matter of vocabulary order and cross-referencing. If, turning from an old text to look up *arede*, *arreed*, *corte*, or *curt*, you fail to meet the form in its vocabulary place, you are balked in your quest as effectually as if the form were omitted. That it occurs run on as a variant after *arcad* or *court* will not help, since the identification is precisely what you were seeking a clue to. A count of such instances (variants run on without cross-reference) on eighteen pages, taken at random about 150 pages apart, if a fair sampling for the whole book, gives it above 37,000 word-forms thus inaccessibly buried. Phrases, again, are entered now under the first word, now under the second: thus, *open fire*, *secondary clay*, *volcanic mud* under the adjectives; *open wood*, *secondary wood*, *volcanic sand* under the nouns. The eighteen-page count indicates that above 85,000 phrases have their location thus in doubt. Many, indeed, as *green monkey*, *orange fly*, *obscure rays*, *line of level*, are entered and defined at both places—an accident not only prodigal of space, but disconcerting when the definitions disagree.

Accuracy, however, must be the criterion uppermost in judging a book that details many thousand statements of fact. By the test of accuracy the New Standard comes off fairly in its contributed matter, especially in its tables and short treatises, but decidedly ill in the work of its office staff. A rapid comparison of its Gazetteer entries with the latest official sources shows many errors (*e. g.*, at *Broach*, *Bruxton*, *British Honduras*) both in descriptions and statistical figures. Its etymologies—too meagre, in any case, to have scientific value—show no advance upon those of the prior edition. It is hard to believe that a professional philologist would have disregarded Skeat's revised verdicts on *dismal*, *havoc*, *parricide*, or Wiener's evidence on *avoirdupois*, *grocer*, *tartan*, or would still derive *pontifex* from *pons*, and *sepal* from *separ*. Its definitions fail repeatedly in two requirements of accuracy: sharp differentiation, and the remarking of status. Thus *factitious*, as used of the "factitious loyalty" imposed at college by fraternities and organized athletics, is not simply "proceeding from or created by art as opposed to nature"; it is "artificial" in the sense of unspontaneous, wrought up by conscious effort. *Quite* as "considerably" should be stigmatized as slack; *so-long* (good-bye) and *enthuse* are not simply "colloquial"; they consort with chewing-gum; and *dump* (verb, sense 3) is low. In short, the errors of all kinds occurring within the compass of single pages (there are at least twenty-two on page 771) suggest that the editorial work has been scamped.

Both in conception and execution, then, the New Standard Dictionary is not a textbook for literary study. Its choice of vocabulary does, indeed, disclose an aim to serve school use. The entries *arctted*, *assoil*, *chivachye*, *fetisly*, *pricasour*, *trctys*, *wanhope*, show that, while professing to debar obsolete words, its publishers claim to cover the literary vocabulary as far back as Chaucer. But this aim is not carried out. Not only are Chaucerian forms of modern words omitted (*e. g.*, *bigonne*, *aryve*, *asscged*, *ayeins*, *bismotered*, *reulc*), but their Chaucerian senses under the modern forms (*c. g.*, under *begin*, *arrive*, the senses in, "he hadde the bord *bigonne*"; "at many a noble *aryve* hadde he be"). The book will sell by its appeal to the semi-educated, to a public interested not in ideas but in things, and disposed (as its editors suggest) to view any lingering over a word's history or expressive value much as trolley-men view stopping for passengers—as irritating delays in an otherwise quick trip.

CURRENT FICTION.

The White Gate. By Warwick Deeping. New York: McBride, Nast & Co.

Mr. Deeping has scored a good many successes as a writer of more or less historical romance. He has shown a profitable fondness for swashbuckling heroes, maidens in towers, excursions, alarums, and hairbreadth 'scapes. To abandon the properties and perquisites of this order of romance, and come down to the dull realities of modern life, calls for a good deal of courage. Mr. Deeping has shown the courage, but not quite the ability, for this feat.

Though modern dress is specified, the story has many of the qualities of the costume novel. Roymer, the English village in which the scene opens, might seem to some people, the author confesses, "in sympathy with that school of fiction that scorns anything dramatic and prefers to regard life as one long flux of dreary detail." He himself is evidently unable to regard life in any such way. In fact, we must confess that his Roymer heroine is only the maiden of the tower, and his Roymer hero the chivalrous knight born to rescue her. Of course, her bonds are not physical; and her isolation is due to her possession of and by that popular figure in current novels, a shameless and frivolous mother. Our Constance's paternity is less doubtful than disgraceful; she herself has the dovelike innocence now known as mid-Victorian. Skelton, the knight, is ingeniously if not successfully disguised as an engineer and inventor. He loves his Constance at first sight, and when she will have none of him, carries her off under the married-in-name-only agreement, which appears to be a perennial spring of opportunity for our novelists. The nominal honeymoon in Italy, which ends as a true one, is not made as interesting as it might have been. We would suggest that Mr. Deeping made a mistake in leaving out that necessary complement to the hero of chivalrous romance—the villain, his rival.

The Best Man. By Grace L. H. Lutz. Philadelphia: J. B. Lippincott Co.

Most of us would refuse to espouse an unknown person merely as a part of professional duty. Only Cyril Gordon had a different conception of loyalty. When the chief of his Detective Bureau entrusted him with the recovery of an important document from a band of criminals, he went forth ready to lay down his life, not to mention his happiness. Accordingly, when he had procured the paper and, to elude the pursuing crooks, had to take refuge in a church during a wedding ceremony, and found himself escorted to the altar, and there presented with a blushing bride, he thought he was merely adding the *métier* of best man to his other accomplishments. However, when he discovered that he had been mistaken for an imported bridegroom who had obtained the bride through blackmail, and that the bride was his "until death do them part," he perceived that his profession had thrown him into the meshes of life. And he had yet the paper to deliver to his chief!

The honeymoon adventures of the

duty-groom and his bride, their attempts at mutual explanation and extrication from their matrimonial entanglement, and their decision to remain enmeshed, form a most cheerful little tale. One fantastic bit of description occurs at sunrise when "the sun shot up between the bars of crimson like a topaz on a lady's gown that crowns the whole beautiful costume."

Our Mr. Wrenn. By Sinclair Lewis. New York: Harper & Bros.

One puts down the book in a pleasant frame of mind, with the feeling of having wandered awhile in an odd and delightful world of make-believe. Mr. Lewis's is better than the average first book, and best of all, holds promise of more telling work in the future. There is simplicity, a grateful lack of straining for effect, in this story of a little New York clerk's seeking for the world of adventure and romance conjured up in his fancy by the Fourteenth Street moving-picture palaces, and nurtured on the gaudy circulars of steamship companies and tourist agencies. The girl, Istra Nash, is a very real figure. Mr. Wrenn met her in a Kensington boarding-house, and she led his wistful middle-class soul for a brief space into the world of Futurist art and letters. She is a stock character of modern fiction, of course, the unconventional, cigarette-smoking girl artist, but she is flesh and blood as Mr. Wrenn sees her. The narrative of Mr. Wrenn's voyage to England on a cattle-steamer and the scenes of boarding-house life in New York are well done. It is a story out of the ordinary, with an individuality that atones for a certain slowness in pace.

The Goddess of the Dawn. By Margaret Davies Sullivan. New York: G. W. Dillingham & Co.

The intention is praiseworthy. The author has set out to show that life is really full of illusions which are solid and dreams which come true. She has fittingly chosen a wealthy, beautiful Southern girl as her heroine. Of her narrative she devotes a considerable part to ten years in her heroine's life beginning with her ante-college days. Miss Sullivan, in order to prove that the good and virtuous triumph nnally in this world, introduces a young sculptor, who is striving to pay off his father's debts and who loves the heroine, but does not confess his love because of his poverty. The girl inspires him with his two best works, The Goddess of the Garden and The Goddess of the Dawn.

The heroine, for her part, heads straight for matrimony. She escapes marrying one suitor, marries another, and at the death of the latter seeks her true love, the sculptor. The kaleidoscopic succession of betrothals and marriages makes the reader rather welcome the end of the book as a guarantee against other matrimonial ventures on the part of the heroine.

A LOVER OF MILTON.

Studies in Milton and an Essay on Poetry. By Alden Sampson. New York: Moffat, Yard & Co. $2 net.

The appearance of this book seems to us of happy augury. Too much of our serious writing about great books and authors comes from the men who teach them professionally, and too little from men who may be styled, in the best sense of the term, cultivated amateurs, life-long students, and lovers of the best literature, qualified through their love and study to write about it worthily. As a result, the pedant and the dry-as-dust often elbow the critic out of the very heart of his kingdom, which we take to be the lives and works of the supreme masters. In further consequence, the public reads too many books and essays about second-rate men and works furnished by critics unwilling or unable to master the erudition held to be requisite to any creditable treatment of the great classics; or else, worse fate, the public too often reads books and essays about the masterpieces of literature written by men who are neither true scholars nor well-qualified critics.

Mr. Sampson, in our judgment, has safely made his way between the sand hills of aridity and the bogs of fatuity. He knows his Milton thoroughly, but he loves him even more thoroughly. He writes with the public in view, yet he never descends, either in style or in substance, to a presentation of his great theme that suggests thinness or smartness. On the contrary, fulness of reading and depth of loving meditation are evident on almost every page. The book is divided into three sections. The first—almost a monograph—entitled "From Lycidas to Paradise Lost," is devoted to a study of the sonnets, but it is so discursive and inclusive in its methods of treatment that it brings out much of the charm of the youthful poet of "Comus," much of the grandeur of the blind epic "bard," and not a little of the strenuous nobility of the Milton of the prose period, the assertor of liberty, who lost his sight in his defence of his country and his ideals. This discursiveness and inclusiveness enable Mr. Sampson to give his readers copious quotations from Milton and apt citations from other writers, as well as good comments of his own; but it must be confessed that they serve also to impart to his essay too much of the appearance of a *tour de force*. This does not greatly matter, however, since others have given us an abundance of straightforward criticism of Milton, and since the wealth of apposite quotations would of itself suffice to make the essay both readable and valuable.

The second essay, "Milton's Confession of Faith," is also something of a *tour de force* through a protracted parallel drawn between Milton and George Fox; but again Mr. Sampson's ingenuity produces results that are happy as well as useful. In the concluding essay, "Certain Aspects of the Poetic Genius," Plato shares with Milton our author's allegiance, with Wordsworth and Emerson almost admitted to the inner circle. The mere naming of these four writers shows that the "aspects" of the divine art that occupy Mr. Sampson's attention are those that may be described as high rather than broad; but this means only that his essay, though scarcely catholic or meant to be such, is permeated by a fine idealism. In reading it we were reminded of the well-known story—we may twist it a bit—of Wordsworth walking ahead with Hogg, Lamb and some one else bringing up the rear. Lamb said to his companion, "There go the poets." Wordsworth—ever singular—turned round with, "Poets, poets, where are the poets?" Would Wordsworth walking with Emerson in heaven just in the wake of Milton and Plato make to his companion Lamb's remark, and would Milton imitate the terrestrial Wordsworth? Mr. Sampson does not help us to an answer that is conclusive, nor does he enable us to judge how Byron would report the incident, granting—and we do not know that Mr. Sampson would grant it—that that poetic peer is in heaven and anywhere near Wordsworth.

It seems ungracious, in conclusion, to point out that a book which we have read with much interest and profit contains some lapses from accuracy that might easily have been avoided. But it may go to a second edition, and in that case perhaps its author will change a few loose statements For example, it seems incorrect to write, as on p. 16, that in 1640 Milton recorded the hope that he "might leave something so written to after-times, as they should not willingly let it die." These famous words occur in "The Reason of Church Government Urged Against Prelaty," which is generally assigned to the early months of 1642. Again, on p. 118 Mr. Sampson's language would hardly imply what seems to be the fact, that before the reply to Salmasius was finished, Milton's physicians had warned him of a probable loss of sight. We admit that Leslie Stephen's awkward insertion of a supporting reference to the "Second Defence" in his article on Milton in the Dictionary of National Biography seems to countenance Mr. Sampson's language, but the latter's way of writing is none the less misleading, as one may see by comparing Garnett's "Milton," p. 111. Furthermore, it is surely hazardous for Mr. Sampson to charge Landor with forgetting that "pe-

cullarities of spelling and punctuation" of the first edition of "Paradise Lost" lay "beyond the scope of the author's revision" (p. 205). Compare this with Masson's remark, "It seems likely that Milton himself caused page after page to be read over slowly to him, and occasionally even the words to be spelt out." There are other statements of Mr. Sampson to which, it seems to us, exception may be fairly taken, but they are comparatively unimportant, and they do not at all diminish our gratitude for such a passage as the following: "When we say that 'Paradise Lost' possesses the quality of decorum, 'which is the grand masterpiece to observe,' we mean that it is nobly decorated with everything which learning, scholarship, poetic power, and sensibility could bring. It is the record of an eye and ear ever alert and eager to seize the myriad forms of beauty which others behold and do not apprehend, and it has all those traits of excellence which a deep-brained intellect and sound character could contribute under the majestic rule of law."

Boycotts and the Labor Struggle. Economic and Legal Aspects. By Harry W. Laidler. With an Introduction by Henry R. Seager, Ph.D. New York: John Lane Co. $2 net.

Doubtless Mr. Laidler did, as Professor Seager in the Introduction says he did, "approach the problem [of boycotts] without prejudice or preconception," but had the Professor not said so it would have been impossible for the reviewer to guess it. For excellent as is Mr. Laidler's collection of facts bearing upon the legality of boycotts in labor warfare, making of his work, as his introducer says, a very good "case-book," it is certainly not unfair to say of it that it reads much more like an argument by an advocate than a scientific inquiry by a dispassionate observer. This is not to say that his argument is not a strong one, but that the judicial attitude is not discernible at any stage of his progress through the subject. It is not perhaps necessary to labor this point, as the reader will hardly fail to note it for himself before he gets very far into the volume.

Broadly speaking, Mr. Laidler's argument is that as labor has finally made good its right to strike, it should be allowed to "organize its purchasing power," *i. e.*, its ability to boycott as a further means of accomplishing betterment of its economic position, for this latter right is equally fundamental and inherent.

A boycott in labor disputes may be defined [says Mr. Laidler] as a combination of workmen to cease all dealings with another, an employer, or, at times, a fellow worker, and, usually, also to induce or coerce third parties to cease such dealings, the purpose being to persuade or force such others to comply with some demand or to punish him for non-compliance in the past. (p. 60.)

Boycotts may be negative, *i. e.*, by means of the "union label," or positive, *i. e.*, of the "We don't patronize" kind. They are further distinguished as primary, secondary, and compound, and of the compound variety there are two kinds. A primary boycott "may be defined as a simple combination of persons to suspend dealings with a party obnoxious to them. . . . This form, however, is rarely used in labor disputes, as it is comparatively ineffective" (p. 64). A secondary boycott "may be defined as a combination of workmen to *induce* or *persuade* third parties to cease business relations with those against whom there is a grievance." The compound boycott "appears when the workmen use *coercive* and *intimidating* measures, as distinguished from mere persuasive measures, in preventing third parties from dealing with the boycotted firms"; and of these compound boycotts there is the kind where "*threats of pecuniary injury*" are used and the kind where "*threats of actual physical force and violence*" (p. 65) are made.

Mr. Laidler points out that "negative" boycotts and "positive primary" boycotts are generally admitted by our courts. Secondary and compound boycotts have been generally condemned as illegal in this country, both by statute law and judicial decision; but in some foreign countries, notably England, have been virtually legalized. It is the secondary and the first variety of compound boycott that Mr. Laidler desires to see completely legalized in this country. It is only proper to say that the "physical violence" variety of compound boycott is not defended by him. Chapter xvii, seven pages in length, contains a statement of the case *against* the boycott. In chapter xviii, fifty-four pages in length, is the case *for* the boycott, and the arguments are summarized by Mr. Laidler at the outset of this chapter as follows:

The argument for the legalization of the boycott from a social and economic standpoint is based primarily upon the hypotheses that the well-being of society is intimately connected with the condition of the working class; that that condition at the present time is greatly in need of improvement; that such improvement depends to a very large extent upon the strength of labor's organizations; that that strength is contingent upon the weapons of defence and offence permitted to it; that the employing class is now in possession of certain powerful weapons denied to the laborer, and that justice demands that organized labor be placed in possession of such weapons as tend to place it on a more equal footing with the employing class in its struggles for a larger part of the social product. While acknowledging the possibilities of occasional abuse, the advocate of the boycott believes that the tendency to abuse it becomes less marked, and that the good accomplished far outweighs the evil. He also points to the danger of the secret use of the boycott, and to the injurious results which follow when a group in society continues a practice in defiance of law. He declares that there is also the possibility that the worker will use more iniquitous weapons should he be totally deprived of the use of the boycott. Finally, he argues for the legalization of the boycott on the ground that its prohibition would deprive the workers of a fundamental human right. (Pp. 274-5.)

What Mr. Laidler desires to see written out of the law in order to legalize boycotts of the "secondary" and "compound" variety is, in the main, the doctrine of "conspiracy" and the doctrine of "malice"; he desires the law to recognize—at least so far as labor is concerned—that what may be legally done by one person may with equal legality be done by two or more persons in combination, as is provided in the English Trades Disputes Act of 1906. In other words, labor unions or workingmen should be as free to conduct boycotts of all kinds—short of the point of violence—as they are to conduct strikes. Mr. Laidler sees no distinction of kind between the right to strike (and induce by all legal means others to strike) and the right to boycott and induce by all means short of physical violence others to do the same thing.

Rights involve responsibilities, and it seems to the reviewer that in demanding that unlimited use of a weapon so powerful as the boycott be permitted to labor unions, Mr. Laidler might very properly have considered the general question of responsibility of labor organizations for their acts arising from the use of the weapon. It may be hoped that if another edition of his work is required, he will devote a chapter to this matter.

Japan As I Saw It. By A. H. Exner. With Special Illustrations in Collotype, Engravings, and Pictures drawn by Various Special Artists. New York: Frederick A. Stokes Co. $2.50 net.

This is an attractive volume, with its carefully finished collotype plates, its clever engravings, its soft and pleasing duo-tone illustrations. Yet on closer inspection it is found to lack a primary quality that we demand in a really artistic volume, that the reading matter shall interpret the pictures and be illumined by them. For instance, over against the page that describes the "artistic embroidery" and "magnificent coloring" of a Kyoto temple, where "a sacred stillness reigns at twilight," appear a pair of hideous itinerant medicine-sellers, with cheap modern umbrellas and straw hats. And opposite page 176, where the "Matchless Fuji-no-yama"

is the topic, we have a long procession of these same "advertising Johnnies." Indeed, to justify the nature of the illustrations, the chapters of the book ought to be a bright series of character sketches—which they are not.

Japanese art is not to be approached with profit from the side of the human figure, but rather from the side of outward nature, viewed symbolically. How little the author is in sympathy with the quaint symbolism of the Japanese garden, which materializes for daily contemplation some vision of beauty that has been registered among the eternal hills, may be gathered from his remarks at page 188: "Where there is a little house garden, which is often only the size of a few mats, it has no flower beds at all, but merely consists of a cartload of rocks, a shovelful of pebbles, a pail of water, an artificial little lantern, and one or two dwarf pine trees." Earlier in the book, at page 116, he treats the native type of garden less superciliously; but there he asserts that "to enjoy the charms of these miniature gardens, one must be a native Japanese." A fatal concession, if a writer would aspire to be a real interpreter of Japanese art.

The author seems merely to have seen the Japan of transition, from the ports of Nagasaki, Kobe, and Yokohama, all of them hybrid settlements, which do little more than suggest the real Japan. His sketch of Japanese history, to which he devotes almost a third of the whole book, is blundering and defective. At page 23 we are told that "on the foundation of the dynasty the government of Japan was a feudal one, and the sundry princes in the various parts of the country lived in utter dependency on the Mikado. Gradually this position changed," and feudalism declined. The very reverse is the case. It is true that W. G. Aston, our best authority on the subject, finds even in the earlier days of paternal rule at Nara and Kyoto some traces of feudal tenure. But, later on, the stronger elements in the nation broke away from the ineptitude of an officialdom modelled on the Chinese pattern, which was dominant for so many centuries, and feudalism asserted itself. With feudalism, however, began that duality of government, with Shoguns ruling at Kamakura and Yedo, and Mikados reigning at Kyoto, which lasted to our days and forms a unique feature in the national history.

The author makes an awkward mistake at page 27, when dealing with the Hojo regents, who for nearly a century and a half held the reins of power, while the Shoguns were puppets in their hands. He calls them *Shukke*, or priests, in place of *Shikken*, or regents; and fails to give them their due as rulers. Our latest authority on the subject, Mr. James Murdoch, in his "History of Japan," Vol. I, chapter xv, declares that, during the greater portion of the 140 years of the Hojo regency, the Shogunal administration was at once strong, efficient, and on the whole highly beneficial; indeed, that Japan was better ruled during the last three-quarters of the thirteenth century than France under Louis IX, or Scotland under its Alexanders—excellent rulers as they were; that it "enjoyed the benefit of an administration more economical, more honest, and more efficient than was known anywhere in contemporary Europe." Words of praise, truly, and helpful in explaining the overshadowing influence wielded by the Shogunate for 700 years. The author hardly seems to comprehend the nature of the Shogunate, for he calls Yoritomo, who founded the institution, "ancestor of the Shoguns." But Yoritomo left no descendant worthy to carry on his work or his name; and early in the thirteenth century the line became extinct.

The author's summing up at page 74 is unfortunate, both in regard to the facts and the form:

> It is a widespread mistake to believe that Japan has ever been a monarchy or even a despotism, from a regular point of view. . . . A monarchical idea has only been represented sporadically and for short intervals by single prominent characters. As for the rest, the country wasted away under the continual fights between smaller and bigger lords. It is true, upon the whole, there was always floating the Imperial idea, but it was more a mere idea than a real sovereignty. The dynasty, said to descend from heaven, and being the representative of deity, feels proud of being the oldest dynasty in the world, and of its looking back upon a reign of 2,500 years. But, if we investigate its history more closely, it soon comes to light that it was exactly the succession to the throne which almost regularly has caused quarrel and conflict, and that there is very little of divine spirit to be discovered in it.

The author has, no doubt, been reading recent criticism, which argues that the singular devotion of the Japanese people to their sovereign, as the fountain of honor and of all state "virtue," is of recent growth and bears with it elements borrowed from the devotion of the retainer to his feudal lord. But this plea, even if allowed, does not justify the statement that the monarchical idea has not held sway in Japan from time immemorial, or that the Emperor ever ceased to be the true centre of the body politic, whose endorsement or seal was in the final issue an imperative necessity to give an act of government validity.

"Japan As I Saw It"—an indexless book, by the way—is, in truth, a summary of Japanese history and civilization that has been undertaken without adequate knowledge or preparation. The author fails to understand the whole drift and meaning of the national evolution, or to grasp the religious symbolism and ideals that lie at the root of the best in Japanese art.

Philosophy of the Practical: Economic and Ethic. Translated from the Italian of Benedetto Croce by Douglas Ainslie. New York: The Macmillan Co. $3.25.

The present is the third and concluding volume of Croce's "Philosophy of the Spirit," of which the previous volumes are the "Æsthetic," translated by Mr. Ainslie, and the "Logic," which he promises to translate. Seldom have author, translator, and printer conspired so successfully to present a system of philosophy attractively. The reader who masters the first three or four chapters of the "Philosophy of the Practical" will find Croce always stimulating, if not always satisfying, refreshingly direct, if somewhat dogmatic, graceful and informal amidst a wealth of learning. The architecture of the system is impressively simple. The philosophy of the spirit recognizes four "forms," or categories, for the treatment of life, or reality: two theoretical forms, or forms of knowing, and two practical forms, or forms of doing. There is no third kind of form; feeling, for example, resolves itself into a matter of knowing and doing. The two theoretical forms are the æsthetic and the logical. They constitute the subject-matter, respectively, of the first two volumes of the philosophy of the spirit. The two practical forms are the economic and the moral, and both are covered by the present volume. The relation of the æsthetic to the logical is parallel to that of the economic to the moral. Logical thought presupposes æsthetic intuition, and is at the same time æsthetic intuition become reflective and discursive. Similarly, morality is utility become self-conscious and deliberate; utility seeking the perfection of its own meaning. In the end, however, the theoretical and practical forms are nothing more than distinguishable aspects of the one Life, Spirit, or Activity. "Motionless beings" and "unconscious beings" are meaningless phrases.

Significant as a contribution to thought are Croce's inclusion of the economic among his fundamental "forms," and his method of defining moral values always by the contrast with economic values. Economists and moralists are both accustomed to speak as if the values studied by the sister science lay in another world. And yet the most definite ethical theory of modern times, English utilitarianism, was clearly an economic theory of ethics; virtually all of the utilitarians were both economists and moralists; and utilitarianism has its representatives in the ethical discussion of all times. Croce makes it

clear that, whatever change in meaning is brought about in passing from one category to the other, the basis of value is the same in ethics as in economics, and therefore that the two fields must be regarded as always contiguous and as determining one another. In a striking chapter on The Philosophy of Economy and the So-called Science of Economics he defines economics as a kind of social mathematics. The economic man, whose one aim in life is to buy cheap and sell dear, bears the same relation to any real man as a right-angled triangle bears to the objects found in nature. There are no economic men in the world, neither are there right-angled triangles; yet each conception helps us to describe its object.

Apparently, neither Croce nor his translator is fully conscious of the affinity of Croceanism with present tendencies of philosophy in other countries. Croce balks at the term "pragmatism"; yet in standing for a reform of the intellect, for a refusal to limit the spiritual to the intellectual, or to admit that there can be a process of knowing which is not at the same time a process of living—indeed, a bodily activity—the "philosophy of the spirit" simply reinforces the teaching of Eucken in Germany, of Bergson in France, and of the pragmatists of England and America. Most striking, however, is the close and detailed parallelism, amounting almost to a photographic reproduction, between Croce's philosophy and the pragmatism of Professor Dewey. Each might be called a pragmatic Hegelian. For both the world is an "activity," which is at once and indistinguishably a practical and utilitarian process and a dialectical process. In psychology they refuse to separate the conscious from the physical act; in ethics the will, or motive, from the overt act. In the matter of an ethical criterion neither will be satisfied with anything narrower or more definite than the demands of "life"; since the present is always a unique crisis in the cosmic activity. Both alike hold that the historic systems of philosophy are but so many expressions of special and passing problems; and in both philosophies it seems that, while individuality is the essence of life, the individual life is but a passing vortex in an oceanic stream of "activity." The main difference is a difference of emphasis. Where Dewey emphasizes the doing, Croce fixes his attention upon the knowing; so strongly, indeed, that at times he might be mistaken for an "intellectualist." At any rate, no one in recent times has stood so firmly as this Italian pragmatist for the Socratic doctrine that virtue is knowledge.

Knowledge and freedom—this is the sum-total of Croce's ethical teaching. To act morally is to act freely, and to act freely is to act with a clear self-consciousness with regard to your ends—to choose your act rather than simply to be carried along on the stream of habit or instinct. Every moral situation presupposes a certain organization of life, *i. e.*, a certain economic situation, which has developed internal difficulties. For example, it is neither moral nor immoral to earn your living in some accepted line of business. The moral question arises when the claims of the business have to be measured against other claims. Moral conduct then consists in a readjustment of the competing claims in the direction of an enhancement of life. But what marks this direction? Croce dismisses the question with the statement that every moral situation is unique. Life creates the moral problem and life alone can furnish the solution. Every attempt to state the problem abstractly, to devise a plan or system of life, is simple casuistry.

The effect of this statement is with one stroke to sweep aside most of the questions that have occupied our moral philosophy. And here again Croce's method reminds us of the American pragmatist. Both have a way of discovering that most of the questions raised in ethical literature are simply foolish. In the traditional formulation the fundamental question is whether the good of life consists in the enjoyment of what we have or in the realization of some more comprehensive purpose or ideal. Roughly speaking, the issue seems to lie between economic contentment and spiritual advancement. Croce definitively rejects the first alternative. "Man," he says, "is not a consumer of pleasures, but a creator of life." Yet the substance of life is to be found always in the demands of the present situation. What he means is that for an enlightened self-consciousness the demands of present enjoyment and the demands of a larger life could not possibly differ; and here, doubtless, he is right. Meanwhile, one would like to know just how the "economic" desires are transformed by the ethical self-consciousness. Is there any relation that can be stated between a given economic conflict and its ethical resolution?

Croce's answer consists only in affirming that the ethical resolution is always something original and new. Possibly no other answer could be given. But the point is instructive in showing the essential similarity of Croceanism with other forms of pragmatism, and at the same time in revealing the essence of pragmatism. The philosophies of Bergson, of Eucken, of the English and American pragmatists, and of Croce all rest alike upon the proposition that reality is life, and life is ever creative and new. "In every new situation," says Croce, "the individual begins his life all over again." In this proposition they mark their dissent from the rationalists and idealists, who hold that life is a dialectical process in which the conclusions are rigorously implied in the premises. This, indeed, is just the point at which Croce parts company with Hegel. But would Croce admit that it is "life" to act in the present without reference to what you have done, or promised to do, in the past? May "life" be as incoherent as you please, provided it is always "new"? Long ago Aristotle set the problem of life by showing that life aims to be ever creative and original, yet ever continuous, orderly, and reposeful. And when Kant resolves all morality into consistency he merely reminds us that a rational and responsible being is one who acts at each moment in the light of a clear self-consciousness with regard to the present *and the past.* The pragmatists object that the Kantian rational being is as lifeless as a machine. The question is whether they, in their exclusive emphasis upon the originality of the present, are not proposing to make human life as irresponsible as the winds. The natural and demoralizing outcome of such preaching is the romantic love-philosophy of Ellen Key, in which the new love is always authoritative over the old and the "true self" of the present always free to repudiate the self of the past, however sincere the past may have been. Thus the Crocean ethics, like the ethics of pragmatism generally, is an irresponsible emphasis upon one of the demands of life which fails to touch the real problem either of life or of moral responsibility.

Notes

Houghton Mifflin Company announces the forthcoming publication of "Memoirs of Youth," by Giovanni Visconti Venosta, and "They Who Knock at Our Gates," by Mary Antin.

The Century Company announces for publication, on March 20, "Dodo's Daughter," by E. C. Benson; "Barnabetta," by Helen R. Martin, and "Little Essays in Literature and Life," by Richard Burton.

The Oxford University Press announced the publication last week of "Nazareth and the Beginnings of Christianity," by Champlin Burrage, and "A Concise Dante Dictionary," revised from the "Dante Dictionary," by Dr. Paget-Toynbee.

Moffat, Yard & Company announce the forthcoming publication of "The Autobiography of a Happy Woman," Anonymous, and "The Desert and Mrs. Ajax," by E. S. Moffat.

Putnams announce the publication next Saturday of "The Shadow of Ætna," by Louis V. Ledoux; "Initiation into Philosophy," translated from the French by Sir Home Gordon; "The True

Ophelia and Other Studies of Shakespeare's Women," by An Actress.

John Lane Company will publish "With the Russians in Mongolia," by H. G. C. Perry-Ayscough and Capt. Otter-Barry, and "Victory Law," by Anne Warwick.

Putnam's publications last week included: "Java and Her Neighbors," by Arthur S. Walcott; "One Year of Pierrot," by The Mother of Pierrot, and "The Marriage of Cecilia," by Maude Leeson.

Longmans, Green & Co. announce the forthcoming publication of "Essays on Faith and Immortality," by the late Father Tyrrell, edited by Maude Petre, and "Flying: Some Practical Experiences," by Gustav Hamel and Charles C. Turner.

McClurg announces the following books for publication this month: "Shea, of the Irish Brigade," by Randall Parrish; "The Coming Hawaii," by Joseph King Goodrich; "Cubists and Post-Impressionism," by Arthur Jerome Eddy, and "The Green Seal," by C. E. Walk. "Taxation," by C. B. Fillebrown, and a volume on "Banking," by Prof. W. A. Scott, have been added to the National Social Science Series.

Frederick A. Stokes Company announces for publication in April: "My Autobiography," by S. S. McClure; "World's End," by Amelie Rives; "The Cost of Wings," by Richard Dehan.

Frederick A. Stokes's spring list of announcements includes: "The Two Americas," by Gen. Rafael Reyes; "America Through the Spectacles of an Oriental Diplomat," by Dr. Wu Ting-fang; "The Dance, Its Place in Art and Life," by Troy and Margaret Kinney; "Other People's Money and How the Bankers Use It," by Louis D. Brandeis. In fiction the same company announces "The Woman's Law," by Maravene Thompson, and "Bat Wing Bowles," by Dane Coolidge.

From London comes the announcement of the appearance, at the end of the month, of *The New Weekly*, edited by R. A. Scott-James. The price of the new publication will be four cents; and its aim will be to bring the large public, which does not habitually read the sixpenny weeklies, into closer touch with the literature, art, music, and drama of the day.

"Robespierre and the Women He Loved" (Appleton) is a translation from the French of Hector Fleischmann. The translator, Dr. A. S. Rappoport, has omitted, however, all the footnotes of the original, and English literature would not have seriously suffered if he had omitted the rest of his translation. Robespierre's sister, Charlotte, once declared that, "My brother's amiability with women captivated their affection; several, I believe, felt more than ordinary friendship for him." But the author undertakes to show that the stories of the Incorruptible's liaisons, repeated by Thiers and others, are all malicious lies. With more poetic imagination than historical investigation he avers that Robespierre did not love any women, so that his volume is like the famous chapter on the snakes in Iceland. The book raises a good many questions which it does not attempt to answer, and is furbished up with portraits of a gallery of Revolutionary leaders who have no particular connection with the author's subject.

In 1905 the Clarendon Press issued in elaborate and handsome form "The Poetical Works of William Blake," for which Mr. John Sampson, librarian in the University of Liverpool, had prepared a text from the manuscripts and original editions, and had written full bibliographical notes. His work in that most difficult field showed a masterly precision, and the ever-growing army of Blakists will be glad to know that "The Poetical Works" have now been brought out in the cheap yet very attractive "Oxford Edition." For the most part the text of the earlier volume has been taken over unchanged, only a few slight errors being corrected and some shifts made in arrangement. The footnotes in the present edition are confined to Blake's own variant and cancelled readings, and to occasional explanations of a necessary sort, and for the ordinary reader the absence of the bulkier commentary and prefaces will make this cheaper edition really the more serviceable. The earlier volume contained only the poems of strictly lyrical and metrical form, but the present edition includes also the Minor Prophetic Books, besides selections from "The Four Zoas," "Milton," and "Jerusalem." When it is considered that among the Minor Prophetic Books is "The Marriage of Heaven and Hell," which lets one so deeply into Blake's philosophy, the importance of the inclusion will be recognized. The most notable feature, however, of this new edition is the reprinting for the first time of "The French Revolution." In 1791 the first book of this rhythmical piece was set up in type by the bookseller, Johnson; the proofsheets were kept by Blake, and bound into a little volume, but apparently nothing further was done towards publishing. It was seen by Gilchrist, Swinburne, and the Rossettis, who quote the title page, and a transcript, partial or complete, was made by Palmer; but the book itself, which turns out to have been all the while in the possession of Mr. John Linnell, and forgotten by him, has just been rediscovered after a disappearance of half a century. It is a demy quarto of 18 pages, 11¼x8¾ inches. The title page runs: "The / French Revolution. / A Poem, / in Seven Books. / Book the First. / London: / Printed for J. Johnson, No. 72, St. Pauls Church-yard. / mdccxci, / (Price One Shilling.)

Of the absolute value of the more recondite of Blake's Prophetic and Minor Prophetic writings there are decidedly two opinions. To the present reviewer the symbolism and mythology of the poet's later years seem largely the product of a mind diseased, and he can see small profit or pleasure in attempting to unravel their meaning. "The French Revolution," however, though bordering on the ecstasy of madness, has comparatively little of its incoherence, and is in places richly eloquent. It begins with a royal council:

> Troubled, leaning on Necker, descends the King to his chamber of council; shady mountains
> In fear utter voices of thunder; the woods of France embosom the sound;
> Clouds of wisdom prophetic reply, and roll over the palace roof heavy.
> Forty men, each conversing with woes in the infinite shadows of his soul,
> Like our ancient fathers in regions of twilight, walk, gathering round the King:
> Again the loud voice of France cries to the morning; the morning prophesies to its clouds.

Perhaps as striking a passage as any in the poem is the symbolic description of the Bastille, conceived in all the horrors lent to it by the popular imagination. The picture is too long to quote, but there is something of the same Ossianic grandioseness in the brief speech of the Duke of Burgundy, who delivers the King's command to the envoy of the people:

> "Seest thou yonder dark castle, that moated around, keeps this city of Paris in awe?
> Go, command yonder tower, saying: 'Bastille, depart! and take thy shadowy course;
> Overstep the dark river, thou terrible tower, and get thee up into the country ten miles.
> And thou black southern prison, move along the dusky road to Versailles; there
> Frown on the gardens—and, if it obey and depart, then the King will disband
> This war-breathing army; but, if it refuse, let the Nation's Assembly thence learn
> That this army of terrors, that prison of horrors, are the bands of the murmuring kingdom.'"
>
> Like the morning star arising above the black waves, when a shipwrecked soul sighs for morning,
> Thro' the ranks, silent, walk'd the Ambassador back to the Nation's Assembly, and told
> The unwelcome message. Silent they heard; then a thunder roll'd round loud and louder;
> Like pillars of ancient halls and ruins of times remote, they sat.
> Like a voice from the dim pillars Mirabeau rose; the thunders subsided away;
> A rushing of wings around him was heard as he brighten'd, and cried out aloud:
> "Where is the General of the Nation?" The walls re-echo'd: "Where is the General of the Nation?"

It is not easy to gainsay Glenn D. Bradley's statement on the title-page of "The Story of the Pony Express" (McClurg) that it is "an account of the most remarkable mail service ever in existence"; and in the arrangement of his material he properly emphasizes its appealing human interest, above and apart from bare historical values. The Pony Express was operated, as readers of "Roughing It" may remember, in 1860-61. To carry letters and Government dispatches from St. Joseph, Mo., to San Francisco, 2,000 hazardous miles, during the sixteen months previous to the opening of the first transcontinental telegraph, its managers built up a system round which cluster some of the most stirring incidents in the development of the West. The book is outlined in a fashion that promises a popular and sparkling narrative, with chapters on the organization and first trips of the Express, followed by two on Riders and Famous Rides and Anecdotes of the Trail. The style, however, is somewhat colorless, and the proportion far from

good. The historical value is impaired by an attempt to exaggerate the secession crisis in California, and *par suite* the value of the Pony Express in maintaining communication with Washington. The chapter on The Secession Menace abounds in such evasions as "the exact details of this [rebel] plot are hard to secure," and such indirections as "that the conspiracy existed has never been disproved." There are few references to authority or critical notes.

We have received the statement for 1912-13 of the Rhodes Scholarships Trust. The statistics given indicate that the scholars more than hold their own with the average of intellectual achievement at Oxford. Their attainments, however, are still below the level of those of the native scholars from the public schools or grammar schools of Britain. Among the most interesting features of the report is the list indicating the lines of work taken up by Rhodes scholars who have completed their course. Of the 431 who have left Oxford, 144 have devoted themselves to educational work and 113 to the law. The School of Jurisprudence, indeed, appears to exercise an altogether disproportionate attraction for the scholars, both from this country and from the British colonies. Out of the 167 scholars distributed among the different courses of study in the last academic year, thirty-eight were reading jurisprudence, and nine were studying for the B.C.L. degree. Thirty-one were reading for the various departments of the Natural Science School, nineteen for modern history, and fourteen for literæ humaniores. In the last-named school only one scholar was placed in the first class last year, a disappointing result, when one remembers that the traditions of Oxford are preëminently classical and philosophical. Six University prizes were gained by Rhodes men in the course of the year, five of them by Americans, and another American was elected to the presidency of the Union Society, a distinction which many undergraduates would prefer to a "first" in one of the schools. The emphasis which Rhodes placed upon athletic distinction in the election of the scholars is evidently observed, for their record in this field last year is a remarkable one, twenty-four of the scholars having represented their University against Cambridge in various events.

The fascination of the details of the crimes perpetrated in the name of liberty and justice in 1793-4 has led Alphonse Dunoyer to examine anew the extent of the responsibility of Fouquier-Tinville, "The Public Prosecutor of the Terror" (Putnam). The volume is well translated from the French by A. W. Evans, and is attractively provided with a number of appropriate illustrations. In the first half of his volume, M. Dunoyer gives a very readable but brief account of the extraordinary rapidity with which the Revolutionary Tribunal dispatched to the guillotine "batches" of forty to fifty persons a day. It acted with such criminal haste that sons were executed in mistake for their fathers, and *vice versa*. Persons whose names were on the long lists handed in by the Prosecutor for condemnation were not even properly identified before being sent to the tumbrils. If the accused asked for papers which would establish their innocence, the Prosecutor replied, "Give them nothing." If the judges or jurors delayed or gave acquittals, the Prosecutor would storm and threaten because "the business was not moving quickly enough." After his own arrest a great many witnesses appeared to testify that they had often heard Fouquier-Tinville make such remarks as, "Come, fellows, things must move. There must be 400 or 450 this *décade*"; or, rubbing his hands, in a gay tone, "We shall unbreech [*déculotterons*] a good quantity of them this *décade*." This first part of the volume, though well written and aimed to show Fouquier-Tinville's part in the bad business, adds little, however, to the fuller accounts already published in the authoritative works of Campardon (1866), Wallon (1881), and Lenôtre (1909), the last of which has also been translated into English.

In the second part of his volume, M. Dunoyer makes a real contribution to our knowledge of Fouquier and the Tribunal. Instead of relying mainly on Fouquier's own published memoir and on the documentary material in Buchez et Roux, he has analyzed and printed the substance of the depositions preserved in the Archives Nationales, which were made by 400 witnesses, who came to testify against Fouquier-Tinville after the fall of Robespierre, when the Public Prosecutor in turn came to be arrested and prosecuted. Fouquier defended himself cleverly and audaciously, maintaining that he had done nothing except perform his duties diligently; he had been only carrying out the orders of the Government, he said, which had formulated the procedure to be followed by the Revolutionary Tribunal. He sincerely believed in his own innocence. To his wife and his seven children, whom he tenderly loved, and who were totally dependent on him, he wrote: "I have nothing to reproach myself with; I have always conformed to the laws: I am satisfied; my innocence will be recognized later." A long trial was given him, and full opportunity to defend himself. But the cloud of witnesses who rose up against him when he himself sat in the seat of the accused leaves no doubt that he had been arbitrary, violent, and indecently hasty in his zeal to get large numbers condemned.

Now that the smoke of battle has cleared away (some time ago, in fact), the time seems to have arrived for a calm estimate of what pragmatism has contributed to philosophical thought. Prof. William Caldwell writes his "Pragmatism and Idealism" (Macmillan) from the standpoint of a Scotchman, brought up in the traditions of the neo-Hegelian school of absolute idealists, who spent several years at universities in the United States before going to McGill University in Montreal (he has a chapter on Pragmatism and Americanism), and his attitude towards pragmatism is distinctly conciliatory and appreciative. Briefly, he is an idealist who would be a pragmatist if only pragmatism would cease to dwell so exclusively upon the more vulgar practicalities. According to Professor Caldwell's idealistic interpretation, pragmatism stands for a "rediscovery by our age of the doctrine of man"; for the doctrine, in other words, that human needs and aspirations are implied in any statement of truth. By "rediscovery" he means that pragmatism is, after all, a continuation of the critical and humanistic movement begun by Kant, on the basis, however, of a wider range, Darwinian rather than Newtonian, of scientific conceptions. Strangely, yet not quite falsely, he takes Bergson to be the ideal successor to Kant. On the other hand, in an instructive chapter on Pragmatism and Humanism, he undertakes to show that human desires and ideals are indeed pathways to objective realities—that, for example, the Hebrew spirit reached a conception of the divine nature which was inaccessible to Greek culture just because the Hebrews were different. Here he takes issue—cautiously and reverently—with the leading "Greek" of his school, Dr. Bosanquet, going so far as to suggest that the inhumanity of Bosanquet's absolute marks a reversion of thought from genuine idealism towards materialism. As against Mr. Bosanquet, it is the humanistic pragmatist who really stands for "the sovereignty of the spirit." Just how the logic of pragmatism is to be reconciled with the metaphysics of absolute idealism, Professor Caldwell does not say. His book is a reflection and an appreciation, a contribution to current discussion, rather than a systematic and well-digested statement of the problem. As such, however, it is timely and suggestive.

Of the antiquity of fools we have the word of Sir Amorous La-Foole in Jonson's "Epicœne": "We are as ancient a family as any is in Europe." Kinsfolk of that house, not to mention readers of the Boston *Transcript*, will be interested in the genealogical notes on one of the collateral lines in the section TOMBALTRAHYSH of the Oxford English Dictionary (Clarendon Press). *Thome Fole* as a quasi-proper name is found as early as 1356-7; from 1337, says Sir James Murray, he is frequently mentioned by learned writers as *Thomas fatuus*. From a citation of 1565 we learn that Tom-Foole kept geese. A reference of 1640 indicates that Tom had brothers: "A foole-reall . . . such ffooles wee commonlie expresse by the names of Tom ffoole, Dick ffoole, and Jack ffoole." The celebrity of Tom appears in the *Cornhill Magazine*, 1865: "More folks know Tom Fool, than Tom Fool knows." Considering the time that he has been in the public eye, it is surprising to find the authors of the "Rejected Addresses," 1812, set down as the first coiners of *Tomfoolery*. And though Southey in 1799 had struck out the epithet *Tom-foolish*, it apparently remained for Jerome K. Jerome so late as 1889 to bring in *tomfoolishness* in "Three Men in a Boat." The history of the word seems to show that *Tom Fool* should be employed as a kind of middle term between *Fool* on the one hand and D—— Fool on the other.

The exact force of *Tom* as an element in word-formation demands the attention

of grammarians. In the case of spanners, screw-drivers, and gazelles, the *tommy* variety is small, or the smallest of its kind. But in the case of *Tomboy*, *Tom-cat*, and *Tom Jones*, the *Tom* suggests the larger and more vigorous representatives of the boys, the cats, and the Joneses. *Tomboy* has Shakespearean and elder authority, though Stoughton, in 1622, says angrily that "of such short-haired gentlewomen I find not one example either in Scripture or elsewhere." *Tom-cat* takes its rise from a popular anonymous work of 1760, "The Life and Adventures of a Cat"; being unacquainted with the work, we cannot say whether the hero owes anything to Tom Jones. Tom Thumb is traced back only to 1579; but Fielding, in a learned note to his tragedy, "Tom Thumb the Great," quotes Justus Lipsius as follows: "Thomam illum Thumbum non alium quam Herculem fuisse satis constat." By some irony of fate, George Moore, in the "Mummer's Wife," 1884, gets the credit for the introduction of *Tommy rot*, upon which, as noted in the Chicago *Advance* of 1895, wits have embroidered an adjectival ending: "A whole school of what has been humorously called erotic and *tommyrotic realists*, . . . asserting that progress in art requires the elimination of moral ideas." In this goodly concourse of Tommies, we miss Tommy Coddle and the fine phrase, Tommy-coddle nonsense, which should not be absent from a dictionary compiled, as Johnson says, "for the use of such as aspire to exactness of criticism or elegance of style."

One need not share the strongly conservative views of Mrs. Archibald Colquhoun's "The Vocation of Woman" (Macmillan) to say that scarcely anything so thoughtful, and at the same time so attractive and genial in style and spirit, has appeared in the literature of the subject. Mrs. Colquhoun offers an extensive discussion of the mental and physical differences of men and women, and takes the ground that women, though not inferior to men, are different, and should therefore have a different education and different occupations. Viewing the sex problem from the standpoint of conditions in England, Mrs. Colquhoun finds it to be created by the fact that, while marriage is monogamous, there are many more women than men. Under these conditions she holds that feminism, with its demand for the economic independence of women, single or married, is a game in which women have everything to lose and nothing to gain. For while, in a broader view, women are not inferior to men on the practical side of life, they are inferior *economically;* that is, they are unfitted for the grind of store or factory. Meanwhile, the family ties which feminists propose to loosen in return for economic independence are all to the advantage of women. The very meaning of monogamous marriage is that thereby the woman binds the father of her children to herself and makes him permanently responsible for the family welfare. Women cannot afford, therefore, to weaken the obligations of wife and mother; rather should they make it a point to emphasize those of husband and father. The chiefly problematic question, then, is what to do with the surplus women. Here Mrs. Colquhoun advises an emigration of women to the colonies, where there is a surplus of men.

Sir Almroth E. Wright in "The Unexpurgated Case Against Woman Suffrage" (Paul B. Hoeber) is amusing, though less amusing than we had expected. One may suppose that Sir Almroth sat down in a blind rage after dinner and completed the book in the course of a single night. Only once does he betray any consciousness of humor—when he describes the male suffragist as the man who greets an anti-suffrage argument with, "Sir, do you mean to insult my wife?" Sir Almroth is determined that women shall be shown their place. Yet he regrets the necessity; for, according to his conception of the social contract, obedience is to be counterbalanced by chivalry. "Unexpurgated" is therefore an apology for rudeness as well as for indelicacy. Virtually all of the indelicacy is relegated to an appendix containing Sir Almroth's famous letter to the *Times*, in which he made the grim and rather telling suggestion that the suffrage movement is the outcome of sexual disorder. His dominant tone, however, is one of scandalized amazement. Can't you see, ladies, that you are not wanted here? What! One or more women on every public board or commission? Pray, tell us how we are to transact business with women around? And how are gentlemen to be guarded from indelicate and embarrassing situations? Sir Almroth Wright is not precisely a model of dispassionate reason; yet his statement that in England, owing to the preponderance of women over men, three-eighths of the women of marriageable age are unmarried, helps to explain the intensity of the sex war there, though the fact deserves a more considerate treatment.

Sir George William Ross, Senator of the Dominion of Canada and formerly Premier of the province of Ontario, died last Saturday. He was born at Ontario in 1841. A lawyer by profession, Sir George was elected in the Liberal interest to the House of Commons for West Middlesex in 1872, and continued its representative until November, 1883, when he entered the Mowat Administration in Ontario as Minister of Education. In 1899 he succeeded to the Premiership, which he held until February, 1905. He entered the Senate of Canada in 1907, and was knighted by King George in 1910. He devoted some years to journalistic work, holding various editorial positions; was the author of several historical works, and was a member of many scientific and educational societies, and the recipient of honorary degrees from a number of Canadian universities, as well as from St. Andrew's University, Scotland.

Miss Annie S. Montague, associate professor of Greek in Wellesley College, died on March 5 in Cambridge, Mass. She was graduated from Wellesley with the first class, that of 1879. In 1882 she received the degree of M.A. from the College, and the same year became an instructor in Greek. In 1893 she became associate professor. She was also a member of various administrative committees.

Frederick Townsend Martin, who died in London last Sunday, was born in Albany December 6, 1849, the son of Henry Hull and Anne Townsend Martin. He was educated at the Albany Boys' Academy, and graduated from the Albany Law School with the class of 1872. Throughout his life Mr. Martin was interested in labor questions and settlement work, frequently visiting the Bowery Mission in New York. He contributed a number of articles on these and kindred questions to magazines, and wrote two books and a play. The first of his writings to attract attention was "The Passing of the Idle Rich." That was followed by "My Personal Experiences of Meeting Snobs," and a little later, "The Reminiscences of My Life" appeared.

The death at the age of eighty-four was recently announced from Milan of Luigi Monti, the last of the guests of Longfellow's "Wayside Inn," and a close friend of the poet. Monti, "a young Sicilian . . . in sight of Etna born and bred," was a member of the Harvard class of 1857, and was an instructor in Italian there from 1854-59. His wife was a daughter of Dr. William Thomas Parsons, also celebrated as the poet of the "Wayside Inn."

Science

The Grocer's Cyclopedia. By Artemas Ward. Published by the Author. $10.

The Economy Administration Cook Book. By Susie Root Rhodes and Grace Porter Hopkins. Hammond, Ind.: W. B. Conkey Co.

The American Cook Book. By Janet McKenzie Hill. Boston: The Boston Cooking School Magazine Co. $1 net.

Around the World Cook Book. By Mary Louise Barroll. New York: Century Co. $1.50 net.

Fifty Years in a Maryland Kitchen. By Mrs. B. C. Howard. Baltimore: Norman Remington Co. $1.50 net.

Dishes and Beverages of the Old South. By Martha McCulloch-Williams. New York: McBride, Nast & Co. $1.25 net.

Believing that the grocers and general shopkeepers of the United States greatly needed a book giving information regarding their business, Artemas Ward issued, in 1882, "The Grocer's Handbook." It was so crude a performance that he now feels ashamed of it. During the three decades that have since passed, he has diligently gathered material for a better book, the result being "The Grocer's Encyclopedia," a large volume of 748 pages, which treats of more than 1,200 subjects. The author's activity, for twenty years, as editor of the *National Grocer*, gave him unusual opportunities, which he supplemented by writing letters of inquiry to all parts

of the globe. The result is a work of great value and interest—a book indispensable to intelligent distributers of foods and at the same time of importance to housewives, who would less frequently have inferior articles foisted on them if they knew just what to ask for and how to judge quality. In these pages they can find out when different fishes are in season; what are the best coffees, teas, potatoes, apples, wines, and so on. There are twelve pages on cheese, with descriptions of forty-eight varieties; twenty on coffee, with a color-page showing twelve varieties. Altogether, there are 449 illustrations, eighty of which are full-page plates in color; some of these are purely ornamental, but most of them are useful, as *e. g.*, the four which show the most important cuts of beef. Under Canned Goods many will be surprised to read that, while in the matter of quantity we hold the record, in variety Europe surpasses us, Holland having canneries which put up several hundred kinds of edibles. Incidentally, there is a great deal of miscellaneous information, such as how to cook bacon, how to eat mangoes, how to test butter. There are also general articles of use to all business men, such as Trade-Marks, Partnerships, Good Will, Window-Dressing. The subject of adulteration is not treated as fully as it might be; nor does the author dwell as he should on the advantages of refrigeration over freezing.

Recipes from nearly 540 of the best-known women of the United States are included in the "Economy Administration Cook Book." Mrs. Woodrow Wilson heads the list, and the authors tell the story of the Wilson family cook book, which is replete with gems for the good housekeeper. Several pages of recipes from it are reprinted, some of them in facsimile. There is a chapter on White House Table Ware. Mrs. Champ Clark contributes a few pages of reflections, interspersed with recipes, one of them being how to cook a beefsteak sufficient for two men, with a fire made of two newspapers. She is one of many contributors who represent the South. No section of the country is neglected. Mrs. Josephine Clifford McCracken, of California, tells how to make the "most delicious of all preserves" of skinned Muscat grapes. Few know how to cook rice; Mrs. Joseph Eugene Ransdell, of Louisiana, reveals the secret. We note a few errors of judgment in some cases, such as the statement that lemon peel improves the flavor of baked apples. Not if the apples have a good flavor of their own! Two men have been allowed to say a word: "Oscar," who contributes a few pages of recipes, and Dr. Wiley, who writes the preface, in which he laments the fact that "in buying we are getting farther away from the producer every year." The volume is adorned with many portraits, and it has an elaborate index of 46 pages.

Janet Mackenzie Hill begins her "American Cook Book" by remarking that our cuisine has become cosmopolitan in character, the New England cookery having been superseded by cookery that has culled the best from every land and clime. This change is exemplified in her book, which does not, as its name might suggest, confine itself to specialties of the country. She begins with appetizers, and each of her chapters (on soups, fish, vegetables, meats, etc.) is prefaced by a few pages of general remarks, which all cooks should know by heart. Here is one: "Shortening makes tender pastry; water, tough pastry." Evidently, there is too much water in the national pie crust. Under "Salads" the amazing assertion is made that "a salad is not an acid dish"; yet she allows from one to three spoonfuls of vinegar to three spoonfuls of oil.

Mary Louise Barroll's "Around the World Cook Book" contains the culinary gleanings of a naval officer's wife. Louisiana gumbo, Argentine puchero, Hawaiian taro, Japanese fish paste, Swedish fish timbales, Italian gnocchi, Spanish steak, Mexican chili con carne, Turkish pilau, stewed kidney à la Creole —these are a few of the hundreds of dishes described. There is also a good deal of miscellaneous information about the care of furniture, cosmetics, perfumes, simple remedies, and first aids.

"Fifty Years in a Maryland Kitchen" is, like the "American Cook Book," more cosmopolitan than its title indicates, though it has a Southern flavor. It has long been a favorite, this being the fifth edition, a fact which speaks for itself. An excellent page is devoted to the important subject of making puff paste; but it saddens one to find, following it, directions for flavoring apple pie with cloves and lemon peel and juice. American apples are the best in the world. Why not enjoy their unique flavor as it is? Several pages are devoted to miscellaneous kitchen lore.

A special welcome must be extended to the last volume on our list to-day—Martha McCulloch-Williams's "Dishes and Beverages of the Old South." Here, at last, is abundant, readable, and trustworthy information about the much-vaunted Southern cookery, which, on the whole, merits all the praise that has been bestowed upon it. As a matter of course, there is a good deal about all sorts of cornbread and cakes, which in the South are so much better than in the North, where the corn is degerminated and deflavored. There are chapters on Creole Cookery, on all the principal kinds of food, pages on roasted 'possum, gumbo soup, cherrybounce, persimmon beer, banana pudding, etc. It should be specially noted that, while many recipes are given in detail, the book is not a dry collection of such, for kitchen use merely, but a volume to be read in the parlor. The most important chapter is the one beginning with the assertion that "plenty in the smokehouse was the cornerstone of the old-time Southern cookery." The details given regarding the old-fashioned smokehouses, with their special arrangement for supplying well-ventilated smoke, are of melancholy interest in these days of "liquid smoke" and denatured bacon and hams.

The *Bibliographie Géographique* for the year 1912, just issued by the *Annales de Géographie* is the twenty-second volume of this valuable series. The method of arranging the publications under the subject and countries, and the condensed explanatory notes of the editor, M. Louis Raveneau, and his fifty-nine assistants, give it a unique value and usefulness. Great care has been taken to record the geographical work of all the countries; there is, for instance, a list of the papers relating to the physical geography of the Balkan Peninsula published by the Servian Geographical Society. Nearly three pages are given to a record of the work of a Russian Geological Committee in the exploration of the gold-bearing regions of Siberia. The size of the volume is exactly the same as that of the previous year, but the number of works on the least-known parts of the earth has much increased, with a corresponding decrease of works on Europe. The United States is covered by 44 titles out of 1,039.

Drama

Goldoni: A Biography. By H. C. Chatfield-Taylor. New York: Duffield & Co. $4 net.

Goldoni's life is often called "a comedy in itself," but neither the wildest of anti-classic melodramas nor the most extravagant of *scenari* can match his career in multiplicity of action. Through what changing scenes he moved, constant only in good humor and in passion for the stage! In Venice, at the age of eleven, he wrote his first comedy. At the Jesuit School of Perugia his *début* as actor won him a shower of sugar-plums—his only scholastic honors. He deserted the study of philosophy at Rimini to voyage homeward with a most amusing company of players. His father taught him a little medicine, his father's patients a little trickery, and his uncle a little law. Then, for more serious schooling, the tonsure, and the uniformed dissipation of the Papal College at Pavia, whence a too successful satire banished him. At Udine, in token of reform, he summarized Father Cattaneo's Lenten sermons in a sonnet sequence. Renewed study of the law became the background for a long series

of adventures, amorous and dramatic. He spent two years as coadjutor in the chancery of Chioggia; got his degree at Padua after a night of gambling; won his first case in Venice; and fled soon afterward from an ugly *fiancée*. In Milan he read his first opera to a troupe of pitiless professionals—and burned his manuscript the next morning. He saw courteous siege and stark battlefields in the War of Don Carlos. Austrian deserters robbed him of all his worldly goods save a tragicomedy, which won him employment as playwright with a company of Venetian actors. Their road led hither and yon across the peninsula, bringing him at length to Genoa, where he found a wife, and a commission as Genoese Consul to Venice. The chief event of his short consulship was the loss of a thousand pounds to a swindling captain who had persuaded him to enlist as auditor in an imaginary regiment. From Rimini, where he had enjoyed Spanish patronage, he fled with his wife before the Austrian advance. Their baggage was confiscated, their driver deserted them, and Goldoni forded the swollen Cattolica with his wife on his back, remarking in mid-stream: "Omnia bona mea mecum porto." At Pisa he practiced humdrum law and adorned the local Arcady as "Polisseno Fegeio"—only to be captured and brought back at last to Venice by the comedians D'Arbes and Medebac.

Then the picturesqueness of his life diminished, and its real business began. Between 1748 and 1762 he wrote above one hundred and fifty plays—comedies, tragedies, tragicomedies, farces, operas, comic operas, interludes. Nor did he write in peace. He was fighting a long, hard fight against actors, managers, and public for the overthrow of the Commedia dell' arte and the establishment of true comedy of character; and he was at the same time defending himself from the parodies and invectives of a jealous imitator, Chiari, and a fantastic genius, Carlo Gozzi. Poor Goldoni! No wonder he had the "vapors"! "Sometimes," he writes, "my imagination was heated by the effervescence of the bodily fluids, and sometimes the animal economy was deranged by apprehension."

Finally, courage gone, he left his beloved Venice to become playwright to the Comédiens du Roi de la Troupe Italienne. He went with high hopes and resolute good humor. Not long after his arrival Mme. du Boccage wrote to Algarotti: "Goldoni loves Paris madly. Even the hubbub of the streets pleases him, and save for the opera and the high cost of provisions, he is enchanted with everything." But his comedians were unwilling to learn written parts; the struggle against improvisation and the Masks began all over again, and ended in defeat. After the expiration of his contract, Goldoni lived on the precarious royal bounty, teaching Italian to the princesses and learning courtly etiquette. But the stairways of Versailles were a hard path for him—all his life he had been a republican at heart. Two weeks after Louis XVI mounted the guillotine, the Convention, on the motion of Marie-Joseph Chénier, voted Goldoni a pension of 4,000 livres. But death had found the old Venetian in his poverty the day before that vote was passed.

Happy the biographer with such a hero! Happy, but daring too, for Goldoni's own Mémoires are easily second among Italian autobiographies. Mr. Chatfield-Taylor's daring is well justified by the excellence of his work. He follows the course of the Mémoires, quoting frequently, paraphrasing and supplementing in an efflorescent style that is none the less spirited and compact, altering the proportions of the story to suit modern interest, and correcting the many inaccuracies by careful reference to recent monographs.

Besides the seven chapters devoted to biography, there are seven on the comedies of Goldoni, and three on special topics, The Improvised Comedy, Goldoni's Rivals and Critics, and Goldoni and Molière. In the chapters devoted to the comedies of Goldoni, Mr. Chatfield-Taylor discusses some sixty plays, giving in most cases a brief analysis of the plot, an account of the leading characters and their social *milieu*, and some criticism. In a few cases, typical scenes are quoted in translation. The analyses are clear and, in general, accurate. It is not true, however, that Mirandolina "has a hankering" for the Cavaliere, nor that he "offers her his heart and hand"; and Ottavio, in "Il vero amico," neither hides his money in a well nor dies on hearing of its loss. The *dramatis personæ* and their little worlds are discussed with amiable sympathy. To these discussions, in particular, the several prints of *genre* pictures by Pietro Longhi add effective illustration. The translations are dull—inevitably so, to be sure, for Goldoni is weakest in dialogue, as he is strongest in the gradual humor of consistent personality and in the cumulative fun of clever situation. His books, after all, are but fuller *scenari*, librettos for action. Isolated scenes cannot represent him fairly, least of all isolated scenes in foreign disguise.

Mr. Chatfield-Taylor's estimates of the single plays are on the whole catholic and just. He regards the Venetian comedies as finer than those in Italian, and "Le baruffe chiozzotte" as the best of all. He recognizes not only the great charm of this play, but its deeper significance also, for he calls it "the first comedy of any land to mirror truly and affectionately the common people, without nobles to scorn them or clowns to belie them." Well-merited praise is given to several comedies that are often slighted, as "La dama prudente," "La guerra," and "Il matrimonio per concorso." The reviewer does not share all of Mr. Chatfield-Taylor's likings. "La bottega di caffè," for instance, is forced and poorly balanced, "La casa nova" inorganic and disagreeable, and "Il cavaliere e la dama" monotonous and verbose. On the other hand, the reviewer would claim a higher rating for "Gli innamorati," which would excel even "La locandiera" if only the third act were worthy of the other two, and for the perennially delightful "Ventaglio," the nearest equivalent, *in lingua*, of "Le baruffe chiozzotte."

Goldoni's work marks, for Italy, the return of literature to life. His predecessors had drawn almost exclusively from literary models; Goldoni drew from human nature. The purpose to be true to nature was clear and resolute in his mind. It is stated definitely and often in his letters, prefaces, and Mémoires, and it is carried into effect throughout the long series of the comedies. Voltaire, whose admiration for Goldoni was immediate and lasting, was wont to call him "the lovable painter of nature," a title well deserved and well bestowed. The types Goldoni chose for portraiture were the types of his own day and his own land: their permanence in interest bears witness to the fact that he was more concerned with their essential humanity than with their passing customs.

Nevertheless, as Mr. Chatfield-Taylor shows exceptionally well, Goldoni felt, and voiced, to some extent, the particular movements of his century. The laws of Venice made open satire impossible for him, and he was by nature a lover of peace and order, yet liberal opinions are expressed again and again in his plays. His aristocrats, for all their foreign titles, are drawn with a subtle and dangerous truth. Goldoni's enemies, at least, were not blind: he was more than once denounced to the Venetian Government for "exceedingly liberal and democratic tendencies." In old age, according to Clavière, "his greatest anguish was to be obliged to beg for the restoration of a pension he had received from Louis XVI: he warmly expressed the regret that he was unable to throw its patent into the fire that had consumed the attributes of royalty." And long before, in a comedy played while the first "Discours" of Rousseau was in the press, Goldoni had written: "Nature regards us all as equal, though the arrogance of the great does not deign to consider the small. The day will come, however, when one pudding will again be made of both small and great."

Goldoni not only drew from life; he sought to influence life. Mr. Chatfield-

Taylor, like the majority of modern critics, refuses to credit Goldoni with a moral purpose. "Nowhere," he says, "does Goldoni poise his lance and ride in battle array against the vices and follies of his time. Instead of making them an issue, he is content to point the finger." But Mr. Chatfield-Taylor's own summaries and quotations would serve to show that Goldoni did make an issue of the most characteristic vice and folly of his time, cicisbeism. Such plays as "Il cavaliere e la dama" and "La dama prudente" were clearly written with a reforming purpose; and there is scarcely one of the many comedies of the aristocracy in which the *cicisbeo* escapes sharp ridicule and straight invective. There is more than jest in Don Rodrigo's inability to understand why the stealing of a man's wife should be permitted when the stealing of his watch is forbidden. Moreover, Mr. Chatfield-Taylor, though he cannot see his hero with lance in rest, recognizes that Goldoni's own morality is an essential element in his enduring value. "In the breadth of Goldoni's sane vision," he writes, "and in the cleanliness of his mind, quite as much as in his unfailing humor and gayety, lie the sources of his glory." And, again, he terms Goldoni, "the most wholesome example of good humor in the realm of comedy."

The chapter on the Commedia dell' arte is distinctly inferior to the rest of the book. The general impression it conveys is fairly correct, but it is faulty in detail. Mr. Chatfield-Taylor is quite wrong, for instance, in saying or implying that written comedy in the Cinquecento could boast only a handful of writers gifted with the dramatic sense, that the mountebanks used outlines called *scenari*, that the Commedia dell' arte is merely a development of a popular drama devised by mountebanks, that the *lazzi* are always scenes, that Harlequin and Brighella appear only in *lazzi*, that the Doctor always speaks in the Bolognese dialect, that Pulcinella made his *début* in the sixteenth century, and that the libretto for Mozart's "Don Giovanni" was based on a *scenario*. The other chapters, however, maintain a high standard of accuracy in all respects.

There is a second work, and a notable one, between the handsome covers of Mr. Chatfield-Taylor's volume, a Goldoni bibliography by Prof. F. C. L. van Steenderen. Its main feature is a set of four chronological lists of Goldoni's writings. In the first list, "Improvised Comedies, Comedies, Tragedies, and Tragi-Comedies," there are 173 entries; in the second, "Books for Operas, Light Operas, and Interludes," 92; in the third, "Cantatas and Serenatas," 8; and in the fourth, "Miscellanea," 11. After the title of each work follow a few lines of apposite information. These lists, more complete, more accurate, and more detailed than those by Rabany, will be of very great value to students of Goldoni. Neither the Pasquali prefaces nor the letters, it may be noted, are mentioned in the list of Miscellanea. From a fifth list, devoted to the English translations of Goldoni, it appears that twelve of the comedies and five of the librettos have been translated once or more than once. Professor van Steenderen apparently had not seen a copy of the earliest libretto translation he records, "The Accomplish'd Maid," of 1767, which is, as he surmises, a version of "La buona figliuola." It is of special interest both for its completion of a literary circle—"La buona figliuola" is adapted from the comedy "Pamela nubile," which was based on an Italian translation of Richardson's novel—and because it is, according to the preface, the "first attempt of bringing an entire Italian musical composition on the English stage, by applying our language to the harmony of their most excellent composer" (Niccolò Piccini). Finally, Professor van Steenderen adds a good general bibliography, containing some 600 numbers, in which the most important editions of Goldoni's works and the most important studies of Goldoni are registered.

The new volume of translations from Brieux (Luce) comprises the well-known "Blanchette" and "The Escape," which under its French name, "L'Evasion," was crowned years ago by the French Academy. "Blanchette," in type, is the most undramatic of plays; in view of the absence of conflict, plot, suspense, its distinguished success at the Théâtre Libre must be classed perhaps with the other anomalies in the history of that extraordinary institution. The chagrin of two provincial innkeepers at the failure of their duly certificated daughter to obtain the expected teacher's post leads to recriminations which drive the girl from home. After pitiful distresses in Paris (merely narrated in the play), she returns to accept thankfully the simple life and rustic wooer whom she had once rejected with contempt. This unfortunate girl, with her fatal diploma, her snobbishness, her textbook learning, and her show-case morality, brings out with commanding distinctness the faults of an educational system which unfits peasants to work with their own class without insuring them a livelihood among the higher circles. The usual charge of exaggeration has been brought against this play, but it seems to us that the abeyance of drama proper has allowed the author to handle the mere problem with good sense, good temper, and moderation. The three loitering acts in the sleepy parlor of a provincial inn have distinguished merit as a reflection of village life and character. The heroine, indeed, is hardly more than a pedagogic convenience, but her rustic associates are full of life, and the two parents, in particular, are masterly delineations, presented with transparent clearness, with that instinctive justice which goes farther than the intention to be just, and with a sympathy so admirable in its latency as to elude possibly the perception of M. Brieux himself.

"The Escape" is inferior to "Blanchette" as literature, but is unquestionably a better stage-play; the art is still rudimentary, but the author has learned to make interest virtually continuous, to give his curtains the crispness of epigrams, and to dash at his point with a brusque precipitance which somehow lands him at his goal at whatever cost of dignity or discretion. The design, also, has its merits. The assertion of human will against fate is a theme of which age has not lessened the nobility, and "The Escape" has a really great moment when two victims of ancestral influence, descendants respectively of hypochondriacs and prostitutes, join hands in the strength of their mutual love and their common peril, to withstand the impending doom. Their instant relapse into commonplace after this brief exaltation might have been set down to ironic perspicacity in M. France; in M. Brieux its source is insensibility. The surrender of the couple on their first trial is disgracefully prompt; they are saved almost by hazard, and the close of the play finds them abjectly pleading for a remission of sentence from the dying physician who has volunteered to act as the mouthpiece of destiny. The play is at bottom less a repudiation of fate than an assault of Molièresque virulence on the time-serving, hypocrisy, dogmatism, and inefficiency of physicians. M. Brieux's difficulty, as the English preface indicates, lies in his failure to perceive that the man who wishes to prove that respectable physicians are charlatans in an esoteric sense must take care that the specimens he depicts shall not be charlatans by popular standards. The confutation of the author of "The Escape" may be left to the author of "Damaged Goods."

The materials and agents in this play are prevailingly second-rate, amorous intrigues that even Paris would find contemptible, and characters who are underbred and puerile in the precise ratio of their claims to gentility and education. There are no gentlemen in M. Brieux's salons; you may find one here and there in the servants' hall or in the pasture. He is an honest man and a good citizen, but the tone of his mind does not correspond with the generosity of his pursuits. A propagator of ideas, he is hardly thoughtful; engrossed with morality, he lacks elevation. A not undiscriminating preface, marred by a few incautious statements, has been contributed by H. L. Mencken. The publishers have seen fit to entrust the rendering of M. Brieux's French into our vernacular to a gentleman who is conversant with neither language.

The performance of "The Merchant of Venice," which Philip Carr has been giving successfully in his Little English Theatre, in Paris, has been transferred to the Court Theatre in London. A prominent critic says of it: "The performance is well worth a visit. The play is given without cuts or transpositions; it is played straightforwardly and intelli-

gently; and though the cast has its weak spots and the ensemble its occasional moments of roughness and feebleness, a very fair idea of the play is presented. Certainly the Shylock of Mr. Michael Sherbrooke is notable. Mr. Sherbrooke does not attempt the majesty and terror of the Irving Shylock, nor does he give us the downright comedy of the Poel or traditional Shylock. What he excels in is malignity. His malignity is horrible. And with it he is not in the least afraid of such comedy as is consistent with his reading of the character. He fawns and grins and cringes; he may positively be said to 'chortle' with evil joy as he drags off Tubal to the synagogue. He is the Jew of the comic stage and the comic papers, as well as the most meanly malignant Shylock that we have seen. As Portia Miss Maire O'Neill is perhaps a little monotonous in the early scenes; but there is glowing passion in her scene with Bassanio; she speaks her two great speeches quite beautifully, meaning and music bearing out each other, and her conduct of the trial (the whole of which is sensibly and knowledgably staged) is just and entirely rid of the usual faults.

Charles Frohman promises a revival of "Diplomacy" for next season, with William Gillette as Henry Beauclerc, Blanche Bates as Zicka, and Marie Doro as Dora. This arrangement suggests the nucleus of an effective cast, but a good deal will depend upon the selections for the Julian, Orloff, and Baron Stein. As Henry Mr. Gillette will challenge comparison with some famous impersonations, notably those of Charles Coghlan and Lester Wallack. Of all the Zickas up to the present time Rose Coghlan's was the best. Miss Bates's interpretation will be awaited with interest. The part of Dora, of course, presents no particular difficulty.

The once famous melodrama, "The Silver King," is to be revived in London, in May, for the benefit of King George's Pension Fund for Actors and Actresses. There will be a very special cast, and the performance will be given in His Majesty's Theatre. The possibility is suggested that E. S. Willard may be induced to emerge from his retirement and resume the part of Capt. Skinner—The Spider—in which he won one of his earliest successes. Henry Arthur Jones and Henry Herman were the joint authors of the piece, which in general workmanship and character was greatly superior to most melodramas of its period.

Sir Herbert Tree has now decided upon Bernard Shaw's "Pygmalion" for his Easter production at His Majesty's Theatre in London. The play is a fantastic piece of work, originally designed for Mrs. Patrick Campbell, who will appear in it as a Cockney flower-girl, qualified to play the part of a duchess by the instruction of a professor of phonetics. The part of the professor will be played by Sir Herbert Tree. The play, which is in five acts, was originally produced in October last at the Burg Theatre, Vienna. A fortnight later it was acted at the Lessing Theater, Berlin, with critical and popular applause. It was translated by Herr Siegfried Trebitsch.

A project started some two years ago has at last taken definite shape, and on April 16 next the "Agamemnon" of Æschylus will be performed in the ancient Greek theatre of Syracuse. Nearly twenty-four centuries have passed since Hiero I. embellished his city with the theatre which tradition attributes to the architect Democopor Myrilla. The theatre itself is one of the largest as well as the most ancient in the Greek world. Cut out of the rock of the hill upon which it stands, it has a diameter of nearly 140 yards, and still possesses forty-six rows of the sixty which once formed the amphitheatre. The nine divisions of these rows of seats can still be distinguished, as can also the altar of Dionysus, which stood in the centre of the orchestra. But the great beauty of the theatre is the superb view commanded by the upper ranges of seats, a view which comprises the Island of Ortygia, the valley of the Anapus, the Great Port, and the wide reaches of the Ionian Sea. The translation of the "Agamemnon" that will be used is by Prof. Ettore Romagnoli.

Music

My Art and My Friends. By Sir Frederic H. Cowen. New York: Longmans, Green & Co. $3 net.

Throughout the English-speaking world Sir Frederic Cowen is known as the composer of some very popular songs. His "Scandinavian" symphony introduced him into many concert halls, and it is only one of six symphonic works he has produced. He has also composed four chamber-music works, four operas, three operettas, five oratorios, and a number of cantatas. In England he has long been admired as one of the best of native conductors. In London and other cities he has come into contact with many eminent men and women, not a few of whom became his intimate friends. Of these he writes in a chatty way. One of them was the poet Browning, for a time his neighbor; he had "the curious habit of always walking with his umbrella or stick over his shoulder, as if he were carrying a gun." Throughout his book Mr. Cowen's main object is the entertainment rather than the instruction of the reader. There are many pages of anecdotes and jokes, some of them rather stale; but we do not remember having come across the one told of Brahms, who, on listening to a new work, was observed making a knot in his handkerchief and, when asked why he did it, answered: "To remember that pretty melody by."

Incidentally, one gets interesting glimpses of English musical activity during the last fifty years. Mr. Cowen happened to be born at Kingston, Jamaica, but he was only four years old, in 1856, when his parents returned to England. He was a youthful prodigy; at the age of six he composed a waltz, and at eleven he made his first public appearance as concert pianist, on which occasion the black nurse who had been brought over from Jamaica cried out proudly, to the amazement of the audience: "That's my boy! That *my* boy!" Santley was one of those who helped him by singing his early songs. Lloyd was another great singer by whose friendship he benefited. At seventeen he composed his first symphony. After studying at the Leipzig Conservatory he returned to London and joined Mapleson's Opera Company as accompanist, coach for the soloists, and drill-master for the chorus. There was in those days much indifference to the proprieties, artistic or other. Thus, in Ireland, during the performance of an opera, it was not unusual for the audience to stop the prima donna and make her sing "The Last Rose of Summer," "The Minstrel Boy," or some other popular favorite, before the performance was allowed to go on. Not to be outdone in informality, the members of the company at Limerick one day fastened the bill posters to their backs and paraded the town in the capacity of their own sandwich-men.

The experience gained by Mr. Cowen during his travels with the Mapleson Company were of good use to him later when he undertook to write operas of his own. Four he composed, but none of them was a success. He writes of his failures with perfect frankness and good cheer, but with the conviction, nevertheless, that under more favorable conditions his "Thorgrim" and, still more, his "Harold" might have been more fortunate. "The British composer who writes an opera under present conditions is doomed beforehand to failure," he declares. British patriotism, so conspicuous in politics, literature, art, sports, does not extend to music, and, least of all, to serious operatic works. Influential subscribers of Covent Garden actually protested against the inclusion of an English opera in the repertory. Another impediment lies in the lack of good librettos, concerning the art of writing which the author has some remarks worth heeding. In the last analysis, however, Sir Frederic feels that the blame lies largely on his own shoulders. The critics praised his "Thorgrim," the performance was excellent, but all these things "are of no use without that indefinable *something* which attracts the public and holds it in sympathetic interest throughout a performance."

The form of native art most relished by the British public is the ballad. To this class Cowen has contributed a number of specimens, of which some have become popular; nor is he ashamed of this, though he admits that the best ballads are not usually the most remunerative. In Wales he was surprised to find that the place of the ballad or

the folksong is so often taken by the hymn tune. In his wanderings he frequently came across small parties of Welsh folk "seated on the grass slopes, singing in good four-part harmony any pieces they could remember, chiefly hymns." A trip to Australia as musical director of the Melbourne Exposition gave him an opportunity for antipodal comparisons, which on the whole are flattering to the Australians.

"The Guide to the Chassevant Method of Musical Education," by M. P. Gibb, is announced for publication next month by the Frederick A. Stokes Company.

Of "The Vanity of Vanities," a new choral symphony by Granville Bantock, recently produced in London, the London *Times* says that Mr. Bantock "is most himself when he escapes from 'the vanity of vanities,' when he indulges in a piece of word painting, the wind whirling about continually, for instance, when he abandons the words to develop a quasi-Oriental dance sung with closed lips imitating the sounds of flute tunes and drum rhythms, or when he bursts into a brilliant C major phrase, 'Go thy way, eat thy bread with joy, and drink thy wine with a merry heart.' . . . Mr. Bantock is exploring the technique of the chorus, not perhaps doing anything as enterprising with the voices as Berlioz did in the 'Symphonie Fantastique' with muted horns and muffled drums, but still searching out their possibilities consistently."

Richard Strauss has completed the score of his ballet. It is now being printed as his opus 63 under the title of "Eine Josephslegende," by Adolph Fürstner in Paris. The duration of the work will be about the same as that of "Salome." The first performance is to be in Paris, by Russian dancers.

For pianists, amateur as well as professional, an indispensable book is Ruthardt's "Wegweiser durch die Klavierliteratur." It contains carefully classified and graded lists of nearly everything of value in music for the piano, either alone or in combination with other instruments. The utility of the book is indicated by the fact that the eighth edition of it has just been published by Gebrüder Hug & Co. in Leipzig. It is thoroughly revised and greatly enlarged, and the author tells frankly what he thinks of certain anarchistic tendencies in the music of today.

Sibelius is at work on his fifth symphony.

A clique of "freakish-looking fanatics" gave "frenetic applause" to Arnold Schönberg's "Kammer-Sinfonie" in Berlin the other day, while others in the audience indulged in hisses and cat-calls. Caroline V. Kerr writes in the *Musical Leader* that "the chamber-symphony is written for fifteen solo instruments and is as laden with dissonances as an overheated motor. Throughout the score there is nothing that could be designated as a theme or characteristic figure, but the small orchestra goes joyfully on its way, obeying to the letter the scriptural injunction of not letting 'the right hand know what the left is doing.'"

Art

PICTURES AT THE METROPOLITAN MUSEUM.

The Metropolitan Museum has just published a "Catalogue of Paintings" from the competent hand of Curator Bryson Burroughs. Now, to publish a thoroughgoing catalogue might seem a most normal proceeding for a great museum. As a matter of fact, it is still rather an exceptional grace. It is only in Germany that one has the right to assume the existence of well-made catalogues, and it is only about ten years since the Metropolitan Museum has made the preparation of such catalogues a regular part of its policy. The "Catalogue of Paintings" marks a stage in a very active process of weeding out bad pictures, buying good ones, and rearranging the galleries. Within ten years the Metropolitan Museum has gained great funds for purchases, and in the same period has been systematically strengthening its staff. In the most conspicuous exhibit we have the opportunity of reviewing this development.

On the side of rearrangement too much good can hardly be said of the work. It was to be expected that Director Robinson would secure a chronological arrangement, but few probably realize how difficult it was to effect this. At last all the older schools are displayed in order and chronologically, while such individual exhibits as the Wolfe, Hearn, and Vanderbilt collections, although escaping the general historical classification, have been brought into relatively harmonious relations to the rest. Ten years ago the galleries looked like two very fine private collections—the Marquand and Vanderbilt, with several mediocre private collections appended. Nothing could be learned except with great difficulty, and rather little could be enjoyed. Of course, that confusion had its sufficient reasons, and was nobody's fault. All the same, high credit is due to those who have straightened out the tangle and have made the galleries almost without exception places of instruction and of high pleasure.

The new Catalogue gives occasion both to review the purchases of recent years of quick expansion and to consider the present condition of the collection as a whole. When one remembers that the great purchasing funds of the Museum put it far in advance of all European competitors, the purchasing success of the Museum has not been brilliant. A kind of mediocrity has perforce presided over the choice, for it is the choice not of an individual, but virtually of two committees, an informal committee of the staff and a stated committee of the trustees. No quick or brilliant transaction is possible under these conditions, and a kind of law of averages prevails. Illustrative examples are the purchase by the Museum of the least attractive member of a Paolo Veronese series at the moment when Mr. Frick was buying the two preferable pieces; or the recent purchase at a great price of a metallic and mannered composition, the appearance of which entirely belies its ascription to the greater Tintoretto; or the purchase of a Bellini Madonna that has merely a faint echo of the quality of the most delightful of Venetians. Against such acquisitions should in fairness be set the splendid Correggio, Four Saints; the Carpaccio Pietà, the Rubens, Wolf Hunt, and many a more modest purchase, either intrinsically desirable or historically apposite.

Some acquisitions leave one perplexed. Take the Botticelli St. Zenobius: one is glad to have so imaginative a thing on any terms, and yet reluctant to see anything so marred by old neglect and recent restoration. Such considerations tell the story of the recent buying campaign. It has been only fairly successful, and this will be the case so long as the buying is done by committee. Of course, this may be a business necessity of the situation. One can imagine the state of mind of trustees towards the spending of the great sums in their charge. It is hard to delegate such spending without the usual business controls. Yet the fact remains that only one museum buys freely and well, namely, the Kaiser Friedrich Museum at Berlin, which has prospered mightily under the benevolent tyranny of Dr. Bode. Incidentally, the best buying in the Metropolitan Museum has been in the department of decorative art, where the articles are too numerous to be passed by any committee, and in the classical department, where the Director may be able to influence the committee more than any curator could do. The whole matter of museum buying remains to be worked out, and it must be admitted that if the Metropolitan Museum in its picture-buying is doing only moderately well, few museums are doing conspicuously better.

Taking the collection as a whole, with some twelve hundred pictures, in mere numbers it approaches the famous foreign galleries. In French painting of the nineteenth century no museum but the Louvre is better supplied. This is the only point of unqualifiedly favorable comparison with foreign museums generally. Whatever the growth in other directions, there has been significant growth. The collection of Dutch and Flemish old masters, while not large, is singularly complete and well balanced. It is by far less rich than similar collections in the second-class museums of Europe, but it is well selected and,

broadly speaking, entirely adequate to the especial needs of the Museum. In Italian and Spanish old masters merely a good beginning has been made, and pictures of first importance are exceptional. It may be the Museum leaves the Spanish field to the Hispanic Society, whose gallery is notably rich. The most pressing need is the systemic upbuilding of the Italian galleries. The scarcity of fine examples and the great prices make the task staggeringly difficult; still much is already under way in filling the gaps. When we turn to English painting of the eighteenth century the prospect is more cheerful. It is not a remarkable display from the point of view of quality, but no museum outside of England has a better one. In French painting of the eighteenth century the Museum is lamentably deficient. Prices here are become almost prohibitive, and the Museum must depend largely on gifts.

The Early American school still needs building up; the later American painters are represented with appalling generosity. Here, largely owing to the liberality of the late George Hearn, there has been a steady increase. On the whole, the buying has been well done, and the gifts no worse than need be; but we believe this influx of canvases by living artists is distinctly a misfortune for the Museum. Much of this material is not worth museum honors now, and most of it will simply go to fill the storerooms in a matter of twenty years. In its own defence, the Museum will be forced either to limit such exhibits severely or put them under a separate roof. That would be far the best plan, a kind of American Luxembourg for contemporary art, from which the pictures of abiding value might be culled out for permanent exhibition. The weakest aspect of the Museum's policy to-day is precisely this patronage of contemporary art. It is not the buying itself that need be objected to, but the premature placing of work of unproved value in a museum devoted to the approved work of the past. The solution is an extra-mural department of contemporary art.

It should be added that the Altman collection will bring a great accession of strength, especially in Early Flemish and Dutch painting; but, unhappily, these pictures can never be put in historical sequence with the general collections. The task of balancing the collections goes on with much system and intelligence, but without much insight. A kind of collective intelligence may be got from committees, insight is solely a product of individuals. The danger of the Metropolitan Museum, for here the galleries of painting are merely symptomatic of a general condition, is that of being overfilled with objects which, while of a certain historic and archæological significance, are of no high artistic merit. Museums thrive not by historic sequences, but by the possession of masterpieces, and masterpieces are much rarer in the Metropolitan Museum than need be, considering the greatness of its funds and the capacity of its staff.

As Mr. Bryson Burroughs's "Catalogue of Paintings" represents the first systematic scrutiny of the Metropolitan Museum's collections, many new attributions of familiar pictures are only to be expected. Mr. Burroughs has provided rather a careful hand-list than a full-fledged catalogue. There is brief information about each artist, a terse identifying description for each picture, and, when necessary, a brief note concerning attributions. Recent acquisitions have usually been fully studied in the Museum *Bulletin*. References to these articles are a welcome convenience. At all points conciseness has been the aim. The student would welcome information as to provenance—and it seems to us that in exceptionally interesting and important cases such information should have been given. However, one must rather admire the consistency with which the text has been kept down to bare essentials. A fuller catalogue will doubtless follow in due course. Throughout, the work has been conducted with good sense and sound scholarship. We notice no serious slip except in the account of Antonello da Messina, where the latest discoveries have not been taken into account. The catalogue introduces an interesting novelty in the use of the Cutler system of library classification for numbering the pictures. Each artist is designated by his initial with a coefficient, and the pictures are designated in the order of acquisition. Thus R 28 is Rembrandt's number. R 28—2 means the second Rembrandt acquired, to wit, the Portrait of a Man in the Marquand collection. An appended S indicates a school piece. R 28S —1 denotes the old copy of Rembrandt's Adoration of the Shepherds, also in the Marquand gift. The system is entirely flexible. It was adopted particularly because the Metropolitan Museum is in rapid growth and naturally wishes to avoid perplexing change of numeration. But the system seems equally good in all cases where museum material can be classified under artists' names. The weakest point in this catalogue is the typographical arrangement, which is confusing, but easily amended. By printing the artists' names in a heavier face, the present confusion with the titles of the pictures would be avoided. This is an improvement that should be made in a second edition. This catalogue comes as the crowning record of a long process of weeding, purchase, and rearrangement, by which within ten years the attractiveness and usefulness of the galleries have been doubled. The steady production of handbooks like the present is the surest evidence that a museum can give of the possession of a competent and devoted staff. Mr. Burroughs is to be congratulated on the successful accomplishment of a task requiring not merely scholarship but a high degree of tact and good judgment.

"The Renaissance of the Greek Ideal," by Diana Watts, is announced for publication next month by the Frederick A. Stokes Company.

In his "Raphaelstudien," a handsomely printed pamphlet of forty-eight pages (Berlin: Hyperionverlag), Mr. Oscar Ollendorff presents with further evidence and new extensions his interpretation, first published in 1896, of the figure of Aristotle in the School of Athens. The substance of this interpretation is that Raphael's Aristotle is an embodiment of the "perfetto cortegiano," the Renaissance ideal of the many-sided, cultivated aristocrat. In support of this view are cited Castiglione's own application of the term "cortegiano" to Aristotle, the grace, dignity, and air of moderation expressed in the figure, and Raphael's friendship with Castiglione and other members of the court at Urbino during the period to which the dialogues of the "Courtier" are attributed. Castiglione himself had derived his ideal from the "Nicomachæan Ethics"; the virtues of his courtier are explained as lying midway between two extremes, equally avoiding excess and defect. Further, Raphael himself was a courtier-nature, in Castiglione's sense, marked as such by his love of classical antiquity, his enthusiasm for learning, his aspiration towards lofty ideals, and his personal grace and charm. Thus it is by no accident that he should have become interested in Castiglione's speculations, that he should have embodied in his Aristotle a conception of which Aristotle was the real originator, and that he should have introduced his own portrait into the picture, upon the Aristotelian side. The last circumstance is the more significant as being the sole instance in which Raphael himself appears in any of his compositions.

The figure of Aristotle is held by Mr. Ollendorff to be the culmination of a series, showing Raphael's gradual realization of an ideal of manhood in which grace should be conspicuously present. Later the Christian ideal supplanted the courtier-ideal; the apostles of the Vatican tapestries are akin, not to Aristotle, but to the Plato of the School, a type of exclusively spiritual striving, neglectful of external graces. But the Christ of Feed My Lambs still retains certain features of the Aristotle-type, with such differences as must distinguish the heavenly Prince from the earthly courtier. Mr. Ollendorff brings both scholarship and sympathetic insight to his interpretation of Raphael, whose aristocratic culture he believes to be inadequately appreciated in the present democratic and materialistic age.

Finance

UNDOING THE MISCHIEF OF THE PAST.

When the Supreme Court, acting under the Sherman Law, began to decree the dissolution of certain great so-called "Trusts," there was an agonized outcry, from both Wall Street and the investing community. Wall Street's distress was caused by the conviction,

which had been carefully instilled into its mind by the financial leaders, that we could not go on doing business successfully without these enormous combinations of corporations. The misgivings of the outside investor were inspired by his notion that "dissolution" meant destruction of plant, good will, and business profits. Both very soon turned out to be curiously mistaken. The separate companies, released from the domination of one company which controlled them all through the machinery of corporate ownership, continued to do a successful and prosperous business.

This gave a somewhat different turn to the public's point of view. Even the simple-minded began to realize that these huge combinations, which had been talked of as if prosperity itself had been originally created by them and could not exist without them, were in reality experiments of a single decade; that they were the outgrowth of a period marked by conceptions of finance which often verged on delirium, and that many of them had been notorious failures. As a further inference, it began to be dimly felt that the outcome of "dissolution" might also mean return to a sound and stable condition of affairs.

But the so-called great Trusts were not the only new phenomena of "combination" in that period of extravagance and delusion. Three contrivances were introduced with a flourish by our financiers of 1899 and 1901. One was the "community-of-interest" idea, whereby one company (usually in the railway field) would buy up a block of shares in another competing company, hold those shares in its treasury, and elect one or two directors in the other corporation. The notion seemed to be that competitive concerns would thereby, so to speak, direct one another's affairs and remove unpleasant competition. This expedient lost its vogue when it was found that "community-of-interest directors" were virtually snubbed by the regular managers, and excluded from active participation in the management.

The "holding company," which bought up other corporations by exchanging its own shares for theirs, was the next expedient. The United States Steel was one of these; the Northern Securities was another; the Standard Oil yet another. Their purpose was, first, to annihilate competition between the companies bought up, and, secondly, to concentrate control perpetually in a few hands. Those purposes were often denied, but the denials were wasted words. The Northern Securities and Standard Oil decisions of the Supreme Court put an end to the process.

The third expedient was the buying up by one company of the shares of another, and raising the money for the purpose through issuing a bond of the purchasing company, secured only by the shares of the company acquired. The Mercantile Marine and the Interborough-Metropolitan did this, and so did the Rock Island. That is what gives peculiar interest to the present situation in the last-named property. In most cases where the expedient was employed the collateral trust bond was issued on the credit of a strong existing company, which had used that machinery to keep under its own control the other company whose shares were deposited as pledge for the bonds.

But the men who in 1901 used the proceeds of their reckless company promotions and wild speculations to buy up control of the fine old Chicago, Rock Island & Pacific property carried the process to its last analysis. They constructed a fictitious "holding company"; put the old railway shares under a collateral trust bond, issued by another fictitious company owned by that shadowy concern, and, in exchange, presented themselves with the collateral trust bonds and with no less than $140,000,000 in stock of the "holding company"—stock which had absolutely no property or assets back of it except the shares of the old railway, all of which were pledged as security for the 4 per cent. collateral trust bonds.

Financially considered, this performance was clearly nothing but the recapitalizing of a railway for three times the amount of stock on which it had previously paid a conservative dividend. Considered as a physical experiment, it was lifting one's self into prosperity by the boot-straps. But the projectors of the scheme had a different end in view, which, in fact, was cynically avowed at the time. Their purpose was, as in the case of the other peculiar expedients of 1901, to control a company without keeping their capital tied up in it, and, for this reason, the ringleaders of the Rock Island promotion expected to keep the "holding company's" preferred stock (which alone controlled the board of directors), and sell their common stock and collateral trust bonds, which had no control at all.

They succeeded in getting the common stock and bonds into the public's hands. But they overlooked two facts which are now seen to have been ahead of them all along. One was, that skill in constructing paper corporations does not make men respectable railway managers. The other was, that when interest should be no longer paid on the collateral trust bonds, the holders of those bonds could automatically acquire the shares of the whole railway property, and leave the "holding company" with nothing.

This is the situation which has developed in the Rock Island, as a sequel to the foolish performances of a dozen years ago. It is a situation which at least points its own moral—equally with the dissolution of the enormous "Trusts"—as to the economic worth and value of the New Finance of 1899 and 1901. It raises the query whether it was not the deficiencies of our corporation law, rather than "tendencies of the age," which really made possible this unscrupulous thimble-rigging, in the face of the courts and the police. It conclusively answers the question—not often asked, however, nowadays—as to whether we should not all have been better off if our Government had left "Big Business" to its own devices.

Young's Freshman English

By FRANCES BERKELEY YOUNG, formerly Instructor in the University of Wisconsin, and KARL YOUNG, Associate Professor in the same. xii+679 pages. 12mo. $1.25.

This is a substantial revision and material enlargement of Berkeley's *Writing from Models*. The most important change is the provision in Part I. of chapters on The Planning and Writing of Themes, Paragraphs, Sentences, Punctuation, and Words. These embody sensible working suggestions and rules, illustrated by student themes and by selections from standard authors.

With the foundation laid for correctness in writing, Part II. deals with the various forms of discourse, taking up first a few general principles and then a number of literary examples. Many of the model selections in the original book are retained, but there have been several additions, and there is a chapter on Argumentation, which form of discourse was not treated in the earlier book.

Chicago and the Old Northwest

1673-1835

By MILO M. QUAIFE

This book is in scope and subject-matter a history, but in language and content it is as thrillingly interesting as romance. It is a history of the founding of old Fort Dearborn at the mouth of the Chicago River at the time when the modern metropolis of Chicago was but a wilderness hunted over by Indians. It describes the "Fort Dearborn massacre," the contest of the British and Americans for the Indian trade of the great Northwest, and the Indian wars, massacres, and frontier experiences which figured in the development of Chicago. The work is the most absorbingly interesting contribution to the history of the Northwest that has appeared in years. It is fully illustrated.

NEW MAGAZINE ON EGYPT

An illustrated quarterly magazine, beautifully illustrated, with news of late discoveries, edited by PROF. PETRIE, began with the January number embellished with frontispiece of jewelry in colors. Price $2 a year. The discoveries by Petrie and others for the EGYPTIAN RESEARCH ACCOUNT (Society) relate to the arts of Ancient Egypt and to its predynastic age. An annual quarto volume, profusely illustrated, and the magazine should be in all public and many private libraries. Circulars of these publications freely furnished. Address REV. DR. W. C. WINSLOW, 525 Beacon Street, Boston.

VOL. XCVIII—NO. 2542 THURSDAY, MARCH 19, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

Important Books of the Spring

Annals and Memoirs of the Court of Peking

By J. O. P. BLAND and EDMUND BACKHOUSE. "Of the importance to us to-day of understanding or endeavoring to understand the Chinese, no one will entertain a doubt, and therefore we heartily welcome a book like this in which the attempt is made, and made, we believe, successfully, to trace cause and effect back to the buried foundations of Chinese philosophy and civilization and to look at things from the Chinese point of view."—*London Globe.* Lavishly illustrated. $4.50 *net.* Postage extra.

George Borrow and His Circle

By CLEMENT K. SHORTER. "A treasure and a delight to admirers of Borrow."—*London Athenæum.* "A sane book about a sane and magnificently wholesome man."—*London Daily Express.*

"A delightfully entertaining Borrovian is Clement King Shorter. . . . The work is distinguished by a wealth of new material, much of which consists of hitherto unpublished letters of Borrow and his friends."—*San Francisco Chronicle.* With frontispiece. $3.00 *net.* Postage extra.

The Passing of Empire

By H. FIELDING-HALL. One of the most important and authoritative books that have yet appeared about the British rule in India. It is an important contribution to the history of Colonial administration, which at the present time has a special pertinence to American readers, confronted, as we are, by very similar problems in the Philippines. $2.50 *net.* Postage extra.

Commodore George Hamilton Perkins, U. S. N.

By CARROLL STORRS ALDEN. An important addition to American historical biography and a most readable and engrossing biographic narrative. Commodore Perkins served with Farragut in some of the most notable naval engagements of the war; and he was in command of the monitor Chickasaw, which had the most conspicuous part in the battle of Mobile Bay. Illustrated. $1.50 *net.* Postage extra.

Thomas Wentworth Higginson, The Story of His Life

By MARY THACHER HIGGINSON. This intimate biography tells for the first time the full story of the life of one of the most interesting of American soldiers and writers. Fully illustrated from portraits, views of Colonel Higginson's homes, friends, etc., and with facsimiles of interesting manuscripts. $3.00 *net.* Postage extra.

The Americans in the Philippines

By JAMES A. LeROY. With an Introduction by Hon. William H. Taft. The first complete, comprehensive, and authoritative history of the first years of the American occupation of the Islands. Mr. LeRoy was Secretary of the Philippine Commission. He had a personal knowledge of most of the events of which he wrote, and spared no pains in the diligent research of documents, records, and newspapers (both American and Spanish). The work is not less readable than sound. 2 vols. Boxed. $10.00 *net.* Postage extra.

POETRY

The Poems of Walter Conrad Arensberg

The "Poems" of Mr. Arensberg touch a note of fantasy that has rarely been heard in English verse. It is to men like Verlaine and Laforgue that one must look for kinship to such interpretation, at once capricious and searching, of the senses and the spirit. Finished in execution, they are compact in phrase, daring in versification, and vividly personal in imagery. $1.00 *net.* Postage extra.

In the High Hills

By MAXWELL STRUTHERS BURT. This little book is one that the lover of poetry cannot overlook. Mr. Burt has authentic poetic inspiration and a fine command of poetic language and his work will be read and treasured. $1.00 *net.* Postage extra.

The Poems of Joseph Beaumont

Poems, most of them hitherto unpublished, of Dr. Joseph Beaumont, a seventeenth century divine. The manuscript was loaned by Prof. George H. Palmer to Wellesley College, where it was transcribed and equipped with notes and introduction by Eloise Robinson, under the direction of Prof. Katharine Lee Bates. $5.00 *net.* Postage extra. Limited edition, of which 200 copies are for sale.

OF VARIED INTEREST

Paul Verlaine

By WILFRED THORLEY. This volume deals in a sane and authoritative fashion with that most brilliant of insane geniuses, Paul Verlaine. Verlaine's fevered life and his outstanding poetic work are both studied with full knowledge and with a fine critical sense. 75 cents *net.* Postage extra.

A Life of Tolstoy

By EDWARD GARNETT. This volume will perhaps prove the most useful of all the shorter lives of Tolstoy to the general reader. Mr. Garnett, who is one of the best known of the younger English critics, has made a close study of Tolstoy's life and work, and presents it with sympathy. 75 cents *net.* Postage extra.

The Hygiene of the Child

By LEWIS M. TERMAN, Ph.D. This book gives the essential facts of the child's physical development, taking advantage of all recent medical and scientific research. An accurate, interesting, and useful textbook. Illustrated with half-tone and line cuts. $1.75 *net.* Postage extra.

Play and Recreation for the Open Country
By HENRY S. CURTIS
265 pages, profusely illustrated, $1.25

THIS book shows some ways in which the adventure and romance and social coöperation of country life in the days of the pioneer, can be brought back to country life today. Parents, teachers and students of rural life will find interest and inspiration in the many helpful suggestions for the organization of recreation in the rural home, school, and community.

The author has brought to this work a unique preparation, as he has been at different times a general director of playgrounds in New York City, supervisor of playgrounds for the District of Columbia, and founder and first secretary of the Playground Association of America.

CROWELL'S SPRING BOOKS

Adventures of The Infallible Godahl

By FREDERICK IRVING ANDERSON

These fascinating chapters from the career of a character even more ingenious in conception than the famous Raffles have made a great sensation during their publication in serial form. Not only are they well worth reading for their interest-compelling plots, but they gain an added value from the exceptional merit of the author's literary style. Mr. Anderson has developed a vein of fiction that well-nigh outclasses the work of both Hornung and Conan Doyle.

8 *illustrations.* 12*mo.* $1.00 *net. By mail,* $1.10.

THE COMMUTER'S GARDEN

Edited by W. B. HAYWARD

A book for those who possess small plots of land and want advice on how best to improve and beautify them. Full of valuable information. 16 illustrations from photographs.

12*mo.* $1.00 *net. By mail,* $1.10.

TUBERCULOSIS: Its Cause, Cure, and Prevention

By EDWARD O. OTIS, M.D.

The simple facts about this dread disease presented in a form interesting and intelligible to the layman. Dr. Otis is an authority on the "Great White Plague." 16 illustrations from photographs.

12*mo.* $1.25 *net. By mail,* $1.37.

RICHARD WAGNER: The Man and His Work

By OLIVER HUCKEL

A sympathetic study of the great composer, from a fresh viewpoint. Issued in style uniform with Dr. Huckel's well-known translations of the Wagner Music-Dramas. Illustrated.

Cloth, 75 *cents net. Limp leather,* $1.25 *net.*
Postage 8 *cents.*

HOW TO REST

By GRACE DAWSON

Points out in a practical way the right method of living. Brief and to the point, and filled with sensible advice.

12*mo.* 50 *cents net. By mail,* 55 *cents.*

THE MESSAGE OF NEW THOUGHT

By ABEL LEIGHTON ALLEN

A clear exposition of the basic ideas of New Thought and comparison of its teachings with those of the orthodox religions and Christian Science.

12*mo.* $1.25 *net. By mail,* $1.37.

THE DEAF: Their Position in Society

The Nation.

NEW YORK, THURSDAY, MARCH 19, 1914.

Summary of the News

The most important development in the Mexican situation during the past week was the withdrawal of Gen. Carranza from the position he had assumed with regard to the right of the United States to investigate the Benton or similar cases. Following a conference with American Consul Simpich, acting under instructions from the State Department, Gen. Carranza announced that he had decided to accept representations from the United States concerning all foreigners in Mexico. Meanwhile, it is freely stated that Villa is ambitious to become the next President of Mexico, and that a break between him and his nominal leader is only a question of time. Villa himself, however, has denied that any friction exists between the Constitutional chief and himself, and has declared explicitly that he will not be President. On the same day that Gen. Carranza made his announcement the President directed an increase in the force of regular troops on the Mexican border to check any inclination on the part of the Texans to organize a raid over the frontier. On Saturday night some Mexicans crossed the border at San Diego, Cal., burnt the general store containing the post office, and murdered Postmaster Frank Johnston. Efforts will be made to have the murderers returned to California for trial under extradition proceedings.

A storm in a teacup was aroused by Ambassador Page's speech last week before the Associated Chambers of Commerce in London, with the result that a resolution was passed in the Senate calling on the State Department to place before it a copy of the speech. Exception was taken to the passages in which Ambassador Page alluded to the Monroe Doctrine as meaning that "the United States would prefer that no European Governments would gain more lands in the New World," and in which he stated that it added greatly to the pleasure of the people of the United States in the building of the Panama Canal to know that the British would profit most by its use. Secretary of St te Bryan has cabled instructions to the Ambassador to forward the full text of the speech. In the meantime Mr. Page explains that the misunderstanding was due to too great condensation in the reports of his speech published in the press, and that the passages to which exception was taken in the Senate were spoken in a facetious vein.

The Senate Immigration Committee decided last week to report the Burnett Immigration bill favorably to the Senate. The literacy test therefore remains in the bill, and the question will be fought out on the floor of the Senate.

The application of the "gag" rule to the debate in the House on the repeal of the exemption clause in the Panama Canal tolls bill indicates that the measure will be transferred to the Senate to-day or to-morrow. According to a preliminary canvass of the Senate it is probable that the motion to repeal the clause will obtain a sufficient majority.

The attempt to amend the Sherman Anti-Trust law by attaching to it a series of definitions has been abandoned. The difficulty of framing legislation to define exactly what constitutes a "monopoly" has apparently been found to be insuperable, and the President, according to the Washington correspondent of the New York *Evening Post*, "has noted that every time a new definition is attempted in this connection it makes a new series of cases to interpret the definition."

As a result of the competition of the parcel post it was announced last Friday that the United States Express Company would go into liquidation. Reports of business during recent months show an enormous decline in comparison with the corresponding months a year ago, and it is said that the small surplus that existed on December 1 last year had by the close of February been converted into a large deficit. In order to preserve its assets the stockholders have decided to dissolve the company.

Three indictments were handed down by the Grand Jury on March 11 against Henry Siegel and Frank E. Vogel, the principals in the conduct of department stores in Boston and New York. The indictments charge fraud in accepting deposits in the private bank of Henry Siegel & Co. when the firm knew that it was insolvent, and in having obtained a loan of $25,000 from the National Bank of Commerce by misrepresentation of assets and liabilities.

It is possible that the differences between the United States customs officials and the Limoges porcelain manufacturers may hold up indefinitely the voting by the Chamber of Deputies of the appropriation for the French exhibit at the Panama Exposition. According to the Paris correspondent of the New York *Sun* there is no likelihood of the budget committee voting the appropriation unless the Limoges difficulty is settled, and as the present Chamber has less than two weeks more of existence before the elections it is probable that the matter will have to be postponed for the consideration of the next Chamber. In that case, the appropriation could hardly be voted in time to make preparations for the opening of the Exposition.

Premier Asquith's statement in the House of Commons on Monday threw no further light on the Home Rule situation. The Premier admitted that he was "not much encouraged" over the reception of his proposal to allow the nine counties of Ulster to decide separately, by a plébiscite, whether they would accept Home Rule or remain directly under the government of the Imperial Parliament. He refused to discuss the details of his scheme until the general principles of the proposal had been accepted by the Opposition. Mr. Bonar Law, leader of the Opposition, insisted that the details must be laid before the House before the matter could be discussed; whereupon Mr. Asquith undertook to afford an opportunity for the discussion of his refusal to enter into details.

Gaston Calmette, editor of *Figaro*, was shot on Monday evening by Mme. Henriette Caillaux, wife of Joseph Caillaux, the French Minister of Finance, and died late the same night. Mme. Caillaux's action was prompted by a desire for revenge for a series of bitter attacks made by M. Calmette on her husband in *Figaro*. M. Caillaux has resigned his portfolio, and the Premier, M. Doumergue, has rearranged his Cabinet.

The general strike in Rome was brought to an end early last week by the prompt action of the Government. There were serious clashes between the troops and the rioters, and a number of persons were injured. While the ostensible reason for the strike, which paralyzed the entire traffic and business of the city, was to protest against the closing of a Government hospital, it is generally believed that the real purpose of the leaders, as has been the case in similar strikes, was to test the strength of the labor organizations.

The recent elections to the Spanish Cortes resulted in a decisive victory for the Government, the Ministerialists obtaining a majority of sixty-six Deputies.

The St. Petersburg correspondent of the London *Times* professes to give details concerning the proposed increase in Russian armaments that has been reported. A secret meeting of Cabinet Ministers and representative members of the Duma was held in St. Petersburg on Saturday, at which, according to the *Times* correspondent, the proposal was made by Ministers that Russia should increase her army on a peace footing by 460,000 men, bringing the total up to 1,700,000. The cost of the increase, estimated at $250,000,000, would be spread over a term of three years. It is understood that the members of the Duma represented at the meeting, among whom were not included Socialists, Labor members, Poles, or Mohammedans, are prepared to vote the necessary supplies.

The scandal arising out of the naval graft charges in Japan has resulted in a deadlock between the upper and lower houses of the Parliament over the naval estimates, and it is thought probable either that the Cabinet will resign or Parliament be dissolved. The latest officer to be involved in the scandals is Vice-Admiral Tsurutaro Matsuo, who has been arrested on a charge of grafting in connection with naval contracts.

The deaths of the week include: Gen. Francis A. Osborn, John Lambert Cadwalader, Dr. Thomas Morgan Rotch, March 11; George Westinghouse, March 12; Judge C. A. Willard, March 13; Right Rev. Dr. John Scarborough, Protestant Episcopal Bishop of New Jersey, March 14; William Lummis, March 15; Sir John Murray, March 16.

Burlingame Public Library

The Week

The little diplomatic passage at arms between Secretary Bryan and Carranza has ended by the latter's climbing down as gracefully as possible. He concedes, in language made as high-flown as may be in order to conceal his yielding, that he will consider representations made to him by the United States in behalf of British subjects, or other foreigners, imperilled in Mexico. The incident is of no great importance in itself, but it illustrates the difficulty of dealing with the Mexicans, whether in the north or in the capital. Their rulers have smart lawyers associated with them, who have a keen scent for every opening and lose no chance to score a point. Carranza's legal advisers evidently thought that they had a fine opportunity, in the Benton matter, to force recognition by the British Government. So they drove at it with a good conceit of their own cleverness. It came to nothing in the end, as it was bound to, but they had had their flourish, and enjoyed it. As for the hard facts and obvious dangers of the case, those they lightheartedly ignored. It was enough to have made their magnificent gesture. This combination of pertinacity in controversy with great personal pride has long been familiar as a weakness of the Spanish character. The Mexicans have their full share of it; and it makes trouble for anybody who seeks to do business with them.

Though the Senate was hasty and rather childish in demanding all the details of Ambassador Page's jocose remarks in London about the Canal and the Monroe Doctrine, it must be admitted that Mr. Page was indiscreet. Certain topics an Ambassador had better keep free from jesting. This is especially the case when those topics are under active discussion in his own country. It is much wiser for him to omit not only joking about them, but all public reference to them. This is not to demand that an American Ambassador, particularly in England, should always be solemn and formal. It is well for him to exercise his wit, but he should do it upon non-contentious subjects. If tempted to say something flippant about the Panama Canal, he should restrain himself, and at least go no further than Jeffrey, who, it will be remembered, spoke disrespectfully of the Equator. We have no doubt that Ambassador Page will be able to prove to the satisfaction of the Senate that he was merely indulging in a little harmless levity which his immediate audience did not fail to understand. But it is the audience at the end of the Atlantic cable that he should never forget. To it, and on most political or controverted matters, it is a recommendation of an Ambassador that he "jokes wi' deeficulty."

It appears to have been decided at Washington to abandon the attempt to amend the Anti-Trust law by plastering some new definitions over it. This seems to us eminently wise. From the first the *Nation* took the view that the statute, as expounded and applied by the Supreme Court, is now a sufficiently stout hook to put in the jaw of leviathans of monopoly and restraint of trade, and furthermore, that the effort to make some new verbal descriptions of the kind of thing it is sought to prevent would be perilous. The inevitable result would be to unsettle what has been determined and to let loose a flood of new litigation. Define and refine as lawmakers may, it is for the judges finally to say what is the legal effect of their definitions. This fact has apparently been borne in at last upon the minds of the ardent definition-makers in Congress. They have discovered the truth that there is no short-cut to an industrial millennium by merely getting up a new form of words. It is an old story. The adoption of a Code in New York was so to simplify the law and judicial procedure that the wayfaring man would know all about it and that the volume of litigation would be cut down very small. In fact, nearly every phrase in the Code has been litigated and made the subject of a large body of judicial decisions. Such would have almost certainly been the fate of extemporized definitions thrust into the Anti-Trust law. They can be given up without a pang.

The statement made before the Senate lobbying investigation committee by a Washington lawyer, that he had been employed by a certain shipbuilding company to work for the Panama tolls exemption, is controverted by the head of the business concern in question. It would appear that the Washington attorney had been hired to work for section 11 of the Panama Canal bill, and not for section 5, which relates to tolls. There is here a certain refinement of pleading which the ordinary mind will find it rather hard to follow. The ordinary mind will seize upon the broad fact that private business interests were not unconcerned in a question which was interpreted as involving the vindication of our national dignity against the insolent demands of foreign Powers. The public is learning to put to a close scrutiny all arguments in which the national dignity demands that something be done in violation of national honor. For that matter, the argument from national dignity is losing force, in general. Recent disclosures the world over—in this country, in Germany, in Japan—have revealed an intimate connection between the preservation of the national dignity as the professional patriot sees it, and fat commissions from the armament makers.

When the Colonel's away, the bosslets will play. But there is a growing curiosity as to what will happen when the leader returns. This curiosity centres just now on Lieut. Perkins. There are whispers that some of the Moose are beginning to fear lest the former Trust connections of this zealous convert are becoming a burden upon the party. At the same time, it cannot be denied that he is an aggressive fighter. His plan of campaign for the immediate future is understood to be to wage war against the shining lights of the progressive Republicans, with the idea that, with them eliminated, the old party will have no claim whatever upon public attention. Senator Cummins is said to be slated as the first victim, and there are stories of a huge campaign fund to defeat him in Iowa this year. Then will come the turns of Senators Borah and La Follette. On the other hand, the Republicans are not napping. The first great battle takes place in Pennsylvania, and the progressive Republicans of that State are endeavoring to concentrate their forces behind a single candidate, in order to make the defeat of Penrose as nearly certain as possible.

The factor of urban congestion in the cities of the Atlantic Coast is concededly one of the outstanding problems of immigration. It is therefore of interest

to see what has hitherto been accomplished in tho way of a more even geographical distribution of immigrants. The latest report of the Commissioner-General of Immigration says: "There can be no question but that many of the evils that grow out of our present excessive immigration would be remedied, or at least alleviated, if the congestion of aliens in our large centres of population could be broken up. Distribution of admitted aliens is a thing much to be desired." A commentary on this statement is offered in the thirteenth annual report of the Industrial Removal Office operating in this city. Since 1901, this bureau has been instrumental in transplanting something more than 71,000 aliens from New York, Philadelphia, and Boston, to homes in 1,155 cities and towns in every State of the Union and Canada. The West Central States have taken half of this number. If these results can be attained by private initiative operating with comparatively limited resources, it is plain that much more might be accomplished if Government agencies were to coöperate with private effort.

Probably there are more pressing municipal problems waiting for solution in New York than the question of a bridge across the Hudson, which was debated last Friday in the rooms of the Merchants' Association. But the nature of the arguments brought forward by opponents of the project is instructive. Citizens of New Jersey took the position that any improvement of communications between that State and New York is bound to divert trade from local merchants to the department stores of this city. This has actually happened in Jersey City, partly as a result of the Hudson tunnels improvement and partly through the building of the Pennsylvania Station, which has greatly reduced Jersey City's importance as a terminal. If better traffic facilities are bound to injure New Jersey interests, it apparently follows that New York city must benefit proportionately. But no, argue real estate interests in this city. A bridge across the Hudson means the pouring out of New York's surplus population into New Jersey, whereas they ought to go to the Bronx and Long Island. Thus, instead of the broad view that in the long run both New York and New Jersey are bound to profit by the change, one as a trading centre, the other as a residential region, two narrow views confront each other.

The death of John L. Cadwalader removes not only one of the most distinguished New York lawyers, but one of its most public-spirited citizens. Few men have more deeply felt their civic as well as professional responsibilities. In his personal dignity, his general culture, his rounded legal knowledge, and his concern for the standards of his profession, he was a great ornament to the Bar. Though he had reached and passed three score and ten, he campaigned night after night for the ticket of the Judiciary Nominators with the enthusiasm of youth. To many he personified the old-fashioned lawyer who was neither a corporation tool nor a mere money-making machine, but an attorney who was both friend and counsellor. As president of the Bar Association he was untiring in his efforts to better legal conditions. To the New York Public Library his services have been singularly devoted and of far-reaching value, notably in the consolidation of the Astor, Lenox, and Tilden Foundations. With John Bigelow, Dr. Billings, and Mr. Cadwalader gone, that institution finds itself hard hit indeed; and Mr. Edward Robinson but voices the feeling of many in declaring that Mr. Cadwalader's death will be "an almost irreparable loss" to the Metropolitan Museum of Art.

A home in which not a stroke of housework shall be done except by professionals, hired to come in by the hour or day.—Mrs. Gilman.

In 1890, according to the Census, there were in the United States female domestic servants—"servants and waiters"—to the number of 1,216,000. Ten years later the number had risen to 1,283,000. The figures for 1910 are not available, but assuming a like rate of increase, there must be to-day not far from 1,400,000 women household servants. The number of families that employ "help" is, of course, a small percentage of the entire population. If every home in the United States were to depend on professional domestic labor, we should need, at a moderate estimate, say, ten million women servants, allowing one servant for the work of two families. Where are these ten million women laborers to come from? Obviously, they can come only from the ranks of the women who have been liberated from the burden of toiling for their husbands and their children. It does not matter whether the cooking or the laundry work of the future will be done in individual homes—Mrs. Gilman says she wants the home preserved—or in great central institutions. Apparently, therefore, the future of woman depends on adopting the institutions of China, where they make a living by taking in each other's wash. Women are to be emancipated in order that they may do each other's cooking. Mrs. Smith will kiss her children good-by and go out to cook Mrs. Brown's dinner. And Mrs. Brown will kiss her children good-by and go out to cook Mrs. Smith's dinner. Being obliged to keep professional hours, however, the chances are that they will have no time to kiss the children good-by.

St. Louis's "triumph" over the billboard nuisance, after a battle of nine years, has a gentleness in its method that will not too severely offend adherents of this style of civic decoration. Its main effect is to stop an insane competition in the size of rival billboards. By the law of 1905, now called into enforcement, the height of each is limited to 14 feet, the length to 50. The gap between two billboards must be all of six feet. All this seems calculated to save the advertiser needless expense, and yet permits of an ample scheme of utilizing vacant lots and glaring walls. But the worst enemy of the billboard can still congratulate himself on certain gains. They are demolishing no less than 1,800 signs which have exceeded the legal limit. Reconstruction will be somewhat checked by a tax of $1 per lineal five feet. Finally, the billboards must leave an open space of four feet from the ground, to avoid the possibility of screening objectionable objects.

There was a time when poetry was not merely the best seller, but the only seller. The court minstrel earned his board and keep by his song, and no literary rival was to be seen anywhere on the horizon. This condition can hardly be restored, but poets will be more than content with Mr. Brett's diagnosis of the present situation. For the first time since Tennyson, he is quoted in the New York *Times* as saying, poets are among best sellers, and he gives cold figures to

substantiate the statement. Tagore's "The Gardener," according to these statistics, has sold to the extent of 100,000 copies in this country alone. One is bound to agree with Alfred Noyes in his repugnance to the notion that a poet is to be judged or is to weigh his happiness by the amount of his bank account, but in so far as figures of sales indicate a larger interest in poetry, they are most gratifying to everybody who wishes one of the oldest and finest of the arts to have its proper place in the public esteem. Especially interesting is Mr. Brett's explanation of the comparative decline in the popularity of fiction. You can present a story in moving-pictures, he remarks, but not poetry.

The London *Times*, in announcing its reduction of price from two pence to one penny, states that this step has been decided on "in view of the grave importance of the present political situation." The statement made by the publisher of the *Times*, in an interview, is more frank. "In view of the grave importance of the political situation," he says, "the authorities at Printing House Square consider the moment an appropriate one for the issue of the *Times* at its new price." That the moment is well chosen there can be no doubt; that the step itself, however, was to be taken in the near future had for some time been regarded as settled. The change is one that is of interest to the whole English-speaking world; and the question of real concern is neither by what motive it was actuated, nor what financial success may attend it, but whether the character of the paper will be maintained. The change from three pence to two pence, made since Lord Northcliffe took possession, has left the quality of the *Times* in the main what it was before the reduction of price—though not equal to that of the palmiest days of the Thunderer; and we believe that a correct calculation of business results, as well as considerations of journalistic pride and of public spirit, would prescribe maintaining its standard as the only true policy for the London *Times*.

With facts about Shakespeare long in as eager demand as pieces of the true mulberry tree, it is surprising to learn that his cranial classification is just determined. Professor Keith, Conservator of the Royal College of Surgeons Museum in England, announces that Shakespeare was round-headed, and therefore a descendant of the Celtic people who invaded Britain in the Bronze Age. He has the word of anthropologists, moreover, that it is this stock which, diffused over Europe, produced the greatest artists. He estimates, from the Stratford bust, that the poet had a huge brain-capacity for a roundhead—1,540 cubic centimetres. It appears from Dr. Keith that a mere long-head, like Burns, can trust to no advantage of brain capacity to make him more than a second-rate poet. How strong a point is scored here by the admirers of Shakespeare the Baconians will be quick to realize. Unless they can prove that their man had a round head also, and a still more capacious one, their cause will have no standing in the anthropological world.

The glorious proposal for an Authors' Bank has just died in its London cradle, but it is gratifying to learn that Messrs. Zangwill and Marriott have procured a vote favoring a substitute for the institution where young poets were to get a cash advance on manuscripts. The new plan is a trade union. A minimum wage enforced against the sweating publisher was debated, but it was thought that the number willing to print at their own expense made it impracticable:

> Only by strong trade union action could the thing actually be done. Literature is a skilled trade, but every one has some elemental acquaintanceship with its tools. Weak action would be useless; but a militant trade union which contained every author of any status in England might kill some enterprises which are not fit to live, and bring some employers up to a decent standard.

The advance represented by this over the original scheme, as over the French "poets' bank," is in its elimination of the risk run by the cashier in accepting works of genius as collateral. The union acts as holding company for the literary output, and it is the publisher, frantic over idle presses, who hastens to fill out the checks. But with this worldly precaution, the romantic beauty of the project vanishes. Its success lies in banding together writers already successful. It offers no aid to the struggling genius, sure to succeed if only he can find a few pennies for food and a few shillings for attic rent.

To ask whether the Irish have a sense of humor would bring shillelahs about the head of the rash questioner, but it might be safe to ask if they can take a joke. The mobbing of "General John Regan" in Ireland is a case in point. It must have seemed to Canon Hannay as alone deserving another play on the Irish character. And now comes something even more ludicrous. A short time ago, *Punch* had a facetious article on William O'Brien, and his resigning as member for Cork in order to be reëlected. It fancied many more resignations by him on fantastic grounds. But one of his indignant followers wrote to the *Freeman's Journal*, declaring that "this English production will be publicly burned in Cork by 100,000 Cork Nationalists." If each one of the hundred thousand buys a copy of *Punch* in order to burn it, that paper need not mind. The revenge would be as terrible as that taken by the mob on an unpopular banker—gathering all of his banknotes that they could lay their hands upon and burning them.

People who know the Paris *Figaro* sufficiently well to remember its make-up will recall the little figure of the crossed foils which always accompanied the editorial articles on the first page signed by Gaston Calmette. The militant symbol was an announcement of the editor's readiness to be called to account for his statements. It is doubtful, however, whether the editor of the *Figaro* expected to be called to account with such fatal directness as marked the tragedy in the Rue Drouot. The campaign which the *Figaro* has been conducting against M. Caillaux was bitter enough, to be sure, but such press campaigns are far from uncommon in Continental politics, and especially in Paris. If M. Calmette's attacks on the Minister of Finance were exceptionally virulent, the thing to have been expected was that the inevitable meeting on the field of honor between the Cabinet Minister and the editor would be a bit more serious than the ordinary encounter of this sort. But the affair had evidently gone beyond the point where a drop of blood from the forearm would satisfy both parties. In the mind of the hysterical woman who did not hesitate at murder, the issue seems to have presented itself as a choice of disaster for her husband or for his enemy. The publication of a letter in the *Figaro* was the specific cause of the tragedy.

THE AMENDED TRADES COMMISSION BILL.

The first comment which will be made on the Trades Commission bill, in the new and altered shape in which the House Interstate Commerce Committee is submitting it to Congress, is that the most objectionable features of the original draft have been removed. When it was first drawn up and published, during January, we pointed out that its provisions were inquisitorial in such degree as needlessly and most offensively to annoy a great body of incorporated enterprises to which the real objects of the law had little or no reference. Its mandatory clauses were applied to every corporation, great or small, doing business in more than one State, or with a foreign country.

It required every such corporation to furnish to the Commission whatever information regarding its business, financial condition, and management the Commission might prescribe. Nor was this enough; for the bill gave to the Commission or its agents "complete access to all records, accounts, minutes, books, and papers of such corporations." As if to prove conclusively that the purposes of the bill were nearer to sheer meddlesomeness than to pursuit of a useful public end, the original measure further declared of these highly confidential data that "the Commission shall, from time to time, make public such information, in such form and to such extent as it may deem necessary."

The new bill, whose text was given out on Monday, eliminates for the most part these obnoxious provisions. Its mandatory provisions are now applied to corporations owning or controlling a property of $5,000,000 or more. The kind of information which such a company is to give to the proposed Trades Commission is now reasonably defined in the bill, instead of being left subject to such excessively vague language as the original bill's stipulation of "information to such degree and extent as may be prescribed by the Commission." Direct investigation of the business and records of such a corporation—which, under the original bill, the Commission would have made, and the results of which it would have published, at its own volition—is now proposed only as a result of Executive or Congressional order. Reports of the investigations "may be made public in the discretion of the Commission," but in certain cases they "shall be made public only upon the direction of the President."

We do not say that the bill as now revised is itself satisfactory; in several respects it is not. Its wording is clumsy and obscure in some highly important clauses; one of which, in fact, after exempting from the provisions of the law corporations with less than $5,000,000 capital, thereupon proceeds to include any smaller company "which belongs to any class of corporations which the Commission may make." This utterly vague declaration, which no other section of the bill explains, might quite conceivably result in subjecting the entire application of the law to the whim of the Commission. But such defects are susceptible of amendment in the nature of definition or limitation; the essential fact is that a bill which was objectionable from start to finish is replaced by a bill which, with some obvious alterations, might be made properly workable. In reality, it adds little to the powers possessed by the existing Bureau of Corporations; the main difference being that the law which in 1903 created that Bureau provides that its officers begin their investigations only "under the direction and control of the Secretary of Commerce," instructs it to make its reports only "to the President from time to time, as he shall require," and authorizes its publication only "as the President may direct."

What the prospects are of enacting this revised bill we do not know. The aspect of the matter which most impresses us, however, is the plain indication, from the manner in which the House committee has dealt with the original and faulty measure, that the present Congress is capable of statesmanlike deliberation, even in the case of measures having more or less of indiscriminate popular clamor behind them. This is equally evident from the manner in which the proposals for sweeping prohibition of holding companies, and for "definition of restraint of trade," have similarly had to run the gantlet of thorough and judicial examination in committee—with the result that the measures have not been drawn up at all in the shape originally expected, and probably never will be. The action of Congress, thus far, on these various measures, fairly supplements its action on the Currency bill in showing by facts, and not merely words, that the business community's dread, a year ago, lest we were entering an era of reckless and purely destructive legislation, was unfounded.

We are nevertheless inclined to repeat the expression of regret which we made at the time this new "Trust legislation" was announced as on the programme. We said then, and we believe now, that both Congress and the Administration would occupy a stronger position, at the end of the present session, if they had left these additional and purely experimental corporation measures alone. By confining themselves to the session's necessary legislation, after the quite unprecedented achievements of the extra session, both legislative and executive branches of Government would have retained the enviable reputation, for courage and progressiveness combined with useful conservatism, which the whole community conceded to them three months ago.

MR. GALSWORTHY'S PROTEST.

A fine flame of righteous indignation burns in John Galsworthy's letter, printed in the London *Times* under the title, "The Heartlessness of Parliament." He cites "a few only of the abhorrent things done daily, daily left undone; done and left undone, without shadow of doubt, against the conscience and general will of the community." All of them, he declares, are removable, and many of them by small expenditure of Parliamentary time, public money, and expert care. "And I say it is rotten," he exclaims, "that, for mere want of Parliamentary interest and time, we cannot have manifest and stinking sores such as these treated and banished once for all from the nation's body."

Mr. Galsworthy's outburst of fiery impatience with the slow process of human betterment will stir many souls, and may result in some practical steps towards making the way of humane legislation easier. It is doubtless true that a considerable element in the difficulty of passing some measures of that nature is the mere heavy-footedness of law-making bodies, or, as Mr. Galsworthy puts it, "mere want of Parliamentary interest and time." It is possible that his appeal may start a movement for the devotion of some definite part of the time of Parliament to the consideration of such

measures. But if this gifted novelist and reformer really thinks that the difficulty lies no deeper than this, that it can be overcome by a mere readjustment of the time-schedule of Parliament, he falls into an error from which a man of his intellectual rank might be supposed to be exempt. In the list of ten abuses which he names as crying out for immediate abolition there are, indeed, some which an energetic drive in Parliament, given a fair chance, would suffice to bring to an end; but there are others, and these incomparably the biggest, which are of a totally different character. A bill to prohibit "mutilation of horses by docking" might perhaps be quickly passed, if Parliament would but give it attention; but does Mr. Galsworthy really think that nothing but the assignment of a certain number of hours to its consideration stands in the way of ending the "employment of boys on work that to all intents ruins their chances in after life" or the "insufficient feeding of children"? To imagine such a thing is to show that one lives, after all, in an unreal world—a world in which the whole problem of the statesman is to think what ought to be and compare it with what is.

It will not do to load too much of the blame on the adventitious element in the case. As regards the really difficult problems—the problems of labor and of poverty—the trouble, as we have said, lies deep in the nature of the question; but even as to the others, what are the facts about the feeling of the public? How many persons in England have ever bothered their heads over "export of horses worn out in work for Englishmen"? What proportion of the people of Great Britain are convinced that there ought to be a law forbidding the caging of song-birds? It may, indeed, be the duty of Parliament to act in these particular matters without waiting for any pressure from public opinion. But, as Mr. Galsworthy himself says, the things he cites are "a few only" of the things that are demanded by this or that group of humanitarians; and if Parliament were to pass the whole mass of measures about which one or another of these groups feels just as intensely as Mr. Galsworthy does about his, we rather fancy that the average Englishman would give Parliament a piece of his mind. And incidentally, how is it that John Galsworthy himself can find it in his heart to enjoy a vacation at Taormina—whence his letter is dated—while the hideous brutalities he speaks of are filling his soul with indignation and rage?

In the field of social betterment there has been in England a great deal of hard work, and a great deal of progress, in the past fifteen or twenty years. If there has not been more, it is not because Parliament has been too sparing of its time; it has been for two very substantial reasons—that those who desire the pace to be faster are very much perplexed as to ways and means, and that there are many who think that the pace has in some respects been not too slow, but too fast. A curious sidelight is thrown on Mr. Galsworthy's perception of the realities of political struggle by what he says about the time wasted in debate on the Home Rule bill. He speaks of the hours spent on it "*since the last new thing was said on both sides*," giving to the phrase the emphasis of italics, in token, no doubt, of the importance of his discovery. But what the contestants are bent upon in a grim struggle like that is not to say a "new thing," but to hold up their end by hook or by crook. They are fighting out an age-long fight; what they are really carrying on is a trial of strength, not a trial of wits. Whatever they may think about the Poor Laws, or the regulation of sweatshops, it is out of the question to substitute a discussion of these things for the fighting out of the Home Rule issue. While that fight is going on, the other class of questions are doubtless considered by Government experts and Royal Commissions, the results of whose labors will in due time be laid before Parliament; and that is all that could be done in any case.

WESTINGHOUSE AND HIS TIMES.

No one will, we think, deny that George Westinghouse has been one of the great figures of American business and industrial life for the last forty years. To few men is it given to achieve such success by inventions so early in life as he, and to still fewer is vouchsafed the creation of great manufacturing enterprises, employing thousands upon thousands of men, along lines of the greatest value to everybody. Westinghouse and Edison illustrate to best advantage that organization of society which gives free scope to individual talent and places no limit upon the legitimate rewards it may reap. Both began without inherited wealth, and both have contributed enormously to the revolution in social and industrial life due to the utilization of electricity. Mr. Westinghouse's claim to popular fame lay, of course, more in the railway field than in the electrical; one has only to contemplate what wonders have been accomplished by his air-brake in safeguarding life to understand that he is entitled to be known as a benefactor of humanity.

In the electrical world he was, perhaps, more an adapter and organizer than an inventor; but a great and never-to-be-forgotten service was in connection with the development of the alternating current system for light and power. For this he received, only two years ago, the Edison gold medal of the American Institute of Electrical Engineers, than which, we fancy, no honor could have been more welcome, since it was Edison himself who in the beginning most bitterly opposed the introduction of the alternating current, calling it "impractical and deadly." In this contest between these two men of vision, Westinghouse saw the furthest and the deepest; and his dogged pertinacity in sticking to his views in the face of ridicule and protest illustrated the strength of his character. It was only in the financial field that Mr. Westinghouse appeared unpractical; there his dreams betrayed him, his visions led him astray. But no financial failure could daunt his spirit or check the fertility of his brain, as is illustrated by his recent invention of the air-spring, which, if properly developed, should become indispensable in the operating of motor cars. More than 15,000 patents were controlled by him, and he held more than 300 for his own individual inventions.

Withal, he never for a moment lost his interest in the individual workingman; though he could snatch a tool from a mechanic and indignantly show him wherein he was doing his work badly, he never forgot that man's welfare. He was always a regular attendant at the meetings of the association of original employees of his airbrake works. Who can measure the benefits conferred upon labor by this man, whom so many of our fellow-citizens would denounce and strip because he achieved wealth as the

result of his genius? Even with genius, success does not come without constant application and study, and, in Mr. Westinghouse's sphere nowadays, not without enormous, unfruitful expenditure. Like Edison, he thought nothing of expending a hundred thousand dollars or several hundred thousand dollars to search for a new method or to demonstrate the feasibility, or the reverse, of a new device. Of this the very large sum spent in developing the Nernst lamp is a case in point, and the clearest proof that there is no royal road to wealth, even when one controls patents which should insure a rich reward to inventor or exploiter.

But no review of Mr. Westinghouse's career can fail to take note of the extraordinary period in which he lived—truly the golden age of invention and industrial development. The submarine cable, the telephone, the electric light, the ocean greyhound, the conquest of the air by flying machines and of the ether by wireless, the automobile—these are but a few of the marvels of science which came to pass during Mr. Westinghouse's lifetime, and are accepted as a matter of course by the oncoming generation. Indeed, one may almost say that his sixty-eight years embrace the whole history of the railway. In all this, nothing has been more marvellous than the development of electrical and hydro-electrical power plants, the harnessing of the streams and rivers, the transmission of power over long distances, and the lighting of cities, for a large share of which thanks are again due to Mr. Westinghouse for his devotion to the alternating current, so brilliantly illustrated by the lighting of the World's Fair in Chicago in 1893. Few to-day realize that the first electric trolley car was run by Frank J. Sprague in 1887, not thirty years ago; that the first arc light attracted great crowds in this city about 1880; that the first steamer equipped with incandescent electric light in the face of the opposition of the underwriters left this city for the Pacific in 1881; that the telephone is but thirty-four years old, the automobile less than twenty. Never has the general welfare been so subserved by industry and invention as during the last few decades, and never has human progress been so rapid. Fortunate, indeed, is the nation which can take the lead in these matters by the aid of such talents as those of George Westinghouse.

RELIGION WITH A "PUNCH."

What is the most humiliating task that a man of intellect and character can be asked to undertake? We should say that it was to find a justification for what he heartily disbelieves in; to set up a defence for what shocks and repels and saddens him; to work out a philosophy which is as a mantle of charity to be thrown about things demoralizing or disgusting. Men in many different walks of life are called upon to stoop to this. The college president is expected to argue that the apotheosis of athletics makes for mental discipline and sound learning. The journalist is looked to for a glozing over of the offences of sensational newspapers. He can be seen doing it in the last *Atlantic*. But the spectacle is perhaps never so depressing as when those set apart to teach morals and religion cast about to find reasons for approving and supporting what in their hearts they must abhor.

The latest example of this to fall under notice is the attitude of some New York clergymen towards the Rev. Billy Sunday. His address in Carnegie Hall last week was his first in this city, we believe, but was only a repetition of the kind of sermons he has been delivering in various parts of the West for some years. Against the man himself, we have not a word to say. His sincerity we do not question. Nor do we doubt that he has helped some men to a better life. It appears to be well established that his "booze sermon" has led drunkards here and there to reform. But the point is that he makes of religion a huge sensation and a blazing vulgarity. He speaks of the most sacred things in the language of the saloon, the race-track, and the gutter. His rudest sneers are for ministers of religion whom he calls "fudge-eating mollycoddles," and for church-members, of whom a frequent description by him is that they are a "world-loving, dancing, card-playing, whiskey-guzzling, gin-fizzling, wine-sizzling, novel-reading crowd." As for professors in theological seminaries, what he would do with them is to "stand them on their heads in mud-puddles." His general style of speech is well exemplified in his saying in one Western city, that he was going to stay there and preach "till hell freezes over, and then I'm going to get a pair of skates and keep on soaking it into Satan."

Now, it is in behalf of such a man and such methods that educated religious teachers are inventing apologies that read for all the world like apologies for yellow journalism. Vulgar, yes; demoralizing, certainly; but only see how it circulates. The Rev. Mr. Sunday sets every nerve in a deeply reverent nature tingling with pain and shame, but only observe how the crowd runs after him. "Tabernacles" are built for him in Pittsburgh and elsewhere. Millions have thronged to hear him. He talks to them, to be sure, in the language of a newsboy or a longshoreman, but his own defence is that if he used such polite words as the clergy he wouldn't have larger numbers to preach to than they do. His recipe for reaching the crowd is very simple: "I loaded my old muzzle-loading gospel gun with ipecac, buttermilk, rough on rats, rock salt, and whatever else came handy, and the gang has been ducking and the feathers flying ever since." Noise and numbers! There it is, the old fallacy made to excuse such a treatment of religion as really tears up its deepest roots. The old notion about the Lord not being in the earthquake but in the still small voice has become ridiculously obsolete. Conversions to the accompaniment of a brass band and shouting thousands are the great proof of spiritual power to-day.

A book has just been published (F. H. Revell) on "The Real Billy Sunday." It is written by the Rev. Elijah P. Brown, D.D., who further identifies himself as "Ram's Horn Brown." It is right enough that a volume should be devoted to a great religious phenomenon—for this Mr. Sunday unquestionably is. Mr. Brown recites the facts of his life, the circumstances of his becoming religious, with many details about his subsequent activity and enormous success. Sunday has simply developed sensationalism in the *n*th power, and applied it to the work of saving souls. He is adrip with the slang of the slums. He claps Jehovah familiarly on the back. He puts a smear as of the barroom over the holy things. But countless thousands fight to hear him. He gets the crowd. And that is enough, even in religion! As he himself says, he "hands out the

goods," he "dopes it out for the Lord," he pitches "hot ones" to that "smooth guy," the devil. At last, religion has got its "punch"!

PH.D.

The time has come when a serious attempt must be made to determine Gilbert and Sullivan's permanent place in the world of creative art. A brief review of the musical-comedy output during the last theatrical season will convince any one that we are sufficiently far removed from "Pinafore" and "The Mikado" to insure a true perspective.

Happily, the material for a systematic examination of the subject is accessible. It is true that we are still without a definitive text of the Gilbert librettos. For this we must wait until Professor Rücksack, of the University of Kissingen, has published the results of his monumental labors. So far, we have from his learned pen only the text for the first half of the second act of "The Mikado." This is in accordance with the best traditions of German scholarship, which demand that the second half of anything shall be published before the first half. In the meanwhile, there are several editions of Gilbert available, which, though somewhat imperfect, ought to present no difficulties to the scholar. For example, in the edition of "The Mikado" issued at Chattanooga last year, the text reads:

> And he whistled an air, did he,
> As the sabre true
> Cut cleanly through
> His servical vertebrae!

where "servical" is evidently a misprint for "cervical." So, too, the trained eye will at once discern that in the following passage from the Peers' chorus in "Iolanthe":

> 'Twould fill with joy
> And madness stark
> The hoi polloi
> (A Greek rebark),

the sense is greatly improved by reading "remark" for "rebark," unless we argue that the chorus had a slight cold in the head, an assumption which nothing in the text would justify us in bringing forward, and which, indeed, would be contradicted by the highly emphasized summer style in which the chorus is apparelled. Thus forewarned, then, we are ready to enter upon a detailed examination of the intensely animated personages in whom Sir William S. Gilbert has embodied his *ultima ratio,* his *dernier cri,* and his *Weltanschauung.*

In Ko-Ko, the author has given us a Man, with none of the sentimentalities of August Strindberg, with nothing of the limited, vegetarian outlook upon life of Bernard Shaw, with nothing of the over-refinement of Mrs. Wharton. Ko-Ko is atingle with all the passion and faults of humanity. He is both matter and spirit. He comes close to us in his rare flashes of insight and in his moments of poignant imbecility. The human being is not lost in the Lord High Executioner. He is alive straight through to his entrails and liver, as Jack London might say. He is infinite, even as life is infinite. He is, by turns, affable, as with Pitti-Sing; cynically disdainful, as with Pooh-Bah; paternal, as with Nanki-Poo.

In the presence of Yum-Yum he is that most appealing figure, a strong man in love torn between desire and duty. The firmness with which he rejects the suggestion that he decapitate himself, arguing that in the nature of things such an operation was bound to be injurious to his professional reputation, reveals a character of almost Roman austerity. There is something of the Roman, too—or shall we say something of the German?—in the thoroughness with which he would enter on his career. He would prepare himself for his functions as Lord High Executioner by beginning on a guinea pig and working his way through the animal kingdom till he came to a second trombone. This is the old standard of conscientiousness of which our modern world knows so little.

And yet a very modern man withal, this Ko-Ko. Mr. Chesterton would have loved him, and would have had no difficulty in proving that his name should be pronounced not Ko-Ko, but the second syllable before the first. He is modern in his extraordinary adaptability to time and circumstance. Starting life as a tailor, he adapts himself to the august functions of Lord High Executioner. He adapts himself to Yum-Yum. He adapts himself to Katisha. No sooner is he released from prison to become Lord High Executioner than he has ready his convenient little list of people who never would be missed. Of his powers of persuasion we need not speak at great length. His wooing of Katisha is a triumph of romantic eloquence. It carries everything before it, as in that superb climax when Katisha inquires whether it is all true about the unfortunate little tom-tit on a tree by the river, and Ko-Ko replies: "I knew the bird intimately." He is modern through and through, our Ko-Ko. He is at one with Henri Bergson in asserting that existence is not stationary, but in constant flux, and that the universe takes on meaning only from our moods:

> The flowers that bloom in the spring,
> Tra la,
> Have nothing to do with the case.

Far less subtle a character is the Lord High Chancellor in "Iolanthe," although, within the well-defined limitations of his type, he is as real as Ko-Ko. Like Ko-Ko he has risen from humble beginnings. But whereas our Japanese hero attains fortune by trusting himself boldly and joyfully to life, letting the currents carry him whither they will, like Byron, like Peer Gynt, and like Capt. Hobson, the Lord High Chancellor's rise is the result of painful concentration and steadfast plodding. Ko-Ko is at various times the statesman, the poet, the lover, the man of the world (as when he is tripped up by the Mikado's umbrella-carrier). The Lord High Chancellor is always a lawyer. In response to Strephon's impassioned cry that all Nature joins him in pleading his love, that dry legal soul can only remark that an affidavit from a thunderstorm or a few words on oath from a heavy shower would meet with all the attention they deserve.

Plainly, we have here a man who has won his way to the highest place in his profession by humdrum methods; the same methods which Sir Joseph Porter, K.C.B., employed when, by writing in a hand of remarkable roundness and fluency, he became the ruler of the Queen's navee; the same methods brought into play by Major-General Stanley, of the British army and Penzance, when he qualified himself for his high position by memorizing a great many cheerful facts about the square of the hypothenuse.

There is matter enough for an entire volume on Gilbert's self-made men—Ko-Ko, the Lord High Chancellor, Major-General Stanley, and the lawyer in "Trial by Jury," who laid the foundation of his fortunes by marrying a rich attorney's elderly ugly daughter. The suggestion is made in the hope that it will be some day taken up as the subject of a Ph.D. thesis in the University of Alaska. That is only one hint of the unworked treasures of research that await the student in these librettos. How valuable would be a really comprehensive monograph on the royal attendants in Gilbert, including a comparison of the Mikado's umbrella-carrier with the Lord High Chancellor's train-bearers!

REVIEWING THE REVIEWER.

The despotism of the professional critic—literary, art, or dramatic—is one of the forms of social injustice against which a hard-driven democracy frequently revolts; so frequently, indeed, that one is surprised not to find a plank in the Progressive platform for the Federal regulation of interstate criticism. Most often the bitter plaint comes from the great army of creative artists, publishers, and producers. The occasion, rather strangely, is, as a rule, the publication of an unfavorable review. Managing editors seldom find letters like the following on their desks, or if they find them they apparently suppress them in accordance with the well-known tendency of the newspapers to suppress things:

DEAR SIR: In your issue of last Monday an ignorant reviewer, in commenting on my latest novel, "Why She Didn't," ventures to put it beside the best of Thackeray and Balzac. You and he and I know that this isn't true, and in the interest of honest art I protest against the framing of comparisons that can only make the judicious grieve and cause dead authors to turn in their graves. My book is a pot-boiler. I put the best that is in me to make it such, and nothing that you may say can alter the fact. I trust you will give this letter as much publicity as you did the original review. Is your critic dishonest, or merely illiterate?

No; the letters that reach the managing editor nearly always have a different tone. Unfavorable reviews are roundly denounced, and favorable reviews are thankfully appreciated. Putting both kinds of correspondence side by side, the managing editor learns that his reviewer is an incompetent and disingenuous

trifler, whose learning and fine sense of discrimination cannot be too widely recognized.

But it is not always the persons directly interested who protest against unfavorable criticism. The general public will occasionally intervene, and writers and artists not implicated in the specific review will chafe under the self-assumed authority of the man who criticises for pay. Sometimes his motives are aspersed. Sometimes his mere human limitations are brought into the discussion. Thus the promoters of a new London literary weekly announce in their prospectus that the paper "will not rely upon the jaded taste of one exclusive dramatic critic, but will publish the opinions of a variety of qualified writers." The scheme is not a bad one. Instead of having one review of a book or a play, have five reviews from several different points of view; this will surely do away with the autocratic element in criticism. But note what a writer in the London *Athenæum* proposes: nothing less than a Review published and written by authors. As matters stand at present, "reviewing is chaotic, and an intending reader is bewildered by conflicting pronouncements." Whether multiplying the number of reviewers by five would render critical opinion less chaotic is an open question. Whether the reviewing of poems and novels by poets and novelists would be always just and discriminating also calls for consideration.

Yet the problem of the jaded professional appetite cannot be put aside. The only question is, what is one going to do about it? Is the professional reviewer to be abolished? We doubt whether many would favor such a plan. The writer of the *Athenæum* letter uses a suggestive phrase, "the intending reader." The reader of newspaper criticism does turn to the reviews for some lead as to how he may most profitably spend his two dollars for a theatre seat or his dollar-fifty for a novel. The newspaper reviewer is his taster. Appetites may grow jaded, and yet there are tea-tasters and wine-tasters who draw very handsome salaries. Why should it be assumed that the dramatic critic's appetite necessarily grows stale with practice? As a matter of fact, it frequently does. But why should it be assumed that he fails to make allowance for that fact? Those who have written reviews and those who have edited them know well enough how hard the average reviewer will strive to make allowances, how he will try to find all the good there is to be said for a production which as a whole he thinks bad; and that if the reviewer finally does hit out it is because, with the best will in the world, the stuff he is concerned with is hopeless by æsthetic standards, or utterly reprehensible by moral standards.

But there are standards and standards. Why should one individual seek to impose his own upon the crowd? I am not speaking now from the point of view of the highest conception of criticism. There are editors and reviewers, no doubt, who regard it as their duty to make no compromise with popular taste, where such taste obviously sets in towards mediocrity or sheer emptiness. Such a reviewer will maintain that it is wrong to speak of the great mass of popular fiction as harmless merely because it is written for the hour, and with no other intention than to kill that hour or two for the reader. A continued diet of literary pap, in the eyes of such a critic, is bound to bring about a state of mental and æsthetic debility in the reader which is more harmful to the welfare of the race than if people did not read at all. The robust, primitive strength of sheer illiteracy is preferable to the flabby culture that feeds on best-sellers and plays with a "punch." And yet for our present purposes, let it be admitted that this lofty standard of a critic's duty is altogether too rigid for the uses of our democracy. The reviewer I have in mind is the one who is perfectly willing to accept the fact that the great mass of books of to-day, while not literature, still calls for sympathetic consideration. In appraising the vast output from the fiction mills he is prepared to lay aside the standards of great fiction. The question is whether he is to throw away all standards, whether his book-notices are to consist of a simple statement of what the book is about, supplemented by praise when he thinks the book worth while; and when the book is not worth while, whether he shall say nothing.

Well, this method has been tried, too, and commercially it is probably the most successful method that can be practiced. Yet let no one imagine that it leaves author or producer altogether satisfied. The author, in his heart of hearts, aspires to be the artist and finds himself longing for true appraisal in place of puffery. The author's financial backer is too good a business man not to be aware that a steady flow of treacle in the review columns is apt to cloy the public appetite. The author wants assurance that his reviewer is not a hired press-agent, but he wants to be reassured at some one else's expense. From A's point of view it would be much better if a little gall were occasionally mixed with the honey, and he thinks that the occasional damning of a book by C, D, or F would increase the prestige of criticism. And C, D, and F think that the best interests of literature demand the occasional slating of a book by A. So it is not rare to hear authors, publishers, producers complain of an excess of saccharine criticism. The invincibly fresh appetite is not quite what they want. What they do want is a fine and discriminating taste that shall infallibly recognize the high merits of the particular book or play in which they are interested.

The critic does not impose his standards. He is an expert who simply announces his findings, and it is for the customer to decide whether he will buy or not. Play-producers have often protested against the critic's habit of overlooking the enormous expenditure of effort, hopes, and money involved in the staging of a play, and the loss its failure must mean to writer, producer, and actors. That puts criticism on a purely business basis. It is an argument which reacts with deadly force against those who bring it forward. If the manufacturer of a new ketchup submits his samples to the Bureau of Chemistry, he will hardly argue that the size of his investment should have anything to do with the chemist's analysis. The purveyors of mineral water depend very largely on the chemist's tables for their advertising effects. So does the tea and wine and cereal food merchant. The more you view art as a business, the stronger the argument becomes for a professional taster of art.

Another way of summing up the indictment against the professional reviewer is to say that he is not representative of the common mass of taste and opinion. He may be unrepresentative either because he knows too much—the "highbrow" curse—or because he knows nothing. Just why a reviewer should be representative of common opinion is not very clear. His work is not that of a prophet, but of a judge after the event. One can easily imagine how immensely valuable the gift of knowing what the public will like would be to those who act as literary advisers for publishers and play-producers. It must be extremely useful for a literary entrepreneur to have about him a taster of whom he can say, "What this man likes, one hundred thousand other people will like." Such a man's opinion determines the nature of the product, determines whether the product shall be marketed or not. But once the product is put on the market, there is no longer need for a prophet. The venture has been made; the prophet must make way for the judge. What difference does it make whether the judge thinks like a hundred thousand other people, or thinks along his own lines? Provided he is honest, he will deliver decision according to the merits of the case. Personally, the chemist may detest ketchup.

But more than that. The accusation that a reviewer's opinion is not at all representative may possibly hold against the critic who knows too much; it does not detract from the authority of the reviewer who is accused of knowing too little. It may be unjust to have the

merits of a "crook" melodrama or a book of Wild West fiction passed upon by a "highbrow" literary taster. But if author and publisher are really anxious to get a line on public opinion, whose opinion can be more convincing than that of the reviewer who is not better informed on his subject than a hundred other men who might be picked up by chance on Park Row or Broadway? I am not so sure but that this may be the best way of selecting a literary or dramatic reviewer for a great metropolitan paper. And lest the reviewer's taste grow jaded, his tenure of office might be limited to a week, or even less. There is no reason why every new play and every new book might not be reviewed by somebody fresh from the street, bringing with him no standards of artificial culture, no preconceived notions based on acquaintance with the author's previous work. For that matter, it is a method that to a very considerable extent is already being practiced. The habit is common of advertising the opinions of non-professional critics, to serve either as a reinforcement or as a counterbalance to what the professional critic may have said. The practice has not been carried to its fullest logical development, because the opinions printed are usually of well-known actresses, clergymen, and social reformers. To the extent that they are notabilities, their views can hardly be representative of the taste of the general public. The opinions of a dozen men taken from the City Directory would be better. Still it is an advance.

In all seriousness I believe that much is to be said in favor of substituting some such system of criticism by partial plébiscite for the present system of individual reviewers. It would be perfectly sound business and perfectly honest business to find a half-dozen men of note who really like a book, and to print their opinions at space rates instead of letting the book take its chances at the hands of some almost unknown reviewer. If the writer of the present article were the author of a book and could obtain endorsements from Mr. William Dean Howells, Dr. Parkhurst, Mr. George W. Perkins, and several Y. M. C. A. secretaries, he would be rather indifferent as to what the hired men of the press might think. This does not contradict what has been said before as to the undesirability of having five different men review the same book or play. That proposal was based on the assumption that the views of these five men would show a wide range of difference. This would indeed make criticism chaotic. The ideal is to obtain five men who are all agreed —in favor of the book or play.

The revolt against criticism regularly arrives nowhere. Common-sense asserts itself to show that if you want judgments, you must have a judge, though occasionally one may be tempted to exercise the recall on his decisions. It is all very well to say, "I know what I like, and the self-constituted critic may go hang." The multi-millionaire from Pittsburgh may like chromos, but when he wants to buy a Velasquez he goes to some one who can tell him whether Velasquez painted the picture. There is a kind of taste in art which is not individual and arbitrary, which is not taste at all, but knowledge. The issue is between a trained palate which sometimes grows jaded and no palate at all. As a matter of fact, the indignant victim of criticism does not know which he wants. Sometimes his critic knows too much. Sometimes he doesn't know enough. The appellant simply knows what he doesn't like in the way of criticism, and that is anything that hurts.

Foreign Correspondence

FRANCE'S STAKE IN THE MEXICAN TROUBLE—APPEAL BY FRENCHMEN IN MEXICO TO EUROPEAN POWERS.

PARIS, February 21.

The following passages are a faithful résumé of an appeal made by Frenchmen in Mexico to the European Powers most interested—England, France, Germany, Spain. These are "particularly authorized to speak up for the protection of their citizens and their invested capital, both of which are in danger."

France holds Mexican investments to the amount of several thousand million francs—more than $1,000,000,000 exclusive of property owned by Frenchmen living in the country—in Government funds, in banks and railways, and in business enterprises of every kind, electric transportation, mills, and factories, etc. "It is necessary to say this because the United States ignores systematically the share taken by France in the development of Mexico. Official documents make no mention of it. The American press is mute concerning it. Open an American guide-book to Mexico and you will find everything in it except the French colony and French business enterprises."

Among such enterprises, the appeal cites mines like the Dos Estrellas and El Boleo; El Buen Tono tobacco manufactory in the City of Mexico; the textile fabrication at Orizaba; and the big French shops in Mexican cities, modelled after the Paris Bon Marché. "In nearly all the banks, it is chiefly French money. Our merchants have obtained a first place in importation. The French resident colony numbers more than 4,000, and comes immediately after the American and Spanish colonies and ahead of the German and English."

The appeal goes on to attribute the "American error" to the idea that Mexico is a "Latin Republic," whereas it is in reality an "Indian Empire." This mistake it considers radical. First, it argues from the Mexican population in round figures —only 3,000,000 of white race out of a total 15,000,000, while of the remaining 12,000,000 only half are of mixed white blood, leaving 6,000,000 pure Indians. The Mexican Republic has never cared to commemorate the European conquest and colonization, and when the Spanish Ambassador, at the diplomatic New Year's reception, recalled the "Spanish origin" of Mexicans, President Porfirio Diaz answered: "That is true—in part!"

The usual arguments—from the character of the population—are presented to show the impossibility of any genuine republican or constitutional system working in Mexico as the United States and Europe understand a republic. A native authority, J. Sierra, is quoted: "What part can universal suffrage play in a new country where the principles of national representation exist only in an embryo state, where there has been no political education, where school instruction is all but non-existent, and where a population thinly scattered over an immensity of space vaguely aspires to a well-being which it cannot define itself?"

This may be compared with the letter of an Englishman resident in Spanish America for thirty-five years: "I doubt if any voter would be able to give any reason for supporting any particular candidate, either Presidential or Congressional. He might reply, 'He belongs to my party,' or, 'He is a good man,' or 'He is a member of my family,' or 'He is an intimate friend of mine,' or, 'He will give our city water-works,' etc., etc. Note that in every case it is the man that is voted for; whereas in the United States it is principles that are voted for, not the man." The French colonists' despairing appeal adds to this:

> From the hot lands of equatorial climate to high plateaus at an altitude of 9,000 feet, the mixture of the elements of the population is such that all is varied and confused, and without real cohesion —unless when at great moments the instinct of national defence is awaked.
>
> The American thesis (President Wilson's) is just—ideally—and we admit it willingly. But we are face to face—not with a theoretic problem, but with the Mexican situation as it exists. Suppose that Huerta withdraws, or is conquered. There must still be the mockery of elections making a choice among rival leaders. Why should Zapata obey Carranza? Why should Carranza be in command of Villa? And what are the others going to do—Pablo Gonzales, Torribio Ortega, Eulalio Gutierrez, Aguilar—not to choose among these adventurers of insurrection?
>
> No; the law of the strongest will have to speak again—amid new upsettings a single one will have to impose his rule—and everything will begin all over again.
>
> It is the duty of the great Powers to come to an agreement and make North America understand that there is also a Europe in existence—and that the long patience of Europe is exhausted. It is time that French, English, Spanish, German citizens should have their interests and their properties defended. We desire a collective and friendly communication of European Governments with President Wilson, to obtain from him, if not a declaration, at least an attitude of neutrality in conformity with the United States' recognition of Mexican Federal power.

At this writing, there is a rumor that a Frenchman—Henry Simon, or Samson—has been "executed" somewhere in Mexico, like the English Benton; also, that Germany is again feeling the way to concerted action on the part of the four European Powers most concerned. No one

imagines that orders already given by France to Ambassador Jusserand—to adhere to the policy of Washington just as far as possible—will be modified essentially. But there is an uneasy feeling, in political and financial circles, that something has to be done. S. D.

EFFECTS OF THE BALKAN WAR—OTHER PROBLEMS IN AUSTRIA-HUNGARY.

VIENNA, March 1.

Commercial depression owing to the political troubles of last year has reduced the demand for all kinds of commodities in Austria-Hungary this year to a minimum. The fear of further difficulty, because Russia is spending $375,000,000 on railways, many of them strategic lines to the Austrian frontier, and is forming four new army corps, has kept up the feeling of disquiet. The unrest has manifested itself in a disinclination to use money in that class of investment which depends upon the political situation, and in many cases persons of means have placed their principal in other countries, or invested it in stock which would be unaffected by any upheaval, either in Austria or in the Balkans

This is especially the case in Galicia, where many aristocrats have left the country for the south of France, and where business is at a standstill. Appeals have been made by the authorities at Lemberg to the central Government in Vienna for assistance for the unemployed, and since last Christmas several thousands of dollars have been distributed to the starving. The distress, however, is much too widespread to be relieved by doles of money. The people of Lemberg and other towns gave evidence of the straits to which they had been reduced by a great demonstration. Shops were plundered of food, and similar riots took place in Budapest this week, while passive demonstrations of the unemployed have been held in Vienna.

Unless the financial situation greatly improves immediately, there is likely to be great trouble in the country generally. The Ministers of Finance, both in Vienna and Budapest, may promise to suggest that money be lent on mortgage and devoted to building purposes, but they are not likely to take more than a mild interest in such a measure, while the Common Finance Minister is pressing so hard for money. He is pointing out that every available cent must be devoted to military preparations, and that it is the duty of every patriot to put money into the funds. There is also a lack of small dwellings, municipal action being already necessary in Vienna to provide apartments for workers. The relief given, however, is by no means in proportion to the demand, and the new houses are let from cellar to attic, before the foundations have been laid. The city is considering plans for constructing an underground railway, so that cheap workmen's flats can be built outside the town; but at the earliest the railway cannot be opened for three or four years, and meanwhile the trouble increases. The number of unemployed grows, while the overcrowding gets worse from day to day. This applies to Budapest as well as Vienna.

The question of duelling in the army has been ventilated in Vienna this week on account of a tragic case in Budapest, in which a lieutenant was shot by his brother-in-law. The whole thing originated in some trivial dispute between a husband and wife. The wife says that her husband always boasted that he had fought nineteen duels, and she longed to pit him against her brother, whom she believed to be the better shot. To accomplish her object, she repeated some expression used by her husband in regard to her family, and her brother appealed to the commander-in-chief at Budapest for instructions. He feared that if he failed to challenge his brother-in-law he should be branded as a coward, and perhaps cashiered.

The commander appointed as seconds two hot-tempered officers who virtually forced the men to fight, although both were unwilling. The brother-in-law attempted to fire to one side, but, owing to his ignorance of the weapon, killed his man. The incident has excited widespread indignation, and it is probable that the entire law regarding the obligation of men in uniform to enter duels will be revised.

The University of Vienna has taken an action in full accord with the spirit of the nation in proceeding to limit the number of students of medicine who may be accepted each year. The authorities take it for granted that all these students will become practicing physicians, and that the profession in a few years will be overcrowded. There is no doubt that the number of academically educated men in Austria is too great, and that the cheap facilities for acquiring a degree, the expense of which at most amounts to a few dollars, and in cases of proven poverty is remitted altogether, are producing a class of men unfitted for their work in life. L. R.

THE FAMINE IN JAPAN.

TOKIO, February 14.

Nearly one-tenth of the population of Japan is undergoing the worst famine that the country has had for more than 100 years. This has been brought on by the failure of the fishing industry and the almost entire failure last year of the rice crop in the northeastern and northern districts known as Tohoku and Hokkaido. The failure of the rice crop in these districts was owing chiefly to cold weather during the summer; the rice did not head up. And the cause of the cold weather—cold ocean currents—kept the fish away from their usual runs and at great distances from the shores.

An official report, issued by the Home Office, states that nearly 10,000,000 persons are in the famine district. A conservative estimate places the number who are now in urgent need of food at 200,000. That the distress is already very real is shown by the many appeals for assistance which are sent to the Tokio press and to charitable organizations.

Before the general public knew of the conditions in the north, persons who deal in humanity were already in the affected districts, gathering young girls to fill the brothels and factories of the cities. Girls from fifteen to twenty have been arriving in Tokio in large numbers, their parents having been willing, in numerous instances, to sell them.

Plans are making to relieve the suffering, through the press, through a special relief organization made up of Tokio business men and officials, and through missionary organizations. The Government has set aside 6,000,000 yen for aid. But the difficulty with this is that it is not meant to supply food directly to the sufferers. The money is to be loaned to various village and prefectural authorities to be used in paying for special work, in order that the people may help themselves, and is to be paid back to the Government within a period of twenty years. Moreover, of this six million yen, only two and one-half millions are to be used this year. The remainder will be distributed next year to help in paying for seed rice. It will perhaps be two or three months before a comprehensive report of the conditions can be made. Even with the aid that is now offered, and with the coming of spring, the suffering will not be over. Months must pass before another rice crop can be harvested, and the people must live, acquire strength to carry on their work, and must have seed for planting. J. B. A.

Imagination in College

A SYMPOSIUM.

[Not many years ago the complaint was occasionally heard that college training was a handicap to a young man who proposed to enter upon a career of business, and that if later he chanced to outstrip the clerk who had four years' start of him, it was by virtue rather of native talents than of his higher education. The past decade has seen a marked change of front on the part of colleges generally, the prevailing aim having been, despite a few strong protests within their ranks, to prepare youths for the immediate business of life. In not a few institutions it is safe to say that whereas discussions of pure theory were formerly regarded as a desirable part of a boy's training, more recently "theoretical" has come to bear almost the stigma of "heretical." To some minds it is a grave question whether present conditions do not prepare a student too perfectly for the medium which he is about to enter. They wonder if it would not be well, as used to be the custom in college, to leave the gulf between theory and practice unbridged; and if the old method was not wise which counted upon a student's feeling some shock when he came into contact with actual life after having experimented in theoretical possibilities. Theory, it was held, quickened the imagination and created a controlling vision which a youth would never quite lose.

As State universities, more than oth-

ers, have specialized in practical efficiency, the *Nation* has thought it well to ask a number of presidents of these institutions to say how the imagination of their students fares under such training; and trusts that the discussion of this important matter may be continued in its correspondence columns.—Ed. The Nation.]

There are at least three ways in which the imagination may relate itself to life: as an æsthetic enrichment of experience, as an intellectual interpretation, and as a vision which supplies a motive to conduct.

So far as literature, philosophy, art, music, travel, supply mental imagery, and open vistas into human life, I fear that the student mind is not richly furnished by his college course. The decline of the ancient classics, the flood of current fiction, the multiplication of student activities, are all hostile to literary and artistic mindedness. It is doubtless true that the State university fosters this type of imagination less successfully than do many of the institutions of the Atlantic seaboard. To recognize this condition is, however, not to surrender to it. While the technical schools are steadily increasing their efficiency, the arts college was never more alive to its opportunities and responsibilities.

Something, too, may be said for approaching a problem from the practical side. I am by no means sure that a student of agriculture, for example, may not in his study of soils appreciate quite as vividly the abstract principles of chemistry as the man for whom laboratory experience is isolated from any practical problem. I feel some confidence in asserting that the keenness with which students in law, medicine, engineering, and agriculture are doing their work, and the large registration in mathematics, in physical and biological sciences, in history, economics, and politics, in psychology and philosophy, justify hope that the State university is doing much to give the student an intelligent understanding of his environment, and to make him value theory because this is the basis, not the antithesis, of the practical.

Perhaps the most searching questions that the community can put to a university are: How do your graduates imagine their lives in relation to the common welfare? Do they see the city and the State as mines to be worked or as causes to be served? Do they look through the eyes of a set or a social class, or has their course given them a disinterested point of view and a vision of duty? All of our institutions may well ponder these questions. How far has this test been met? Is the average university club a place in which men and measures are discussed with the calm detachment, the insistence on verified facts, and the open mind which characterize the scientific spirit and the socialized imagination? The State university has no cause to vaunt itself, but may it not hope that as the institution is more and more consciously seeking to serve the commonwealth, students and alumni are with increasing clearness gaining the vision of obligation and opportunity, of what Wells calls "the sense of the State"? George E. Vincent.

University of Minnesota.

I have no hesitation myself in saying that the young men of to-day are dreaming dreams on a larger scale, and thinking in larger units, than the corresponding boys of my own college generation, which was the first half of the seventies.

When a boy grasps the idea that we are at work in our department of agriculture, for example, trying to determine the conditions of a permanent agriculture; that is, that we are trying to find out a system of culture by which Mother Earth, instead of yielding continually less, may yield continually more, his imagination will have caught fire, and he will look out on the world of agriculture and all its problems with that eye of a statesman which characterized Faust in the second part of Goethe's great tragedy. For with an improving agriculture comes an improving quality of the agriculturist, one element reacting on the other; and with the improving quality of the agriculturist, using that term in a large sense, comes an improving civilization, with all which that implies.

The imagination of a student in architecture quickens and reaches up into newer and higher regions through his dreams of great and beautiful structures, for it carries him into intellectual and æsthetic intercourse with the great architects and artists of all countries and all times. The boy who catches a notion of what it means to the world and to civilization to subdue nature and to harness the winds, the streams, the ocean tides, and the heat of the sun to the car of human progress, can certainly not be accused of a lack of imagination.

Take a still more "material" illustration. The boy who recognizes what it means for our day and generation to discover and utilize for human welfare the clays of a great commonwealth like that of Illinois in such a way as to increase the wealth of a community in the production of clay products; who has a vision of the far-reaching effects of the increasing facility and ease of life, following upon the use of brick, for example, as a paving material, and the consequent emergence of a whole great commonwealth from the thick muck and mud of its fertile fields to a solid basis of facile communication and intercourse; who realizes how investigations in this field may result in a complete change in our style of building, and in the incorporation into it of all the principles of art and beauty which humankind has worked out in the course of ages, and how by a steady development of our scientific knowledge and our artistic skill through this same use of clay products we may increase enormously the beauty and joy of life in the contact with the common articles of furniture about a house, like plates and dishes—when a boy, I say, has this vision and comprehends these relations and interrelations in a large way, he is living, and moving, and having his being in a world of imagination and beauty.

The boy who is dreaming of making a combustion engine which shall get rid of smoke in our great cities, and increase the ease of movement throughout the world, certainly cannot be accused of not using his imagination; for the possibility of his success depends on doing this very thing.

All the facts thus far discussed relate to what people are apt to regard as the purely material side of college life. Speaking of the students in the University of Illinois to-day, where we are supposed to have developed these non-imaginative sides of the university curriculum to the full extent, I believe that there are now more students here on this campus who are interested in art and literature, and looking forward to achieving something creative in those lines, than there were at Northwestern or Harvard when I was a student at those colleges, nearly forty years ago.

An institution which has turned out a Lorado Taft, who certainly in the field of sculpture cannot be accused of lack of imagination; a Walter Burley Griffin, who dreamed of a great city, which will be realized as the capital city of the Australian Commonwealth; a Henry S. Bacon, who imagined the great Lincoln monument on the mall at Washington, which is to be realized in the next few years, can surely not be accused of destroying, at any rate, the imagination of college students.

My own opinion is that a large part of the current criticism of American colleges and universities is based upon an exclusive study of the historic institutions along the Atlantic seaboard, which may perhaps display all the evils which our friends, Flexner, Birdseye, Corbin, and even President Wilson and President Lowell, discern; and I would not undertake to say that they do not know what they are talking about. But most of the criticism of that sort certainly applies primarily to the institutions described by their friends, and has little or no application to the great State universities of the Mississippi Valley. I believe that the visions which

are seen by the young women and the dreams that are dreamed by the young men in these great centres of popular education are destined to change the face of our society, as they make steadily for an intelligent, cultivated, aspiring democracy, determined to dream and to realize its dream, that all the good which has been achieved by civilization thus far shall be maintained and made available for all mankind, rich and poor, educated and uneducated alike.

EDMUND J. JAMES.

University of Illinois.

Whether the present work of colleges and universities quickens the student's imagination less than the work of the college of former times is doubtful. It depends much on how restricted a meaning we give to the word imagination. If we mean imagination in general and not merely the higher form of this power exercised in poetry and art, I do not believe that the old college curriculum was more effective in this respect than is the diversified work of the present college or university. In the old institution the curriculum was required, and every one was compelled to conform to the same standards, whatever his interests might be. This of itself had a very repressing effect upon an appreciable number of students in every college. Furthermore, the number attending college was, comparatively speaking, very small. Nor, again, can I see that the teaching, with some exceptions, was more vital and inspiring than it is at the present time. In fact, much of it was notoriously dull and dispiriting. I recall only a few great teachers.

The subjects studied did not lend themselves more than does the present group of subjects to the stirring of the imagination. The Latin and Greek of that day were depended upon largely for imaginative development, but the methods of study and teaching were such as to make a slavish adherence to words and phrases the rule. The great increase in the study of French and German has, at least in part, made up for the decline of Greek and Latin. Philosophy was another subject that one might recall as having in the old days some effect upon the imagination; and indeed it had, especially if it were taught by a real teacher. But here again it is safe to say that in general the courses in philosophy as given nowadays, supported by courses in psychology and biology, are fully as inspiring in every respect as the courses of twenty-five years ago. In English there is a distinct gain over the past, since in the old days very little appeared in the courses of study under the title "English." History, where the imagination comes often into play, was given in small and often uninteresting doses. The numerous courses of the present day, the increased equipment, and the unquestioned development in training for the teaching of history make the present ahead of the past. In science the contrast is very greatly in favor of the present. There was very little science taught in the colleges thirty-five years ago, and very little laboratory work, at least in American colleges. There was no call upon the imagination. Nowadays a student can do nothing in science without the use of his imagination, nor can he in mathematics. Economics has developed in large measure within the last three decades. Sociology was hardly heard of twenty-five years ago. Both of these subjects encourage the exercise of the imagination. In the professions we find somewhat the same situation. In engineering and medicine there can be no constructive work of any sort without the use of the imagination. Therefore, in general, so far as subject-matter, the quality of teaching, and the general equipment of the institutions are concerned, the character of the work done now is on the whole superior to that of the past, and ought, other things being equal, to arouse the imagination more than was possible in past decades.

In spite of all this, the type of imagination that has to do with poetry, art, and music—with the emotional nature—may have suffered. Yet on this point I am in doubt, for it must be borne in mind that the increase in the enrolment of colleges and universities has been enormous. The college community is no longer limited to the select few, but includes a great mass of those who for one reason or another are enabled to seek a college education. The select few are still with us, and I am not convinced that they do not still respond to appeals to their imagination. They are lost to sight, however, in comparison with the total number. In addition, we must remember that a different type of imagination, that developed by history, science, economics, and the practical professions, has come into play, and overshadows at the present time the type attaching itself to poetry and art. The stirring of the imagination now is along economic and social lines. It is no longer contemplative. It does not have to do so much with poetry and art as it has to do immediately with life, and the imagination of students is easily aroused in all moral, social, and economic questions. Then, too, colleges of liberal arts, where the greatest appeal to the imagination is made, are large and increasing. In the thirteen universities having the largest college enrolment, there are, according to Professor Rudolf Tombo, jr., 23,280 college students, and of these 14,648 are men. What a tremendous increase in twenty years!

That there are great difficulties attending the development of appeals to the imagination of whatever sort there can be no doubt. They lie partly in the increasing and often foolish demand for the practical, for that which has an immediate money value. The things, however, that most hamper sound learning, contemplation, the development of the imaginative side of the student's life, are too great freedom in the choice of courses, the lecture system, the rush and hurry of modern life, the enormous increase in the number of student activities, the growing complexity of our civilization, the great appeal of social life, the development of the moving-picture show, the modern theatre, college athletics, innumerable books and magazines—all of which tend to relax his mental discipline. Here, to my mind, is the real centre of the whole difficulty. In the old days there were few lectures and much hand-to-hand work. There was time for meditation and rest, with opportunity for private reading and discussion, and students had to get from one another through the exercise of their own qualities of mind their opportunities for recreation and enjoyment. Added to this difference is the whole trend of our American life. Colleges and universities fight against the situation to the best of their ability, but they are the creatures of the people themselves and partake of the character of life of the community that supports them.

Lastly, I cannot see that State universities are in any way different from other universities in these respects. While I believe it to be true that the old college training was too unpractical to enable the college graduate immediately to compete in business with the ordinary clerk, I am unable to see that the State university, on the other hand, now prepares the student too perfectly for life so that he fits into its workings without the shock which he would get, and in the old days used to get, if his imagination were encouraged to play around theoretical possibilities. That this change towards the practical is on the whole a disadvantage, few, I believe, would maintain. That it more than offsets the possible loss on the emotional imaginative side many would contend. The State university simply is doing its best to train students substantially well for their mission in life. In order to deal justly by its community the university must represent such callings and professions as have been organized sufficiently to furnish material usable as educational instruments. And so far as I know, all the training of the State university, no matter towards what end it is directed, is intended to practice the reasoning powers, arouse the imagination, and give the stu-

dent some ability to exercise creative power.

FRANK STRONG.

University of Kansas.

The history of learning may be figured (even if one is not a disciple of Bergson) as consisting of two movements: the first, a succession of reconstructive impulses, each resulting in a better formulation of experience; the second, a stiffening and petrifying of the formulations achieved into an orthodoxy which in turn resists succeeding reconstructive impulses. At every point along this circuit, from the beginning where discoveries are made to the end where ancient discoveries have fallen to be textbook routines, one finds teachers. At the beginning one finds the vital creative scholar. At the end one finds the "hidebound pedant the like of which shall in a subsequent century be made at Nuremberg out of wood and leather." What a school effects depends upon where its teachers range between these extremes.

It is the same in all sorts of schools. Froebel did his work in the kindergarten. He has disciples who continue his work in his spirit. But also he has disciples who make the Froebel play a deadening routine, and who, reciting the Froebel catchwords, develop in little children that *état scolatre* (described by Tolstoy in "La Liberté de l'Ecole"), in which the mind becomes a shrivelled edition of its healthy self. It is the same in all subjects. The professor of lyric poetry may be a Doctor Blimber to whom "all the fancies of the poets . . . are a mere collection of words and grammar and have no other meaning in the world." On the other hand, the professor of historical grammar may be one to whom the secular changes of the Greek grammar through a thousand years afford a view of the evolution of life and mind as profound as that which appears in the literature in which the grammar was hidden. A man of the better type, whatever his subject, draws those about him into faith in his work. It is faith in a great work, and no cheaper device, which saves a youth —imagination, heart, will—whatever there is in him.

In the State universities I have known some teachers who seemed to me well down towards the level of Doctor Blimber. I have known many more, with varying ability, of the better sort. When I see, as I do every day, the young doctor of philosophy who burns with hidden fire in hope of establishing a new result in his subject, still better when I see the old professor who has outlived a large part of what he was taught and of what he has taught, and still faces the onrush of new ideas with undiminished faith, courage, and industry, I think the imagination of those whom such men lead is in no peril.

Poetry

A LAY O' THE DAY.

Oh, I'm homesick for the old days, the slow days, the days that used to be,
When the stage-coach held the highway, and the frigate ruled the sea.
We go scuttling over land,
Skyrocketing through air,
On our spit-fire devil-wagons,
Getting—where?

Give us back the long days, the calm days, the days when men could dream,
When the town was still a village, and there wasn't any steam.
Though we carry round on wires
The live Promethean Spark,
We are rather more than ever
In the dark.

Though truly these be live days, and brave days, days when strong men grind
On the flints of circumstance cutting-edges to the mind;
Yet the stroke that whets a hatchet,
Turns a razor edge:
Lest we blunt the finer spirit,
Better hedge.

Better give ourselves an off day, a whole day, a day to size up things,
To weigh the fact that after all the soul was born with wings,
And might, had we the courage left
To break its prison-bars,
Outsoar these aeroplanes, and float
Among the stars.

If ever dawns a new day, the true day, the day when we are through
With this rag-time-tango living—oh, I know what I shall do:
I'll sit me on the quiet grass
Under a quiet tree—
I'll sit, and very like I'll whistle—
Quietly.

JEFFERSON B. FLETCHER.

Books and Men

SIR JOHN TENNIEL.

"Tenniel's White Rabbit is an English squire." This was the comment made in a magazine when a number of artists entered the field which had been Sir John Tenniel's own—the illustration of "Alice in Wonderland" and "Through the Looking Glass." The magazine writer chose the important character of the White Rabbit for comparison, and discussed the conception of him as formed by Arthur Rackham, Peter Newell, and others.

The White Rabbit of Tenniel certainly is an English squire. There he stands at the head of the first chapter, with checked tweed coat, well-filled waistcoat, heavy watch with a massive chain and seal, Gladstonian collar, and—truly English touch—an umbrella. And there he stands, safe in the affections of thousands; of elderly people who were children when he first appeared, and of children who are making his acquaintance to-day for the first time. His portrait was the keynote, so to speak, for an association of author and arist which proved to be, perhaps, the most happy combination in the history of the making of books.

None of the recent obituaries of Sir John Tenniel, in the newspapers, failed to mention the fact that he illustrated "the immortal Alice"—as they all called her. The notices of the artist's death almost invariably named his cartoons for *Punch* as his best work, and gave a secondary place to his illustrations of Lewis Carroll's books. The political influence of the cartoons, and the long term of years through which they appeared, may justify this. Certainly Dropping the Pilot did as much as any one thing to fix Wilhelm II in the world's mind as a cocksure young upstart—a reputation which he was more than twenty years in living down. It is still a model for political cartoons—it was parodied in a New York newspaper last week.

But I question if an artist would place the "Alice" pictures behind any of the cartoons in craftsmanship. If popularity counts, the picture of the Jabberwock, the Mad Tea-Party, and the disappearing smile of the Cheshire Cat are known to thousands of persons who have never seen Dropping the Pilot, the pathetic drawing of Gordon at Khartum, or the caricatures of Disraeli. Finally, Tenniel had his equals in the cartoonist's field, but seldom his superiors as an illustrator, if one considers the sympathy, judgment, and humor displayed in the two Carroll books.

There was an almost universal outburst of protest when, on the expiration of copyrights, other artists ventured to tread in Sir John Tenniel's footsteps. Some of them did it with full realization of the danger. The childish sweetness of Alice, wrote Mr. Peter Newell, is a characteristic which Sir John Tenniel "has caught and fixed in a way none may rival." And "his work will live as long as Alice." Yet Mr. Newell attempted the impossible, with more success, perhaps, than would have been expected. There is no admirer of Mr. Newell's other work who will not have to admit that his White Rabbit is merely a scared little gentleman, his Mad Hatter a pot-house lounger out of Dickens, and his March Hare a rather bibulous beaver.

Mr. Arthur Rackham tried the same thing, a few years later. His gnarled and writhing trees, his fondness for the grotesque and goblin-esque (to coin a word) elicited a picture in *Punch*. The real Alice of Tenniel was looking upon

the brood of mock Alices—upon all the strange, twisted shapes, and exclaiming, as she did in the book on one occasion: "Curiouser and curiouser!"

Lewis Carroll was by no means the easiest author for an artist to satisfy. The strange genius who could write such rollicking nonsense for children, and such prim letters to them; who could get miffed with two little girls who were writing a child's magazine, and refuse to receive their publication because it contained a limerick which he fancied carried a disrespectful allusion to some obscure dogma of the church; who could reprove W. S. Gilbert for his line about "the pale young curate" because the curate "might have become pale while watching at a sick-bed or visiting the poor"—this was a character by turns generous and astonishingly peevish.

Yet Tenniel and he worked together without serious difference. Tenniel found him exacting, as did Harry Furniss at a later date—Furniss speaks of seven years spent in illustrating one book. Mr. Tenniel, as he was then, and Lewis Carroll came together through Tom Taylor's introduction. Tenniel made the pictures for "Alice in Wonderland," and, six years later, in 1871, for "Through the Looking Glass" He wrote that after this work, "the faculty of making drawings for book illustration departed from me, and notwithstanding all sorts of tempting inducements, I have done nothing in that direction since." His only earlier illustrations seem to have been for "Lalla Rookh" and the "Ingoldsby Legends."

"Don't give Alice so much crinoline," the author would write to Tenniel. Or "The White Knight must not have whiskers." Sometimes Tenniel would rebel. "A *wasp* in a *wig*," he wrote once, "is altogether beyond the appliances of art." Yet he achieved results apparently as difficult. A caterpillar sitting on a mushroom, smoking a hookah, would not, on the face of it, seem an easy problem. The artist came off with flying colors, as every one knows.

In reviewing the pictures you are led to wonder how much of the detail, not directly demanded by the text, is due to Lewis Carroll's suggestions, and how much to Tenniel's imagination. That gift of the artist played about the author's fancy, never straying too far afield, never rigidly bound by the letter. Who suggested, for instance, the straws twined about the March Hare's ears, in the manner of King Lear? Who invented the Jabberwock's vest and gaiters? Who gave the Dodo his cane?

Tenniel's pictures have become part of the life of so many of us. I know a man who followed a little girl and her nurse from one shop to another in an English watering-place, in great delight because the girl "had one of those combs which go over the head, from ear to ear, just like Alice in Wonderland." Mr. Edmund Gosse, in a volume of recollections published a couple of years ago, speaks of the fact that the poet Aubrey de Vere looked so much like the Hatter that it was impossible not to notice the resemblance. When Mr. de Vere recited poetry it was especially hard to keep from smiling—as he recalled the picture of the Hatter quoting:

> How I wonder what you're at!
> Twinkle, twinkle, little bat!
> Up above the world you fly,
> Like a tea-tray in the sky.

And an amateur performance of "She Stoops to Conquer" was ruined, for a number of the audience, when one of them pointed out, in a whisper, the similarity in appearance between one of the men in the cast and the Fish-Footman in "Alice in Wonderland."

EDMUND LESTER PEARSON.

News for Bibliophiles

EARLY PLAYS AT HARVARD.

Valuable communications on early plays in this country have from time to time appeared in the *Nation*, notably in the issues of January 28, February 11, 1909, and February 27, 1913. So far as I am aware, however, attention has never been called to a perhaps not very important, but yet very interesting, phase of the subject—namely, plays acted by students at Harvard College before 1800. Information on this subject has been obtained from two sources: the "Diary" of Dr. Nathaniel Ames, who graduated in the class of 1761, and the manuscript records of the College. The entries in the "Diary" are so brief that they may be given in full. (The references are to the Dedham Historical Register, where the "Diary" is printed.)

1758, June 22, "Roman Father a Play" (I, 13).

1758, July 3, "Cato a Play acted at Warrens Cham." (I, 13); July 6, "Cato to perfection" (I, 13); July 14, "Cato more perfect than before" (I, 14).

1759, April 20, "went to see the Drummer acted at Hows" (I, 50); April 21, "The Orphan Acted ye 13th inst." (I, 50); June 20, "the Recruiting Officer Acted by ourselves then Public" (I, 50); July 6, "the Revenge acted" (I, 50); September 7, "Cato acted this evening" (I, 51); November 23, "went to Boston, the Revenge Acted at Bowmans" (I, 52). (This was presumably Ames's classmate, the Rev. Joseph Bowman.)

1760, April 8, "Tancred and Sigismunda Acted with a Farce at ye end on't" (I, 112); June 13, "Acted Tancred & Sigism^da^ for which we are like to be prosecuted" (I, 112).

1765, Nov. 20, "Scholars punished at College for acting over the great and last day in a very shocking manner, personating the Jude etertat Devil, etc." (II, 27).

In regard to Ames's final entry, it may be said that one student was expelled, one student was rusticated, and two students were "degraded" for their share in the "profane farce."

The following extracts are from the books labelled "Faculty Records," though, as a matter of fact, the word "Faculty" was not employed at Harvard until 1825.

1762, April 28, "This Day was the public Examination, the Com^tee^ of the Overseers being present, after w^ch^ Oliver & Huntington were allow'd to exhibit a Scene in Terrence before the Com^tee^ they desiring it, but in Private in the Library none being present but the Com^tee^, the President & Tut^rs^" (II, 161).

1781, Nov. 16, "Voted—That To-morrow evening, some Scenes of *Busiris*, a Tragedy written by D^r^ Young, be exhibited in the Chapel, as an academical exercise, by a number of the Students" (IV, 278).

1781, Dec. 7, "Voted—That a number of the Junior Sophisters who are to exhibit, this evening a piece from Pope's Iliad, be permitted to appear habited" (IV, 282).

It has been stated that the Rev. Benjamin Colman (H. C. 1692; d. 1747) "was himself a poet, and wrote, inter alia, GUSTAVUS VASA, the earliest American tragedy. It was once acted at Cambridge, at a Commencement of the College" (New Eng. Hist. & Gen. Register, 1860, XIV, 160 note); and Wegelin ("Early American Plays," 1890, p. 24) says that Colman left such a play in manuscript. Did Colman write such a play and was it ever acted at a Harvard Commencement? The "Gustavus Vasa" commonly acted in this country in the last half of the eighteenth century was, I take it, the play of that name written by Henry Brooke, and printed in London in 1739.

When it is remembered that the prejudice in New England against plays was great, that the opposition to all theatrical performances was bitter, and that the first theatre in Boston was not opened until February 3, 1794, it will doubtless surprise many to learn that the Harvard students not only had been giving plays for certainly thirty-six years before that event, but that in so doing they had the sanction of the College authorities.

It may be added that Ames on September 9, 1761, recorded that "Boston People flock up to Newport to see the Plays by the English Actors" (I, 145); that on August 23, 1762, he himself went to Providence to see them (I, 147); that on November 12, 1762, "in the evening acted a Play rebuked for it by our Parents" (I, 148); that on November 14, 1762, it was "Proposed to act a Play in Dedham" (I, 148); that on November 13, 1765, "Undertake to act the Orphan" (II, 27), and that on April 20, 1772, "The Farce called the Toy-shop was acted . . . before a numerous Audience of the most respectable Inhabitants of the first Parish in Dedham both male & female. General Prologue which I wrote for the Toy-shop . . . [here follows the Prologue in 38 lines.] . . . N.B.—The Guests were invited to come to an Evening Lecture" (III, 23-24).

Finally, this is a convenient place for putting on record what is perhaps the earliest performance of a play in English in Canada, at Annapolis, of which a notice appeared in the *American Magazine* for April, 1744, I, 348-349.

ALBERT MATTHEWS.

TRANSCRIPTS OF BIRD SONGS.

In this day, when everything, including the last mysteries of life and the dearest personal sanctities, and excluding only cubist art, is measured by a strict scientific standard, it is perhaps idle to bewail the application of scientific methods in the description of bird songs; especially since we are now hearkening, not to the melody of "smalë foulës," but to the music of humanity in that rosy and golden communal state which is the twentieth-century Heaven. Yet does not the lark (our horned lark as well as the British skylark) sing at Heaven's gate, and shall we not ever, on hearing it, pause in delight and awe?

Of the several means of describing the songs of birds, we have foolishly preferred musical notation. One book after another is appearing, interspersed profusely with musical staves that look very scientific and useful, but, as a matter of fact, are rarely of the slightest value. The keen ear of Gilbert White himself would not recognize these songs when played on the piano, and it is doubtful whether Mr. Burroughs, who might conceivably have been pestered into an understanding by this time, could do more than say what songs they were *not*. The cause of the failure of musical notation is well known—yet not regarded: few birds sing in accord with the intervals of the diatonic scale, and few birds sing without using notes that are indeterminate in pitch. These difficulties are insuperable. While it is possible to reproduce with some success the song of the wood-thrush, it is beyond the power of the cleverest musician or naturalist to catch and keep the intricate warble of the magnolia warbler, or the tumultuous jargon of the brown thrasher. And there is a further difficulty which is rarely mentioned—the variableness of quality in bird songs. Suppose we were able to set all songs on the musical staff; should we be better off? Not much, I fear. In my experience (and in the experience of every field naturalist), I have named a bird, not by the form of the song, but almost wholly by the quality. Only in special cases is the form significant. In virtually every case the ear is arrested by, and the memory retains, the quality of the song. Those who are enthusiastic over musical notation forget that birds do not use the piano.

An older method, based on the alphabet rather than on the musical staff, is still popular among ornithologists. I dare say, Mr. Burroughs has done more than any other person to illustrate its usefulness. What grammar-school teacher, "birding" in the wake of a noisy crowd of youngsters, has not stopped with a "Sh!" and exclaimed: "Listen, children, the ovenbird! Do you hear that, 'Teacher, *teacher*, TEACHER, TEACHER, *TEACHER*'?"

But Mr. Burroughs has not been useful in more than a few instances. Nor have dozens of other writers, producing every manner of astonishing description, many of them little better than the following befuddling concoction which Minot intended to represent the song of the Blackburnian warbler: "'Wee-see-wee-see, tsee-tsee, tsee, tsee, tsee-tsee, tsce, tsee,' the latter syllables being on ascending scale, the very last shrill and fine"—a transcript which I have never been able to connect with the original. The versions, moreover, tend to multiply *ad infinitum*. For the red-winged blackbird we have an assortment that should satisfy every one. For the Maryland yellowthroat no less than two dozen are current: among them are "witchity, witchity, witchity"; "tswee-tee-tee, tswee-tee-tee-tee"; "I see, I see you, I see, I see you, I see, I see you"; to which so excellent an ornithologist as Mr. Chapman deigned to add, "I beseech you, I beseech you, I beseech you"; and once, as I was passing an insane asylum, I was sure that that yellow bird in the willows was calling, "You're crazy, you're crazy, you're crazy."

This alphabetic method, though inferior to the musical in the representation of form, is superior in the representation of quality, since the syllables chosen are sometimes capable of indicating the quality with preciseness. Yet we need to guard ourselves against vagaries, in particular against the application of this method to any and every song. Especially must we realize that most of these transcripts are recognizable only by the trained ornithologist, who forsooth needs them not!

In addition to the use of the musical staff, and of painstaking literal notations, methods which are frankly scientific in spirit and result; there is a third, which might be called the literary method. Whole pages—chapters even—devoted to scientific description of a bird's song are of less value than two well-chosen adjectives, as when Gilbert White speaks of a bird's "sibilous, inward melody"—of less value than an apt comparison, as when Mr. Chapman says, "It has a quality about it like the droning of bees."

In Mr. F. Schuyler Mathews's "Field Book of Wild Birds and Their Music" the discussion of the song of Wilson's thrush illustrates the use of all three methods. First, the literal notation: "O, veery, veery, veery, veery!" over which Mr. Mathews draws an undulatory scroll which helps matters very little. Secondly, the musical notation:

Thirdly, the literary description: "The tone effect at a distance is like the metallic twang of the Jew's harp; nearer by it resembles a reedy, harmonic strain from an accordion swinging in the air. Some one, I do not know who, has called the song 'a spiral, tremulous silver thread of music.'"

Surely the third method is the best. For my part, I confess a debt of gratitude to that nameless poetic soul, "Some one," which I do not feel towards the *eingehend* Mr. Mathews in his scientific moods. I would not leave the impression that the musical reproduction and the literal reproduction are useless. They are both useful at times, and the second is more often useful than the first. But they are of trifling value generally in comparison with the literary description. That this is true is largely owing to the complicated form of most bird songs, but it is mainly due to the difficulty presented by the quality of bird songs, which the literal transcript meets only imperfectly. This matter of quality is the more important, and the matter of form the less important, by virtue of the fact that the songs of many of our commonest birds (notably, of course, the song sparrow) vary widely in form, and only slightly in quality. What is needed, therefore, is a method which, while not ignoring the form, is capable of describing the quality; and this means that, unless the scientist can invent a new method, we must turn to the artist of words. He can describe in a few terse, definite, and yet vague, words what the scientist without literary talent could not describe in a ponderous manual. He can apply the subtleties of a highly developed language to any song whatever. What is more, he can give to the city-dweller a distinct foretaste of what awaits him in the country—which hours spent in playing the piano or in pronouncing "wichu-wichu-wichi-chee" could never give.

Correspondence

THE NEW "NATION."

TO THE EDITOR OF THE NATION:

SIR: In answer to the leaflet in the last *Nation* inviting suggestions in regard to the programme of the new *Nation*, may I, as a very dependent reader of the old *Nation*, say a word?

Like many another college professor, I am compelled to limit my list of periodicals to the bare necessities. I put the *Nation* first; and I do this because its criticism inspires my confidence. When I read that the scope of the journal was to be enlarged I felt misgivings; in such a review I want quality, not quantity. And I am reminded of the fate that overtook the London *Academy* a number of years ago when it sought to enlarge and make a wider appeal. It soon became useless for my purposes.

It would be impertinent for me to sug-

gest that the *Nation* might become less authoritative in the hands of those who have so carefully guarded its interests. But I fear popularization of the *Nation* as I fear the pest. And I must, again as a dependent reader, candidly express my fear. With best wishes,

W. P. REEVES.

Kenyon College, Gambier, O., March 14.

[We are glad to assure Professor Reeves and other friends that every effort will be made by the new management to preserve the old standards to which the *Nation* has been and is devoted.—ED. THE NATION.]

REALITIES IN THE NEAR EAST.

TO THE EDITOR OF THE NATION:

SIR: If we review the years during which the Turks have been gradually forced back to Asia, during which also the Ottoman Empire in Europe has been bolstered up by the great Powers, we must be struck by the futility of diplomacy and the want of foresight of cabinets. The main policy of the Powers was to uphold the Turkish Empire in Europe, however disastrous the consequences to the people whom the Turks oppressed, and however opposed to the increase of civilization and material prosperity in these regions. This policy has been in the result a complete failure. Inevitable forces against which the schemes of diplomats and chancelleries were quite unavailing have now almost driven the Turks from Europe. The retention of Adrianople and of a part of Thrace gives them next to no European interest, for this territory is—politically—a mere annex to Constantinople, and is a financial incubus into the bargain.

Yet the futility which has always marked European diplomacy in regard to the Near Eastern question was surpassed when the Turks were allowed to tear up the Treaty of London. Had Adrianople and the surrounding district remained in the hands of Bulgaria, the peace of the Balkans would have been assured, for the aspirations of Bulgaria would have been satisfied. Accordingly, the first reality which we have to grasp is that peace is not permanently assured so long as a mile of ground in Europe outside of Constantinople belongs to Turkey, and there is still a bit of ripe fruit to be seized. The main reality, however, to bear in mind is that the storm centre is now shifted to Asia Minor, and that the enemies of the Turkish Empire are no longer the small Balkan States, but the greater European Powers and Greece. Greece must be ranked with the great Powers by reason, not of her size, but of her geographical position. One has only to refer to one of the late Lord Salisbury's large maps to perceive that the increase of the Greek race must inevitably cause the shores of the Ægean Sea one day to become Greek territory. In the natural process of modern evolution the ancient influence of Greece must again become paramount in certain parts of Asia Minor.

But though by the spread of the Greek population Turkish influence and rule will be weakened and finally overthrown on the Ægean seaboard, it will be undermined inland by concessions to capitalists under the support of their respective Governments. The Turks, it is certain, cannot conduct a modern administration and modern business, and now that the European source of supply to the ranks of politicians and officials has ceased by the loss of the European territories, officials will become more incapable than ever. This incapacity has hitherto never been realized by the great Powers; it is now so indisputable that it will henceforth necessarily form an important factor in their Near Eastern policy. Therefore, as a governing race, the Turks are in a plight similar to that of the Red Indians of America or the Maoris of New Zealand. Diplomatists and chancelleries will continue to keep up the fiction of an independent Ottoman Empire and will connive at administrative abuses and injustice, but fictions cannot alter realities.

We have also to realize that the policy of the great Powers in reference to Turkey in Asia is purely selfish. All are engaged in a game of grab under the veil of concessions, treaties, and spheres of influence—a game which is stimulated by the weaknesses and pretentiousness of the present governing group at Constantinople.

The progress of the partition of Turkey in Asia must necessarily be gradual, but it is none the less inevitable, since it is based on supreme time forces. These will produce results in various forms. It may be in violent annexation, as in the case of Tripoli, or in peaceful annexation, as in the case of Egypt. But as between the invaders it is a battle of cash rather than of cannon, for the military power of both Germany and Austria-Hungary is largely nullified by reason of their geographical position. Difficulties and dissensions are pretty sure to arise from time to time, because the condition of the Ottoman Empire is such that it is imperative for European Powers to acquire as far as possible indefeasible rights within its area. The progress of these acquisitions will one day form an interesting chapter in the history of the decline and fall of the Ottoman Empire.

E. S. ROSCOE.

London, Eng., March 9.

THE AMERICAN HISTORICAL ASSOCIATION.

TO THE EDITOR OF THE NATION:

SIR: Since the publication of my letter concerning the management of the American Historical Association, which appeared January 22, three replies, or explanations, have been given to the public through the medium of the *Nation*. These letters were written by men of the highest standing in the Association: Professor Fay, of Dartmouth; Professor MacDonald, of Brown, and Professor Jameson, of the Carnegie Institution. These gentlemen are not only learned scholars, but they are also good judges of the strength of an assumed position. If my statement that the American Historical Association, under the leadership of its council, had been conducting and administering its affairs in an illegal and unconstitutional manner, could have been refuted, it would, of course, have been done. As a discreet silence has been maintained on the only point at issue it is fair to conclude that it is conceded that the "power of the council has increased, is increasing, and should be diminished." Professor Fay agrees with me entirely on that proposition.

While it could hardly be expected that Professor Jameson and Professor MacDonald would concede so much, it is reasonable to suppose that they are not prepared to justify the shutting out of the hundreds of men who attend the annual meetings of the Association from having any part in its government, other than that of ratifying what had been done by the Council. At any rate they say nothing about the real point at issue.

Professor Jameson flies from the real issue and tries to conceal his flight by bringing non-essentials into the discussion. The question of the popularity or unpopularity of my position at Charleston does not affect in the slightest degree the justice of my contention. I stated there that if any men on earth were capable of self-government the members of the American Historical Association were capable; that we had allowed the Council to assume too much power, and that it was our duty to become self-governing. If the personal endorsement of at least one hundred men, including those who have held high positions in the Association, was an indication that I was not standing alone, such an endorsement was certainly voluntarily extended after the business meeting. My learned and distinguished friend, I fear, does not read accurately the signs of the times or he would not take the position that the methods of the Council are popular. If he thinks that the wiping out of constitutional guarantees is popular with the members of the Association he is blind.

Professor MacDonald makes a labored effort to defend the nominating committee. I have no quarrel with the committee. Some of my best friends served upon it. I conclude that they did what they were appointed to do. Such a committee has no legal existence, as the Council has no authority whatever to appoint it. How the committee performed its duties has no proper place in this discussion. There was no criticism of its members at Charleston, therefore Professor MacDonald's defence is unnecessary.

To put the whole matter concretely, my contention is that the duties of the Council are carefully laid down in section 5 of the Constitution, as follows: ". . . the election of members, the calling of meetings, the selection of papers to be read, and the determination of what papers shall be published." It has no right to appoint a nominating committee which does nothing more than conduct a caucus by mail, the effect of which is to preclude a free and fair expression from the men who sustain the Association. The constitution contains the democratic ideal. Is it not our duty to see that it is not set aside?

May I again emphasize the fact that my action in this entire matter is impersonal? I have repeatedly stated that

it is the system, not men, that I am condemning. We have drifted consciously or unconsciously, it matters not which, into the rule of the few in the American Historical Association. I do not claim to represent the entire membership in my contention for self-government. I do know that I have unmistakable evidence that there will be a revolution if the question is not handled justly and wisely by those in authority.

DUNBAR ROWLAND.

Mississippi Department of Archives and History, Jackson, Miss., March 15.

THE BLIGHT ON ATHLETICS.

TO THE EDITOR OF THE NATION:

SIR: The great prevailing evil connected with college and school athletics is not the "mucker" ideals and practices on the playing field, but the grafter ideals and practices with respect to making up the teams before they reach gridiron or diamond. Except in a few colleges, usually the larger ones, there is constant deliberate violation of the professed observance of the standards of non-professionalism. Those responsible for the make-up of the teams say one thing and do another—essential crookedness. It should be added in fairness, however, that frequently in those institutions where conditions are the worst a committee of the faculty on athletics wages a gallant but losing fight for the maintenance of standards. The chief seat of the trouble usually lies with the managers, student body, and, most important of all, the alumni.

When the present writer was a senior in preparatory school (an old endowed academy of good reputation), the chief "line bucker" that year on the football team was not a member of the school, although, of course, he was supposed to be. He had been a member of the school some years before, but at that time had no connection with the school whatever other than playing on the team. Yet the principal of the school and other masters stood on the side lines, and, "with indifference, approval, or motives of expediency," saw him play all through the season. In my home town, when the high-school team (baseball or football) plays the team of another high school situated at some distance, the managers of the respective teams think it smart to vie with each other in running in as many semi-professional non-members of their school as possible. This sort of thing is, I believe, distinctly worse nowadays than it used to be. It is a manifestation of our national propensity to over-organize things and to worship the god Get-there.

To what depths the resulting degradation of spirit of the whole undergraduate body in a college may descend is illustrated by the following incident which not long ago came directly under my personal observation. A paid professional on the baseball team (he was indeed a student also, but everybody knew he was paid, and one of the trustees, it was generally understood, furnished the money) was on one occasion refused by the manager an advance of his salary, while the team was away from home "representing the college" in a large city. The next time the team played at home he obtained his revenge by striking in the midst of the game. He sat on the benches during the remainder of the game and saw his team whipped; and, of course, the student body at the time was furious. He was denounced in most thoroughgoing fashion in the next issue of the college paper. Now anybody would suppose that the wrath of the student body would be sufficiently deep and lasting to prevent such a traitor, who had so flagrantly and publicly disgraced them, from ever playing on the team again. But he was not only a star pitcher, but also a batsman who frequently rapped out three-baggers and home runs: and he did play on the team the following year.

Of what avail is the attempt of professors in such a college to inculcate high ideals of honor and honesty in the classroom? Their efforts are counteracted many fold by the influence of the school of graft maintained by the department of athletics.

What hope is there of keeping grafting out of business and politics in a nation where young men in higher institutions of learning, during that period of their lives when, if ever, they are idealists, habitually and systematically cheat at their games? IDEALIST.

New Haven, Conn., March 7.

ALBERTUS VAN BEEST.

TO THE EDITOR OF THE NATION:

SIR: I should be glad to receive information about the American career of the Dutch marine painter, Albertus Van Beest (1820-1860), who from 1845 until his death lived and worked in Boston and New York. Among his American pupils are mentioned the marine painter, William Bradford, and the landscape painter, R. Swain Gifford. Information concerning the whereabouts of his works in public or private collections will also be received with thanks. A. J. BARNOUW.

446 Beeklaan. The Hague, Holland, March 5.

THE FOREIGN CRITIC.

TO THE EDITOR OF THE NATION:

SIR: A chapter might easily be written concerning mistaken literary judgments by foreigners. The perusal of such a chapter might even lighten for us the humiliation of certain cruel and rare moments when we realize that we have made ourselves ridiculous by immoderate censure or laudation (generally the latter) of an English writer. *Die Neueren Sprachen* publishes frequent letters of literary appreciation, dated from London and signed by a name which may, strictly speaking, be either German or English. While some of these letters contain nothing so absurd or grotesque as to indicate a foreigner whose taste is as yet unformed, the criticism in the following passage (quoted from Vol. XVIII of the above review, page 421) looks quite in the opposite direction:

Mr. Mackereth's name deserves to stand very high among the poets of today, for there is a strength about his work which is very rare in English verse. His thoughts have a nobility and at the same time a restraint that is the prerogative of no special poet and age. "A Son of Cain" (Longmans, 3s. 6d. net) is everywhere full of an optimism that does not deny the pain of life but lifts its eyes to the hills all the same, and everywhere there is that deep, instinctive sympathy with all that lives that forms the finest note of our age.

We have the rollicking of exultant power in:

> I met a Lion in the way:
> Heigho! his eyes were wild!
> A bright, magnificent beast of prey,
> A dæmon's child.
>
> He scowled, and scowled,
> With bristling mane;
> And growled, and growled,
> Like in angry pain.
> He stood aloof; I liked him well.
> Heigho! his ivories!

Shades of Tartarin!

I close with the sentiment of the following lines which a French lady preserved, in the form given below, in her translation of Du Maurier's *Trilby:*

> A feeling of sadness and longing,
> That is not aching to pain,
> And resembles sorrow only
> As the mist resembles the rain.

RAYMOND WEEKS.

Columbia University, March 15.

A REQUEST FOR LETTERS.

TO THE EDITOR OF THE NATION:

SIR: Dr. J. M. Hulth, of the University Library of Upsala, who has succeeded to the editorship of Carl von Linné's correspondence, formerly edited by the late Prof. Th. M. Fries, desires information as to the whereabouts of letters to and from Linné, which might be found in collections in this country. Individuals or institutions having such letters are asked to communicate with the undersigned. AKSEL G. S. JOSEPHSON.

The John Crerar Library, Chicago, Ill., March 14.

DUFFERS AND EXPERTS.

For the ordinary duffer the printed directions of the expert on how to play the game of golf are often a disheartening experience. His instructions to us to think of a dozen different things at once are as difficult to execute as to close simultaneously all but the third finger of a hand; and the diagrams, with their dotted lines and pointed arrows, which he employs to illustrate swing, and grip, and stance rival in intricacy a complicated problem in hydraulics. It may be doubted whether any mere duffer has ever derived benefit from the theoretical study of the game. Half an hour on the links under the supervision of a professional who has the happy knack of disguising the boredom he must inevitably feel is probably worth all the books that were ever written for the instruction of the initiated but inexpert.

Nevertheless, there is a fascination in the study of these books that we would not willingly forego, and we continue to brave the derision of the family

circle and to endanger its penates by posturing, club in hand, upon the carpet, fondly imagining that the contortions we are making bear some resemblance to the hero of the diagram. Our next adventure on the links ought usually to be sufficient to convince us that all is vanity, that duffers we came into the world of golf, and duffers, saving a miracle of regeneration, we are destined to leave it; but when the next book by a renowned expert appears we borrow it with the simple faith of little children.

But even though in our less optimistic moments, as when our opponent is dormy and our drive has been sliced out of bounds, we realize that not even a Vardon can restore to us that lost stroke or prevent its recurrence on another occasion, there is a considerable amount of interest in reading, as in a recently published symposium of famous players,* how past masters of the game conceive that they themselves play their strokes. It is pleasant to follow in their wake *haud passibus æquis*, now and then recalling a memorable stroke, an epoch-making event in our own foozling history. There was that time when we played the long "push" shot up to the pin at the seventh, laying it dead at the hole side exactly in the manner described by George Duncan; or that other never-to-be-forgotten occasion when from the abyss of the formidable bunker that guards the sixteenth, tucked up against the face of the hazard, we achieved a miracle of recovery in which we recognize now that we employed precisely the methods advocated by Lawrence Ayton. The musical purr of a perfectly hit drive is a sound that, thanks to some special dispensation of whatever providence alternately encourages and casts down the golfer, most of us have heard at more or less infrequent intervals; but there is a satisfaction in learning from Harry Vardon how intricate is the succession of movements that in our more inspired moments we must have achieved in the order prescribed.

Young Mr. Ouimet, who contributes to the symposium an interesting chapter on putting, rudely upset what had almost crystallized into a tradition when he defeated Vardon and Ray in last year's open championship, for it had come to be very generally accepted that no amateur golfer, however good, could quite beat the best of the professionals. In spite of Mr. Ouimet's remarkable performance that axiom is probably still sound, and why it should be so has been the subject of much speculation. Clearly it is not because the professional has a great deal more practice, for there are many leisured amateurs who spend a good part of their waking lives upon the links, whereas the average professional habitually devotes several hours a day to the dull routine of teaching. The explanation is probably in the main a psychological one; the professional makes his living by his ability to play golf. That which for the amateur, if he be playing well, is an agreeable exercise, if ill, an exasperating waste of time, is for the professional a solemn discharge of duty, a thing to be taken seriously, just as we take our account books and ledgers. The professional, especially the Scotch professional, who is the sublimation of his class, will make a golfing joke, but he will not make a joke on golf. At most of the famous links on his native heath there is a set of jests, hallowed by antiquity, to listen to which is part of the routine through which the stranger is expected to go, but golf itself is a sacred matter not lightly to be profaned.

"How often do you do that?" the present writer once inquired of a well-known Scotch professional when he was guilty of the elementary mistake of taking his eye off the ball, and fluffed an easy approach into the bunker guarding the green. The professional gave the question his conscientious deliberation, and "Just aboot once a year-r, sorr," came the unsmiling reply.

That remark seems exactly to express the difference between the amateur and the professional points of view. The former, be he an amateur champion or the plain average duffer, is privileged to take his eye off the ball as often as he likes, and may yet hold up his head among his fellow-men. The latter, since to err is human, may be allowed an annual indulgence of the weakness, but to repeat it with the careless insouciance of the amateur would be to put in peril his means of livelihood.

Assuredly there is balm in Gilead for the duffer. Following a professional match, or playing ourselves with a professional and receiving a stroke and a beating, we may envy the mechanical accuracy with which he makes his "threes" and "fours" and "fives," humbling "Bogey" and making "Par" appear absurdly simple, yet we know that he is not enjoying the mathematical precision of his play one-half as much as we are enjoying our own spasmodic brilliance. There comes in his round none of the sense of adventure that attends our own eccentric course. The back spin from the cunningly played mashie shot as his ball hits the green has for him no thrills, for the result that we hope for prayerfully is for him but the occurrence of the expected; and the intentional slice around the coppice on the woodland course, that we deem a suitable subject for the subsequent entertainment of our friends in the clubhouse, is to the blasé expert no more than a part of the mechanical routine of the day's work. Even our emotional outbursts we would not sacrifice for the imperturbable poise which the professional knows it is necessary for him to maintain, for though these are bad for our golf they are excellent purges of our souls. And if at times in the eye of the expert we catch a gleam of sarcastic commiseration for our ineptitude we can retort on him, as Chesterton makes King Alfred's men retort on the conquering Danes in his "Ballad of the White Horse":

> You are more tired of victory
> Than we are tired of shame.

*"Success at Golf," by Harry Vardon and others. Boston: Little, Brown & Co. $1 net.

Literature

SOCIALISM REVISED.

A History of Socialism. By Thomas Kirkup. Fifth edition. Revised and largely rewritten by Edward R. Pease. New York: The Macmillan Co. $1.50.

This edition of Kirkup's work has been prepared and published in a new form by an English Fabian, who explains in his preface exactly what he has done. Roughly, Mr. Pease has brought up to date those chapters which described primitive Socialism and the origins of the present movement, has written several new chapters on the movement abroad, and particularly in England, and has collected (in chapters xv and xvi) Kirkup's own views on the question in general, these views in previous editions having been scattered through six chapters, and being now rearranged and much condensed. The result of his labor is a handy edition of a valuable work.

Chapters xv and xvi are, naturally, much the most interesting in the book and exhibit clearly Kirkup's special merit as a writer of Socialist history and a student of the Socialist movement. He is careful to impress upon the reader that it is not a mere collection of economic theories or doctrines, but a real movement. "It is not," he says, "wedded to any stereotyped set of formulas, whether of Marx or any other, but is rooted in reality, and while moulding facts, it must adapt itself to them. Above all, we must ever remember that it claims to represent the aspirations after a better life of the toiling and suffering millions of the human race" (p. 405). It is "still in process of development. Its theories must undergo the rough-hewing of continual controversy, discussion, and criticism." "The competitive system has never entirely and exclusively dominated any society, and has been everywhere modified by custom and the traditions of the past, by national and social interests and by moral considerations. . . . We must conceive Socialism in the same way as claiming, when certain historical con-

ditions have been realized, to be the normal or prevalent type of economic and social organization." What this means is set forth as follows:

> Socialism, then, simply means that the normal social organization of the future will and should be an associated or co-operative one. It means that industry should be carried on by free associated workers. The development of Socialism will follow the development of the large industry. . . . It is a new type of industry and economic organization the practicability of which must be decided by the test of experience. It cannot be introduced mechanically. We cannot force or improvise such a change in the constitution of society. No revolutionary violence can avail to carry through a transformation which runs counter to the fundamental laws of human nature or the great prevailing tendencies of social evolutions. This will be especially manifest when we consider that its realization will, above all things, depend on the ethical advance of the mass of the people (p. 415).

Kirkup's Socialism is very far removed from the present "stiff and barren orthodoxy," as he calls it, which is so deeply permeated with, and colored by, an aggressive materialism and a spirit of general and violent revolt. With this he has no sympathy. Marx he regards as having forged "new chains for the working class in the shape of dogmatic materialism, a rigid and abstract collectivism and ultra-revolutionary views which still hamper it in the task of emancipation" (p. 443). More than once he expresses strong disapproval of the attitude of modern Socialists towards "the family," and is at pains to insist that between Socialism, as he understands it, and religion there is no contradiction (pp. 447-449). To the reviewer, however, it seems that he fails to recognize the instinctive antagonism that exists between the Socialist *weltanschauung* and that of the Christian, if for no reason other than that the one is concerned exclusively with *diesseits* and the other mainly with *jenseits*. Platforms may assert as forcibly as possible that "religion is a private matter" with which Socialism is not concerned, but no intelligent Socialist will deny that the entire body of Socialist thought is altogether detached from religion, taking no account whatever of those fundamental relations which are the substance of all religion, and from which no believer can logically prescind in any rational act. It is quite true that the Christian churches are not in the least committed to any particular system of government or production. Society exists, as they see it, for man and not man for society, and whatever system of production best enables man to fulfil his destiny here and hereafter is, from their point of view, good. But unless we are to deceive ourselves, we must not fail to recognize, in the Socialist movement, even as Kirkup describes it, a synthesis of many centrifugal forces, all operating strongly against the existing order—indeed, the very foundations of the existing order—and notably against the notions of law and the supernatural destiny of man. Whether one hold any form of religion or not, there is no excuse for not recognizing this fact, for it will probably, when fully recognized, greatly help to clear the field of discussion and enable those who are in doubt easily to find their proper camps.

Kirkup's book will make an appeal to many who are tired of Spargo, Hillquit, and the other painstaking but tedious modern scholastics of the more reasonable and coherent Marxian school. To those who are fighting Socialism it will perhaps furnish suggestions for a change in the plan of campaign. Much ammunition is now going to waste on empty forts—such, for instance, as "surplus value"—which might be put to more profitable use elsewhere. Incidentally, it is worth noticing that Kirkup, although valiantly laboring to bring his Socialism into harmony with Evolution *à la* Darwin, is much more of a Utopian than a scientific Socialist, and the general trend of the movement in this direction is now very marked. The "soap-box" school and a few of the faithful scholastics alone remain thoroughly orthodox and "scientific."

CURRENT FICTION.

When Ghost Meets Ghost. By William De Morgan. New York: Henry Holt & Co.

Devoted readers of Mr. De Morgan will recall the whimsical "Apology in Confidence" appended to "A Likely Story." His preceding novel, "An Affair of Dishonour," had been sharply handled by reviewers. They had not only fallen foul of the story for what it was—a feeble attempt at historical romance—but had censured the author for what it was not. They had expected him to be "Early Victorian and suburban, kindly and buttonholy," and he had disappointed them. He apologizes for his unfair treatment of them, and plumes himself on the "Victorianity" and "suburbanity" of his current offering, "A Likely Story." Also, harking back to criticisms of his earlier books, he asks credit for having "slumped" from a quarter of a million words to less than 100,000—"an essay towards conformity which seems to me to deserve recognition."

The physical aspect of "When Ghost Meets Ghost" leads one to suspect that convenience rather than conformity determined the length of "A Likely Story." Here is a chronicle running to nearly 900 pages and bulking a good deal nearer half a million than a quarter of a million words. If the characteristic summaries prefixed to the chapters had been printed as a table of contents, as they were in the earlier novels, some twenty-odd pages would have been added to the volume. This may have been the straw to imperil the publisher's back: a list of short chapter-titles is furnished. But the important question is not how long the story is, but whether it is too long. The present reviewer (who would not spare anything of "Joseph Vance" or "Alice-for-Short") thinks it is.

The substance of the narrative is altogether too slight for this scale of treatment. A pair of twins are separated in early womanhood, one following her convict husband to Van Dieman's Land, the other staying in England. After some years the husband, by a clever forgery, causes each of them to believe that the other is dead. Half a century later they are both in England. Problems for the novelist: how shall they be brought together and how shall they be convinced of the truth? Mr. De Morgan's postulate is that these are problems of almost superhuman difficulty, and that we are assisting at an extraordinarily subtle process of solution. In point of fact, the means employed is the simplest known to the romancer—coincidence. Never has that long arm been more deliberately extended. If little Dave Wardle, who lived in a particular house in Sapps Court with one of the old twins, had not been run over by a particular fire-engine, and taken to a particular hospital, he would never have become the protégé of the particular nurse who was familiar with the particular village household in which the other old twin lived. If Lady Gwen had not chanced to be calling at Sapps Court at the precise moment when Mrs. Prichard's old table was about to be repaired, she would not have taken charge of the old lady's papers, her father the earl would not have read the forged letter, and—so on.

When, at the end of a very long chain of these petty coincidences, the facts have become plain to everybody except the two old parties, there is still a vast deal of fiddling to be gone through as to how they shall be made known to each other. Lady Gwen, who at this very moment is able to endure her lover's blindness and her bosom friend's dangerous illness without hysterics, is almost beside herself with dread as to what may happen to these two respectable old women when they find that they are both alive! The noble earl, her father, is hardly less distressed; indeed, the anguished attention of a large number of persons of all ranks and ages is focussed for some time upon this terrible moment of revelation. One of the twins does die shortly after the news is broken. But why shouldn't she? The

truth is, there is interest, and a mild pathos, inherent in the situation, but one cannot make even a potential tragedy out of the meeting, or failure to meet, of two nice old ladies of eighty-odd who have been lost to each other for fifty years.

This is not the whole story, of course. Sapps Court is, roughly, the *milieu* of the opening chapters of "Joseph Vance" and "Alice-for-Short." Dave Wardle is again the gamin destined to become a gentleman. Uncle Mo is the rough diamond, the heart of oak. When we hear, in chapter one, that he is an ex-prize-fighter, we know that he will not have been so in vain, and the single right cross-counter by means of which he does for the villain (a very Dickensish jailbird) in the very last chapter, justifies us. Ancester Towers, the other setting, places the action, without undue violence, at the other social extreme. The earl is simply a gentleman and a connoisseur who happens to have a title. His lady the countess is of an older school. With her dowager-like, almost Trollopean, attitude, she is in odd contrast with her daughter Gwen, and is, we suspect, less an anachronism than the latter, since the action is supposed to take place in the fifties. Gwen, the beautiful and audacious, is plainly akin to Mr. De Morgan's other delightful heroines. But the chronicler is so intent upon his two old grannies that, with all his half-million words, he does not succeed in finishing her love-story, and has to "gobble it up" as best he may in the very obvious exposition of the "Belated Pendrift" which closes the volume.

Simple Simon. By A. Neil Lyons. New York: John Lane Co.

Readers who remember the "Clara" of this writer will be prepared for the mixture of audacity and sentiment, social theory and satire, realistic detail and romantic feeling which give their peculiar atmosphere to these pages. The activities of Messrs. Wells, Chesterton, and Shaw have, to be sure, established something like a school of audacity. To be lively, and brilliant, and shocking, in one sense or another, is the essential.

Some of the younger Englishmen who show this influence seem to be really above it, or to have something behind it. Two such we have noticed particularly of late, James Stephens, author of "The Crock of Gold," and A. Neil Lyons, author of "Clara" and of the present story. These writers are of their day; they do not dare not to be clever; they make great play with paradox and quip and shocking sally. But this is nothing more than the modish garment of their humor. For these are genuine humorists. There is a human warmth about them which one gropes for in Mr. Chesterton and misses outright in Mr. Shaw. Mr. Wells showed it in "Mr. Polly," and Mr. Bennett in "Buried Alive." As a group, the old guard of new-century wits have been chary of it as too much smacking of that damnable thing, sentiment. Mr. Stephens and Mr. Lyons, the more furious they are against the sham, the more ardently and openly they worship the real thing. Clara was a disreputable woman, but she not only loved much, she was perfectly lovable, and, on her own plane, venerable. In the present narrative, Mr. Lyons shows himself very angry against official charity, the dull hypocrisies of organized poor-relief. But this merely brings into sharp contrast the loving kindness of Simple Simon and his mate. One trait we hope Mr. Lyons will outgrow—a belligerent tone due to the assumption that other people are probably less sensible than he.

The Judgment of the Sword. By Maud Diver. New York: G. P. Putnam's Sons.

"Here," the author's note tells us, "is no compound of history and romance, but the true romance of history. . . . Neither book (this or its predecessor, 'The Hero of Herat') has any relation to the historical novel proper, except in form." The exception is puzzling, unless form means merely title and binding; for the book does not even resemble a novel in form. There is no love story; there is no hero—or, rather, there are half a dozen. As the writer says, "No single figure, however heroic, could be made to dominate the tale of the First Afghan War without fatally upsetting the proportions of the whole."

Once it gets under way, the narrative is picturesque and vigorous. Mrs. Diver has made good use of the background of mountain and defile, of the striking scenes of defence, retreat, and slaughter. It is not her fault that the story of Pollock's punitive expedition seems anticlimactic after the British disaster in which sixteen thousand men perished; but she might have told this more briefly.

The Remington Sentence. By W. Pett Ridge. New York: George H. Doran Co.

A quaint and quiet humor, the leisurely progress of an unaccented plot, stress placed on minor detail, and a wide range of characters—these are familiar characteristics of Mr. Ridge which his readers expect and which they find in the present volume. The vicissitudes of a sister and three brothers, condemned by the terms of a dead father's will to "hard labor for five years," create whatever of plot there is. The young Remingtons leave their Hampshire country home to prove their mettle in London, before coming into a substantial fortune. These facts we discover by dint of reading between the lines. The whys and wherefores that lead to the imposing of "the Remington sentence" the reader may create for himself. Upon this point the author is silent.

Among the characters one recalls with interest Helen, the perplexed "big sister"; her lover, the explorer Saltmarshe; Kenton, one-time butler of the Remingtons, outwitting a nagging wife by well-acted aphasia; Mr. Clifford, the successful fruit merchant of Covent Garden, who indulges his "low tastes" at Hampstead Heath on Bank Holiday; Signora Michaelis, of the Leicester Square ballet, once Nancy Dawkins, of the Chalk Farm Road bakeshop; Loo Riccardo, cockney blending of Italy and England; and Harkway, the schoolmaster, a pedagogical Wilkins Micawber, that Dickens might have drawn. With these and their fellows we wander through W. Pett Ridge's favorite London, the London of the lower middle classes—Tottenham Court Road, Southampton Row, St. Martin's Lane, Holborn Circus, Regent's Park.

THE SPIRIT OF MODERN GREECE.

Ægean Days. By J. Irving Manatt. Boston: Houghton Mifflin Co. $3 net.

Professor Manatt wrote this almost ideal book of travel with the experience of a four years' consulate at Athens and of three subsequent visits and with a rich accumulation of Hellenic culture gained through a lifetime of loving study and honored teaching. He is thoroughly familiar even with the somewhat recondite works upon his subject, he has at his fingers' tips the political, literary, and artistic history of the Ægean during the ancient, mediæval, and modern periods; he is renowned as an adept in the vernacular. His style is in the main easy, yet at times marked by the vice, so peculiar to the scholar when writing a popular treatise, of attempting factitious sparkle and energy. Thus it is that the comparisons may become farfetched, as when he likens Concord to Colonus as a poetic hearth, Simonides and Voltaire to James Russell Lowell, or, most extraordinary of all, implying a certain lack of humor, his rehabilitated Sappho to Alice Freeman.

Professor Manatt errs in not brightening his volume with enough photographs, and those that he does reproduce are for the most part dimly printed. It is impossible, of course, to do justice to what is perhaps the finest landscape in the world; but these illustrations do not even suggest the inspiring nobility of Greek scenery as compared with the enticing luxuriance of Italian. It is, too, a little surprising to find a man of the writer's inclinations insulting Lesbos and the

Lesbian poets by inserting a poor reproduction of a wretched painting, Alma Tadema's Sappho and Alcæus.

The scheme of the work is eminently artistic. In Part I a summer's vacation at Andros is used as a centre of interest, and around it are grouped excursions to the near-lying Cyclades—Eubœa, Syra, Tenos, Naxos, and Paros. Part II is less unified, describing a short Ægean cruise under the enlightened conductorship of Dörpfeld, and visits to Ceos, Troy, Lesbos, Chios, Ithaca, and Leucas; but a certain connection is maintained by the recurrence of the Homeric *motif* through these sections of the Hellenic world, and by the confinement of attention, with one or two exceptions, to the Asiatic coast and the adjacent islands. The unity is all the more remarkable in view of the fact that several chapters have already been published as occasional essays. In the course of describing each place visited, Professor Manatt contrives to introduce all the significant geographic, historic, ethnographic, literary, and even practical information. But this is no mere guide-book. In his rambles with you he comes upon a ruined tower, a lone column, a half-effaced inscription built into a garden wall, and he is forthwith reminded of some ancient tale, some bit of lore, some verse of poetry connected with the fragment. He seems a pleasant comrade conversing casually and familiarly as you walk or ride or row or sail; and lo, when you have done, as if by magic you are well enough instructed to lecture yourself upon the places that you have visited in his company. In the end you find yourself possessing an adequate conception of each Ægean island in its more glorious classical setting, in the ecclesiastical ascendency of its Byzantine period, in the picturesqueness of the Venetian occupation, under Turkish misrule, in the heroic War of Independence, and in the almost realized hope of a modern resuscitation.

Almost immediately on landing at Andros, Professor Manatt is haled before an absurd court for trespassing on private premises, and thus he has an opportunity to sketch the whole petty polity of the island. He searches out a hymn to Isis chiselled upon a stone now used as a lintel, and he falls into delightful recollections of other Andrian inscriptions, which he employs to reconstruct the conditions of the place under Athenian and Roman sway. Meeting Dörpfeld on a steamer in the Ionian Sea, he allows the ingenious archæologist to explain in his own entrancing and momentarily convincing style his theories about an Ithacan Leucas. So he leads us on and on, beguiling us ever into the idea that we are merely chatting as we jog pleasantly along, never emphasizing too obviously the thesis that lurks beneath the whole work.

It is this thesis that creates a broader and a nobler unity. The author, in a word, is a fervid advocate of the continuity of the old and the new Hellenic culture. He patronizes, to be sure, true New Englander that he is, rather than comprehends and honors the august church of the East, and in his treatment of the Andrian benefactor but heretic, Theophilos Kaïres, he fails to appreciate the importance to the church of maintaining the standard of faith as well as of morals; but in general he is a steadfast friend of the modern Greek and a believer in his future. He constantly discerns ancient customs still persisting; he realizes that the determinative factors are an uninterrupted civilization and language, whatever fresh influx of blood there be. To one who has read the heroically poetic letter of a wounded Greek soldier to his wife in the May *Atlantic* of 1913, the identity of the past and present needs no demonstration.

This is a timely book, and to those who know and, because they know, appreciate and love modern Greece, it will prove a helpful apologia. It constitutes the best kind of a defence, for it is indirect. There are few bald assertions of the superior character and energy of the present race, but the accidental pictures of their generous hospitality, their kindly curiosity, which is only another phrase for humane interest, and their almost fanatical desire for education under adverse circumstances, are more effective proof. When a distinguished historian in one of our greatest universities visits the Balkans for but a few weeks, and then, abandoning his scientific reputation, presumes to issue an ultimatum upon the complicated problem and upon the merits of the several combatants, it is comforting to listen to the sober judgments of Professor Manatt's ripened experience.

S. Bernardino of Siena. By A. G. Ferrers Howell. London: Methuen.

The name of San Bernardino calls to mind, first of all, perhaps, the gaunt Franciscan figure that appears so often in the altar-pieces of the Quattrocento, distinguished by the lips drawn in over a sunken mouth, the bald head inclined a little, with its narrow circlet of white hair, and the attribute, a tablet with the sacred monogram YHS. Readers of Italian manuals will think at once of certain unique passages from sermons preached at Siena, stories and fables and sketches of contemporary life, recorded just as they were uttered, phonographic in the freshness of their dialect and the vivacity of their phrasing. But their author had little thought of place in art or literature; the powers of his keen mind and eager soul were wholly spent in ministry. He was the foremost figure in Italian religious life between St. Catherine and Savonarola. He is truly named the Second Founder of the Friars Minor; he won back the allegiance of the Italian people to the Church, dishonored and enfeebled by the Great Schism; and in his preaching, here and there and everywhere in Italy, he strove, flame-like, to enlighten and to burn away the gathering moral darkness of the Renaissance.

Some twenty years ago Paul Thureau-Dangin published an admirable study of the life and preaching of S. Bernardino, a book very like Sabatier's "Vie de S. François" in spirit and in value. Since then, however, biographical and critical investigations have multiplied, and a new comprehensive work is therefore welcome. One misses in Mr. Ferrers Howell's style the clearness and grace of his French predecessor, but in completeness and accuracy the new book is all that could be desired. The first of the four long chapters recounts the history of the Strict Observance, the second is biographical, the third and most important is devoted to the sermons of S. Bernardino, and the fourth to his minor works.

The preachers of the Quattrocento contented themselves, for the most part, with formal exposition of the gospel or epistle for the day. Bernardino, disregarding that convention, chose a topic suggested by the immediate needs of the audience before him, and dealt with that topic directly, intensely—and at extreme length. In most of his sermons he attacks particular vices—gambling, love of finery, avarice, party strife; but his preaching as a whole illumines the entire field of religious experience. He combines searching moral diagnosis with generous commonsense. So he treats of wisdom in almsgiving, of caution in admonishment, of poverty and the love of poverty, of honest doubt, of religious sentimentality, superstition, and asceticism. His doctrine bears eloquent witness to the passing of the Middle Ages:

> To take up the cross in a way that the body cannot bear, is not an inspiration of God, but a temptation of the devil; and the reason is, that God hates none of the things that he has made; wherefore he hates not our body, but loves it, and would have us love it, and preserve it for his honor, and not destroy it, nor give it a burden it cannot bear. . . . For the judgment is not between us and the saints, but between God and us: the question will be whether we have fulfilled his commands to the best of our ability; not whether we have done what the saints did.

Yet his liberalism went hand in hand with a relentless intolerance of evil; and he wrought mightily upon the throngs that heard him. Often his sermon-courses ended in the red glow of a bonfire of vanities; and again and again he quelled the bitterness of local

warfare. Even now signs of his influence remain throughout Northern and Central Italy, from the Alpine pass that bears his name to his burial place at Aquila, in the many churches that are dedicated to him, and in the representations of the sacred monogram, carved, at his bidding, on city towers and on palace gates.

Mrs. Ady (Julia Cartwright) contributes to Mr. Ferrers Howell's volume an interesting chapter on S. Bernardino in Art. It is in Siena, naturally, that the figure of the saint appears most frequently, but there is hardly a local school that cannot show his likeness on wall or panel. The most notable paintings inspired by his life are Pinturicchio's frescoes in the Aracœli and the charming little pictures at Perugia, by Fiorenzo di Lorenzo, representing S. Bernardino's miracles. At Perugia, too, is his most elaborate monument in stone, the façade of the Oratorio, decorated with the very lovely bas-reliefs of Agostino di Duccio.

The Minor Poems of Joseph Beaumont. Edited by Eloise Robinson. Boston: Houghton Mifflin Co. $5.

Among the possessions of Professor Palmer, of Harvard, brought together in the course of his devoted study of George Herbert and Herbert's age, is the unique manuscript of the minor poems of Dr. Beaumont, which he bought at one of the sales of the Sir Thomas Phillipps collection in 1911. It is a quarto volume of 173 leaves, written in two hands, one that of the poet himself, the other that of John Gee, who apparently used the manuscript in preparing the selection of Beaumont's verse for his edition of 1749, and made various corrections to this end. Under the auspices of the English department of Wellesley College the whole volume has now been handsomely reprinted, with an ample introduction and notes.

Relying chiefly on Gee and correcting some errors of Grosart by the way, Miss Robinson has incorporated in her introduction an excellent account of Beaumont's quiet and in the end not unprosperous career. He was, according to his own report and as his industry with the pen well testifies, a bookish man who might have been content to settle down in the university there to spend a life in digesting libraries of theology. In one of his birthday effusions—"Martij 13, 1643"—he pretty well sums up his intellectual course, and as the poem is not in the selection of 1749, and consequently not in Grosart, we may quote several of the stanzas as an example of his rather rougher style:

Th' importunate Drops at length some impresse made
Upon my stony Intellect, & I
Was put Apprentice to ye Bookish Trade
At full fifteene ith' Universitie
Where captiv'd in a Gowne, under ye shade
Of thousand leaves I sate, and by
The losse of almost all ye Time since then
Have learned to be ye foolishest of Men.

My itching mind proudly desir'd to prie
Into whatever Learnings Title wore.
With unfledgd Wings I often towred high,
And snatch'd at things above my pitch, before
I had sure hold of what beneath did lie.
Yet on I ventur'd still, & caught at more;
I caught ye Wind of Words, which by a Blast
Of following Notions soon away were past.

At length I learn'd, & sure my Tutor was
Th' ETERNAL WISDOME, well to rest content
With shallow knowledge of such Objects, as
Can never blesse their Knower: Complement
And Ceremonious Learning I let passe
To guild their Crest, who make Applause their bent
Ambitious onely not to be a foole
In that, which Saints and Angells draws to Schoole.

But our poet was soon cast out of his bookish ease. In the year 1644, according to the quaint account of John Gee, the Earl of Manchester was ordered "to garble and model the University of *Cambridge*, where Mr. *Beaumont's* avowed affection to the King's cause exposed him among the first, to the keenest edge of their resentment." Beaumont lost his fellowship (early in 1643, according to Miss Robinson's calculation, instead of 1644), but under the generous protection of the Bishop of Ely he multiplied benefices and books in a way that ought to have made even a poet-clerk happy.

Beaumont, as we already knew, belongs with the school of Herbert and Vaughan and Crashaw and Traherne, and the present addition to his works only serves to place him a little more exactly in that band of religious poets. Though of course he never rose anything like as high as Crashaw or even as Vaughan, his work is rather more on a consistent, if not dead, level than theirs, avoiding the morbid conceits of the former which sometimes sink him to about the lowest degree of bad taste of any writer of mark in the language, and seldom if ever flowing in the flaccid manner of Vaughan in his more negligent moments. Miss Robinson admits freely that very few persons—none, we should say, unless they are reading in that period for a purpose—will care to go through all of Beaumont's 177 poems which she has printed. It would scarcely be a fair question to ask any scholar why he, or she, had ventured to add another volume of this kind to our burdened libraries, and as a matter of fact the present publication has a certain value and even interest of its own, though the latter must not be presumed on too far. Beaumont had the least spark of genius, and not much of the high fervors of religion, but he is an admirable specimen of a man who lived in the intellectual and spiritual society of those who possessed both of those qualities in large measure, and he caught, as it were, the routine of their inspiration. He is in this way characteristic of the mean, though not precisely the golden mean, of his age. At times he utters a note of a more intimate sincerity, and for a moment we seem to see into the man's living heart. Having quoted the cruder stanzas from his "Natalitium," we feel bound to supplement them with a more alluring illustration. We take them from the first poem in the volume, "Suspirium," which was not known to Grosart:

I *think* a thousand thoughts a day,
Yet think not one: each doth betray
It selfe, & halfe-made flyes away.

I *think* of Heav'n, I *think* of Hell,
Of what both heer & there doth dwell:
Yet what I *think* I cannot tell.

Through all ye World my Mind does run,
And when her foolish Course is done,
She onely is where she begun.

Such Hudling and Perplexity
In my tumultuous Heart there bee,
That seeing all, I nothing see.

When our divine Dr. Beaumont wrote those words he was thinking not of the poems of Herbert or Vaughan, but of a sad experience which came to him often in his own study, and which has come to many another over-ambitious student since his day.

Miss Robinson's editorial care in bringing out the volume is commendable, but she has fallen into the too common error of editors in finding parallels and suggesting borrowings on the most unconvincing coincidences of language.

Notes

The Yale University Press has undertaken the following publications: "Bracton: De Legibus et Consuetudinibus Angliæ" (Vol. I), edited by George E. Woodbine; "University Sermons," by Henry Sloane Coffin; "Our Many-Sided Navy," by R. W. Neeser.

The two volumes on the Civil War in Harper's composite history of "The American Nation" were contributed by Dr. J. K. Hosmer, and attracted considerable attention at the time of their appearance. They are now brought out in a separate edition as "The American Civil War."

The Bobbs-Merrill Company will publish on March 21, "Five Years to Find Out," by Ida A. R. Wylie.

D. C. Heath & Co. announce the forthcoming publication of Keller's "Die drei gerechten Kammacher," edited with notes and vocabulary by Prof. H. G. Collings,

and of Gustav Frensen's "Jörn Uhl," abridged and edited with notes by Prof. W. W. Florer.

Sherman, French & Co. announce for publication next month "Candle Flame," by Katharine Howard.

In the March announcements of Houghton Mifflin Company the following books are included: "The Women We Marry," by Arthur Stanwood Pier; "Emerson's Journals" (complete), edited by Edward W. Emerson and Waldo Emerson Forbes; "The First Step," by Eliza Orne White; "Lost Diaries," by Maurice Baring; "The United States Federal Internal Tax History from 1861 to 1871," by Harry Edwin Smith; "Commodore George Hamilton Perkins, U. S. N.," life and letters, by Carroll Storrs Alden: "In the High Hills," by Maxwell Struthers Burt. The same publishers have added to their Riverside Textbooks in Education: "Rural Life and Education," by E. P. Cubberley; "The Hygiene of the School Child," by Lewis M. Terman; "Evolution of the Educational Ideal," by Mabel J. Emerson; "Chief Middle English Poets," by Jessie L. Weston; "The Tendency to the Concrete and Practical in Modern Education," by Charles W. Eliot; "Art Education," by Henry Turner Bailey.

The general meeting of the American Philosophical Society will be held at Philadelphia in the hall of the Society, Independence Square, April 23-25.

The *Nation* evidently has done an injustice to Mr. Zane Grey in its criticism of his "The Light of Western Stars," by the statement that he "has taken over his opening situation from Charles Alden Seltzer's 'The Trail to Yesterday.'" In a letter to the editor, Mr. Grey declares that his novel "was written in 1912, and was begun serially in *Munsey's* before Mr. Seltzer's novel began in another magazine." Investigation fully substantiates this statement. The *Nation's* reviewer was misled by the fact that Mr. Seltzer's story appeared in book form several months before Mr. Grey's. The entire intent of the reviewer was to say that this novel was of the conventional sort as to situations, and inferior in that respect to the author's own "Desert Gold," published previously. It was not the intention to accuse him of wilful plagiarism, and any inference to that effect is regretted.

To the series of reference books prepared by William S. Walsh for the J. B. Lippincott Co. he has now added "A Handy Book of Curious Information." It comprises, as the sub-title states, and as some experience in using the volume confirms, "strange happenings in the life of men and animals, odd statistics, extraordinary phenomena, and out-of-the-way facts concerning the wonderlands of the earth." Naturally, the prime disadvantage of any such miscellaneous cyclopædia as this is in the uncertainty one must always have whether a particular desideratum will fall within its province. We can only assure the searcher after such books that the editor of this volume has made a truly curious collection of facts and stories from many scattered sources.

The anonymous author of "The Life of Sir Kenelm Digby" now offers "Policy and Paint," some incidents in the lives of Dudley Carleton and Peter Paul Rubens (Longmans, illustrated). Carleton was a general utility man in diplomacy for James I and Charles I, eventually becoming Foreign Minister. Rubens, as all the world knows, was British envoy for the King of Spain in the year 1629. Some twelve years earlier, when Carleton was at The Hague, the two men had been associated in picture-dealing ways. Carleton was a zealous agent for the art-loving noblemen of England, especially for the favorite Buckingham, and knew where to place a gift where it would do the most good. Carleton was something of a cold fish, but his career gains dignity from his constant devotion to the cause of Elizabeth of the Palatinate and Bohemia, whose royal husband had been dispossessed and exiled by the Emperor. The intention, one can hardly say the endeavor, to reinstate his sister colored all the foreign policy of Charles I. It was the permanent obstacle to peace with the Empire and with Spain. Carleton, as a good royalist and Protestant, ever sought to make peace between England and France, a course made very difficult by the religious contentions in both countries. Rubens, of course, sought peace with Spain. Both attempts succeeded, though on humiliating terms. Elizabeth of Bohemia remained unrighted. Charles and Buckingham complicated every negotiation by fluctuations of timidity, ill-calculated rashness, and perfidy. Carleton served difficult masters, kept himself pretty clean, and probably deserves our author's commendation as the first real English diplomat, as distinguished from casual envoy and spy. Perhaps the chief value of the book lies in the picture it draws of the sheer incompetence of the Stuart régime in all foreign matters. For more than local reasons, a Cromwell was due. On the rather slender thread of the relations of Carleton and Rubens our author has constructed an excellent bit of biographical history. The necessary complications of the narrative make the book one rather for the scholarly than for the general reader.

The reading of "The Science of Happiness," by Jean Finot, translated from the tenth French edition by Mary J. Safford (Putnam), in spite of its numerous editions and its chaplet from the French Academy, has not removed the suspicion that Happiness, like Fame,

> will not speak to those
> Who have not learnt to be content without her.

The author's habit of enthusiastic exaggeration, noticed in these columns on the appearance in translation of his "Race Prejudice," some seven years ago, is abundantly in evidence in the present volume. At the outset we are told that, "after all, if we consider man happier than he really is, perhaps some additional happiness will follow." But the suggestion seems to be at once forgotten by the author himself, for it would be hard to conceive humankind in a more wretched condition than is painted in many of the paragraphs that follow. Man craves only happiness and creates nothing but misery. He has created enough futile tears with his religion to drown the whole present generation. With all their racial gayety we may see at a glance that the representative minds even of the French people are "corroded by every evil, beginning with that of thought and ending with that of love." From all the heights of French intellect streams down the dreariness of desolation, present even when not visible. Disunited in most things, we have one point of solidarity—"each member of mankind would believe himself dishonored if he did not provoke around him the bitterness of envy." "The object in life for the majority of men and women is nothing but the desire to create along their path the worst of the moral deformities of man, envy." And if we were to banish all whose business is nothing but the creation of hatred, the cities, the suburbs, and the country would be alike depopulated.

One begins to feel, at times, that one is dealing with a modern Juvenal, but the turning of a page will bring the comforting assurance that the sadness which has thrown a veil of profound melancholy over the world and elicited more tears than the most terrible wars is but spurious after all, and its cult a mere fad. Religion has been the main offender in setting awry a humanity which is really born to be happy, and particularly the Christian religion, the predominant care of which "is to poison the little joys of life." In the happiness which is just ahead of us, then, we are all to give up our *religions*, so far as anything in the nature of a definite creed is concerned, and substitute *religiousness* in their place. Our happiness is not to be entirely freed from the condiment of sorrow, but not too much of it, if you please. We are cautioned, of course, as by the moralizers of all ages, not to depend upon wealth for happiness. And here again the author is seized with a spasm of pessimism; he interjects the remark that society always treats a very wealthy thief with more respect than a very poor honest man. But he immediately brightens up with the reflection that Mr. Roosevelt, by attacking dishonest millionaires in a country where wealth outstrips all honors whatever, has shown the fragility of its worship and shifted the chances of success to the side of its opponents. It must be said for the author that, though his ideal of happiness is not very clearly defined, he does insist that it is to be a product of the *moral* life. And in spite of his slap at Christianity for trying "to poison the little joys of life" which the human heart craves, we are told finally that the coming pedagogy of happiness will implant in the mind the precept that "it is not wishes fulfilled, but duties accomplished, which most surely and most easily procure happiness."

There is, of course, nothing really new in all this, and few thoughtful readers, one imagines, would have felt any sense of injustice if the French Academy had withheld its crown. To go back to Keats again, we fear that the French seekers after happiness who have swallowed up ten editions so rapidly are wooing with too slavish knee. Rather than this—

Make your best bow to her and bid adieu;
Then, if she likes it, she will follow you.

It was a happy idea, in connection with the official life of Disraeli, which is coming out so slowly, to issue a volume of his political writings, and this has now been done, under the editorial care of Mr. Benjamin Hutcheon, as "Whigs and Whiggism" (Macmillan). Some of the pieces included have been reprinted in earlier volumes, but even these are now out of print, and the brilliance of their style, apart from their historical value, would justify their presentation again in popular form. The two longest and most important pieces are "The Vindication of the English Constitution" and "The Letters of Runnymede," the former of which appeared in December, 1835, as a "letter to a noble and learned lord," the latter in the first half of 1836 in the London *Times*, being republished anonymously in July of the same year. Both the "Vindication" and the "Letters" were written while Disraeli was still in the wilderness, and are a part of his savage campaign against the Whigs in behalf of Lord Lyndhurst. The "Vindication" contains the fullest exposition of Disraeli's conception of the Constitution; it might not inaptly be described as Burke, without the deep undertone of philosophical emotion that surges through the "Reflections," but sharpened and keyed up for a more modern taste. Occasionally there is a telling epigram, as, for instance, this: "There was a time when our Kings affected to rule by Divine right. It cost our fathers dear to root out that fatal superstition. But all their heroic labors will prove worse than fruitless if the Divine right of Kings is to be succeeded by the Divine right of the House of Commons." Occasionally epigram and argument unite more elaborately, as in this cutting, if not entirely fair, attack on the Westminster Utilitarians, against whom the "Vindication" was mainly directed:

The blended Utilitarian system of morals and politics, then, runs thus: it is the interest of man to be a tyrant and a robber: a man does not change his nature because he is a king; therefore a king is a tyrant and a robber. If it be the interest of one man to be a tyrant and a robber, it is the interest of fifty or five thousand to be tyrants and robbers; therefore we cannot trust an aristocracy more than a monarch. But the eternal principle of human nature must always hold good. A privileged class is always an aristocracy, whether it consists of five thousand or fifty thousand, a band of nobles or a favored sect; therefore the power of government should be entrusted to all; therefore the only true and useful government is a representative polity, founded on universal suffrage.

"The Letters of Runnymede" are more personal than the "Vindication," and perhaps for that reason have been better remembered—unless it is the cleverness of the title that has given them a kind of factitious reputation. Junius was evidently Disraeli's master in their composition, Melbourne and Lansdowne and Lord John Russell and Palmerston taking the place of the Grafton and Bedford and Mansfield over whom the terrible *nominis umbra* poured his vitriol. That the animus, if not quite the deadly precision of malice, of the older writer was caught by the younger may be seen from a typical specimen of the attacks on Lord John Russell:

You were born with a strong ambition and a feeble intellect. It is an union not uncommon, and in the majority of cases only tends to convert an aspiring youth into a querulous and discontented manhood. But under some circumstances—when combined, for instance, with great station, and consequent opportunities of action—it is an union which often leads to the development of a peculiar talent—the talent of political mischief.

The "Letters" were never acknowledged by Disraeli, and their present editor suggests that, as their author grew older and became better acquainted with the men whom he had so viciously abused, he regretted their publication. We need have no such regret to-day.

To every college teacher, to each and every man, a book on the short story is an ambition that gives promise of early fulfilment. "The Modern Short-Story" (A. S. Barnes Company), by Lucy Lillian Notestein and Waldo Hilary Dunn, is the latest stone towards the completed edifice. The Short-story, properly hyphenated, is the exclusive subject of this latest work of collaboration. The authors have not a great mind, but great minds, for they flow from channel to channel with a facility more admirable than that displayed by the lone Indian shooting the rapids of the St. Lawrence. Whole chapters are made up of a mosaic of quotations embedded in the cement of such startling profundities as that the Short-story "is akin to the other forms of narrative art." Besides, we are assured, hundreds of stories have been read in the preparation of the volume. Those used for illustration can be counted on one's fingers, and not all of them seem to have been scrutinized. At least, in Kipling's "Drums of the Fore and Aft" is seen none of the satire that saturates it; it becomes "simply self-sacrificing heroism." The little treatise is primarily a textbook to which the authors hope many college students will be exposed, but one may harbor the suspicion that the undergraduate mind, after encountering these numberless hurtling phases of current doctrine, will be left gasping in bewilderment rather than keyed up to a creative point. To the general reader, familiar with recent theorizing about short fiction, the volume is more likely to prove unintentionally entertaining.

Various indeed are the topics in "A Bookman's Letters" (Doran), by W. Robertson Nicoll, the veteran editor of the *British Weekly*. They range from such a good old-fashioned topic as Learning to Read to matters so recent as A New Critic—Mr. John Bailey. But all have the discursive air of one whose long custom it has been to converse in a pleasantly informal manner as ideas occur to him, but never to be elated or fervent or combatively aroused—an omnivorous reader without engrossing literary passions or profound critical convictions. In this pedestrian manner he likes to relate reminiscences of Meredith, to recount the early career of Swinburne, to indulge in divagations anent Sir Walter Besant. Yet in general he avoids main-travelled roads, much preferring to meander down many an unfrequented bypath. He lingers over the strangely futile career of George Augustus Simcox; he retails the letters of long-forgotten Samuel Brown to seldom remembered George Gilfillan; he wonders whether Robert Buchanan was moral or not; and to Mr. William Hale White he devotes full five chapters of leisurely comment. Though poetry, the novel, the essay, and criticism receive repeated notice in the four hundred-odd octavo pages of these fugitive writings, it is not so much literary art as biographical detail that has obviously engaged his warmest interest. Near the opening he converses of The Six Best Biographies, and throughout the volume he rehearses wherever he can little known facts of the flotsam and the "tramps" in the stream of literary history that will appeal to those of curious and desultory reading.

Somewhere midway in the saintly line of social benefactors from St. Francis to Florence Nightingale stands the consecrated figure whom E. K. Sanders has admirably described in "Vincent de Paul, Priest and Philanthropist, 1576-1660" (Longmans). It is as the patron saint of practical philanthropy, as the pioneer of social reform, organized charity, and assistance to wounded soldiers and galley convicts that Vincent de Paul has been hitherto chiefly known. The world has acclaimed him as the organizer of the devoted Mission Priests who went to Scotland, Poland, and Italy, to Algiers and Madagascar, as well as throughout France, and as the founder and spiritual adviser of the saintly Sisters of Charity, who included women of high and low degree, and who devoted their lives to forgetfulness of self in their service of others. Mr. Sanders does not abate a bit of this just fame, but he goes further; he pierces the veil with which the celebrity of the philanthropical achievements has enshrouded Vincent de Paul, and reveals him as a simple and sincere priest of the Catholic faith whose prime aim was to bring spiritual food to those who were in spiritual starvation. Born during the religious wars, and living through the worldly, selfish, factional struggles which stretched from Henry IV's death to that of Mazarin, this simple saintly son of southern France saw that the common people were as sheep having no true shepherd. A spiritual tragedy at the bedside of a dying peasant convinced him of this, and produced the crisis in his own life which turned him towards mission work. "It is the priests living as most of them live to-day who are the greatest enemies of the Church of God," he cried. Henceforth he sought to raise the priesthood from its degradation and to have Christ's word preached to those who had never truly heard it. Looking at Vincent de Paul primarily as a spiritual reformer, Mr. Sanders unfolds the details of a life as extraordinary as it is simple and beautiful. In the first half of the volume he sketches the outward life of Vincent de Paul as student, Turkish slave, papal agent, confessor of princes, adviser of Anne of Austria, and inspirer of saintly lives like his own; in the second half he describes the organization and work

of the Mission Priests and the Sisters of Charity, and shows the constant personal influence which the founder continued to exert upon both until his death in 1660 at the age of eighty-five. It is an excellent, edifying biography, worthy of its subject.

Mr. Frederic Mathews's "Taxation and the Distribution of Wealth" (Doubleday, Page & Co.) has an ambitious title, and is issued by the publishers in ambitious form—a portly, well-printed octavo of nearly 700 pages. And the table of contents is no less ambitious—five parts, each divided in books, each book divided into chapters. The parts and books cover an extraordinary range of topics: Protection, Taxation, the Natural Tax, Progress (including Progress and Politics, Intellectual Progress, Religion, Philosophy), and finally Politics. Unhappily a little delving below the surface shows that all this array of learning has but one aim and end: the single tax. The propaganda of the single-taxers takes Protean forms, and ranges from the one-page leaflet to the ponderous pseudo-scientific treatise. This volume belongs to the latter class. Testing Mr. Mathews's reasoning and evidence here and there, we find him using glibly the most untrustworthy material and settling summarily the most intricate problems. On the General Principles of Taxation, Adam Smith's well-known four canons are quoted, and there is an end. Indirect taxation, of course, gets hard knocks, and protective duties perhaps the hardest of all. However great may be one's impatience with the stock arguments of the crude protectionists, such superficial and inaccurate arguments for free trade as Mr. Mathews presents can cause no less impatience. That he is not competent to deal with the really intricate problems of international trade is shown by his misunderstanding of Mill's reasoning on the possible transference to foreigners of part of an import duty's burden. As to the later parts of the book—on Intellectual Progress, Religion, Pre-Socratic Philosophy, Attic Philosophy, and, finally, Christ—he must be a brave single-taxer who will read it all, and a brave man who will bring himself to believe that he sees its bearing on the problems of taxation and distribution. In the concluding chapter we are told that "the words of but one man in the history of thought show a rational and scientific comprehension of the disease from which society is at present suffering"; and the volume ends at the very last with a resounding phrase which sufficiently indicates its quality: "One Tax, One Freedom, One Kingdom, and One God."

The separately printed supplement to the January number of the *American Journal of International Law* gives translations of the various treaties entered into by the Balkan belligerents: that of February 29, 1912, between Bulgaria and Servia, with a secret appendix, and an agreement between the general staffs of the two armies; of May 20, 1913, between Turkey and the Balkan allies; of July 28 and August 10, 1913, between Bulgaria, Rumania, Greece, Montenegro, and Servia, with protocols annexed; of September, 1913, between Bulgaria and Turkey, and of November 11, 1913, between Turkey and Greece, with protocols annexed. In addition to these Balkan documents is given the United States proclamation of November 21, 1913, prescribing rules for the measurement of vessels for the Panama Canal. In the *Journal* itself a valuable paper contributed by Mr. A. Schvan embodies suggestions for a combination between the two great Anglo-Saxon Powers, for the maintenance of naval peace, Great Britain having for her sphere the Atlantic and the United States the Pacific Ocean. Mr. Schvan recognizes that with only one of the great Powers, the United States, are war interests of comparative insignificance; but this "splendid" isolation in his view is in danger of diminution, under the ever-increasing interdependence of trade, shipping, and finance. He trusts to the Dominion, on our northern border, and other outlying great provinces, to prevent England from forgetting that she has a greater rôle to play as the centre of a world-wide empire than as one of the historical Powers of Europe. He believes that a clear division of naval responsibilities would be all-powerful for the maintenance of peace on the high seas, with, as a corollary, the discouraging of military exploitation on the land. Another elaborate paper is the first part of Mr. Roy Emerson Curtis's "Law of Hostile Military Expeditions as Applied to the United States." Denys P. Myers presents a study of "Representation in Public International Organs," with a very complete array of citations. The editorial comments are valuable and instructive, as are the summaries of international events and of public documents relating to international law.

Prof. Herbert E. Bolton's "Guide to the Materials for the History of the United States in the Principal Archives of Mexico" (Carnegie Institution of Washington) is one volume of a series that is designed to render more accessible to historical students the manuscript sources for American history in foreign archives. In the long and often lean years of American historiography, no single undertaking has been so full of promise as has this effort of the Carnegie Institution of Washington to break away from the customary routes of historical travel, and to strike out into new and largely untrodden fields. With the materials in the United States, Spain, Italy, Germany, Canada, Cuba, and Mexico already fairly outlined; with the volumes on England nearly complete, and those on France approaching completion; with reports on Switzerland, the Netherlands, and Sweden under way, and that on Russia projected, the process of orientation is well begun, and the task of construction is already awaiting the builder. But a history of our colonial and national periods is not a matter of days but of years, and in years not of decades but of generations.

Mr. Bolton's "Guide" is the result of five summers spent in Mexico, followed by a period of sixteen months devoted to the actual gathering of information. To any one familiar with the difficulties of a task of this kind—pioneer work often of the hardest and most perplexing character—it will not be necessary to read the author's preface to be impressed with the value of what he has done. Other volumes of the series will bear more directly upon leading phases of our history, but none will show more strikingly the intrinsic perplexities of the problem that every one engaged in this undertaking has had to face. In Mr. Bolton's case more than half the working hours spent in the archives were devoted to the physical tasks of searching for and handling manuscripts; many additional hours were consumed in the presentation of credentials, and the gaining of admission to the various repositories visited; while the remaining hours were taken up with the dreary business of studying the material thus unearthed. The conditions in Mexico were particularly discouraging, and the investigator left his work there, as other investigators have left their work elsewhere, with the feeling that the resources of the archives had been far from exhausted, and that even those collections which were examined were but part of a larger whole that will have to be dealt with some day.

Prof. Rudolf Eucken, the idealist of Jena, has written two more books, which have been promptly translated, and published by Putnams. They are "Knowledge and Life," translated by W. Tudor Jones, and "Ethics and Modern Thought," translated by Margaret von Seydewitz. The first is a portion "of a greater work already planned," which was interrupted by the author's visit to America; the second consists of the Deem lectures delivered last year at New York University. We have taken the pains to read these books, before putting them upon the shelves, though (after a dozen or so volumes of Eucken) without expectation; and our lack of expectation has been verified. They contain scarcely one distinguishably new idea, if, indeed, a new phrase. Yet they are not therefore to be summarily condemned. Some men can sing a song with as much sincerity the thousandth time as the first; and Eucken, especially in "Knowledge and Life," tells the tale of the independence of the spiritual life with the same freshness and vigor of eloquence (well rendered by Mr. Jones's translation) as if he had never told it before. As usual, he is at his best in the critical summaries of prevailing tendencies of thought. His positive construction, showing that knowledge and life are aspects of one movement, continuous yet always revolutionary of previous schemes of life, resists clear statement and leaves one, as usual, with an expectation always just to be satisfied. Yet to one who has not read Eucken the book may be recommended.

Books on "The Greatest Books in the World" always attract some readers and evidently still find publishers; but it may be doubted whether the above title ought to have been chosen by Laura Spencer Portor for her little volume (Houghton Mifflin) on "The Odyssey," "The Divine Comedy," "Goethe's Faust," "The Arabian Nights," "Don Quixote," "Pilgrim's Prog-

ress," and "The Book of Job." She shows neither familiarity with original sources where that alone might justify adding one more comment to the thousands that have been made on Homer, Dante, and Goethe, nor originality of thought, nor charm of style. There is much vagueness and dim speculation throughout, together with, as always in such cases, some unsupported positiveness. She finds "every evidence that Homer had a broader and deeper experience of life than comes to most men"; but it would be superfluous to comment further on a wholly superfluous book.

Prof. Rufus Byam Richardson, the archæologist, who died on March 10, was born in Westford, Mass., April 18, 1845. He graduated from Yale in 1869, and received the degree of Ph. D. in 1878 and of bachelor of divinity in 1883. From 1880 to 1882 he was professor of Greek at the Indiana University, and from 1882 to 1893 at Dartmouth. From 1893 to 1903 he was a director of the American School of Classical Studies at Athens. He excavated the ancient gymnasium at Eretria, and the site of ancient Corinth. Prof. Richardson edited Æschines's Oration against Ctesiphon, 1889, was a contributor to the *American Journal of Archæology*, and the author of "Vacation Days in Greece," 1903, "Greece through the Stereoscope," 1907, and "History of Greek Sculpture," 1910. He was a member of a number of archæological societies.

John Brown Dunbar, who died on March 12, was born April 3, 1841, at Bellevue, Neb., at that time Indian country. Mr. Dunbar was brought up among the Pawnees and was considered an authority on their language, grammar, and customs. He assisted Father Gailland, of St. Mary's mission, in the preparation of a Pottawatami grammar and dictionary, and furnished the late Daniel G. Brinton with a collection of Indian songs, Pawnee, Arikara, Caddo, and Wichita. He contributed an important series of articles on the Pawnee Indians to the *Magazine of American History*, wrote an appendix on the Pawnee language for Grinnell's "Pawnee Hero Stories and Folk Tales," and was the author of a number of papers on Indians and early Western history.

Allan Forman, well known as an editor and dramatic critic, died on March 13. Mr. Forman was born September 27, 1860, at Mattituck, Long Island, N. Y. After taking a special course in English literature and economics at Williams College, he started the Brooklyn *Advance* in 1881. He served as dramatic critic for various papers for five years, and established the *Journalist* in 1884, which, except during three years of travel in Europe, he continued to conduct till his retirement in 1908.

The death in England was announced recently of Christian David Ginsburg, who was one of the original four members appointed by convocation for revision of the English version of the Old Testament. Dr. Ginsburg was born December 25, 1831, and received the honorary LL.D. from Glasgow University in 1857. He was the author of a number of works of Biblical criticism, including commentaries on the "Song of Songs," "Ecclesiastes," and "Leviticus," and a critical text of the Hebrew Bible. He was also a contributor of numerous articles to encyclopædias.

Alfred Charles Edwards, editor in chief of *Le Matin*, Paris, who died recently in that city, was born at Constantinople on July 10, 1857. He was the founder and for many years editor of *Le Matin*, and had previously been connected with *Le Figaro*, *Le Gaulois*, and *Le Clarion*.

Science

PROFESSOR SEE.

Brief Biography and Popular Account of the Unparalleled Discoveries of T. J. J. See. By W. L. Webb. Lynn, Mass.: Thomas P. Nichols & Son Co. $2.50.

Truly this is a daring book, everywhere abounding in parlous surfeit of superlatives. Its subject, Professor See, has thought thoughts as vast as the universe itself, and has surely acquired the cosmic attitude of mind. By heredity "a typical Missourian in every sense," the infant See, we are told, first saw the light on the 393d anniversary of Copernicus's birth, weighed nearly ten pounds, suffered from a "croupy tendency," showed himself "every inch a natural philosopher" by speculating on the origin of sun, moon, and stars at the tender age of two, never so much as dreaming that he should grow into a "little boy with methodical methods," and one day become "the greatest astronomer in the world."

This biographer believes in his subject heart and soul: he leaves the reader in no manner of doubt about it, following the "triumphant career with unabated enthusiasm." With agility the youthful See passes from Steele's "Fourteen Weeks in Astronomy" to Laplace's "Mécanique Céleste," side-steps the University of Chicago, and publishes his first volume of researches himself, probably his most important work so far. Later President McKinley appointed him professor in the navy. After brief duty in the East, he was ordered to Mare Island, where during the past twelve years he has pursued researches in universe building to which has not as yet been accorded that full acceptance which their author and his biographer seem to believe has been the case.

Professor See has published many extended papers in the "Proceedings of the American Philosophical Society of Philadelphia," where they have the widest circulation; but so far his revolutionary theories seem only in small part acceptable to his scientific contemporaries. Rather more than half the present book is See's own, a reprint of papers and addresses in which he sets forth in his positive fashion the views which have enabled him to establish on an impregnable basis the two new sciences of cosmogony and geogony: at least that is what his biographer says. Looking into details, we find no especial novelty in his new theory of earthquakes. John Michell (1760) put forth the same idea: subterranean sea-water turned into explosive steam. Whether right or wrong, Professor See is skilled in clear exposition of his ideas. He tells how, on his theory, the mountain ranges have been formed by the expulsion of lava from beneath the earth's crust, pushing it up in one place and permitting it to sink down in another, so that matter is transferred from one place to the other by the movement of lava streams beneath the cool, solid crust of the globe. As for any such secular action of the ocean in uplifting the land, one must close the eyes to the thousands of miles of ocean coast that are not elevated. There are many oceans with abysmal depths off their coast, but no mountains adjacent on the land; indeed, it would help the theory not a little if the Atlantic Ocean did not exist at all. The shallow Mediterranean hardly accounts for the Alps, nor do the moderate depths of the Indian Ocean for the Himalayas. It must be said that geologists have shown no marked unanimity in thinking Von Zittel, and Suess, and Geikie, and Lyell, and Dana, and Chamberlin all wrong, and See alone right. "A decillion decillions to one" may be the chances in favor of his theory, as See sees them, but geologists appear to think very differently.

Coming now to his celestial researches, astronomers are ready to acknowledge their debt to Professor See for agitating in England the question of publishing Sir William Herschel's voluminous papers, for nearly a century accessible only in the scattered "Philosophical Transactions," but now made available in collected form through the collaboration of the Royal Society and the Royal Astronomical Society, under the competent editorship of Dr. Dreyer, of Armagh.

Concerning his own work Professor See well says it is most significant that his laws would unite all the different classes of heavenly bodies into one continuous and unbroken whole. Nothing could be more acceptable than such a scheme of origin and connection, provided it can be shown to be reasonably true. His capture theory has points of interest, and some astronomers are disposed to regard portions of it with favor. Many generations, however, must pass before it can be definitely accepted; meanwhile the opinions of other experts are entitled to due consideration.

See's biography is profusely illustrated with fine half-tones, for the most part from photographs, terrestrial and celestial. There are also portraits of many eminent astronomers, from Her-

schel to Huggins; a swaggering one of the Hon. Champ Clark, whose national lustre now receives sensible accretion as "member of Congress from Professor See's home district in Missouri." This is a unique story which may enhearten many a struggling youth with a deathless ambition.

Dr. Thomas Morgan Rotch, professor in the Harvard University Medical School, who died last week, was born in Philadelphia in 1849. He graduated from the academic department of Harvard in 1870, and four years later from the medical department. He was the medical house officer of the Massachusetts General Hospital during 1873-74, and studied in European hospitals in 1875-76. He was a lecturer from 1878-88, assistant professor in diseases of children from 1888-93, professor from 1893-1903, and professor of pediatrics since 1903. Dr. Rotch was the author of several medical books, among them a textbook on "Pediatrics," and one on "The Röntgen Ray in Pediatrics." He was also a contributor to medical journals.

Sir John Murray, the naturalist and oceanographer, was killed in an automobile accident at Edinburgh, Scotland, on March 16. Sir John was born at Coburg, Ontario, Canada, on March 3, 1841. He was educated in the public schools of London, Ontario, at Victoria College, Coburg, at Edinburgh University, and in Germany. He was one of the naturalists on the famous voyage of the Challenger, 1872-76, and was first assistant of the staff appointed to publish the scientific results of the Challenger expedition, 1876-82, becoming editor in 1882. He was a member of the Triton and Knight Errant explorations in the Faröe Channel, and took part in numerous other explorations. Sir John was created K. C. B. in 1898, was a Fellow of the Royal Society, an LL.D., a D.Sc., and Ph.D., and was the recipient of various foreign orders and honors. He was the author of a number of works and reports on oceanography and kindred subjects, and was an honorary member of a large number of British and foreign scientific societies.

Edward Singleton Holden, who died on Tuesday, was born at St. Louis, November 5, 1846. He graduated from Washington University in 1866, and from the United States Military Academy in 1870. He left the army in 1873, and from then till 1881 was professor of mathematics in the United States navy. He was director of the Washburn Observatory, Wis., 1881-85; president of the University of California, 1885-88; director of the Lick Observatory, 1888-98, and had been librarian of the United States Military Academy since 1901. Dr. Holden received the LL.D. from the University of Wisconsin and from Columbia; was a member of various American and foreign learned societies, and was the author of many books on astronomy and other subjects. Among his miscellaneous writings may be mentioned: "Bastion System of Fortification," 1872; "Life of Sir William Herschel," 1881; "Mogul Emperors of Hindustan," 1895; "Primer of Heraldry," 1898.

Drama

THE CHICAGO THEATRE SOCIETY.

Chicago, March 13.

The Chicago Theatre Society, which was formed in 1911, has not attempted to lease and operate a theatre by the season, or to organize a repertory company of its own. The directors have recognized that this would necessarily throw upon them a mass of detail which they had not the experience to handle. The general plan has been to make contracts with producing managers, guaranteeing a minimum share of gross receipts for engagements played under the auspices of the Society. The exact nature of these contracts and the amount of financial risk has varied considerably, but in no case has the Society invested capital before the opening of an engagement or assumed the actual lease of a theatre. It has, therefore, always been possible to compute the maximum liability.

The first venture under such an arrangement was a ten weeks' engagement of the Drama Players at the Lyric Theatre in February, March, and April, 1912. This company, supplied by the Shuberts, was organized and directed by Mr. Donald Robertson, who had been instrumental in forming the Society, and made up of well-known and competent actors, among whom were Mr. Herbert Kelsey, Miss Effie Shannon, and Miss Hedwig Reicher. Rehearsals were begun in October, 1911, and a series of bookings arranged prior to the opening in Chicago. Nine plays were selected by Mr. Robertson and the executive committee, subject to the approval of the Shuberts, but the financial responsibility of the Society was confined to guaranteeing the receipts of the ten weeks in Chicago, and all other expenses, including the salary of the director, were paid by the producing company. The net result of the season, from the treasurer's point of view, was a loss of about $35,000, or approximately 60 per cent. of the Society's guarantee fund.

On the artistic side, it is not so easy to arrive at a definite statement of results. Of the plays produced, three were entirely new works by American authors, three were new translations of successful foreign plays offered for the first time in America, and the other three, Ibsen's "Lady from the Sea," Molière's "The Learned Ladies," and Pinero's "The Thunderbolt," were virtually new to Chicago audiences. The last-named group proved to be the most successful, while the American plays failed to arouse any particular interest. It is possible that some of the apathy displayed by the public was due to the fact that nothing was attempted in the "new manner of stagecraft," and that there was nothing either in the plays or in the method of their presentation to set them noticeably apart from the offerings of the other first-class theatres, but I am more inclined to account for the lack of support in other ways. The director, for instance, was embarrassed by a system of season-seat reservations for fixed nights, which made it necessary to withdraw certain plays at the very moment when they had begun to make a popular appeal, and to substitute others which had not been so successful. This handicap alone should account for a loss of several thousand dollars. The Lyric Theatre in itself was hardly suitable for the purposes of the Society. It had never been properly established in the minds of the theatre-going public as a successful playhouse. It was too large, and when only partly filled was anything but homelike and intimate.

In the search for new American material, Mr. Hamlin Garland and others toiled valiantly, but it was discouraging to find that, while the general level of craftsmanship in the plays submitted was surprisingly high, there were no pieces of conspicuous excellence or originality, and that the playwrights of already established reputation apparently did not think it worth while to offer new works. Add to this a general lack of interest in the repertory idea and the suspicion on the part of the average theatregoer that, since the venture was subsidized, it must be an attempt to educate his taste (an idea which he bitterly resents), and you have some of the elements which contributed to the heavy tax upon the guarantors.

For the second season, the Society found it impossible to raise enough funds to repeat the experiment with the same or a similar company. It, therefore, decided to limit its activities to guaranteeing the pay-rolls, travelling expense, and necessary advertising of certain productions which would not otherwise be brought to Chicago. By special arrangement, the Society obtained the use of the Fine Arts Theatre, which seated about six hundred people, agreeing to pay rent only for such time as it was used for the Society's purposes. Thus was arranged and carried through a season of eighteen weeks, during which time fifty-one different plays were presented, among them about twenty-eight short pieces of one or two acts. The season opened with one week of the Coburn Players in "Electra," "Iphigenia," "Macbeth," and "Twelfth Night." They were followed by one week of the Hull House Players, a local semi-amateur company, in Galsworthy's "Justice" and "The Pigeon" and Masefield's "The Tragedy of Nan." After this came two weeks of "Anatol" from the Little Theatre in New York, four weeks of the Irish Players, and a four weeks' engagement of an English company

playing Stanley Houghton's "Hindle Wakes." Beginning March 17, Miss Horniman's Players, from the Gaiety Theatre, Manchester, occupied the theatre for four weeks, presenting six modern English plays and three revivals of old comedies. From April 21 to April 26, Miss Edith Wynne Matthison and her company appeared in a revival of "Everyman" and during the following two weeks presented four short plays, including "The Terrible Meek" and "The Necessary Evil," by Charles Rann Kennedy. There were also, earlier in the season, a special production of "The Drone," by Rutherford Mayne, given at four matinée performances, and one evening and one matinée performance of four short American plays by the Wisconsin Dramatic Society.

Thus far two engagements have been played under the auspices of the Society during the current season: four weeks of "The Yellow Jacket" and twelve weeks of repertory under the direction of Mr. B. Iden Payne. Mr. Payne was one of the early stage managers of the Irish Players, and afterwards for several years the director of Miss Horniman's company in Manchester. His company, which was necessarily smaller than the one which played at the Lyric during the first season, included Miss Mona Limerick, Mr. Walter Hampden, Mr. Whitford Kane, Mr. Dallas Anderson, and a number of actors and actresses who had gained their experience in the English repertory theatres. Only three weeks of rehearsals were possible before the opening, and the labor of putting up a new bill for each week of the engagement proved a most severe tax upon the skill of the director and upon the strength, willingness, and resourcefulness of the actors. The general average of the acting and of the stagecraft displayed was extremely good under the circumstances; and the simplicity and sincerity of the productions justified, I think, the belief of the executive committee that, in spite of meagre attendance and much misunderstanding of its aims and intentions on the part of the critics, the Society has to its credit an effective achievement. It is expected that the total loss to the Society will be less than that of last season.

From the foregoing survey it will be apparent that, while the Chicago Theatre Society has not actually maintained a repertory company of its own, the whole experiment has been along the general lines of the so-called "repertory movement," and has tended towards the ultimate establishment of a permanent company under the control and sponsorship of the Society. This may be a matter of the near future, or it may still be a long way off. The season at the Lyric, the engagements of the Irish Players and of Miss Horniman's Players, and more especially the twelve weeks just closed, have tested the present attitude of the public and of the critics towards the repertory idea. There is no indication that this attitude is likely to undergo a radical change. For it is rash to assume that the public can be consciously educated in the theatre. What can be done is to offer to those people who are already genuinely interested in plays and methods of presentation not yet commonly found in other theatres a chance to gratify their taste. If such a policy is followed, without a truckling to sensationalism or a leaning to moonshine, and above all without any assumption of cultural superiority towards those who are frankly more interested by some other form of entertainment, it is safe to count upon an already existent portion of the public which (I quote here from a letter of Mr. Winthrop Ames), "can be slowly unified into a supporting and increasing audience."

KENNETH SAWYER GOODMAN.

AN APOSTLE OF MODERNITY.

European Dramatists. By Archibald Henderson. Cincinnati: Stewart & Kidd.

Mr. Henderson is an apostle of modernity. Like the faithful of other cults, he adopts his creed once for all in its unsifted integrity. The simplicity and expedition of this method are beset with the drawback that what is received as *à priori* impeccable often turns out on experiment to contain ingredients that are uncongenial or meaningless to the docile worshipper. In such a perplexity Mr. Henderson is the last man to cavil or temporize. He duly subordinates or piously suppresses his own unreasonable feelings; far be it from him to set up his impertinent instincts in the face of works sustained by the twofold vouchers of contemporaneity and eminence. In Mr. Henderson's sacerdotal or ceremonial praise of pessimists and iconoclasts for whom as a mere man he entertains the most wholesome indifference, we seem to hear some genial and humane Calvinist of the early nineteenth century enlarging with perfunctory ardor on the merits of original sin and eternal punishment. Mr. Henderson, as man to man, cares nothing for Ibsen; but he praises Ibsen with a gusto that makes us really quite impatient of those tepid and half-hearted proselytes, Mr. Archer and Mr. Gosse. He does not in the least like Strindberg, but he ransacks his own comprehensive and tri-lingual vocabulary for epithets of praise that would sound fulsome to Mr. Björkman.

The truth is that Mr. Henderson, American citizen and householder, is, in no true sense, the author of the book called "European Dramatists." He has evoked a phantasm or spectre of himself—a constructive entity, so to speak—whose function it is to consume latter-day literature in quantities that defy measurement, to enjoy them hugely, to praise them without stint, almost without mercy, and to indite copious essays for a receptive public. The real Mr. Henderson—a plain, kind, healthy American citizen, no doubt, like the rest of us—very properly goes about his business and, beyond the needful concession of his name, repudiates all share in these extraordinary proceedings. But, no, we exaggerate; there are scattered passages in which the live man has, for a page or two, snatched the pen from his aerial secretary or "affable familiar ghost." The said living man wrote the criticism of Strindberg's "Easter," of Maeterlinck's "L'Intruse" and "Blue Bird," and of Barker's "Prunella," and he nods at us now and then over the shoulder of his industrious substitute, when the latter deals with theatrical performances.

We think it needless to pass in minute review the opinions of a book constructed in this fashion. That Mr. Henderson's spectral collaborator should trouble himself little with definitions, distinctions, qualifications, explanations, and the other adjuncts to precise and lucid thinking is a fault too natural to incur censure: these are the functions of a living organism. It is excusable, likewise, that this airy personage should express himself in a somewhat windy and inflated style, a style teeming with polysyllables which he enjoys in the measure of their sonority and their abstractness, and of many of which he clearly understands the meaning. We confess that we have reaped most profit from the papers on the genesis of Ibsen's drama and on Granville Barker, which draw heavily on the author's abundant stores of knowledge and which illustrate the happy property inherent in facts of retaining their specific gravity, when everything in the neighborhood tends to rarefy and dissipate. Some day Mr. Henderson may quarrel with his literary factotum, and, in a fit of honest indignation, sit down and write a book himself: the day will be a luckless one for Ibsen and Strindberg, and a happy one for his reviewers.

"AS YOU LIKE IT."

Margaret Anglin's representation of "As You Like It," in the Hudson Theatre, is a most workmanlike achievement, marked by notable intelligence if not by much inspiration. Its excellences include a much greater reverence for the text than is commonly exhibited, some exceedingly clever stage management—especially in the ordering of the forest scenes—swift, smooth, and spirited action, and admirably painted scenery, not so spectacular as to block the progress or mar the proportions of the piece, but sufficiently beautiful to give pleasure and promote illusion. Unfortunately, the Rosalind of Miss Anglin—the designer and directress of this production—is

not so successful as the framework which she has prepared for it. Her impersonation has its distinctive merits—spirited execution, humor, archness, coyness, dignity, and refinement—but it suffers constantly from over-accentuation, a certain hardness that creates the appearance of artificiality, while it is curiously lacking in fanciful or poetic suggestion. The actress insists so strongly upon some of her points as almost to incur a charge of affectation, of which the merest suspicion is necessarily fatal to the charm of Rosalind's character.

Miss Anglin was most successful in the first act, where her retort upon the banished duke was delivered with admirable feeling and dignity, and in the scene with the bloody 'kerchief. In the purely comic or fanciful episodes she betrayed a self-consciousness which may have been due to anxiety, but robbed them of much of their appropriate charm. If her idea was to express Rosalind in terms of modern naturalism, she made a mistake which she will do well to rectify. Romance and realism are seldom compatible. This was exemplified, more or less, in the realistic Jaques of Fuller Mellish, a clever study executed with fine consistency and precision, but one that took little note of the sardonic vein in Jaques's character. Sidney Greenstreet's Touchstone was another performance which was good mechanically, but poor in imagination. It had none of the quaint, wistful quality of which the old comedians made so much. The Celia of Ruth Boucicault was good, and Pedro de Cordoba was a virile and attractive Orlando, especially in the earlier acts. The Corin of Max Montesole had uncommon merit—a capital bit of Shakespearean character—and E. Y. Backus and Harrison Carter, as the banished and usurping dukes respectively, both did well. In general quality the performance was far superior to several more pretentious modern Shakespearean revivals. J. R. T.

NOTES.

"Cymbeline" was the last volume of the New Variorum Edition of Shakespeare (Lippincott) to come from the hand of the late Horace Howard Furness. Indeed, the critical apparatus was not quite complete at the time of his death, and so the usual articles on the State History of the Play, Actors' Interpretations, and the List of Books consulted are wanting in this volume. The Index has been compiled by Dr. Benson B. Charles, of the University of Pennsylvania. Fortunately, the Preface, the elaborate notes on the text, and the discussions of the source of the plot and date of composition were left ready for the press. The merits of this edition are so well-known that we need not dwell on them here. With regard to the question raised by Prof. A. H. Thorndike, as to the influence of Beaumont and Fletcher's "Philaster" on Shakespeare's latest group of plays—the so-called "romances"—and on "Cymbeline," in particular, Dr. Furness very sensibly concludes that the evidence is too uncertain for us to reach any decision. It is a question of priority and in view of the meagre data that have come down to us no one can say whether it was Shakespeare or the younger dramatists that led the way. For the rest, Dr. Furness's estimate of the play strikes us on the whole, as too low. Moreover, he tries to thrust upon some hypothetical collaborator virtually all responsibility for what is inferior in the work. His theory is stated in the following words:

> Regarded broadly, I believe that the Imogen love story and all that immediately touched it interested Shakespeare deeply; the Cymbeline portion was turned over to the assistant, who at times grew vainglorious and inserted here and there, even on the ground sacred to Imogen, lines and sentiments that shine by their dulness. Nay, one whole character was, I think, confided to him. It is Belarius—who bored Shakespeare.

In support of his views Dr. Furness cites a number of lines which are objectionable on the score of slovenliness of style or of inconsistency with the character of the speaker. It would be pleasant if by so simple a device we could relieve our favorite authors of the blemishes that offend us in their works, but Shakespeare, like the rest of us, will have to bear the responsibility of his own sins. Most critics will readily grant that the scene containing the vision of Posthumous is spurious. There is likely to be more skepticism in regard to the supposed defects of the final scene. It is a different matter altogether, however, when we are asked to reject scattered lines and fragments of lines here and there throughout the play in scenes whose authenticity is unquestioned. Professor Dowden and others have already remarked on the signs of declining energy that are observable in certain parts of "Cymbeline" and the weaker passages on which the present editor has laid his finger may well be referred to the same general cause. The truth is that in selecting a chronicle background for the central romantic theme Shakespeare did not make a very happy choice, and even his own interest, doubtless, slackened in the face of the inherent dulness of the subject. That the decline mentioned above was only temporary, however, is clear from the two plays that followed—"Winter's Tale" and "The Tempest"—in each of which we have romance, pure and simple, set forth in a style that shows no flagging from beginning to end. But, after all, when we think of "Cymbeline," we think first of Imogen, and this character alone suffices to make the play worthy of the group to which it belongs.

George Middleton, well and favorably known as an author of short plays, has now produced a three-act comedy, "Nowadays" (Holt), which is notable not only as a sane and veracious study of contemporary life, but for dramatic qualities which ought to make it valuable in the theatre. Dealing with the relations of the sexes, and making a strong and effective plea for a more equal partnership for women in the opportunities and responsibilities of life, it shows a philosophic realization of the limitations imposed by nature and the hard facts of existence. The story, free from all sensationalism or extravagance, is strong in the naturalness of its situations and the vitality of its contrasted personages. William Dawson, a prosperous contractor, and a liberal and affectionate man, is nevertheless, by training and instinct, a domestic tyrant. His creed is that a wife, if comfortably provided for, should find a full life in caring for her home, children, and husband; that girls, except in case of necessity, should regard marriage as the sole respectable means of livelihood, and that boys should succeed to their father's business or follow his direction. But he is willing that his son should have a liberal education, see something of the world, and have an opportunity of sowing a few wild oats. For twenty-five years he has ruled his family in accordance with this policy, unsuspecting that he has robbed his wife of the zest of life by crushing her artistic ambition. When his daughter, who has inherited his dominant will and her mother's idealistic spirit, insists upon going to New York to study sculpture, he refuses to aid her, hoping that she will be starved into submission, but continues to let his son, a selfish young wastrel, run free, with a large allowance. The result is that the lad marries a pretty but foolish girl, whom he soon abandons shamelessly, together with the partnership bestowed upon him by his father, while Mrs. Dawson, driven into temporary revolt, breaks her fetters and joins her daughter, who has won a great prize in a public competition. In the end old Dawson capitulates, agreeing to meet his wife's wishes in every respect, but in the meanwhile Mrs. Dawson has discovered that her artistic faculties have been paralyzed, and she patiently returns to the old drab existence at home, content to mother the deserted wife and her infant. The daughter, with the prospect of fame and fortune before her, offers her hand to the man who has long loved and encouraged her, but has never proposed marriage, fearing that his poverty might be a bar to her artistic progress. She decides that they will work together, that woman's nature needs a mate for its full development, and that life is not complete without the child. This is a simple tale, without a shock or thrill in it, but steadily interesting and entirely human. All the characters are depicted with fidelity and consistency; the dialogue is good, and the plot logical in its outcome.

Mr. G. K. Chesterton's "Magic" is to be succeeded at the Little Theatre in London by "Love's Labour's Lost." This piece was selected by Charles J. Mathews and his wife, Mme. Vestris, for the opening of their season at Covent Garden on September 30, 1839. No one, not even the oldest actor in the theatre, had ever seen it played. The cast included James R. Anderson, Robert Keeley, John Pritt Harley, Mrs. Nisbett, and Mme. Vestris (as Rosaline). Unfortunately Mathews closed the shilling gallery, and the admission to the lower gallery was reduced to 1s. 6d. The "gods" resented this curtailment of their liberties, and the comedy was interrupted, often stopped, and all but "damned" by the tremendous noise and uproar. At last a man carrying a placard on a pole gave the malcontents to understand that

the shilling gallery would be restored on the following night. There were, however, only nine presentations of the play at Covent Garden.

F. R. Benson's American tour prevents him from assuming the management of the Stratford-on-Avon Festival this year, and the programme has been arranged by the executive committee of the Shakespeare Memorial. The proceedings, which will occupy two weeks, will be opened on Monday afternoon, April 20, by Sir Herbert Tree, who will produce "Othello," playing the Moor to the Iago of H. B. Irving and the Cassio of Henry Ainley. On the evening of that date Arthur Bourchier will be seen as Shylock. On Thursday, April 23, Shakespeare's birthday, Mr. Bourchier will act Benedick. Miss Margaret Halstan will act Portia in "The Merchant of Venice" and Beatrice in "Much Ado About Nothing." In addition to playing Iago, H. B. Irving will appear as Hamlet. Oscar Asche and Miss Lily Brayton have been approached with a view to their playing in "The Taming of the Shrew." The general direction of the festival this year has been entrusted to Mr. Patrick Kirwan. During the festival Mr. Kirwan will produce two old plays, "The Two Angry Women of Abington" and "A Woman is a Weathercock." The first of these, which was not divided into acts, was published in 1599. The scene lies in London. Its full title is "A Pleasant Historie called The Two Angrie Women of Abington; with the Humorous Mirth of Dick Coomes and Nicholas Proverbs." Of the five plays by Henry Porter which are mentioned in Henslowe's "Diary," this is the only one extant. Charles Lamb praised it. "A Woman is a Weathercock" is of somewhat later date. It was acted before James I at Whitehall and "divers times privately at the White-Friers, by the children of her Majesties Revels." Published in 1612, it was dedicated "to any Woman that has not been a weathercock." The author, Nathaniel Field (1587-1633), was a player as well as a playwright. He also wrote "Amends for Ladies," 1618, and he shared with Massinger in the authorship of "The Fatal Dowry," 1632, first acted at "Black-Friers."

Music

FOLKSONGS

Afro-American Folksongs. By Henry Edward Krehbiel. New York: G. Schirmer. $2 net.

About thirty years ago Lafcadio Hearn conceived the idea of a book on negro music of which he and Mr. Krehbiel were to be the joint authors. He was to write "a long preface and occasional picturesque notes" to go with his friend's "learning and facts." He would begin by showing how the blacks "carry their music with them to Persia and even to mysterious Hadramant, where their voices are held in high esteem by Arab masters." Then he would "touch upon the transplantation of negro melody to the Antilles and the two Americas, where its strangest black flowers are gathered by the alchemists of musical science and the perfume therefrom extracted by magicians like Gottschalk."

This book, unfortunately, never was written; but Mr. Krehbiel continued to study the subject, as he had already done for a decade, and to gather material for a volume of his own, which is now before us. It is not an attractive book to the eyes, and the numerous quotations are printed in type so small that one almost needs a microscope to read them; but these shortcomings must be overlooked because of the value of the material contained between the covers of this "study in racial and national music," as the subtitle calls it. A good deal of this material is but loosely connected with the main thesis of the book, but it is interesting to students of music and anthropology, although the frequent digressions make it difficult for the average reader to follow the argument.

What Mr. Krehbiel has attempted to prove is that Dr. Wallaschek, the author of a valuable book on "Primitive Music," was wrong when he expressed the opinion that the songs of the American negroes are very much overrated and that, as a rule, they are "mere imitations of European compositions which the negroes have picked up and served up again with slight variations." In Mr. Krehbiel's opinion, the songs of the black slaves of the South are original and native products:

> They contain idioms which were transplanted hither from Africa, but as songs they are the product of American institutions; of the social, political, and geographical environment within which their creators were placed in America; of the influences to which they were subjected in America; of the joys, sorrows, and experiences which fell to their lot in America.

Of the conditions under which the negro songs were born this volume presents vivid pictures, cited from diverse authors; sketches which explain why so many of the songs are "spirituals," and why more of them are gay than might be expected under the circumstances. This leads to a discussion of the psychology of the major and minor modes, concerning which interesting facts are brought to light. On examining the negro folksongs in six collections Mr. Krehbiel found that 331 were in the major mode, 62 in ordinary minor, 23 mixed and vague, 111 pentatonic, and so on. The pentatonic scale and the use of the "snap" or "catch," which characterizes three-fifths of the songs and which in an exaggerated form lies at the basis of "ragtime," are the two most obvious features of the Afro-American folksongs and therefore the most frequently copied by composers and dance-makers; but, as the author says, "there is much more that is characteristic in this body of melody, and this 'more' has been neglected because it has not been uncovered to the artistic world." His object is to uncover these elements. He admits that, while the folksongs originated in this country, "the essential elements came from Africa"; and to Africa, therefore, he takes the reader in a chapter in which he learnedly discusses the many kinds of slaves, their aptitude and love of music, and their knowledge and use of harmony. Other chapters are entitled Folksongs in General, Songs of the American Slaves, Religious Character of the Songs, Variations from the Major Scale, Minor Variations and Characteristic Rhythms, Structural Features of the Poems, Funeral Music, Dances of the American Negroes, Songs of the Black Creoles, Satirical Songs of the Creoles.

In this diversity of topics and digressions one is surprised to find no discussion of the relations between the songs of the American negroes and those of Stephen Foster. This omission is doubtless due to the fact that Mr. Krehbiel accepts the old-fashioned and foolish definition of some of the German writers, who allow no song to be called a folksong if its composer is known, even though it be in all other respects exactly like acknowledged folksongs. It is a definition which would exclude from the collections of folksongs all those the composers of which might happen to be discovered to-morrow! Stephen Foster's songs are true folksongs in every possible way except that their composer's name is known. Nor are they the only songs which disprove the writer's statement that the negroes of the plantations alone lived under conditions which are essential to the development of true folksong. We have white and red as well as black folk music. What is more, the white and red music is purely American, whereas in the case of the negro folk-music "the essential elements came from Africa," as Mr. Krehbiel admits and proves. In this he was anticipated by Jeannette Robinson Murphy, of Orlando, Florida, who, in her "Southern Thoughts for Northern Thinkers," gives a more minute and vivid description of the characteristic "trimmings" of negro song than are to be found in the volume under review.

As for the numerous songs printed in Mr. Krehbiel's volume it need not worry any one that while he would have preferred, as he admits, to present them without harmonic additions, he nevertheless does present them with such. Students may disregard these additions. At the same time, as long as harmonies were added, it should have been done after the methods followed by Grieg in Norway and Harvey Worthington Loomis in his arrangements of Indian

tunes, making the harmonies as exotic as the melodies, instead of following the rules laid down in Richter's manual of harmony.

At a recent recital of Julia Culp, the audience was much pleased with two songs by John Alden Carpenter, included in the collection of six settings of poems from Rabindranath Tagore's "Gitanjali." Mr. Carpenter discovered the worth of these poems and set them to music long before Tagore had received the Nobel prize for literature; indeed, the "Soul of India" was at that time virtually unknown in America.

The "Old Testament of Music," as Hans von Bülow called Bach's "Well-Tempered Clavichord," is offered for sale by a dealer in Munich (Rosenthalsches Antiquariat, Katalog 153) for the trifle of $8,000. It was believed until recently that the original of this work was lost; but of the Munich manuscript, sixty-two pages (out of ninety) are in Bach's own handwriting. It is thought that this manuscript belonged to his son Philip Emanuel.

Although Paderewski could not play in California, he found there a cure for his neuritis, which had delayed his appearance in New York a fortnight, and made him lose another fortnight on the Pacific Coast. At the conclusion of his Eastern engagements he will probably return to California next month and give the recitals which were postponed.

Art

French Colour-Prints of the XVIII Century. An Introductory Essay by Malcolm C. Salaman. Illustrated by fifty representative examples in colors. Philadelphia: J. B. Lippincott Co. $12 net.

The field of prints is apparently small. Yet it includes a remarkable range of possibilities because of the diversity of the media employed (etching, dry-point, line-engraving on copper, wood-engraving, mezzotint, stipple, aquatint, and what not). And it offers an infinite variety of national, racial, and individual expression. Recently added attention has been devoted to the bypaths of the subject. Under the circumstances, the French color-print was bound to have its turn, and it is perhaps more significant than surprising that two books on the subject have appeared within a year —that of Model and Springer ("Der französische Farbenstich des 18. Jahrhunderts") and the one now under consideration.

One must welcome the present book, even though some of the half-tone plates are rather flat in modelling and color. These reproductions are useful, however, since there is not much opportunity to see the originals in this country, American collectors of this specialty being few. Your reviewer, in fact, knows of but one who has achieved really noteworthy results.

At their best the eighteenth-century Frenchmen used color with tact, a sense of harmony and a certain reticence, and with a wisely appropriate choice of media without obtrusive line (for color in line is thin) or grain. Furthermore, they manipulated the medium in such manner that, as the Goncourts noted, the process, the manner, the labor which produced the effect, were quite concealed. This last statement has reference particularly to the plates in which Debucourt, Descourtis, and others worked in a mixture of aquatint and other methods.

Mr. Salaman, however, has treated not only this late eighteenth-century phase of the subject, but he takes us back to Le Blon and his early experiments, and includes within his scope the "crayon" manner and its offshoot the "pastel" manner, as well as stipple engraving. The last named, with its facile adaptation to the taste for sentimental prettiness, had its vogue more particularly in England, and is but slightly associated with French art. The earlier crayon, or chalk, manner, on the other hand, is peculiarly an expression of the French spirit, and, further, of a factor of considerable importance in the history of all reproductive graphic art; that is to say, the interest in the reproduction of drawings. It is that, too, which brought into being the basic process of the aquatint, which is the main theme of the book before us. Aquatint, the invention of which is usually connected with Le Prince, and which was often referred to as *gravure au lavis*, "wash" engraving, was evidently born of the desire to reproduce wash drawings. In numerous plates by Janinet, Debucourt, Descourtis, and others, plates "not great but engaging and decorative," the reader receives a vivid impression of the taste and life of the Louis XV and Louis XVI periods. But it is the gay, light-hearted life of the rich only that is mirrored here. It is reflected, in the language of Brownell, with "audacity of suggestion," but no "vulgarity of pictorial expression," no "offence against artistic taste." We get in these prints a picture showing only one side of the shield. The author quite aptly points out that the "great, serious, homely art of Chardin" has no place in the records of the color print, and Watteau but a very small one. It is at best the "piquant effrontery" of Boucher, and in the main the work of minor artists, which was reproduced in such terms of color. Among the artists who inspired these engravers in color—Huet, Schall, Boilly, and the rest of them—Boilly stands out; and to him Mr. Salaman devotes a good deal of space. The recent revival of interest in Boilly, however, has been anticipated by the American connoisseur who some time since brought together what is perhaps —to speak guardedly—the most complete collection of prints by or after this artist.

French color engraving must naturally not be judged from the point of view of the lover of etchings. Its object and achievement do not lie in that direction. It was not practiced as a painter-art, as a means of original expression, except by Debucourt, who was both designer and engraver. It had a quite special aim and intent. Mr. Salaman speaks of aquatint and the crayon manner as "pretty media," and in that spirit he appropriately handles his subject.

The Vasari Society continues its useful work of publishing drawings by old masters with undiminished vigor. The portfolio for the eighth and ninth years (1912, 1913) presents the usual assortment of important pieces from public museums, and, even more valuable to the student, of drawings in private collections. The policy of republishing a certain amount of familiar material is justified by the fact that the Society offers truer facsimiles and usually reproduces to scale. Thus in Portfolio VIII we find the first really adequate reproduction of the splendid drawing by Antonio Pollaiuolo, A Prisoner before the Judgment Seat, in the British Museum. Other drawings of especial note among the thirty-three are St. Martin Dividing his Cloak, by Tintoretto, from the Edinburgh Museum; fine examples of Piranesi and Antonio Canale, British Museum; two quite magnificent Rembrandt sketches from private collections; studies from a Negro's Head by Watteau. Benozzo Gozzoli, Michelangelo, Alonso Cano, Rubens, Jordaens, Hans Baldung, are other artists represented by drawings for the most part new to students. The attributions of a rather feeble sheet of pen studies to Fra Bartolommeo might awaken critical doubts. Portfolio IX contains twenty-eight plates and greater rarities. Three pieces each are accredited to Leonardo da Vinci and Rembrandt. Michelangelo, Titian, Sebastiano del Piombo, Correggio, Dürer, Koninck, Altdorfer, Jean Fouquet, Jacques Callot, and Watteau are the outstanding names. Especially noteworthy are the tiny emblematic design by Leonardo, owned by the Hon. A. Holland-Hibbert, and the bold pen sketch for Dürer's Christ on the Mount of Olives from Lord Hampton's collection. Mr. G. F. Hill, from the beginning the honorable secretary of the society, has recently resigned. Mr. A. M. Hind, of the British Museum, succeeds him. To Mr. Hind applications for membership and the subscription of a guinea a year may be sent. Few publishing clubs are more worthy of support. None offers its members a more skilful management or a better money's worth.

Arthur Parton, the landscape artist, who died on March 7, was born at Hudson, N. Y., March 26, 1842. He studied at the Pennsylvania Academy of Fine Arts, in Philadelphia, and exhibited his first pictures there in 1862. Coming to New York in 1865, he became a regular exhibitor at the National Academy of Design. He received the gold

medal of the American Art Association in 1886, and the Temple Medal, Philadelphia. He also received honorable mention at the Paris Exposition, 1900. His works are represented at the Metropolitan Museum of Art and in other leading collections. Mr. Parton was a member of the American National Academy, the National Academy, and the American Water Color Society.

Finance

MEXICO AND THE MARKETS.

"Mexico" has come to be a word which Stock Exchange operators cannot conjure with. This is because, although the Mexican imbroglio is the foremost political problem of the hour, every successive attempt to make of a new development in the tangled relations a basis for a general break on the New York Stock Exchange has failed. There have been various explanations for this, and they have been mutually conflicting. One theory is that our Government's policy is at all events averting war, and that without war, the Mexican situation is not a formidable financial menace. But another theory, which seems to be equally widely held on the Stock Exchanges, is that the Washington policy is certain to cause war with Mexico, and that war would be preferable to the existing state of political chaos across the border. This second theory is interesting, because unusual from the Wall Street point of view.

Two questions always confront the financial markets when a nation goes to war. One is the actual and immediate expenditure involved, and the Government borrowings incidental to them. Even the Boer War, fought by a rich European Power against a remote colonial people, cost England, all told, a million dollars a day, or one thousand millions in all, and it utterly deranged the English financial position. The extent of such a drain on resources depends on the duration of the fighting.

Our own Spanish war, which lasted not more than five months, increased our expenditure on the army alone, in the two fiscal years within which the campaigns fell, by $220,000,000, and compelled our Government to sell $198,000,000 bonds. This was a larger rate of daily expenditure than England's in South Africa; but the shortness of the contest averted a serious strain. It would therefore have to be considered, in a supposable Mexican campaign, whether the period of fighting would be nearer to the four months of 1898 in Cuba, or to the thirty-three months of 1899, 1900, 1901, and 1902 in the Transvaal.

The other consideration which confronts financiers when such a contest begins is the question of foreign complications. This was temporarily a serious matter in the Russo-Turkish War, and it was the paramount financial influence in the recent Balkan contest, when nobody felt sure, from October, 1912, to June, 1913, whether the great European Powers might not be drawn in. A Mexican contest would reduce at least this difficulty to a minimum; for the great neutral Powers with interests in Mexico would probably be better satisfied to see us intervene than to have us hold our hands off.

But behind all these considerations there would stand the utterly perplexing questions, Where would a process of armed interference end, how long would the process continue, and in what degree would it improve the present deplorable condition of Mexican finance and business? All of these problems have been curiously tested once, by what occurred in Mexico, just when our own Civil War was breaking out. A Mexican President, duly elected and inaugurated, had been driven from the capital; an insurgent leader had been recognized by foreign governments as *de facto* President. Thereupon, however, the constitutional Government proceeded to hold its ground, and a state of anarchy, similar to what now exists, prevailed. United States vessels were seized; foreign residents who refused to pay heavy cash requisitions were banished or executed without trial. The murder of Ormond Chase, then a matter of executive inquiry, resembled in all respects the episodes of Benton and Vergara.

Mexican trade was meantime ruined. Paper currency, issued by the *de facto* Government, fell to 60 per cent. discount. In 1861 a tax of 10 per cent. on all fortunes exceeding $2,000 was decreed. Our Administration, having recognized the insurgent Government, changed front and recognized the other Mexican faction. Meantime, the Monroe Doctrine was asserted at Washington, but our own Government, confronted with war at home, could do nothing in Mexico.

At length, in December, 1861, through the French Emperor's urgency (utilizing the helplessness of the Washington Government), France, Spain, and England landed troops in Mexico, and in 1863, with the nominal consent of a Mexican "provisional Government," Maximilian of Austria was made Emperor of Mexico. What followed, everybody knows. Maximilian and his French troops were utterly unable to pacify the country. Three years later, they were still on the defensive, holding only part of Mexico. In 1866 Napoleon III, frightened at the attitude of the victorious Union Government at Washington, began to withdraw his troops from Mexico. In 1867 Maximilian was captured by the insurgents, tried by court-martial, and shot. It was then that Porfirio Diaz, at the time an insurgent leader, came upon the scene.

Such was the course of events in the last instance of actual foreign intervention, to put a forcible end to political chaos in Mexico. The question, whether the failure of the present Mexican situation to upset the markets is due to improbability of war, or to probability of it, must be judged in the light of the above considerations.

Young's Freshman English

By FRANCES BERKELEY YOUNG, formerly Instructor in the University of Wisconsin, and KARL YOUNG, Associate Professor in the same. xii+679 pages. 12mo. $1.25.

This is a substantial revision and material enlargement of Berkeley's *Writing from Models*. The most important change is the provision in Part I. of chapters on The Planning and Writing of Themes, Paragraphs, Sentences, Punctuation, and Words. With the foundation laid for correctness in writing, Part II deals with the various forms of discourse, taking up first a few general principles and then a number of literary examples.

The Backward Child

A Study of the Psychology and Treatment of Backwardness. A Practical Manual for Teachers and Students

By Barbara Spofford Morgan

$1.25 net

A radical departure from present psychological lines of work. Its aim is an analysis of mental faculties to find the cause of individual backwardness rather than the mere classifying of mental defectives; and its subject-matter is the backward child who will remain in the community, rather than institutional cases. Suggested systems of training to develop the neglected or unexercised functions which are responsible for such backwardness, are offered. A book that will prove invaluable to educators engaged in the training of children.

DARK HOLLOW

THE LATEST DETECTIVE STORY

By Anna Katharine Green

Illustrated. $1.35 *net*

DODD, MEAD & CO., NEW YORK.

¶ If somebody offered you four big books for five cents, and they were full of interesting stories, humorous and philosophical sayings, useful facts, and plenty of pictures, you would think you had a bargain.

The New York Evening Post offers you precisely that every Saturday. Its four sections contain not only the day's news, but a valuable summing up of the week's events.

¶ **The Photographers** who make the pictures for the **New York Evening Post Saturday Magazine** go everywhere and see things that no one individual possibly could. There are from 50 to 60 fine half-tones and other engravings in every issue, covering public life, society, sports, the theatre, the fashions and every other field.

The Magazine is prepared solely for the New York Evening Post readers and is not the ordinary syndicated affair.

Of the many regular features in the other sections, here are a sample half dozen:

MUSIC: Henry T. Finck writes a column that keeps the Saturday reader in touch with the concerts, and contains timely anecdotes, news bits, and editorial utterances about musicians. His reports of concerts and operas are interesting even to the persons who don't know a semiquaver from a harpsichord.

THE STAGE: J. Ranken Towse, veteran among the dramatic critics of New York, tells about the new things in the theatrical world and gives his estimate of plays and events in the dramatic world.

WOMEN AND FEMINISM Some one has said, apropos of *The Evening Post's* head "What Women Are Doing," that, if it knows that, it knows more than Socrates, Napoleon, and Abraham Lincoln. Possibly those three didn't know—feminism is pretty new—but anyone would certainly admit getting a fairly good inkling who reads the very full accounts of suffrage doings, fashions, shopping, sociological movements, and no-mere-man-knows-what-not, written by Clara Savage, Louise Townsend Nicholl, Jeanne Stevens, and other specialists.

FINANCE An entire Supplement is devoted to this subject and Alexander D. Noyes is its editor. It contains business diagnoses and letters from all the financial centres, as well as full quotation tables. It is known as one of the most authoritative financial publications of the daily newspaper world.

CHURCHES AND ORGANISTS Two full pages are given to these subjects. Hundreds of people take the paper for this one feature; and letters come from all parts of the United States from church musicians who keep in touch with New York in this way. E. N. Williamson edits this department.

SOLDIERS and SAILORS The page about Army, Navy and Militia is known wherever a drum beats or a quartermaster's whistle blows. It is a complete encyclopædia of the week's doings and of prospective happenings. The service everywhere reads this page.

Of course, it is not necessary to say that the editorial page and the literary department are read by thinking people the world over and have been for upward of a century.

What some people need to be told is that the price of this Saturday paper is ridiculously low:

FIVE CENTS on the Newsstands.
$2.50 a Year, by Mail, Out of Town.

THE MASTERS OF THE WILDERNESS

By CHARLES B. REED

The opening essay, which gives its title to the volume, is a highly interesting and carefully wrought account of the origin and upgrowth of the Hudson's Bay Company, with a portrayal of its powerful influence on the development of Canada. "The Beaver Club," the second essay in the volume, is closely allied to the first, and concerns a social club of Montreal, the members of which were drawn from the partners and factors of the Northwestern Fur Company, for many years a rival of the Hudson's Bay Company. The concluding essay, "A Dream of Empire," recounts with many fresh details the adventures of Tonty in Old Louisiana.

PROBLEMS OF SCIENCE

By Federigo Enriques. Authorized translation by Katherine Royce, with an introduction by Josiah Royce. Cloth, 375 pages. $2.50.

The author is professor of projective geometry and geometric drawing in the University of Bologna, and is one of the most conspicuous of contemporary Italian scientists.

The volume here translated is a comprehensive and compendious survey of what has been done and is yet to be done in the scientific field. It gives evidence of a most thorough scientific equipment and a remarkable familiarity with the results of the labors of scientists of all lands and nationalities.

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING
BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth*, $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

EARMARKS OF LITERATURE

BY

Arthur E. Bostwick

Is there anything about real literature that marks it for what it is?

THE author asks this interesting question in the opening sentence of his book and then proceeds to answer it. He says that there *are* "earmarks" by which real literature may be recognized, and then goes on to show what they are and how by using them as a measure one may recognize the things that make *good books good.* Price 90 cents.

VOL. XCVIII—NO. 2543 THURSDAY, MARCH 26, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

Appleton's New Books

Forty Years of It

By BRAND WHITLOCK, *formerly Mayor of Toledo, now Minister to Belgium.*
$1.50 *net.* *Postage extra.*

Mr. Whitlock's volume is in a sense a history of the progess of democracy in the Middle West. His reminiscences are of such men as Governor Altgeld, Tom Johnson, "Golden Rule" Jones. And in the telling of these men, their ideas and ideals, and of himself as the continuator of their work, he illuminates that spirit which makes for democracy. Few reminiscences have had the vigor, optimism, and personal appeal of Mr. Whitlock's pages.

The Life of St. Augustine

By LOUIS BERTRAND. *Cloth, gilt top, uncut edges.* $3.00 *net.* *Postage extra.*

A brilliant account not only of the vital personality of St. Augustine, but also of the times in which he lived. The book is packed full of information so interesting as to make the life of St. Augustine seem more fascinating than fiction.

Government Ownership of Railroads

By SAMUEL O. DUNN, *Editor of "The Railway Age Gazette," author of "The American Transportation Question."* $1.50 *net.*
Postage extra.

A comprehensive and impartial analysis of the theory of government operations of carriers. The author carefully reviews the results achieved in countries where private management has predominated as well as those countries whose experience with public ownership is enlightening. Rates, service, and financial return are discussed.

"His book deals with facts. It is well organized, clearly written, and well summarized."—*Record-Herald.*

Psychology in Daily Life

By CARL EMIL SEASHORE, *Professor of Psychology and Dean of the Graduate College, University of Iowa.* $1.50 *net.* *Postage extra.*

A clear, non-technical interpretation of the relation of psychology to everyday affairs. It offers an excellent method for cultivating a good memory and for obtaining the maximum mental and physical efficiency.

"It may easily become as fascinating as a novel."—*The Epworth Herald.*

Chemistry in America

By EDGAR FAHS SMITH, *Ph.D., Provost of the University of Pennsylvania. With illustrations.* $2.50 *net.* *Postage extra.*

The history of the progress and achievements in one of the most useful sciences in this country. Compiled, in response to an urgent demand, by one of the greatest chemists of the present day. The work includes many of the real treasures of the science which hitherto have not been accessible.

Advertising and Selling

By HARRY L. HOLLINGWORTH. *Illustrated.* $2.00 *net.* *Postage extra.*

This book is a careful study of the scientific principles underlying the advertising and selling of commodities. "No phase of the subject, no matter how remote or subtile, seems to have been overlooked."—*The Scientific American.*

THREE NOTABLE NOVELS

OLD MOLE
By GILBERT CANNAN, *Author of "Round the Corner," etc.* $1.35 *net.* *Postage extra.*
By a sudden turn in Fortune's wheel "Old Mole" is torn from his respectable, comfortable life in the North of England. Almost a wreck, his philosophy saves him and leads him into a veritable voyage of discovery in life.

RICHARD FURLONG
By E. TEMPLE THURSTON, *Author of "The Antagonists."* $1.35 *net.* *Postage extra.*
"One is inclined to rank the novel's heroine with the great heroines of fiction, since she stands for gloriously unselfish love and so for mightily creative womanhood."
—*Chicago Record-Herald.*

YOUTH'S ENCOUNTER
By COMPTON MACKENZIE, *Author of "Carnival."* $1.35 *net.* *Postage extra.*
A wonderful study of Youth, its hopes, ambitions, and ideals.
"The author shows a mastery of his art that makes him a force in contemporary letters to be reckoned with."
—*The Book News Monthly.*

TABLES OF COMPLEX HYPERBOLIC AND CIRCULAR FUNCTIONS

By ARTHUR EDWIN KENNELLY, Professor of Electrical Engineering in Harvard University, 8vo. Cloth, 311 pp. $3.00
Previously issued
CHARTS. 20x20 in. Cloth, 52 pp. $4.00

Designed primarily to meet the requirements of electrical engineers who deal with alternating current conducting lines. These tables have been carried to a higher degree of numerical precision than would usually be required, in order to make some contribution to fundamental mathematics. By the aid of slight transformations, they can also be used to evaluate complex circular functions.

Unpopular Government in the United States
By ALBERT M. KALES

This volume by a prominent member of the Chicago bar is an especially timely book, presenting with great clearness and cogency some of the political needs of the country, particularly the necessity of the short ballot. The author points out that the establishment in the United States of State and municipal governments, according to the plan of splitting up the power of government among many separate offices and requiring the widest and most frequent use of the elective principle, has cast so great a burden upon the electorate that an intelligent citizen is reduced to a state of political ignorance inconsistent with self-government. This situation has made it possible for a well-organized hierarchy to acquire the real power of government and to retain it, in the face of popular disapproval, for selfish ends. He discusses various expedients for restoring the American ideal of democracy and considers constructive proposals like the commission form of government for smaller cities, and the application of the principles underlying this form to larger cities and the State, and to the selection of judges.

The PRINCIPLE of RELATIVITY in the Light of the Philosophy of Science.
By PAUL CARUS
Cloth, $1.00.

The author recognizes the correctness of the Principle of Relativity, but criticises the exaggerated statements which have done much to confuse students and to mystify the reading public.

The Boston Transcript correctly summarizes his position as follows:

"Absolute existence, in fact everything absolute, is impossible. Reality is not immovable and unchangeable absoluteness, but the effectiveness of things in their relation. All things are in a flux, and we ourselves are constantly changing. The only way to make knowledge possible is to ignore complications and to consider a thing as fixed. This is a fiction similar to that in calculus where a curve is thought of as made up of a succession of straight lines infinitesimal in length.

"The philosophy of science is *the* philosophy. If the philosophy of science had been better known, the principle of relativity would have at once been rightly understood and the vagaries of many mystifying contentions would have been avoided."

After presenting the problem and referring it to the domain of *a priori* reasoning rather than to that of experiment the author quotes and discusses Prof. D. F. Comstock's characterization of relativity, Prof. Emil Cohn's account of the Fizeau experiment, Dr. Philip Frank's discussion of absolute motion and absolute space in which the contrasted views of Professors Ernst Mach and Alois Höfler are presented. Mr. Norman Campbell and Prof. William Francis Magie are quoted and the merits of the Michelson-Morley experiment are discussed.

Standard English Classics
Macaulay's Speeches on Copyright and Lincoln's Address at Cooper Union
Edited, with Introduction, Notes, Topics, and Questions, by CHARLES R. GASTON, Chairman of the English Department, Richmond Hill High School, New York City.
16mo, semiflexible cloth, 101 pages, 25 cents

THIS new edition presents two of Macaulay's argumentative speeches and one of Lincoln's in a clear and accurate text, with sufficient introductory comment and just enough annotation to make clear the setting and content of the speeches.

Attention to the speeches as the exposition of living ideas with a definite relation to present-day life is emphasized in both introduction and notes.

The edition includes abridgments of the Parliamentary debates of 1841 and 1842 on copyright, and extracts from Douglas's Columbus speech.

LETTERS AND MEMORIALS

OF

Wendell Phillips Garrison

Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

HOUGHTON MIFFLIN CO.

BOSTON NEW YORK

NOW READY

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth*, $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

BIOGRAPHY AND HISTORY

Imperial Germany — **By PRINCE BERNHARD VON BÜLOW** (Formerly Chancellor of the German Empire.)

These reminiscences of the political changes in Germany during the past twenty years by one who was at the very head of the movements he describes, constitute one of the most important volumes for students of contemporary history that has recently appeared. *Large 8vo. $3.00 net.*

The Empress Frederick: A Memoir — **ANONYMOUS**

A biography which possesses all the value of an historical document about a woman who has been singularly misunderstood by the public—the mother of the present Emperor of Germany. *Illustrated. 8vo. $2.50 net.*

Hellas and the Balkan Wars — **By D. J. CASSAVETTI**

The recent Balkan wars from the point of view of a Greek who was but an actor in the events he describes. *Large 8vo. $3.00 net.*

TRAVEL

Lombard Towns of Italy — **By EGERTON R. WILLIAMS**

A delightful companion volume to the author's well-known "Hill Towns of Italy" and "Plain Towns of Italy." *Small 12mo. $1.75 net.*

Panama and the Canal — **By WILLIS J. ABBOT**

The human side of the building of the Canal, told in vigorous and graphic style. *12mo. $2.00 net.*

Japan's Inheritance: The Country, Its People and Their Destiny — **By E. BRUCE MITFORD, F.R.G.S**

"Wanted: The truth about Japan," says the author. From long residence in Japan, he gives the truth about the Japanese people and their future as he sees it. *8vo. $3.50 net.*

The Ideal Motor Tour in France — **By WALTER HALE**

Routes, roads, rates—everything that one needs to know in order to take the Ideal Motor Tour through France. *Small 12mo. Cloth, $1.50 net. Limp leather, $2.50 net.*

A Winter in India — **By ARCHIBALD B. SPENS**

A record of one who visited India to see and to enjoy, and who saw and enjoyed much. *Illustrated, Small 8vo. $1.75 net.*

SOCIOLOGY

The Workingman's Christ — **By CRAIG S. THOMS**

A new presentation of a topic which is at present uppermost in men's minds—how can the Church and the workingman be brought closer together? *12mo. $1.25 net.*

The Age of Mother Power — **By C. GASQUOINE HARTLEY** *Author of "The Truth About Woman."*

Researches into a most interesting period of evolution—the age of mother-right and mother descent, by one of the keenest thinkers and cleverest writers of the feminist movement. *12mo. $1.25 net.*

Eugenics: Twelve University Lectures — **By Prof. C. B. DAVENPORT and others**

Twelve selected lectures discussing different phases of eugenics, by authorities on the subjects discussed. *Small 8vo. $2.00 net.*

EIGHT NOVELS

Black is White — **By George Barr McCutcheon**

A long novel in the serious vein which characterized the author's "The Hollow of Her Hand." *Illustrated in color by A. I. Keller. 12mo. $1.30 net.*

Dark Hollow — **By Anna Katharine Green**

A melodramatic mystery story, as puzzling and mystifying as "The Leavenworth Case." *Illustrated. 12mo. $1.35 net.*

The Youngest World — **By Robert Dunn**

A new author who has written, so critics claim, the best story of Alaska that has yet appeared. *12mo. $1.40 net.*

The Primal Lure — **By V. E. Roe**

A dramatic story of devotion, sacrifice, and love in a Hudson Bay Post. *Illustrated. 12mo. $1.30 net.*

The Making of an Englishman — **By W. L. George**

Says the *Evening Post* of New York: "Not merely a splendid opportunity for contrast between the temperamental differences of French and English, but a narrative of earnest merit." *12mo. $1.35 net*

Initiation — **By Robert Hugh Benson**

The initiation of a selfish man into a realization of his real duty and responsibility. *12mo. $1.35 net.*

A Pillar of Sand — **By William R. Castle, Jr.**

Boston society cleverly drawn in a story of much cleverness and real merit. *12mo. $1.30 net.*

The Sword Hand of Napoleon — **By Cyrus Townsend Brady**

A picturesque and dashing novel centered about the Retreat from Moscow. *Illustrated. 12mo. $1.35 net.*

The Nation.

NEW YORK, THURSDAY, MARCH 26, 1914.

Summary of the News

The Mexican situation in its relation to the United States remains unchanged, and there has been nothing to confirm the report published in some of last Friday's papers that President Wilson contemplates any change of policy. Fighting began around Torreon on Saturday afternoon, Villa capturing Bermejillo after a running fight of sixteen miles. On the following day the rebel troops entered Brittingham, which is only nine miles from Torreon proper, and after hard fighting on Monday and Tuesday they took possession of Gomez Palacio, a strongly fortified position three miles from Torreon on the northern side. It seems to be established that the Federal forces are considerably inferior in numbers to those of Villa. At Eagle Pass, Tex., on Monday there was an insignificant clash between an American patrol and some Mexican Federals, due to the latter, who were pursuing some Constitutionalists, having directed their fire to the American side.

Opposition to the repeal of the exemption clause in the Panama Canal Tolls bill has developed considerably, and filibustering tactics have been employed to delay its consideration. It cannot be taken up in the House until the Rivers and Harbors bill is out of the way, and although that measure received the right of way on Monday, following an agreement among Democrats in the House, progress with it is so slow that it is doubtful when the Tolls bill will be taken up. The President, however, expresses confidence that the free tolls provision will be repealed.

Statements were issued on Saturday by Attorney-General McReynolds and Howard Elliott, chairman of the New Haven Railway, that an agreement had been reached between the Government and the line for the reorganization of the system so as to prevent a suit under the Sherman act. Certain important concessions have been granted to the New Haven, notably an extension of time for the sale of the Boston & Maine line. Chairman Elliott in his statement expressed the belief that the settlement would have a beneficial effect on the industrial situation in New England.

The Indiana Democratic State Committee on March 19 unanimously adopted a plank endorsing a State-wide primary law. The popular support thus accorded President Wilson was the more significant in view of the fact that all of the Taggart nominees were subsequently chosen.

The proposed amendment to the Federal Constitution extending the suffrage to women was rejected in the Senate on March 19 by a vote of 35 to 34 in favor of the resolution, a two-thirds affirmative vote being necessary for its passage. An amendment offered by Senator Vardaman to repeal the Fifteenth Amendment granting the franchise to negroes was lost by a vote of 48 to 19, and one by Senator Williams of Mississippi excluding negro women from the woman's suffrage amendment was rejected by a vote of 44 to 21.

In its report for the fiscal year ending December 31 last, the United States Steel Corporation records the largest turnover of business of any year in its history. The gross earnings last year were $796,894,299, as compared with $745,505,515 in 1912 and $757,014,767 in 1907, the best previous year in point of revenue.

The announcement was made on Friday of last week that Robert Lansing, of New York, and Cone Johnson, of Texas, would be appointed respectively counsellor and solicitor of the State Department in succession to John Bassett Moore and Joseph W. Folk.

The situation in Ulster, which appeared extremely grave at the end of last week, has cleared somewhat. On Friday, following the debate in the House of Commons and the departure of Sir Edward Carson for Belfast, the Government started moving troops into the province. A number of officers, understanding the movement as a preliminary to war, took advantage of the option said to have been given and resigned their commissions. Premier Asquith issued a statement to the *Times* on Monday declaring that the situation had been misunderstood, and that the movement of the troops was a purely precautionary measure. In the House of Commons on the same day he repeated his assurances, and the Secretary for War added a brief statement that the resignations from the army had been due to a misunderstanding and the officers had been ordered to rejoin their regiments. Throughout the crisis there have been no disturbances either in Ulster itself or in the rest of Ireland.

The British naval estimates for 1914-15, which were announced in the House of Commons on March 17, amount to $257,750,000, an increase over those of last year of $13,700,000. Mr. Winston Churchill, First Lord of the Admiralty, in explaining the estimates, stated that the increase was due principally to the change to oil fuel, to the establishment of a naval flying corps, and to the increased pay of the personnel of the navy. He held out hopes, however, that "in the absence of any new policy" the estimates for next year might be substantially lower. The rivalry with Germany was mentioned frankly, Mr. Churchill declaring that it is the aim of Great Britain to complete eight battle squadrons by the time Germany has five.

According to dispatches received from South Africa the Labor party has made considerable gains in the elections throughout the Transvaal. The success of the Laborites is particularly noticeable in the Rand district, and the result is regarded as a condemnation of the Government for its action in deporting the strike leaders. It is asserted also that the Labor victories indicate that the Boers have lost control in the Transvaal.

The Caillaux case arising out of the shooting of Gaston Calmette, editor of *Figaro*, by Mme. Caillaux promises to develop into another Government scandal. Following the resignation of M. Caillaux from the Doumergue government and the readjustment of the Cabinet came the resignation of ex-Premier Monis, who held the portfolio of Minister of Marine. Statements were made in the Chamber that while M. Monis was Premier he had influenced the public prosecutor to postpone the trial of Henri Rochette, who was charged with having swindled the public out of enormous sums of money. Before the investigating committee of the Chamber of Deputies Caillaux and Monis have given evidence directly contradicting each other. The Royalist party has seized upon the Caillaux case as a pretext for anti-republican demonstrations, and it is charged that Caillaux and other members of the Radical party have used their political opportunities to accumulate large fortunes.

The new Italian Cabinet formed by Signor Salandra, former Minister of the Treasury, in succession to the Giolitti Cabinet, has been completed. The Premier assumes also the portfolio of Minister of the Interior, and the Marquis di San Giuliano, who was spoken of in connection with the premiership, becomes Minister of Foreign Affairs.

Greece's naval programme announced by the Minister of Marine in the Chamber of Deputies on March 19 is to include three battleships of the Dreadnought type, three armored cruisers, and lighter craft. The Minister of Marine emphasized the determination of the country to maintain the supremacy at sea gained as a result of the Balkan wars.

Half of the Greek loan of $100,000,000 was issued on March 18. On Saturday the French Government authorized an issue of $35,000,000 for the French market, and the remaining $15,000,000 will be issued in England.

The deadlock between the two houses of the Japanese Parliament arising out of the naval graft scandals resulted on Monday in the issue of a decree by the Emperor suspending the sessions for three days. Since Parliament adjourned yesterday in the ordinary course, the Emperor's action is equivalent to a prorogation. The deadlock arose out of the failure of the conference committee of both houses to agree on the respective amendments for the reduction of the naval estimates. As the budget has not been passed the situation is a serious one.

The deaths of the week include: William Paterson, March 18; Adolph F. A. Bandelier, Prof. Giuseppe Mercalli, March 19; Wilton Lockwood, March 20; John Norris, March 21; Harry Thurston Peck, March 23.

The Week

President Wilson was well advised in consenting to the publication of the informal talk which he gave the Washington Press Club on Friday. The country will have read with interest and a new understanding Mr. Wilson's account of the very human embarrassments of his office. Compelled to wreak himself upon his work, to order his day rigidly, and to shut out as many haphazard interrupters as possible, the President has been acquiring the reputation of one austere and aloof, merely a thinking machine, a man of mystery. But in Mr. Wilson's frank disclosure of his inmost thought about all this, we perceive that he is throughout keeping his genial interest in everything that is human, though obliged to hold it, as it were, under cover. His humorous description of his own feelings about it all, his explanation of his frequent desire to cease to be a dignified official and to become a mere man again, and his unbosoming himself of his constant fear of making blunders, constitute delightful reading. The whole is a touch of nature which will make his countrymen feel more kin with President Wilson.

The sub-committee of the House Judiciary Committee which has been considering the relations of Representative McDermott, of Illinois, with the lobbying activities of the National Association of Manufacturers reports a lack of evidence such as would justify his expulsion, but recommends the adoption of a resolution declaring that the House "strongly condemns" his conduct, and pronouncing him "guilty of acts of grave impropriety." As these acts, according to the report, include not only "his associations with M. M. Mulhall, a lobbyist of the National Association of Manufacturers," but also "accepting loans of large sums of money from Horning, a pawnbroker, and from Harvey, a member of the Retail Liquor Dealers' Association, both of whom were vitally interested in legislation pending before Congress," it cannot be said that the subcommittee is too harsh in its characterization; indeed, a not altogether inconceivable standard of personal honor might suggest the voluntary resignation of the gentleman from Illinois. Fortunately, the report was unanimous.

There seems to be general agreement that the provisional settlement which has been arranged between the Government and the New Haven Company is the best thing that was possible in the circumstances. Mr. Brandeis is quoted as saying of it that "the people of New England are to be congratulated." President Elliott, of the New Haven, feels satisfied that the amicable adjustment arrived at has the merit of giving "ample time for the protection of the company's property," and of recognizing New England's need of "peace and a chance for constructive work." Much is still left open for decision, but both sides seem confident that the completion of the programme will involve no serious difficulty. The whole story of the New Haven, from the time that it entered upon its policy of sweeping aggrandizement, forms one of the most significant episodes in American railway history, and the last chapters in it have been, in more ways than one, of a tragic character. The company is now at last facing away from that troubled past, and the thousands who are affected by its fortunes and by its proper management must feel a long-wished-for sense of relief.

The most notable victory that peace has scored in decades, if reports say true, has aroused surprisingly little comment. Perhaps this is due to the well-nigh incredible nature of the report, for it is nothing less than that the line officers of the navy have yielded to the staff officers in the long dispute whether the latter should have military titles. Who has forgotten the tempest that raged so fiercely a few years ago when a mere surgeon was put in charge of a hospital ship? What jests and gibes were made over the kind of orders that a surgeon would issue to those having to do with the navigation of the vessel! The line officers saw nothing but immediate disaster to the whole naval establishment if such a condition was to be allowed. Nor were they so weak as to be impressed by the argument that in the army the staff officers had military titles. After all, the army is only the army, while the navy—well, the two words require to be pronounced in very different tones. And now the line has surrendered. Simple folk belonging neither to the line nor to the staff will wonder what these rival defenders of our liberties will do without their familiar bone of contention, but the signing of the treaty of peace between them must make the President face the Mexican problem with a smile.

The contest for the Alabama Senatorship between Oscar Underwood and Richmond Hobson goes on its interminable course. As there is no real issue involved, the struggle has degenerated into one of personalities. As usual, the unfortunate negro has been dragged in and Alabamians were besought to defeat Underwood because, thanks to him, half a dozen black men hold minor places on the pay-roll of the House of Representatives—thus endangering the superiority of the Anglo-Saxon race—until it appeared that Hobson himself had appointed a colored bootblack or barber for a House committee. Then, going from black men to white women, the horrible charge was made by the Underwoodites that Hobson conferred with Jane Addams and other leaders of the National Suffrage Association, who, be it known, are plotting to overthrow negro disfranchisement in the South by getting Congress to enfranchise all women by a Constitutional amendment. Naturally, Hobson indignantly denied this sordid charge, so galling to a Southerner's honor, and retorted that his opponent is the agent of the Whiskey Trust. Ridiculous as all this is, it is undeniable that Hobson has won the support of Prohibitionists and temperance workers in extraordinary degree; to them he is a great national figure.

Partisanship is never so offensive as in the administration of workmen's compensation acts. Yet the law which passed the Kentucky Legislature just before adjournment was opposed by men fired with the same zeal as those who insisted that the New York Commission should be bi-partisan. They alleged that the governing board, composed of the Attorney-General and Commissioners of Labor and Insurance, would "be enabled to build up a political machine." This frightened no one, and a bill which had the support of labor and enlightened capital went through unchanged. Modelled on the Ohio law, it is optional in nature, provides a State insurance fund, and sets the maximum death indemnity at $3,750, and the maximum weekly payment for injury at $12. The laws of the

two other important States which dealt with workmen's compensation in 1913 show how variant are ideas, not merely upon the question of partisanship in the administrators of the State fund, but upon who these persons shall be. In Connecticut there are five Commissioners, of whom it is stipulated merely that one shall be appointed from each Congressional district. In Oregon three industrial accident commissioners are appointed by the Governor, and it is provided that not more than two shall belong to the same party.

Ex-Commissioner Worcester's gloomy letter in the New York *Times* on the 361 American employees who have been displaced in the Philippine service calls for distinctions. Dealing with so large a number of officials, it is mainly directed at the dismissal of men in inferior posts. Yet in the happy days when he himself served in the islands, it was the avowed endeavor of the Administration to put natives in subordinate positions as fast as they qualified. What he now protests against is, therefore, an enlargement of the old policy; and this in face of assurances from the new régime that competence is insisted upon in the Filipino appointees. And a considerable part of the dismissals, as Mr. Worcester admits in veiled language, is traceable to a new and praiseworthy striving after economy. The last issue of *The Filipino People*, in editorial comment on the first successful passage of a General Appropriations bill in three years, which President Wilson signalized by a congratulatory telegram, explains that the long deadlock between Assembly and Commission was due to the latter's insistence upon "useless and unjustifiable expenditures" for a crowded executive force. In reductions of force, as well as of salaries, a million dollars annually is to be saved the poor *tao* whom the ex-Commissioner would have us believe the politicians are bleeding. Dismissal on insufficient notice may have worked hardship in some cases; but his blanket indictment involves self-contradictions.

Ex-President Eliot's eightieth birthday on Friday passed without formal celebration. The day found him in "fine health and good spirits," and full of the keenest enjoyment of what he has called the "durable satisfactions of life." Mr. Eliot is to New England what John Bigelow was to New York—its First Citizen. Year by year he has been showing how one may reach great age with unflagging energies and complete devotion to public questions. He declined the London Embassy chiefly because he could do more useful work at home; and on subjects connected with peace and war, education and morals, as well as on social issues, he speaks constantly to an enormous audience. Nothing that he has ever said is clearer and more incisive than his recent analysis of the labor unions, pointing out how the whole movement places its emphasis on the wrong things. He was free to say, what many public men feel but dare not utter, that the trades unionism of today is objectionable on moral and educational grounds, even after proper recognition of its achievements in raising wages, shortening hours, and improving conditions of labor. Physically, Mr. Eliot is erect and vigorous—a wonderful example of what happens when an intellectually intense life is coupled with normal and sensible care of the body.

The splendid conduct of the Wellesley girls at the big fire so centred public attention as largely to relegate to the background, for the time being, the loss suffered by the College. In many ways that loss is irreparable; dispatches tell, for instance, of researches carried on for years and of great value to science, the records and results of which have been destroyed. But this should serve to remind the public, and especially the persons of large means who are in the habit of responding generously to any call in behalf of a good public cause, that the College is absolutely crippled, and that it has earned by four decades of good work the hearty assistance that it so desperately needs in this emergency. It must not only erect new buildings to take the place of the old central building that was destroyed, but must provide entirely new equipment for its laboratories and build up its library and its museums afresh. We have not heard of any systematic endeavor to obtain funds for these purposes, though Bishop Lawrence, the chairman of the executive committee, issued a statement soon after the fire, setting forth the prostrate condition of the College. In this he pointed out that, owing to the obsolete nature of the construction of the central building, it had been impossible to place insurance corresponding to anything like the value to the College of the building and its contents. We feel confident that an appeal to the enlightened liberality of those interested in the higher education will meet with a generous response.

The process of deterioration which is supposed to set in with the second generation of great fortune-owners in this country is not so widespread as one is led to imagine. The victory over England's professional court tennis champion by a rich young man argues rather exceptional physical stamina and a clean outlook upon life. The heir to America's largest fortune has devoted much of his time and his means to useful work in the field of social service. The young heir to one of the great landed fortunes in New York city has displayed a commendable interest in matters of social and civic progress. The heir to one of the largest railway fortunes in the country has given a great deal of time to coaching the university crew of his alma mater. It may be that amateur rowing or tennis or even the management of a campaign against the social evil is not an exercise conducive to the conservation of great wealth. The three generations from overalls to overalls, liberally interpreted, might still hold. But that other form of decline which we associate with the Pittsburgh school of millionaire ethics, as brilliantly exemplified in the person of Harry K. Thaw, is apparently far from universal among the children of the very rich.

The closing words of Mr. Asquith's speech in the House of Commons two weeks ago were as follows:

> If there is one lesson more clear than another, taught by the history of this ancient Kingdom of ours, it is that the union with us of law and of liberty has its source, and in moments of supreme urgency has its sanction, in the corporate sense of common interests and common responsibilities. There are times, and I believe this is one of them, in which we ought all of us to be ready to sacrifice much, not merely of prejudice and prepossession, but of solid and dearly cherished aims and ideals, for the paramount good of the whole. If we have been as a nation, as we may claim without boasting to have been, the pioneers in the world of popular government, it is because our people, keen, tenacious, combative, self-reliant, learned in the stress of controversy, the most acute and

apparently the most irreconcilable, to respect one another and to renounce the falsehood of extremes. This is a testing case. The best traditions of our past, no less than the undisclosed and fateful issues of the future, appeal to us to-day with imperious accents to pursue if we can the way of unity and peace.

The fine spirit of this passage, as, indeed, of the Prime Minister's entire speech, was fully recognized by his immediate audience in the House, as by the major part of press and public in England. Yet Mr. Asquith's conciliatory proposals have not been accepted, though they went so far as to lead William O'Brien to assert that the Prime Minister had consented to the erection of an Orange Free State in Ulster.

An important distinction to be made is the difference between Ulster's excuse and Ulster's reason. Freely admitting, as Mr. Asquith did, that there are historic and racial difficulties to give point to Ulster's unwillingness to come under the government of a Dublin Parliament and Executive, the practical question now is whether she is determined to fight despite the free opportunity offered her to decide whether she will accept that government or not. Ample time is given for settling the matter. The Home Rule bill will not become law before July, 1914. Under its operation, an Irish Parliament could hardly be set up before July, 1915. But the Ulster counties could, by a bare majority vote, take themselves out from under Dublin rule for six years. During that period, at least two general elections will occur, and if, as the Ulster leaders assert, the country is with them, there would be no possibility of another Imperial Parliament "riveting the Dublin fetters" upon them. Their rights and privileges are fully safeguarded. It is this fact which has made the whole burning controversy seem factitious. Ulster may be as sincere as you please, but the way in which the English Conservatives have seized upon the Ulster issue for political effect has few of the marks of candor upon it. The Ulster club was good enough to shatter the Parliament Act, and drive the Liberals out of power. So the cry was raised of a great outrage upon Ulster, which all Englishmen must resist by force of arms, if necessary. But Mr. Asquith's plan of settlement was one eminently just to Ulster, and more than fair. Yet the Conservative leaders had gone so far and kindled such hopes in their followers that they would not draw back. They continued to talk as if the Prime Minister's proposals had not entirely altered the situation. This is party tactics, not common-sense.

It was a trifle more than impudent in Sir Edward Carson, the other day, to refer to Winston Churchill as "a politician on the make." Whatever may be the case with Mr. Churchill, Sir Edward Carson is to-day playing a political game in which the stakes are, for him, dazzling. If he wins, he becomes the unquestioned leader of the Conservative party, with the reversion of the Premiership clearly his. For it was Sir Edward Carson who devised the scheme of using Ulster discontent, skilfully fanned into Ulster resistance to the law of the land, as a means of tumbling the Home Rule bill in a heap and wrecking the Liberal Ministry. It was a daring project, which Sir Edward has thus far carried on with great tenacity; but its effect on his own political future, if he is finally successful, is so plain that it requires peculiar effrontery in him to rebuke another for being "on the make."

Mr. Winston Churchill has revolutionized naval warfare, so far as the experts are concerned, by announcing a new standard of international comparison on the sea. This time it is the fifteen-inch gun. In a reassuring speech the First Lord of the Admiralty asserted that Great Britain will have ten ships carrying these mammoth guns to Germany's two. Need anything more be said? In the naval war-game as played by the experts it is a maxim that only the biggest fighting units shall be counted, everything else being relegated to a theoretical scrap-head. The experts will undoubtedly proceed to educate themselves in the new arithmetic with characteristic zest, and the taxpayers of the nations will have to pay for the new educational course. For instance, it is only necessary for Japan to lay the keel of a single 17-inch gun battleship to make the United States navy obsolete—theoretically; and immediately we shall be called upon to balance the naval ledger on the 17-inch basis. Every war leaves behind the real lesson that arithmetic is a delusion. But the experts undismayed cling to figures. On the Continent they are now busily engaged in comparing rows of figures as between Russia and Germany to show that both Russia and Germany must spend more money on bigger armies.

English laments over the sale to Americans of a part of the famous library of the Duke of Devonshire are natural, but ring a little hollow. Emphasis is placed by the London *Standard* on the severe pressure of English taxes, particularly the death duties, which is leading old families to part with "heirlooms of great historical and personal interest." It is hard, the *Standard* affirms, for an impoverished nobleman to refuse an offer of $500,000 for books or works of art that he personally can get on perfectly well without. This would be especially true of one who never could speak, with Prospero, of "volumes that I prize above my dukedom." In the case of the great Devonshire library at Chatsworth, there may easily have been the added reason that the owner knew nothing whatever about the inside of his books. This was true of the late Duke. He did not even know how to get down from the gallery of the library, as is shown by the amusing story, in his Life, of his having to call a servant in order to show Lord Salisbury where the blind stairway was. The present Duke may be as indifferent to the contents of his rare volumes. As long ago as Dr. Johnson's day, the Dukes of Devonshire had a reputation for "dogged veracity." This may lead to a more bluntly truthful explanation of the present sale than we have yet had.

The political effects of the murder of the editor of *Figaro* may turn out to be serious for the Radical majority now in control. It is not so much that M. Calmette was editor of a journal of conservative, and virtually royalist, sentiments, and that his assassination may be made the occasion for further anti-republican "demonstrations." Of much greater consequence are the revelations now coming out of the intimate connection between politics and finance as exemplified in the Rochette case. A Government of stock-brokers is a favorite way among the anti-republican parties of describing the present Radical régime, and every little while enough comes out to justify the critics, in partisan eyes.

CHEATING AFTERTHOUGHTS.

Ex-Senator Foraker, in an address before the Cleveland Chamber of Commerce last week, argued for the right of the United States, under the Hay-Pauncefote treaty, to discriminate in favor of our coastwise vessels using the Panama Canal. The contrary opinion he sought to reduce to the absurd. Why, he exclaimed, if we cannot thus aid our domestic shipping, and, of course, cannot favor our foreign shipping, then "no advantage whatever arises out of this great national work, the construction of the Panama Canal."

We will not dwell upon the unpleasant implications of this. It might be interpreted to mean that if we have not overreached somebody, or deceived and cheated some other nation, in building the Canal, then all our labor is in vain. We do not suppose that Mr. Foraker intended this, or would approve it; though it seems to lie tacitly in his argument. But he has misread the entire history of our work on the Canal, if he is not aware that the United States protested earnestly from the first day to the last that it sought no exclusive privileges at Panama. To affirm now that we get no "advantage," if we cannot twist the treaty, is coolly to forget that we vowed to all the world that we would never seek any special advantage—except, of course, for our navy. It is this historic fact which renders the present rueful attitude of men like ex-Senator Foraker ridiculous. To make it appear that, after proclaiming for years our unselfish motives, we are now chapfallen to find that we are debarred from playing a smart trick at the expense of other nations, is to class ourselves with the England of Dr. Johnson's day. He warned his Irish friends against making a Union with England, saying that, if they did, "we shall surely rob you." He added: "We would have robbed Scotland if she had had anything worth stealing."

The Hay-Pauncefote treaty was not negotiated or ratified in a corner. We knew what we were doing, and so did all the world. In the report of Senator Davis, for the Committee on Foreign Relations, recommending ratification of the treaty, he made it perfectly clear that we were setting up no "selfish motive of gain." To do that, he said, would be "unworthy of the United States, even if we owned the country through which the Canal is to be built." And on the question of adopting the Suez rules for neutralization and entire equality of treatment, he said explicitly that this country could not oppose them "without discrediting the official declarations of our Government for fifty years." But California was alert then, as she is to-day, to the possibility of selfish gain through the Canal. Senator Bard, of California, moved to amend the treaty by adding the clause: "The United States reserves the right . . . to discriminate in favor of vessels of its own citizens engaged in the coastwise trade." But the Senate voted this down. There could hardly be plainer proof that the treaty was not then believed to convey the right which it is now sought to read into it.

Our virtuous protestations of disinterestedness never rose higher than at the time the Panama Zone was forcibly seized. That act was felt to need every justification possible. It was seen that if, in addition to "taking" the Isthmus, we were to use it and the Canal to the prejudice of the world's commerce, this country would look not only very like a pirate—that we did not so much mind in those days—but like a low-down trickster. Accordingly, no one was more emphatic in asseverating our unselfishness than President Roosevelt. In his message to Congress of January, 1904, he declared: "If ever a Government could be said to have received a mandate from civilization to effect an object the accomplishment of which was demanded in the interest of mankind, the United States holds that position with regard to the interoceanic canal." That was the tenor of all the talk at that time. We would hear of nothing except "the interest of mankind." Now we have waked up to the interest of our shipowners! As they cannot get a direct subsidy, argues Mr. Foraker, we must give them one indirectly, by means of a remission of Canal tolls, or else confess that we didn't drive a sharp bargain when we had the chance to.

The question has sometimes been put, rhetorically, what would the United States do if the shoe were on the other foot, and if it were England that was striving to evade the apparently plain requirement of a treaty? It is not necessary to confine ourselves to hypothesis. The thing has actually occurred. By the treaty of Washington in 1871, provision was made that the use of canals along the great lakes, whether American or Canadian, should be upon equal terms to citizens of both nations. But some years later, Canada undertook to give a rebate of nearly all the Welland Canal tolls to Canadian ships carrying merchandise to Montreal or beyond. This was virtually the same thing we have attempted at Panama—a discrimination in favor of coastwise trade. President Cleveland promptly protested that this was to fulfil a treaty promise with only "the shadow of performance." The matter was taken up diplomatically, and Canada receded from her untenable position.

It is a similar retreat from an act violative of an international agreement, as all understood it at the time it was made, which President Wilson, to his everlasting credit, is urging upon Congress. All that he asks is that we do what we said we would do. The tolls-exemption was pure afterthought. And it was a cheating afterthought. Unless we set ourselves straight, no nation having a treaty, or contemplating a treaty, with the United States will feel safe in taking words in their ordinary meaning, or depending upon the understanding of the negotiators. Yet some Americans think it highly patriotic to expose their country to such a reproach! They seem to be rather proud when a foreign Government comes to us with a treaty in its hand which we are trying to set aside, and asks the "Figaro" question, "Who is cheating here?"

JUSTICE TO PUBLIC SERVICE CORPORATIONS.

Whatever may have been the sins of our railways and other public service corporations—and the *Nation* has not failed in its duty of pointing them out—it is undeniable that they are to-day paying a heavy penalty for the mistakes of their managers in the past. Indeed, so beset are some of them as to make it clear that, in business circles at least, there is a revulsion of feeling due to the impression that the Government is no longer giving them a square deal, that the pendulum, having swung too far in one direction, is going too far in the other; that owing to legislation, regulation, and to threat of confiscation, and by autocratic use of Federal authority, the lot of the railway company at least is becoming intolera-

ble; that so much of the power of company officials has been stripped from them by Government arbitration, control, and regulation that they can no longer be held responsible by their stockholders for satisfactory results. It is even said that their present estate is so intolerable that complete Government ownership is beginning to appear preferable.

Thus, in his recent annual report, Mr. Rea, the president of the Pennsylvania Railroad, declared: "It is evident that the ability to regulate wages and working conditions, and other heavy operating expenses, has, as the result of Federal and State legislation, largely passed from the control of your management, as has also the power of your company and other railroads to charge reasonable rates for the public transportation service rendered." His own railway is confronted with an increased annual expense of $1,580,000, of which $850,000 is due solely to the totally uncalled-for Full Crew act, passed at the behest of the labor unions; the other $730,000 being occasioned by the raising of wages through the arbitration in 1912 under the new Federal law, the Newlands act. Now, an ordinary corporation, finding its expenses increased by causes beyond its control, would feel free to charge more for its product; but the railway is estopped, since the power over rates has passed to the Interstate Commerce Commission. The difficulty is so much intensified by the diversification of governmental control that President Rea insists:

> Some way must be found whereby the serious but divided responsibility of governmental regulation of rates, wages, and other railway matters shall either be concentrated under one administrative branch of the Government, or the results of legislative acts, orders of commissions, and awards of arbitration boards shall be recognized by rate regulatory commissions, so that regulation of wages, rates, and other matters may continue without working a manifest injustice to the railroads and those who have invested in their securities.

Should the Interstate Commerce Commission long postpone its rate decision, or decide against an increase, there will inevitably be profound sympathy for the honest railway managers in search of new capital who find themselves thus ground between the upper and the nether millstone. They also feel themselves seriously wronged when they appear openly before the Legislature to ask for the repeal of the Full Crew law, and find that neither the Legislature nor the press pays any attention to their protest. It does not help the situation to point to the mismanagement of the New Haven, the St. Louis & San Francisco, and say that this sort of wrongdoing is responsible for the present situation. The presidents may admit this sorrowfully, yet wake up the next morning to find a bill in the Legislature at Albany to revise commutation rates downward in a given county by 50 or 60 per cent.

The telephone company is in the same plight; but recently placed under the control of the Public Service Commission, it finds a bill introduced at Albany enforcing a five-cent rate in New York. This may be a just proposal, but the responsible telephone officials must be forgiven if they feel a bit bewildered and go about wondering where the next blow is to come from. The Bell Telephone Company is facing the Postmaster-General's demand that its stockholders be compelled to sell out to the Government. Its president, Mr. Vail, in his remarkable report just issued, attacks the Post Office's arguments for Government ownership. They are obviously very misleading, if it is contended either that the postal business is well managed or that the parcel post is a financial success. Who can tell? Not Mr. Burleson. He has abolished the special parcel-post stamp, and would never think of reckoning in rentals, or interest on plant, or overhead charges, to ascertain whether the parcel post is carried at a deficit or not.

Meanwhile, the Government refuses to reimburse the railways adequately for carrying the mails, and insists on different rates for heavy and light mail matter carried in the same car. Is it any wonder that uneasiness grows and unrest continues? And both are intensified by the situation of the express companies, however much they may owe their present plight to past stupidities. One does not have to be that worst of offenders, a "reactionary," or an investor in railway securities, to see how great is the opportunity for constructive statesmanship on both sides, for the peace policy that Mr. Wilson outlined. That, we take it, is to be peace, with honor and justice, without mercy for corporate wrong-doers of the New Haven stripe, but with protection to those who would bury the dead past and play fair. Has not the time come, they ask, when they may receive a sailing chart to which they may adhere for at least a few years? Are they not to be freed from their present position of being under fire at once from all sides and at the mercy of demagogues, labor unions, experimenters, diversified government agencies controlling them without regard to one another's acts, and of the several Legislatures?

THE IRISH IN OUR PUBLIC LIFE.

In his series of articles on immigration, Professor Ross gets round in the April *Century* to "The Celtic Tide." His discussion of Irish emigration to this country is brief, but seems to be well fortified by fact, and is not unsympathetic in spirit. A fuller treatment would bring out many points that Professor Ross here passes over. For example, he has previously given expression to the serious disquietude which many Americans feel to-day in connection with the new-comers from South European countries. But their grandfathers were just as acutely concerned over the Irish emigrants. These were, sixty and seventy years ago, as much disliked and even dreaded as are, by some, Slav and Italian to-day. America put up with those early Irish emigrants in much the same spirit in which it has had to reconcile itself to the later Italian tide. In both instances, it is the Caliban argument that prevails:

> as 'tis,
> We cannot miss him: he does make our fire,
> Fetch in our wood, and serves in offices
> That profit us.

It may be asked, however, if the large immigration of to-day will not, half a century hence, look as harmless and even desirable as does now the Irish immigration of 1845-55. That the flow from Ireland has so greatly fallen off appears to be one reason why Professor Ross looks at it with a more kindly eye. The only good immigration is a dead immigration!

So remote has become the old notion of an "Irish peril" in the United States that now one of the main questions discussed is whether Irishmen have risen as they should to their opportunities in this country. This comes within the scope of Professor Ross's article. We may remark, by the way, that there

could hardly be a better proof of Irish assimilation here, and of the senselessness of the old fears about this element of our immigration, than sober debate whether Irish-Americans are as prominent as they ought to be in the professions and the sciences. It is Professor Ross's opinion that they are not. "Those of Irish blood," he says, "are far from manning their share of the responsible posts in American society. Their contribution by no means matches that of an equal number of the old American breed." This would imply that the old American breed is holding its own fairly well, and is in no immediate danger. But it is also fair to remember that we must not make up a final judgment too hastily. Professor Ross justly observes that "it is too soon yet to expect the Irish strain [in America] to show what it can do."

One thing, however, it has shown that it can do, though Professor Ross makes no direct reference to it. The Irish in the United States have displayed a wonderful talent for public affairs. America is always mainly in mind when the old taunt is repeated that the Irish are able to govern every country except their own. The distinction won by Irishmen outside of Ireland is, indeed, an old theme. It was dwelt upon with a kind of proud humility by that greatest of all Irishmen, Edmund Burke. In France, in Spain, in South America, Irish names have been illustrious. But in the United States a great door, and effectual, has been opened to the Irish genius for politics. Its flexibility, its innate generosity, its human sympathies, together with an easy mastery of political machinery, has led it on to triumphs quite out of proportion to the numbers of Irishmen in this country. One sign of this Irish technical facility in politics is seldom noticed, but deserves a word. Irishmen are natural-born parliamentarians. The best parliamentarians—in the sense, we mean, of ready grasp of rules of procedure—at Albany have for years been Irishmen. In the House of Representatives, to-day, an Irishman, Mr. Fitzgerald, is an acknowledged master in that art.

It cannot be said, by even the warmest friends of Irishmen, that their contributions to our public life have always been worthy or inspiring. Boston is now spoken of as an Irish city. It has had a succession of Irish Mayors. But their rule has not invariably been what it should be. It is not necessary to refer to Tammany, so long stamped by Irish dominance. The names of Kelly and Croker and Murphy do not feed Irish pride. Indeed, they are well known to be a cause of grief to truly patriotic Irishmen, whether in Ireland or in the United States. Irish priests and other visitors from Ireland have been known to express in private their astonishment and mortification at the kind of Irishmen who had seemed to come to honor in this country. Tammany in New York has been a standing and effective argument against Home Rule in Ireland. But this, it may be believed, is in the way of being corrected. The admirers of the Irish race will at least hope that their extraordinary gifts in politics may be more and more used for the bettering of our public life; so that hereafter, in the struggles for higher things which are bound to mark our democracy, the record may be made, as it was long ago in one of the famous battles of France: "Nos Irlandois s'y distinguèrent."

PROFESSORS IN COUNCIL.

A circular letter was sent out in the spring of 1913 looking to the formation of a national association of university professors. The motive actuating the signers was indicated in the statement that, besides his interest in his specialty, the university professor is "concerned, as a member of the legislative body of his local institution, with many questions of educational policy which are of more than local significance," and that "he is a member of a professional body which is the special custodian of certain ideals, and the organ for the performance of certain functions essential to the well-being of society." And the general purposes were declared to be "to promote a more general and methodical discussion of the educational problems of the university; to create means for the authoritative expression of the public opinion of the profession; and to make possible collective action, on occasions when such action seems called for." The letter was sent out by Johns Hopkins professors to members of the faculties of nine other universities, and the response was favorable in all cases; a conference on the subject was held last November; and now announcement is made of the names of a committee, representing the chief departments of learning and nearly all the leading universities of the country, whose task it will be to take the steps necessary for complete organization.

The distinctive feature of the American university is the part played by the president. Nothing even distantly resembling it exists, we believe, in any European country. That he is not the absolute monarch he is sometimes represented as being is true enough; but the limitations upon his power are often of the same nature as those which have as a general rule obtained in the case of what are usually designated as absolute monarchies in the history of nations. No university president thinks of setting up his personal will as the sole guide of his policy. Apart altogether from such check as may be exercised by the board of trustees, or other formal governing body, he usually consults the chief professors in any matter relating to their respective departments; and moreover there exists in every university some form or other of faculty organization. Nevertheless, the president, in most American universities, is the centre of power, the chief fountain of favor and disfavor, of advancement or retardation; and his disposition towards any question, whether relating to an individual or to a principle or a policy, usually has, or may have if he chooses, the controlling influence in its determination.

This feature of the American university system has been the subject of endless comment; but there exists alongside it, and somewhat resembling it in nature and effect, another feature that has attracted less notice. What goes on within any university is, in a certain sense, its own private affair; and it may easily happen that it is not the president, but one or more professors or professorial cliques, in whom real power rests, and by whom it is improperly exercised. Now there has not been developed in our country either a central organ—such as the Ministry of Public Instruction in European countries, for example—or a well-defined body of university tradition, to operate as a check upon any bad tendencies or unjust practices which may thus develop in a given institution. When such a state of things arises, whether the blame for it belongs to president or to

professors, all that is apt to happen is a certain amount of grumbling, perhaps of indignation; it is only in extreme cases that there is likely to be any overt action. It may be that some professor is the victim of downright persecution; it may be that manageable mediocrity is systematically preferred to high ability which is somewhat more difficult to handle; it may be that independence of thought or freedom of speech is frowned upon and discouraged. Whatever the trouble may be, appeal is impossible to any but the little circle within the university itself, which is to all intents and purposes a close corporation.

That the new association may supply to the American university professor a basis for a wider and more catholic appeal in questions of moment, that it may become the means of promoting a professional spirit at once finer and stronger than that which has hitherto been general, must be the hope of all who are interested in the most truly distinctive service which universities render to a nation. Upon their immediate promotion of the general welfare, not only through the diffusion of intelligence and the improvement of education, but also through efforts expressly directed to economic and social ends, emphasis has been laid in these latter days as never before. This tendency is bound to continue; and the benefits that will flow from our universities in these ways are quite beyond calculation. But it is not difficult to imagine these results obtained by other instrumentalities, if the institution we call the university were not historically in existence, and ready to furnish them. The thing that the university alone can supply—the thing, at all events, in which neither history nor imagination suggests a possible substitute—is the preservation of high intellectual ideals, the maintenance of noble traditions of science and learning. Of these ideals and traditions university presidents, however masterful, university administrators, however efficient, cannot possibly serve as the custodians. It is upon the men whose business is not to administer but to teach and to learn, not to manage but to investigate and to inspire, that we must depend for keeping alive the sacred fire. And if we read aright the announcement of its purposes, the new association is above all to be devoted to the strengthening of the conception of the professor's status.

THREE YEARS OF THE DRAMA LEAGUE.

The Drama League of America is celebrating the completion of three years of existence. The review in *Drama* by the League's president, Mrs. Best, shows how this body suggests comparison with plans for state-aided drama. It is not merely a discriminating agency, but an active force in the encouragement of good plays. Founded on the idea of avoiding bad plays by getting skilled judgment of them, the League has come to have something of the group's power to create what it wants. Standing for the demand for better-written, better-produced drama, it helps thus to insure the supply. It does not believe in the ability of the mass to get what it wants, inasmuch as helter-skelter theatre-going gives the people small voice. The League also distrusts popular taste itself, and insists upon a clearer understanding than most have of the difference between Galsworthy and Veiller. It tries to form a coherent group large enough to demand attention, and to support those higher stage ventures often looked upon as precarious.

"Take up the cultured man's burden" is a dreaded cry nowadays, and the League's progress is the more creditable in that it has had to make head against it. Its 90,000 members constitute in thirty-five of the largest American and Canadian cities units of genuine influence, while a coöperative branch is being formed in England. Its officials, from university professors to business men, are well known. An education department reaches libraries, colleges, high schools, and a great many children, and in certain country and city districts paid workers are organizing amateur dramatics. It coöperates with a publishing house in issuing inexpensive plays, ten having now been planned for. But its main work is in establishing circuits through the smaller cities, by binding several hundred or a thousand people to take tickets to half a dozen better plays than they could otherwise obtain. Companies for one-night stands may be carried from coast to coast on the assured support of a series of towns, while a national taste is being formed on which managers desirous of raising standards may depend. The members should reap the double benefit of being kept in literary touch with the theatre, and—where they live in the larger cities—being spared the practical vexation of experimenting on performances. Chicago last year had 150 plays: 100 were musical comedies, and therefore not considered; of the other fifty, sixteen were approved and bulletined. If the bulletins were taken as even a partial guide, thousands of hours and dollars must have been saved. The League says nothing of unapproved plays; and so long as its list is short, silence cannot be construed as condemnation.

This promising organization will plainly count for little if the membership is not responsive. A year ago Walter Pritchard Eaton found Western members (chiefly women) enthusiastic in attending meetings, but laggards in attending plays. The latter cost money; recommendations often ran counter to this or that critic, or this or that neighbor; many liked the sense of belonging to the organization, but were indifferent to its work. Possibly, this has changed, for Mrs. Best reports the word of certain managers that receipts swell on the first favorable bulletin, and of others that approval has saved some plays.

The idea is to create a ticket-buying patronage by common-sense means, not elevating the theatre above the audience, not cultivating the "problem" drama, but supporting tragedy, comedy, farce, and melodrama alike, if only they are good of their kind. While its influence may always safely be exerted upwards, it has to reflect that in the present closeness of touch between the public and the stage, errors of taste or too great conservatism would be fatal.

The significance, less of the League and similar organizations than of a larger impulse behind them, is two-fold. The dramatic production of the last half-century in Europe and America has cosmopolitan qualities, and so transcends national lines that it is the common property of every stage. Granting practical difficulties, it is unfortunate that more of what is admittedly good in all this bulk should not be often represented. Thus Chicago, in one of whose suburbs the League originated, has a Little Theatre that has found a public ready to crowd to Murray's translations of Euripides, and to Synge, Yeats,

Maeterlinck, and Sudermann. Together with this goes the new yearning manifested in small places. The theatre as it now exists is too purely metropolitan. The opportunity for inferior plays to scour the country banditti-like and hold up the smaller cities, hungry to see anything and only half-conscious that the modern stage "has such a scope to show her pride," has had too few checks. When this hunger organizes itself, and presses its wishes home to the centres of play-production, the second-rate play may be exposed to a healthier and stronger competition.

A WELCOME NOTE.

For some time to come the barnyards of Iowa are to be the scene of cheerful tumult. As the rural free delivery continues to pour into Iowa copies of the maiden speech delivered last week by Mr. Vollmer in the House of Representatives, proud cacklings and cluckings will arise from within the wired poultry stockade. Grunts of philosophic but profound satisfaction will issue from the pig-pen behind the barn. And within the barn there will be lowings of contemplative and approving comment. If the soil and the climate of Iowa had a voice they, too, would join in the chorus of self-congratulation; and the farmer might rub his jaw with satisfaction. For even in the pages of the *Congressional Record*, the official organ devoted to the regularly recurrent praise of nature and nature's God, one must search far to find so handsome a tribute to the good will of Providence as it manifests itself in the agricultural statistics of Iowa. We welcome the reappearance of the fine old native type of Congressional eloquence which for some time has been submerged by the dry discussion of free foreign bottoms and interlocking directorates. The forces of change may play fiercely about us, but America will be America so long as new Congressmen from the South remember to pay tribute to the soft murmurings of the Chattahoochee, and new Congressmen from the North lay wreaths of laurel at the feet of the American hen.

We welcome Mr. Vollmer's impassioned defence of the American farmer as a type of American manhood and its capacities. We have latterly fallen into the habit of self-dispraise. From comparing our cities with the cities of Europe to our disadvantage, we have passed on to comparing the foreigner's farming methods with our own. After pointing out how much better they do things in Düsseldorf than they do in Chicago, we have gone on to show how much better the market-gardeners around Paris do than the farmers of our prairies. And so the legend has grown up of a rather shiftless American farmer who doesn't dig deep enough, who doesn't feed his soil enough, who doesn't rotate scientifically. The farmer has had his turn under the muckraker's harrow. But what are the facts? Turn to Iowa:

Argentine corn! Have you seen it? Compared with our Iowa corn, it is a measly, scrawny article, like popcorn, and full of bugs. All the imports of Argentine corn for a year would not furnish a morning breakfast for the hogs of Iowa—

Loud grunts of "Hear, Hear" from the hogs of Iowa.

All the importation of Chinese eggs would not furnish a nestegg apiece for the hens of my State—

Shrill soprano cackle of "Right you are" from the hens of Iowa.

I have travelled all through Central and South America. The Latin-American is not yet born who can compete with the Iowa farmer in raising corn.

One need not be a farmer or the son of a farmer to feel the blood of pride mantling the check of patriotism. It is good that such things be said.

Cheering as a sign that the natural optimism of this people is far from dead, Mr. Vollmer's remarks take on profound significance in the light they throw upon a political revolution that is now working itself out. For the extraordinary fact must not be overlooked that Nature has been pouring forth her bounties in Iowa under a Democratic Administration. The American hen has been laying like mad although a Democrat is in the White House. The American hog has been growing tenderloins and bacon at an amazing rate with a Democratic majority in the Senate. Iowa's swelling ears of corn have been growing faster than Argentine corn with Champ Clark as Speaker of the House. What Republican Administration can show a snowfall that may even compare with the heavy drifts that have recently been blanketing the farmer's fields, protecting his young growing things, and steeping his soil in beneficent moisture?

Thus, in the great shifting of party principles and programmes, it may yet prove to be the decisive factor that the rainfall, the temperature, the wind output from Medicine Hat, and the frequent volcanic eruptions in Alaska, with their perceptible effect on climatic conditions all over this country, are no longer to be found exclusively in the Republican platform, but may confidently be expected to be handled with equal, if not superior, courage and statesmanship, by the Democratic party. Admitted to power on sufferance, the Democratic party may yet develop strength in quarters least expected. The farmer will naturally go with the party in whose hands are the lightning and the thundercloud.

This leaves the Republican party in a parlous state. The Progressives have stolen a great many of its votes. The Democratic party has now stolen most of its clothes—the retired farmer with his house on Main Street and his Ford machine ever ready to take him to church or the moving-picture show, the growing deposits in the country banks, the swelling crops, the climate; above all things, the American hen. We distinctly visualize Uncle Joe Cannon gazing sadly through the henyard wiring and muttering, *Et tu, Brute!*

Foreign Correspondence

THE DEPORTED SOUTH AFRICANS —AN UNUSUAL DEMONSTRATION IN HYDE PARK.

LONDON, March 7.

Any one who arrived at the Marble Arch entrance to Hyde Park on the first Sunday of this month could see at a glance what exceptional interest had been aroused by the meeting called to welcome the South African "exiles." Four o'clock was the time fixed for the beginning of the speeches. By that hour the multitude was already far larger than the normal total of what is regarded as a very successful Hyde Park demonstration. Walking south to the Hyde Park Corner entrance, one found the vanguard of the chief procession beginning to pass through another dense crowd. It was not until about six o'clock that the last detachment made its way in.

The deported leaders themselves marched under the words "Exiled! They Conquer." Other legends were "Welcome to the Deported," "Unity now International," "Your Liberty at Stake," "Workers of London and Workers of South Africa Stand United against Botha." Out of the hundreds of mottoes displayed on these banners, only two or three could be regarded as at all violent or abusive.

Not every one, of course, among the hundreds of thousands of persons present could be claimed as a sympathizer. It was just the kind of Sunday afternoon, with its bright sunshine and genial air, that would tempt into Hyde Park—its pleasant sward fenced off by no "Keep off the grass" notices—large numbers of people who cared little about politics. Doubtless, too, mere curiosity to see what the deported leaders were like attracted a good many. The Monday papers published a snapshot showing F. E. Smith, the Unionist member of Parliament, with silk hat on his head and cigar in his mouth, listening to one of the speeches. Many others, certainly, came to the park and went away again with no more democratic zeal than Mr. Smith. But the welcome that was given the "exiles" when they reached their several platforms, and the enthusiasm with which the nine meetings carried the resolution of the day, showed how strong a body of opinion supported the protest.

A big demonstration of this kind is of some value as an index to popular feeling, especially in cases where for some reason or other it has not been able to find adequate expression in Parliament or the press. The gathering was a London crowd pure and simple. The procession was not swollen, as at so many previous Hyde Park meetings, by deputations from the country. This rally gave one some impression of the forces of London labor. Yet of the sixty-one members for London constituencies in the present House of Commons, how many belong to the Labor party? Only three. Is it any wonder that so many of the younger and more impatient spirits within the labor ranks are declaring that the hope of accomplishing anything by Par-

liamentary representation is only a delusion?

A great demonstration, too, is a useful corrective of mistakes made by the press in its estimates of popular feeling. In commenting on the Hyde Park meetings, the *Daily News*—one of the few papers that have realized the significance of recent events in South Africa—truly says that the action of the Botha Government has touched popular instincts in a manner and to a degree of which organized political opinion has very little conception. "It is clear that the papers do not recognize it. It is fairly certain that none of the regular political parties has any real appreciation of the magnitude of the storm brewing. This is not an ordinary labor agitation, any more than the passionate protest against Chinese serfdom was an ordinary labor agitation. What the man in the crowd feels, perhaps, rather than thinks and says, is that, in their dealings with these men, Gen. Smuts and his colleagues have struck a blow not at trade unionism only, but at the very heart of civilized democracy of any kind."

The British Government and Parliament, one may take it for granted, will do nothing. If the Colonial Secretary's doctrine of colonial independence is correct, there is no power at home to interpose the slightest check on Gen. Botha so long as he can obtain a majority in South Africa. This very helplessness will only embitter the feeling of those who resent the Botha policy as an affront to the British traditions of liberty and justice. Before this trouble arose, there was already good reason to fear a general strike on English railways next summer. The effect of the South African martial law and deportations upon the temper of the labor world has been such as to make this prospect almost a certainty.

CARNIVAL IN SPAIN — ONE-ACT PLAYS—THE OPERA.

MADRID, March 8.

The chief attraction of the carnival, which, at the beginning of Lent, temporarily drives politics from the field, is the procession on the Recoletos, the chief boulevard, in the gayly decorated carriages and picturesque floats. A prize of $600 is offered for the most artistic effort, but on various occasions, including this carnival, no entry was accounted worthy of the first prize. This is due to the fact that the carnival season here in Madrid is getting to be more and more a festival of the poor, and the appearance of most of the floats is flimsy and cheap. Various wealthy families adorn their carriages with flowers and ribbons, and make a picturesque addition to the spectacle, but the floats are the criterion.

Another feature has driven out the purely artistic effort, and that is the opportunity of advertising. Thus a very successful float filled with gay young people, dressed as hunters and huntresses and representing "Valor and Beauty," may be followed by a grotesque figure sitting in a huge shoe and carrying the advertisement of the only shop worthy of your patronage. An insurance company also entered a float in which the most prominent object was a sign urging every one to get his or her life insured, and to do it now. It all reminded me of my boyhood days, when, after the wonders of a Barnum circus parade, came the anti-climax behind the last elephant in the form of a darky driving a wagon with a huge sign extolling some quick-lunch counter or a new brand of easy-chair tobacco.

In the smaller cities some of the older traditions have fortunately been preserved. Thus the procession of giants, grotesque figures representing in some places various nationalities, in others characters from pictures or folklore, still issues forth, and after parading through the chief streets and performing a curious local dance in the principal square, enters the church itself. There, according to the ancient tradition of some towns, the figures repeat their dance before the image of the Virgin, or of some saint, no doubt in order to let him share the merriment and to afford him a little amusement in the midst of the ennui of unending heavenly bliss. At the end of the festivities, the giants are stored away in the sacristies, to show that they are not only sanctioned by the church, but form a part of the various religious procedures and ceremonies.

The theatres and places of amusement here hardly resemble those anywhere else. During the days of carnival, especially, when it was frequently suicidal to remain out of doors, the small theatres, which give only one-act plays, were crowded. The briefness of these performances allows the presentation of several plays in the course of the afternoon and evening. Indeed, the next morning should be included, for it is often two o'clock before the theatre closes. The striking feature of these performances is their utter lack of formality. They begin half an hour late, or more; they have been insufficiently rehearsed because they are apt to be taken off with surprising haste after unfriendly demonstrations on the first night; the prompter plays the chief rôle, and the heroine is likely to find him more interesting than her passionate lover; the musicians drop in casually smoking, and with their hats on, and by and by the leader appears, which may indicate that the audience will not be kept waiting much longer. Sounds of scene-shifting continue, curious faces appear at the side of the curtain to ascertain whether the number and temper of those present demand a prompt beginning. Presently the orchestra strikes up and a characteristic, light musical comedy has begun.

The scene generally opens on a village square, which enables the composer to put the audience into an expectant frame of mind. Many things can happen on a village square, the worst being a song by an untrained but willing chorus, made bearable by some rather clever dancing. Then the hero comes in and discloses the difficulties he finds in the conquest of his love. When you feel perfectly certain that she will never have him, she enters, sings a song with her eyes fastened on the director, and finally disappears with her lover, in defiance of the unsuspecting father. The scene then shifts to Paris. I have never been able to determine why in almost every play the scene shifts to a brilliantly lighted Parisian hall. Be that as it may, the climax of the intrigue is now reached. The eloping couple appear; so does a fabulously wealthy American; champagne flows in rivers; flimsily dressed danseuses show the possibilities of night life in a great city; songs and choruses succeed each other. In the meantime, the heroine resists the bribes of the wealthy American; the father arrives in hot pursuit, but is convinced of his helplessness by the facts of the situation, and the curtain falls with the lovers grouped near the prompter's box, while the prompter himself hands a cigarette to the irate, but appeased father.

The performances at the Royal Opera House are no less characteristic of Madrid. No *mise en scène* of a more luxurious character could be devised; evidently neither time nor money is spared to make the costumes and the decorations equal to any in Europe. This winter many Italian operas are being presented and also a few of Wagner's are attempted. I use the last word for many reasons. In the first place Germanic traditions are as foreign to these people as are the customs of the Chinese. In the second place Italian and Spanish singers rarely interpret Wagner in a way satisfactory or even endurable to a German musician. Finally, it is an exceptional Spaniard who will understand music such as Wagner's. The musical rhythm of the people here is, as it has been for centuries, purely Oriental—cadences, melodies, and trills. Wagner, therefore, seems to enjoy a success based on his great name rather than any local appreciation.

The Italian opera, on the other hand, is the greatest drawing card, and is generally presented with a good deal of fire; and, when the singers are imported from the leading opera houses, is thoroughly successful.

R. S.

HOLLAND'S FINANCIAL DIFFICULTIES—OLD-AGE PENSIONS — THE NAVY.

THE HAGUE, March 14.

Holland, like many other countries, annually publishes a book containing the official trade statistics. But the man who has to make use of such tables had better take any figures than these official "returns." This untrustworthiness may be excused on two grounds. In the first place many kinds of goods are free from import duties, and it is not necessary to take account of the quantities thereof coming into this country. Secondly, quantities of goods cross the frontier daily to be re-exported.

It is in relation to value that figures are altogether wrong. Again the explanation is easy, but can hardly serve as an excuse. The statistical service was organized in 1850, and the prices of various commodities, prevailing at that time, were taken as a basis to calculate the value of the trade. That these prices have varied in sixty years has only recently dawned upon the official mind. Peruvian bark, worth $20 a kilogram then, is still regarded as worth the same, al-

though it can now be obtained at about one-hundredth of that price.

A thorough overhauling of this state of affairs has been promised and a bill has already reached the second Chamber providing for reforms. When the trade returns for 1914 are published next year a considerable diminution of the value of imports and exports is likely to appear, but this will be purely clerical.

The old-age pensions accorded to septuagenarians by the previous Administration prove far more expensive than it was thought they would, and other measures —the increase of the colonial navy, for instance—demand many millions. Mr. Bertling, the Minister of Finance, is in a far from enviable position, as he has to find the money, not only for what the present Government does, but also for the measures passed by its predecessor. That Administration proposed to revise the tariff and to make it fiscal and "mildly" protecting at the same time. But this met with an unmistakable "no" from the electorate. Other financial measures, such as a 10 per cent. surtax on several duties and a tobacco tax, were vehemently opposed also, the former as a "makeshift unworthy of a real financier," the latter as an intolerable burden on the Dutch, who smoke as soon as they can walk to a cigar shop.

Minister Bertling, however, cannot have his single income tax passed in time to use it this year, and thus has to resort to the makeshifts which were condemned in his predecessor. Even he has announced a "technical" revision of the tariff, a tobacco tax, and surtaxes. And the latter are much higher than those paid at present. Thus on the death duty a surtax of 20 per cent. is proposed, on the earned income a duty of 20 per cent., on the unearned income a duty of 25 per cent., and on the income tax, levied on companies with limited liability, a surtax of even 50 per cent. is asked.

There are those who think that even the $100,000,000 desired by the State is not sufficient to guarantee Holland's independence, much less that of her colonies. At present the Dutch fleet is not more than a make-believe. The ships are small and for the most part too old to be of any account in war. There is not a single dreadnought among them—nothing to protect the commercial fleet, Java, and the rest of the Indian Archipelago. Several Royal committees have studied the problem, and it is probable that before long an Indian squadron will be built.

In the meantime private people are doing their best to support the State. The firm of Driessen, cocoa manufacturers, have devised a novel way to assist the Navy League in collecting money for warships. Every packet of chocolate, every tin of cocoa contains coupons of a value corresponding to the size of the packet. Buyers are requested to return these coupons to Messrs. Driessen, who undertakes to send the amount printed on the coupon to the Navy League. It is only a matter of 2,000,000,000 twopenny tablets or thereabout. Every Dutch man, woman, or child to eat one tablet a day, and the Junketer may be put on the stocks within a year! Was there ever a sweeter way to show one's patriotism?

F. H. A.

Parties and Men.

SOCIAL AMENITIES IN POLITICAL LIFE.

By SIR HENRY LUCY ("Toby, M. P.").

On the opening day of the famous case of Bardell versus Pickwick the defendant observed a serjeant with a fat body and a red face who nodded in a friendly manner to Mr. Serjeant Snubbin and said it was a fine morning. "Who's that red-faced man," whispered Mr. Pickwick to his solicitor, "who said it was a fine morning?" "Mr. Serjeant Buzfuz," was the answer. "He's opposed to us; he leads on the other side." It is recorded how Mr. Pickwick "was on the point of inquiring with great abhorrence of the man's cold-blooded villany how Mr. Serjeant Buzfuz, who was counsel for the opposite party, dared to presume to tell Mr. Serjeant Snubbin, who was counsel for him, that it was a fine morning," when he was interrupted by the entrance of the judge.

This touch of nature, noted by Dickens, makes akin the political world on both sides of the Atlantic. In their social relations opposing parties in the various Legislatures dwell apart. They lunch and dine together, strictly within the lines of party demarcation, and regard with suspicion interchange of social friendship with adversaries. An exception to the rule is to be found in London. Party spirit is not less bitter, but it does not extend beyond the limits of the actual battlefield. In the dining-room of the House of Commons particular tables are in a few instances set apart for particular companies. There is, for example, one at which His Majesty's Ministers sit. No private Member would presume to join the circle. Analogous provision is made for leaders of the Opposition. The Irish Nationalists also have their particular quarter in the dining-room. But under the mellowing influence of the prospect of Home Rule, they are less exclusive than they were in Parnell's time or in the early days of Mr. Redmond's succession to the leadership. They may frequently be seen dining at tables where the main body of private Members promiscuously sit.

This disposition to fraternize with the enemy at the social board is in increasing degree displayed at private gatherings. There remains a certain line of distinction. If the host and hostess belong to the Liberal party, the majority of guests are of that faith. The rule applies with equal force to the houses of Conservatives. But at what usually turn out to be the most successful parties there is a leavening, whether of Liberalism or Toryism as the case may be. The same circumstance exists in the case of the great "crushes" at which the opening of a new session is celebrated. The Prime Minister and his wife are "At Home" to his supporters in both houses, and to their wives and daughters. On the same night the leader of the Opposition throws open the stately rooms of Lansdowne House. The vast proportion of both guests belong to their several political parties. But in both houses there is a fair sprinkling of the other side, usually represented by its most popular members.

The rupture of the Liberal party following on the introduction of Gladstone's first Home Rule bill dealt a blow at this happy condition of affairs from which in individual cases it has not yet recovered. There is nothing so bitter as the animosity of severed friends. The five-score members of the Liberal party who followed Mr. Chamberlain and Lord Hartington in secession from their party would hold no truck with former comrades. The latter were equally bitter in their resentment of those whom they regarded as deserters from the Liberal flag. It so happened that what were at the time known as Dissentient Liberals included the majority of those accustomed to play the host. Mr. Chamberlain gave many dinner parties throughout the session. Previous to the break-up of 1886, Devonshire House was the splendid centre of social life for the Liberal party. Thereafter its doors were angrily closed against old familiar faces.

The only member of Gladstone's Cabinet who managed to retain friendly relations with former colleagues was Sir William Harcourt. Mr. Chamberlain by chance meeting his once bosom friend, John Morley, passed him without sign of recognition. Sir George Trevelyan, with whom for years he was accustomed to exchange hospitalities, became a particular aversion, inasmuch as, having at the outset seceded with the rest, he, upon reflection, went back to the old fold. But up to the time of Sir William Harcourt's death there was no interruption of intimacy between him and Mr. Chamberlain. The same friendly relations were maintained with Sir Henry James, afterwards Lord James of Hereford, a man who for conscience sake sacrificed the blue ribbon of his profession when within his grasp. When in 1886 the landslide on the Home Rule question rent the Liberal party in twain, it was made known to Henry James that in Gladstone's reconstituted Government the woolsack was at his disposal. He was, however, a convinced anti-Home Ruler, and turned aside from the luring bait.

A pretty tale hangs by the uninterrupted amity of Harcourt and Henry James. One day, in conversation with Harcourt, the late Lord Morris, one of the wits with which Ireland occasionally endows a Saxon Parliament, remarked upon the charm of this personal incident in the storm and stress of party warfare.

"Yes," said Harcourt, with a wistful, far-away look in his eyes, "we are, as you may say, brothers."

"So were Cain and Abel," murmured Lord Morris.

As illustrating the happy state of the social relations of political antagonists in the Parliamentary circle, I may mention an incident of personal experience. During the term of his Premiership Mr. Arthur Balfour had accepted an invitation to dine at my house. Casting about for men whom he would particularly like to meet, I thought of Sir William Harcourt. On the face of it, the experiment was exceptionally risky. As leader of the H use Mr. Balfour was in personal charge of an Education bill whose genesis and provisions were abhorrent to Liberals. Harcourt ably led desperate resistance to the bill. At that period there was being tried the experiment of adjourning the sittings of the House of Commons from 7 P. M. till 9 o'clock in order that Members might dine. On the day of our dinner an extreme controversial point had come up for discussion on the bill in committee. From three o'clock till seven Arthur Balfour thundered across the table at Harcourt, who, the light of battle in his eyes, vigorously replied. At eight o'clock they unexpectedly met at dinner and were undisguisedly pleased at the *rencontre*.

Early in the course of the meal Harcourt announced that, in view of the urgency of the position of the Education bill, he must be back in his place at nine o'clock, when the sitting would be resumed. Arthur Balfour smiled at this noble exhibition of devotion to duty, but made no remark. He recurred to the subject later when, consulting his watch, he found it was five minutes to nine.

"Harcourt," he pleasantly said, "it's time you were off."

Harcourt, who loved a cigar after dinner and the talk that accompanied it, gloomily looked across the table. Then he rose and said, "I beg to move the closure," and stalked from the room.

The Prime Minister, who, by the way, does not smoke, was in no hurry to depart. He read in the papers of the next morning how the leader of the Opposition, rising at ten o'clock, indignantly protested against the absence of the right honorable gentleman in charge of the bill.

"Where is the Prime Minister?" he inquired, thumping the table with closed fist, and with familiar gesture looking round to his supporters, who responded with strident cheer. "He ought to be in his place to answer for this iniquitous bill."

Among the charges brought from the opposite benches against Mr. Asquith is that he is too frequently disposed to dine out when the House is in session, and may not be counted on to return before eleven o'clock, the hour of adjournment. It must be admitted that the custom on the part of a Prime Minister is comparatively modern. While Disraeli was Prime Minister he never, or hardly ever, dined out while the House was sitting. Stafford Northcote followed his old chief's example. W. H. Smith improved upon it in characteristically genial manner. He had a specially prepared dinner sent to his private room behind the Speaker's chair, provided his own wines and cigars, and invited a few of his colleagues or principal supporters to share the comforts of the situation, their consciences made easy by knowledge that they were within sound of the division bell. As for the leader of the House, he was at instant call should a sudden turn of events demand his presence on the Treasury Bench.

Mr. Gladstone during his successive Premierships rarely dined at the House. His official residence in Downing Street was, at his habitual speed, within seven minutes' walk. He found the brief exercise and the change of air refreshing. Moreover, he liked to munch his mutton at his own table, with full opportunity to bestow upon each mouthful those thirty-two bites he once declared were necessary to complete digestion. But his absence never exceeded in duration the canonical hour. Sometimes at periods of storm and stress it fell considerably within its limits. When he was carrying his second Home Rule bill through committee I have seen him stride out past the speaker's chair on the stroke of eight o'clock, and watched him return to his place at twenty minutes to nine, having in the meantime bolted his evening meal. Possibly at such crises he would put on a spurt that would reduce his walk there and back to ten minutes. That allowance made, the feat was one that should humble the pride of the American quick-luncher.

It was Mr. Arthur Balfour who broke the traditions of the Treasury Bench in this respect. Impatient of the dulness of debate, tired of the tedium of hour-long lounging on the Treasury Bench, he shrank from the supplementary ordeal of eating a not-particularly good dinner in the company of men who, worthily esteemed as colleagues, inevitably suffered from the drawback of diffusing the sadness of monotony. To dine at the House would be very pleasant, say once a week, or, better still, once a fortnight. "Toujours perdrix" is proverbially a distasteful item of the bill of fare.

When in succession he came to be Prime Minister or leader of the Opposition, Mr. Balfour, most delightful of companions, found himself the recipient of a stream of invitations to dinner outside the precincts of Westminster. After heroically withstanding temptation for a while, he yielded. In course of time what began as an exception grew into a habit. So powerful was its force that it captured both Front Benches, Ministers and ex-Ministers nightly going out to dinner with a light heart. In Disraeli's time, and with occasional exceptions during Gladstone's Premiership, the spectacle of a Minister showing himself on the Treasury Bench in dinner-dress created something of a sensation. In these days (or rather nights) it is common enough.

An Arctic Eye.

VISION OF THE SNOWY OWL.

Because we human beings have reasoning powers, we command the laws of physics and optics; we make the waves of light our plaything, thinning, concentrating, bending, filtering them with lenses, mirrors, and prisms. And when all is done, it is no more than an attempt to remedy the degenerate condition of our two eyes. Everything must be judged by comparison. If there were no eyes but our own they would be regarded as perfect. But there are the eyes of a snowy owl, and when I look deep into those yellow depths, I am conscious of inferiority.

In some ways an owl's eyes are much like our own. The yellow irides of the snowy owl face well to the front, giving him binocular vision; so we hail him as, like ourselves, one of the pursuers of earth, who has more need in life to look forward than back. Furthermore, he winks with his upper eye-lid, and not his lower, in which respect he differs from most birds, and he has eye-lashes, too; but why we know not, for his frozen tundra home is not dusty. Beyond these resemblances, comparison shows us in a sorry light, which is calculated to disturb, momentarily, the poise of the Lord of Creation.

In size the owl's eyes far excel ours, but to what extent we fail to grasp until we see his skull. Then we realize that he is indeed a specialist. His whole personality is subordinated to vision. He is primarily a pair of great, golden optics; his feathers keeping these eyes warm, his wings serving to carry them from place to place, his food captured chiefly for their nourishment. Their relation to his skull is like that of the brain to ours. Indeed, the cubic contents of each of his orbits is actually greater than his brain capacity.

We watch his iris carefully and see it expand and contract like the diaphragm of a camera shutter. In his icy home near the top of the world, when the sun sinks for the last time and the winter night shuts down, these golden irides enlarge and the convex surface of the lens draws in every available wave of twilight from star and aurora, re-

vealing through the dusk the small creatures of fur and feather, and directing their pursuit and capture. But what of the Arctic day when for months the snowy glare is poignant pain and men must guard their eyes with dark glass or flounder about helpless with snow blindness? In the inner corner of our eye we have a little roll of skin, useless and unsightly, a heritage from some saurian-like ancestor. The owl has also received this third eyelid, but in working order; and when the glare becomes unbearable, this membranous curtain flows gently outward, filming the eye with translucent tissue. Thus can the eagle look at the sun and live; and the owl scan the light-scorched tundra and follow the leaps of an Arctic hare.

The interior of an owl's eye viewed through a simple mirror ophthalmoscope is a marvellous sight, seeming, like the X-ray, to admit us to the deeper secrets of the living body. The moment the pencil of light strikes the retina, the iris contracts, and readjusting itself a moment later, reveals the whole back of the inner eye, the blood-orange choroidal coat and its delicate pigmentation. Below the level of the pupil is the curious, fan-like pecten, throbbing rhythmically, its black tissue crumpled into half a dozen folds. The human eye wholly lacks this structure, and we can only presume that its function is to help nourish the great eye as a whole, or to aid in accommodation.

The full face of the snowy owl is one of its human resemblances. Among mammals we find much the same angle of divergence in dogs and bears, both of which look forward in life and not sideways. But unlike these creatures, the snowy owl has eyes with little power of rotation. The law of compensation steps forward and presents the owl with fourteen neck vertebræ, which move upon one another so easily that the bird can describe almost a omplete turn of its head. The bears, with but half this number of neck bones, can twist only part way around. The owl is like a binocular, revolving lighthouse; the bear like an oscillating but stationary one.

When the owl flies silently through the dusk, it has need to concentrate its vision in but one direction—downward. No prey offers, nor does danger threaten from the side or above. Now this sort of hunting, peering through the dim light, or, in the Arctic day, searching the far distant tundra, requires far-sightedness. But when the ground is under his feet, and his prey within reach, this long vision is swiftly replaced by the short-sightedness necessary to the swift moment of capture. In captivity, with opportunity only to look closely at objects, the snowy owl may become short-sighted or else astigmatic, but we so closely reproduce his normal conditions of life that he thrives for many years. In our climate he will not survive the heat and continued glare of the summer's sun, so at this season the change to Arctic night is simulated by removing him to a cool, dark cellar. Here he eats his daily portion of mice and sparrows, he preens and moults his plumage, occasionally converses in a low tone with his fellows, and still more rarely sends his loud mating call, "craou! craou!" ringing through the night. Or he sits silent and introspective, seeing again perhaps the sights which have been photographed on those great pupils: the coming of the colorful Arctic spring, with the unreal brilliance of tundra blossoms; the eternal warfare of the wolves and the musk-oxen; the inverted sex-life of the phalaropes; and his own home life, the scratched-out hollow in the cool moss, and the half-dozen sombre-clad owlets for which he foraged through all the intense, brief summer of this desolate northland.

WILLIAM BEEBE.

Correspondence

THE NEW "NATION."

TO THE EDITOR OF THE NATION:

SIR: The announcement sent out with the last number of the *Nation* will be of great interest to all its old readers and subscribers, and since you generously invite them to comment on the changes that are proposed, I am tempted to express my pleasure at the promised restoration of the summary of the week's news, which was a valued feature of the *Nation* for a brief period some years ago. At the same time, the "marked increase in the number of pages per issue," which is foreshadowed, fills me with apprehension. It has always seemed to me one of the fine distinctions of the *Nation* that its high qualities were contained in such compact compass. I should fear that any marked enlargement of its field such as is suggested by the items in your list: "Out of Doors," "The Animal World," "Sports," would result in some loss in its own special distinction of character without adequate compensating gain. Through the medium of reviews, these subjects may be said to have received in the past a quite adequate consideration in your columns. May I express the hope that, by expanding them into special features, the *Nation* will not, with the rest of its enlarged programme, approach too nearly the swollen ranks of the magazine and the bloated weekly editions of the daily paper? HAROLD B. WARREN.

Brookline, Mass., March 17.

TO THE EDITOR OF THE NATION:

SIR: The writer begs to do himself the pleasure of saying—apropos of your recent announcement of changes to be made—that the best possible guide to future enlargement would seem to be your past. Dr. Holmes to the contrary notwithstanding, it is sometimes possible to steer a ship by reference to its own wake. In point of scholarship, independence, cosmopolitan range of intelligence (whether political or literary), grasp of large subjects, you have conferred on the writer what I may call a "perennial favor," and a most exceptionally great favor, ever since the *Nation* was first published. You have championed the identical ideas incorporated in President Wilson's leading measures—the "safe and elastic" principles combined in the Currency bill, in particular. I am yours with great respect and genuine gratitude.

Hartford, Conn., March 17.

A PLAGUE OF SOCIOLOGICAL GOSSIP

TO THE EDITOR OF THE NATION:

SIR: The most incorrigible gossip, particularly if his specialty be sociological gossip, can generally silence criticism by a virtuous protestation of his interest in facts. If he ask foolish questions, he is only "seeking light"; if he sticks his nose into dirty business practices, he is a devoted truth-seeker, trying to get at the facts. The Almighty Fact has become one of our lesser gods and bids fair to be raised to the rank of the two great gods, the Almighty Dollar and the Almighty Ballot. Who is there that dares to question the value of fact and the superlative merit of the fact-seeker? At the risk of sacrilege, it must be said that facts are what the gossip, as well as the scientist, seeks; with this difference: that the scientist values a fact because of its relation to some truth which he believes to be of value, whereas the gossip values it because of the interest he can create by telling it to somebody else. The unthinking world has often mistaken the gossip for the scientist, especially when they have dealt with some of the same facts.

How many Government commissions of inquiry have we had during the last fifteen years? Does anybody remember now what they did or what they discovered, though at the time our ears tingled with horror at the facts brought out? Has any real good come of any of them? If one wants to know why these mountains of published evidence have brought forth so little, let him follow carefully the hearings of any commission of the present day. Let him try to determine how much of their inquiry is mere economic or sociological gossip, and how much relates itself to any real problem in any logical way. The theory seems to have been that, if we can only pile up a large enough mountain of fact, the truth will, in some magical manner or by some process of parturition, emerge. Truth is not to be discovered in that way. Suppose that a court of law, without any idea as to what evidence was relevant and what was not, should proceed to gather volumes of evidence, valuing each fact for its own sake, whether it had anything to do with the question at issue or not, how long would it take to determine the merits of even the most ordinary case? What is especially needed in these inquiries is some general ideas on the relevancy of sociological evidence. That is the only thing which will

prevent them from becoming mere collections of gossip.

It has long been believed that when, for any considerable time, there are more laborers seeking employment than are wanted by the employers, then labor conditions are bad; but when, for any considerable time, employers are looking for more men than there are men to be had, labor conditions are good. Now, this is either true or it is not true. If any commission of inquiry into social conditions doubts it, why does it not test it out and determine, once and for all, whether it is true or not? If it is true, it furnishes the key to the whole situation. All that has to be determined is how the number of men looking for jobs can be reduced, or how the number of jobs looking for men can be increased. If your commission cannot do that, it had better disband as incompetent to handle the question.

It would be an interesting inquiry if the members of the commission would spend half their time disguised as employers seeking unskilled labor, and the other half as unskilled laborers seeking employment. By this means, they could determine whether it is harder for an employer to find an unskilled laborer who is willing to work for him than it is for an unskilled laborer to find an employer who is willing to employ him, or *vice versa*. If it is especially hard for employers to find unskilled laborers who are willing to work for them, obviously we should either have more unskilled laborers, or fewer employers, or both. Most employers would certainly agree to that, and they would probably set themselves to get more unskilled laborers imported. By the same reasoning, if it is especially hard for unskilled laborers to find employers who are willing to employ them, most obviously we should try to get more employers or fewer unskilled laborers. If it is good policy to import unskilled laborers when they are scarce and hard to find, it ought to be equally good policy to stop importing them when they are so abundant that they have difficulty in finding employers enough to employ them all. No one who is not willing to do this need be taken seriously if he professes interest in "labor."

Our industrial system needs a balanced ration; but it seems to have an excess of unskilled labor and a deficiency of employers. Obviously, the ration can be balanced up only by reducing the excessive ingredient or adding to the one which is deficient. Why not do both? At the present time we are doing the opposite in both cases. We are not only importing vast numbers of unskilled laborers, but we are discouraging employers by holding them up to public odium and ridicule, especially if they are unusually successful. When we need more employers who can start new productive (not acquisitive) enterprises and carry them through successfully, we should hold them up to public esteem. Otherwise we are imitating the old woman who threw clubs at her chickens because they would not come when she wanted them.

If we shall stop doing the obviously wrong things, and do one or two obviously right things, we shall need no more, or very little more, "social" legislation. Moreover, the sociological gossips will be among the unemployed.

BANDELIER.

To the Editor of The Nation:

Sir: By the death of Adolph Francis Alphonse Bandelier, on Thursday, March 19, in Madrid, Spain, American anthropology has lost its most distinguished scholar. It is very doubtful whether his intimate personal knowledge of the races of both North and South America, based as it was on many years of life in the very dwellings of the Indians and expanded by exhaustive researches in Spanish colonial archives, can ever be equalled. It certainly has never been surpassed by his predecessors or contemporaries. By his death it is as though a storehouse of priceless manuscripts had been burned.

Professor Bandelier was born in Berne, on the 6th of August, 1840, and was, at the time of his death, in his seventy-fourth year. It may have been due to his Swiss ancestry that his literary product seemed to combine German patience and thoroughness with an originality and brilliance that is French.

Coming to America at an early age, he soon became interested in the study of American archæology. At forty we find him in the Southwest and Mexico, where he lived for twelve years, devoting his time to long journeys on foot, living for months at a time in Indian communities without so much as seeing a white face. His zeal for acquiring at first hand an exact knowledge of the manners and customs of the aborigines led him into many dangerous situations. But neither danger, nor, what is far harder to endure, the filth and squalor of Indian life, was allowed to interfere with his investigations. After five years of field work that would dismay any but the most ardent and devoted enthusiast, he settled down in Santa Fé to undertake extensive researches in the documentary evidence. Much of this time he was in charge of studies made for the Hemenway Archæological Expedition.

In 1892, through the generosity of Henry Villard, Bandelier left Santa Fé for the West Coast of South America. Here, chiefly in Peru and Bolivia, he continued his ethnological, archæological, and historical studies. For fourteen years he worked on South American subjects in connection with the American Museum of Natural History, gathering a large part of the extensive collection of Peruvian antiquities which deservedly adds to the fame of that museum.

While he was in Lima he married, in 1893, Miss Fanny Ritter, who was destined to become, not only his faithful comrade in the field, but also his enthusiastic co-worker in the library, and during many years of the latter part of his life, his eyes as well. In the deciphering and translating of colonial manuscripts, a field in which he took high rank, Mrs. Bandelier was of the greatest assistance.

In 1904 Bandelier became a lecturer at Columbia University and was able to teach in his favorite field: Spanish-American literature in its connection with ethnology and archæology. Failing eyesight hampered his work but never dampened his zeal. Not long ago he was rejoicing in restored sight and shortly before his death was engaged on further researches in the realm where he was master.

The list of his published works reads like a bibliography of American anthropology. It includes scientific reports on his archæological tours; contributions to the history of the Southwest; semi-popular books like "The Gilded Man," a vivid picture of the period of Spanish exploration and discovery; and, finally, "The Islands of Titicaca and Koati," the best example of his ability to combine intensive field study and wide literary research.

The last-named book, which was published by the Hispanic Society of America in 1910, is typical of his life-long crusade against tradition and for the truth. In it he shows the falsity of many historical myths for which the Spanish chroniclers and their followers were responsible. Prescott had to rely almost entirely on such sources as Garcilasso Inca de la Vega. Yet that noble Inca left Peru when but a youth, lived forty years in Spain before he began to write, and then with pardonable pride sought to surround the empire of his ancestors with a glamour that should command the respectful admiration of sixteenth-century Europe. Bandelier, by his long years of actual residence among the Indians, was able to remove much of the accumulated crust with which romance and imagination had surrounded the truth. It was due to this ability that his comments on the literature of early Spanish-America were so valuable. His loss will be felt by students of American anthropology for many years to come.

Among his published works, the following are the best known: "On the Art of War and Mode of Warfare of the Ancient Mexicans," 1877; "On the Distribution and Tenure of Lands, and the Customs with Respect to Inheritance among the Ancient Mexicans," 1878; "On the Social Organization and Mode of Government of the Ancient Mexicans" (these three published in the Peabody Museum of American Archæology and Ethnology, Harvard University, Annual Reports for 1877, 1878, and 1879); "Historical Introduction to Studies Among the Sedentary Indians of New Mexico," 1881; "A Report on the Ruins of the Pueblo of Pecos," 1881; "Report of an Archæological Tour in Mexico in 1881," 1884; "Final Report of Investigations among the Indians of the Southwestern United States 1880-5," part 1, 1890, part 2, 1892, two volumes; "Contributions to the History of the Southwestern United States carried on mainly in the years from 1880-1885," 1890 (all these in the Papers of the Archæological Institute of America, American series, constituting volumes 1-4); "The Romantic School of American Archæologists" (New York Hist. Soc., 1885); "The Delight Makers" (a novel of Pueblo Indian life), 1892; "The Gilded Man (El Dorado), and Other Pictures of the Spanish Occupancy of America," 1893; "An Outline of the

Documentary Report on the Relative Antiquity of Ancient Peruvian Burials," 1904; "History of the Zuñi Tribe," 1892; "The Indians and Aboriginal Ruins of Chachapoyas, Peru," 1907; "The Islands of Titicaca and Koati," 1910.

NATURE IN THE EARLY EIGHTEENTH CENTURY.

TO THE EDITOR OF THE NATION:

SIR: In view of the prevalent conception that the early eighteenth century had no appreciation of nature, the following lines may, perhaps, be of interest. They are from an anonymous poem which was published in 1729, under the title, "The Loss of Liberty: or the Fall of Rome." The piece is of some significance on its own account, as it seems to me to be better than all but a few of the blank-verse poems published before "The Task" (1785). Thomson's "Winter," "Spring," and "Summer" had preceded it, and probably influenced it, but it does not particularly recall "The Seasons." The lines given below have nothing to do with the subject of the poem, but are introduced for their own sakes:

The Sun, with all his Glory, from the Sky
Descended, an unclouded Blaze! the East
Was darken'd o'er with Night's increasing Shade,
'Till, by Degrees, the ample Vault of Heav'n
Was veil'd amid the Gloom; the Stars alone,
With twinkling Radiance sparkled from above,
And gemm'd the glitt'ring Round; 'till in her Wane,
The languid-looking Moon, all sickly, pale,
And yellow'd o'er with horizontal Mists,
Gleam'd thro' the waving Trees, and drove her Car,
In Silence o'er the World; then slept the Winds,
And still'd the murm'ring Wood, the ruffled Stream;
Peace brooded in the Calm, and Nature seem'd
To slumber o'er her Charge.

RAYMOND D. HAVENS.

University of Rochester, March 15.

IMAGINATION IN COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: Apropos of your first symposium, may I remark that what is left unsaid is as important as what is said? The stress in every one of the letters is laid only on what the imagination is stimulated to *do;* our State universities apparently deem themselves altogether successful if they can inspire their students to build better bridges and make two ears of wheat grow where one grew before. No one wishes to belittle the material services of these institutions to their communities. But that such stimulation is the chief function of education is open to question.

What of the stimulus—which these gentlemen so completely overlook—to *be,* to conceive an ideal of character and conduct? Does not the college which gives its students a conception of a well-ordered life, which inspires them to strive for self-regulation and proper self-development, also benefit the community? For, after all, very few undergraduates can become Edisons or Burbanks, on however small a scale, but they may be roused to make the best out of themselves. To my mind it is more urgent at present that they be successes as men than as farmers or engineers—for the man who aims at realizing a sound humane ideal is quite likely to "get on in the world" and is sure to realize his duties as citizen, while the man whose goal is material, even material service, may live a disorganized and impoverished existence.

Herein, I fancy, lies the cause of the slight querulousness discernible in these letters towards the Eastern colleges and the classics. On the Atlantic seaboard the humanistic ideal still survives to some extent. Probably the State universities more nearly fulfil their purpose, although the older institutions are by no means such abject failures as some people would have us believe. However, the latter do seem to lose their inspiration in proportion as they subordinate the classics, and some of us who owe allegiance to more "up-to-date" branches of learning would like to see the old supremacy reëstablished. To us Plato and Aristotle seem to give a finer stimulus than stock-raising and the theory of the gas engine, and Sophocles to yield a deeper insight than Sudermann or stereotomy.

Books and Men

SWINBURNE.

A few of Swinburne's essays and studies have been gathered into a volume and published by Mr. Richard G. Badger, at the Gorham Press, Boston. The first of them, a sort of brief "morality," called "A Pilgrimage of Pleasure," gives its name to the book. It is attributed to Swinburne, but apparently without absolute certainty. The date of it is 1864.

Other numbers, in the same book, are "Dead Love"—"a dim sort of short story in prose," as Mr. Gosse calls it; a review of Baudelaire's "Les Fleurs du Mal"—written in a Parisian Turkish bath, according to the same authority; an article on Simeon Solomon's "Vision of Love"; a page or two about Meredith's "Modern Love"; the enthusiastic and slashing article on Dickens, from the *Quarterly Review* of July, 1902; a *Fortnightly* article on Charles Jeremiah Wells—"An Unknown Poet"; and a brief review of John Nichol's "Hannibal." A bibliography by Edward J. O'Brien closes a book the importance of which lies almost wholly in its interest to collectors, and in the fact that it is made up of articles from the hand of a man who was a great poet.

A life of Swinburne is in preparation, it is said, for the English Men of Letters series. The author is Mr. Edmund Gosse. The limits of space imposed upon the contributor to that series should not be irksome. The poet's outer life was the comparatively uneventful one of the typical literary man; of his inner life it may be that no biographer will ever try to write fully. Those who are acquainted and those who profess to be acquainted with the intimate side of literary gossip may possibly understand why so little has been generally known about Swinburne. This is not to deplore the lack of small talk, the scarcity of anecdotes about him. It simply means to point out that, while the magazines of the past thirty years have contained scores of articles about his great contemporaries—articles published both before and after their deaths—the few which dealt with Swinburne were almost all critical. They contained little or no biographical material.

Those who were born years after he had written the poems which made his name one of the glories of English literature knew simply of his living in retirement with his friend, Mr. Watts-Dunton. This was all, until his death five years ago next month. The forthcoming biography, about the "most extraordinary human being" its author ever knew ought to be an interesting book. Mr. Gosse's essay on Swinburne of about two years ago promises that.

It was a wonderful time, for his friends and worshippers, when the poet stood in the morning light of his fame:

When, with flame all around him aspirant,
Stood flushed, as a harp-player stands,
The implacable beautiful tyrant,
Rose-crowned, having death in his hands;
And a sound as the sound of loud water
Smote far through the flight of the fires,
And mixed with the lightning of slaughter
A thunder of lyres

Naturally, it turned their heads a little. Some of the cult, when Swinburne recited that very poem, "Dolores," to them for the first time, sank literally upon their knees before him, and offered the adoration due a god! Surely, no one need waste satire on a scene like that. His own conception of himself was of one who should have been an ancient bard. "I should like to stand on a promontory in Sark," said he, "in the full blaze of the sun, and shout my verses till all the gulls come fawning to my feet. That would be better than scraping and spluttering over a filthy pen."

He was right. And his worshippers, though rather absurd and hysterical, were not far from right. It is true they erred, somewhat, in their prophecies—the world's great age did not begin anew with the "Poems and Ballads," the republic of life and letters which he hailed afar has not come to pass. But this strange poet burst upon a stodgy,

mid-Victorian world; he came with words of fire. Language had a new sound on his lips, things hitherto unattempted in English prosody were child's play to him.

You can duplicate the experience; you have duplicated it if you read Swinburne for the first time when you were nineteen. That is the only age when most men read poetry; it is certainly the age to encounter the "Poems and Ballads." It is easy, from the quietude of sixty, or the cynicism of forty, to look back with amusement upon the days when Swinburne was bidding England and Europe, and the rest of the world, to have done with kings and queens, with marriage rings, apparently, and with clothes as well. But you have either missed a great experience or wilfully parted with your illusions if you do not recall with emotion your first entrance into that garden, where there is

Not a flower to be pressed of the foot that falls not;
As the heart of a dead man the seed-plots are dry;
From the thicket of thorns whence the nightingale calls not,
Could she call, there were never a rose to reply.
Over the meadows that blossom and wither
Rings but the note of a sea-bird's song;
Only the sun and the rain come hither
All year long.

Reading "The Triumph of Time," with its numerous magnificent stanzas, and reading "Faustine," "Dolores," "A Forsaken Garden," "By the North Sea"—to name but a few—has been a memorable event for thousands of lovers of poetry. If it came at the right time in their lives the magic pages burned, to their excited imagination, like those of an illuminated manuscript. On others lines of Shelley have made a similar impression, though without quite the same justification.

The healthy mind took no harm from Swinburne. Much that was extravagant, a little that was morbid, was passed by without lasting impression. Some of his eroticism was beautiful; some of it plain fudge. He had a good deal to do with founding the school of poets and prose-writers who clamor that only the illicit can possibly be "artistic"; who are as narrow and bigoted in their insistent dwelling upon one theme as any of the "Puritans" they denounce. To some extent he may have influenced the sickly band, who, as Mr. Alfred Noyes justly points out, brought poetry into disgrace and made it seem only a plaything for effeminates. Many of his longer poems, most of the dramas, are read only by students and a few others. But there remain perhaps a score of exquisite songs and lyrics, unharmed by parody, undiminished in their beauty by the lapse of nearly half a century. And this can be said of few poets, except the supreme masters.

EDMUND LESTER PEARSON.

News for Bibliophiles

GRIMAREST'S "VIE DE MOLIÈRE."

The bibliographers give 1705 as the date of the first edition of Grimarest's "Vie de Molière." To be sure, Brunet, "Manuel du libraire," Vol. III, col. 1808, adds the note: "Déjà impr. à Lyon"; but he doubtless intended to refer to an edition printed at Lyon by Jacques Lyons with the date 1692, which was really a pirated reprint of the 1705 edition, antedated by the printer so as to avoid being interfered with by the privileged publishers of Paris. This reprint of the "Vie," Lacroix suggests, was intended to form a part of the pirated edition of Molière's works issued by Jacques Lyons about 1710, with the fictitious date 1692 (see "Bibliographie Molièresque," 1875, Nos. 982, 283, 300). The real *editio princeps* of the "Vie" was published at Paris in 1705 by Jacques le Febvre and by P. Ribou; it appeared in Dutch at Amsterdam in the same year. In 1706 there appeared an anonymous "Lettre critique à Mr. de * * * sur le livre intitulé La vie de Molière," in reply to which Grimarest produced his "Adition [sic] à la Vie de Molière, contenant une réponse à la critique que l'on en a faite." The "Vie" was printed at Brussels in 1706, and in English with a translation of Molière's Works, London, 1714. In 1709 it was included in the five-volume edition of Molière printed at Amsterdam; and, together with the "Lettre critique" and the "Addition," in the edition printed by Denis Thierry at Paris (see Lacroix, Nos. 298, 299, 982-87). Lacroix states distinctly that the edition of 1709-10 is the first printed in France which contains the "Vie," "Lettre critique," and "Addition." A copy in the Harvard College Library (Paris, chez la Veuve Gabriel Huart, M.DCCX) contains in the first volume the above pieces, with the statement that they have not before been included in the "Œuvres de Molière," and two plays, "Le Dépit amoureux" and "L'Etourdi" (cf. T. F. Currier and E. L. Gay, "Catalogue of the Molière Collection in Harvard College Library").

An edition of Grimarest's "Vie" which apparently contradicts the foregoing statements, and seems not to have been recorded, has recently been acquired by the Yale University Library—a single volume with the following title-page:

LES | ŒUVRES | DE | MONSIEUR | DE MOLIERE, | TOME I. | Nouvelle & derniere Edition. | *Enrichies de Figures en Taille-douce.* | [Vignette.] A TOULOUSE, | Chez JEAN-FRANÇOIS CARANOVE, | près Saint Rome, à la Bible d'Or. | M.DC.XCIX. | AVEC PERMISSION.

On the verso of this title is the list of "Pieces contenues en ce premier volume," including prefatory matter, "La Vie de M. de Moliere par Monsieur Grimarest," the "Lettre Critique," the "Addition," and two plays, "L'Etourdi" and "Le Dépit amoureux." Then follow fifteen more unnumbered leaves, containing the "Privilège du roi" granted in 1680 to Denis Thierry for the edition of 1682; the "Permission" issued in 1696 to Dominique Desclassan, and by him transferred to Caranove, to reprint for three years in Toulouse the 1682 edition; "Avis sur cette nouvelle edition," "Table générale" of the contents of the eight volumes, "Preface" (reprinted, with variations, from the 1682 edition). "La Vie de M. de Moliere" occupies pp. 1-90; the "Lettre critique," pp. 91-107; the "Addition," pp. 108-36. The remainder of the volume is filled by the plays, "L'Estourdy, ou les contre-temps," pp. 137-236; "Le Dépit amoureux," pp. 237-324, ending with the words "Fin du Tome premier." The Yale copy appears to be complete as to text, but does not have the engravings announced on the title-page. The bibliographers describe two eight-volume editions printed at Toulouse, one by Dupuy, Desclassan, and Caranove in 1697, one by Caranove in 1699; both reproducing the Paris edition of 1682 (see Lacroix, Nos. 288, 290; Lacroix adds: "Il est de tradition, à la Comédie française, que les éditions de Toulouse donnent le meilleur texte de Molière"). Since the publication of Mr. Currier's "Catalogue," the Harvard Library has acquired a set containing Vols. I-VII of the 1699 edition, completed by Vol. VIII of the 1697. A comparison of Vol. I with the single volume in the Yale Library yields curious results. The title-pages are identical in wording, with minute differences of type; H. has "prés Saint Rome" where Y. has "près," and the vignettes are quite different. H. has no sign of Grimarest's life; it contains after the title-page ten unnumbered leaves, with the preface of the 1682 edition, "Avis au lecteur," and verses; then follow four plays: "L'Etourdy ou les Contre-tems," pp. 1-114 (notice the difference in spelling); "Depit Amoureux," pp. 115-217 (not "Le Dépit Am."); "Les Precieuses Ridicules," pp. 219-63; "Sganarelle," pp. 265-304; after p. 304 come the "Privilege du Roi" and the "Permission d' imprimer." There are occasional differences in the text of the two volumes, and Y. has three lines more to the page than H.

The Yale volume undoubtedly belongs to a pirated and antedated edition which was first mentioned in 1886 by E. Lapierre, "Les Trois éditions de Toulouse," in *Le Moliériste* (Vol. VIII, pp. 213-17). Lapierre states that in some copies of Vol. VIII of the genuine 1699 edition, Grimarest's life (1705 edition) was bound in. He then discusses the antedated edition, pointing out that its text is more correct than that of the other Toulouse editions, that the order of the plays is different, and that it contains several writings (*e. g.*, a criticism by Bayle) which do not appear in the previously known authentic editions before 1710. However, he had seen only an imperfect copy, without engravings, and evidently not including Vol. I, for he makes no mention of the "Vie," the "Lettre Critique," and the "Addition." His conclusion is undoubtedly correct, that about 1710 some printer, whether Caranove or another, brought out an edition based on that of 1710, and dated it "Toulouse 1699" in order to take advantage of the three-year *privilège* which expired in that year.

K. MCKENZIE.

Literature

THE ENGLISH PEOPLE AND THE REFORMATION.

The Western Rebellion of 1549: An Account of the Insurrections in Devonshire and Cornwall Against Religious Innovations in the Reign of Edward VI. By Frances Rose-Troup. Illustrated. London: Smith, Elder & Co.

This elaborate account derives its importance and interest neither from the eminence of its author nor from the intrinsic value of the subject, but from the prominence of the author's sponsors and from the broad general conclusions which she (and apparently they) believe this piece of minute research establishes. As the preface states, Dr. James Gairdner read and revised the manuscript; Dr. T. N. Brushfield suggested the subject and provided material. The approval of these scholars enables us fairly to regard the book as an example of the most recent methods approved by historians of the English Reformation, whose sympathies are confessedly Roman Catholic.

The Roman Catholic view of the English Reformation teaches that its cause lay not in the wickedness of the clergy nor in the alienation of the people, but in the political ambitions of king and nobles, and that the measures by which the power of the Pope was abolished and the monasteries dissolved were stained by fraud, violence, and deceit. Until, however, popular opposition to the Reformation measures, actuated by religious preference for the old régime, could be definitively established by research so sound as to stand the test of critical investigation, the burden of proof must still lie upon the Roman Catholics. If a majority of the people did object, why did they not revolt? The object of this book is to show that they did. It is the most elaborate attempt yet made to investigate popular uprisings, and to meet the contention of recent students that the risings between 1536 and 1558 were chiefly the result of the economic crisis, and were only to a very minor extent connected with the Reformation.

The author's methods are those of the new Roman Catholic school, to let the facts speak for themselves and to withhold comment or criticism. We are explicitly told, however, that England in 1536 "from one end to the other was permeated with sedition," and the careful account of the Pilgrimage of Grace, of Exeter's Conspiracy, and the like, are obviously to show us that the seething discontent underneath the apparent apathy or acquiescence of the people burst forth several times prior to the particular outbreak with which this book deals.

How two or three thousand men, headed by a few gentlemen and priests, rose in Southwestern England in 1549, besieged Exeter, demanded the restoration of the old ceremonies, fought a "battle" or two with the royal forces, and were finally dispersed and the leaders executed, is all told with such a wealth of detail that probably the narrative of this event will never need to be rewritten. Indeed, the critical apparatus is so erudite that few but scholars well versed in the field will be able to verify the citations from pure inability to know to what they refer. The veriest tyro will identify "L. and P."; few manuscript workers will be puzzled by "Caligula E.," but "Invective, sig. e. v." will puzzle many, even though the full title of this little-known tract is quoted later in the text for another purpose. What, too, is "Cotton Appx."? The list of authorities contains neither the initials of the authors, the editions used, nor indications of relative value. The index is meagre and inaccurate. The means of filling out the indications in the footnotes are lacking. Important steps in the narrative are unsubstantiated by even such references, while abundance of exact citations is constantly poured out upon the most trivial and minor matters. We insist upon this point because the Roman Catholic or Protestant layman, for whom this volume is intended, may very probably conclude that such erudition on minor matters indicates so great erudition upon the vital facts, for which no references are given, that the mass of information could not be cited in mere footnotes. He will be apt, therefore, to accept the author's fundamental conclusions as proved.

The fallacy of such an assumption and the subtlety of such a method appear when one realizes that upon the really material facts of the inquiry—the extent of the movement in territory and in numbers, and the real sentiments of the people—the author virtually vouchsafes but one witness. Only one lengthy narrative of the event has been found, and the book is, therefore, a restatement, with some corrections and elaborate additions, of the opinion of John Hoker, or Hooker, alias Vowell. From the very considerable literature of printed and manuscript material the author was able to draw little of value on popular opinion, however voluminous were the details about troops, marches, and trials. This is the most vital count in any indictment against the general conclusions that the book seeks to establish. Only less damaging is the fact that Hoker is not shown to have been an eye-witness of these events, nor to have written his account within some brief time thereafter. He seems to have written about 1570, or perhaps later, in connection with his work on Holinshed's "Chronicle." This fact the author is apparently unwilling to confess to her reader. Nowhere do we find the full titles or whereabouts of the various versions Hoker wrote; nowhere do we find any account of him, of his opportunities for observation, of his character, of his veracity, nor even of his connection with Exeter. Indeed, though references to "Hoker" are sprinkled throughout the book, we find no description whatever of that citation till we reach page 134, where a footnote refers us to Appendix D, a brief half-page of details concerning the manuscript copies. Worst of all, the important sections of the text, for which no citations are given, are all based on Hoker, and are not, as might otherwise be supposed, careful summaries of an amount of contemporary evidence too voluminous for citation.

The longest and most direct statements about the ideas of the people are carefully circumstantial, but obviously imaginary, descriptions of scenes and incidents, every detail of which could be supported by adequate evidence except the fact around which the description was written. When the rebels are taken to prison, the discomforts of a sixteenth-century prison are vividly described, not from evidence furnished by the rebels, but from some well-known source. We learn what manner of a court tried them by evidence drawn from Sir Thomas Smith's "Commonwealth." A chapter headed Religious Feeling in Exeter contains a few apposite quotations from Hoker, and biographical details from unimpeachable sources about the cathedral clergy and the single Exeter martyr! The chapter on the condition of the country enters into the economic argument, but advances only one specific explanation, and that not the author's own, of the claim that the agrarian discontent in the West was slight; few cases have been found in the Star Chamber or in the Court of Requests from Western England. But the records of both courts are notoriously incomplete; we know almost certainly that Western England formed a legal district quite apart from Eastern and Southern England, and that the Stannary courts of Cornwall, the manorial courts, the forest courts, or some royal council may very likely have heard such cases. Absence of evidence in this case proves literally nothing, and, least of all, that this rebellion, not being agrarian, was religious.

Even if all these rebels were animated solely by religious motives, even if we accept the largest contemporary estimate of ten thousand (Hoker's estimate is two thousand), we hardly find in these facts valid evidence regarding the opinions of some half-million souls in Western England. We must have numerous first-hand explicit opinions of actual witnesses, indirect evidence

above the suspicion of having been manufactured for any one's purpose, to demonstrate a positive attachment of the people to the Pope or to Catholic rites. It is more than probable that the vast majority throughout England would have been willing to retain the old ritual and liturgy, but that they were ready to take any active steps to preserve them must be shown by other evidence than this book affords. We must have, too, some account taken of the international situation, of the rivalries of noble factions, of the possible claims of men like Exeter upon the throne, of the "national" feeling in Cornwall (p. 221), of the common use by Protestant and Catholic alike of religious pleas to cloak all sorts of interests and schemes, before we shall see the full significance of this rebellion.

CURRENT FICTION.

Burbury Stoke. By William John Hopkins. Boston: Houghton Mifflin Co.

Mr. Hopkins here returns frankly to the atmosphere and setting of the book by which he won his audience—"The Clammer." Clams are not involved in the present action, but those which figured in the earlier tale were so clearly employed as supernumeraries that they might as well have been called trout, or humming-birds, but for the immediate need of a salt-water flavor. Boats now serve the same purpose, somewhat more conventionally. The supposed narrator, who is known to us only as Peter, is not so strictly a recluse as the Clammer, since his father and sister live with him. But he has the recluse instinct, and sees little of the people who live beyond the six shore acres which he has protected with a high wall. A man invades this territory by swimming ashore from a wreck. Burbury Stoke is a handsome young Englishman, and, though he gives no account of himself, Peter takes him in as a guest for some time. Then Peter's sister, Felicia, comes home, and we perceive that Stoke is her rejected but not despised lover; Peter is less understanding, since he is made precisely according to the Clammer recipe of dunderheadedness and sensibility. We do for a time share Peter's uncertainty as to which of the two Marys provided for his consideration he is really in love with, but the uncertainty lasts longer on his part than on ours.

Vain Oblations. By Katharine Fullerton Gerould. New York: Charles Scribner's Sons.

Feminine cleverness cannot go much farther than it has gone in the writing of these seven stories. They are extremely skilful products of the art of the short story. Not one of them is built upon a commonplace situation; and of the seven episodes here developed, none stoops to follow the line of least resistance. They are not pretty or pleasant stories; in fact, they are without exception "disagreeable," grewsome, or harrowing. Whether from instinct or method, each story is based upon an impossible situation, some human *impasse* within which lie vain struggle and suffering. The title of the initial tale thus becomes a fit title for the collection. Another thing the tales have in common is that, with a single exception, they are supposed to be told by a man—not always the same man, but some man of middle age or more, with wide experience of men, places, and things—a man of the world, in short. The style is suitable for such a person—or for a clever woman's theory of him. It is sophisticated, grim, a trifle weary—suspicious of sentiment, though dryly aware that there may be something in it. It is also adroit, alert, to the point, beyond the utmost of smoking-room colloquy. And at bottom, despite its gruffness and grimness, despite its attempt to achieve the air of the detached male, its deliberate immersion in an atmosphere of whiskey and tobacco—at bottom it is feminine, and rather morbidly feminine.

Guardian Angels. By Marcel Prévost. New York: The Macaulay Co.

M. Prévost has brought his authority as an Academician to the telling of a story with a moral. He does not believe in governesses; and undertakes to show, by four typical examples, their evil influence in French domestic life. A pleasant suggestion of their collective character is given in the second chapter, which portrays all four getting drunk together in a suite maintained by the lover of one of them. They do not deliberately plot against society; their deadly work is individual. Rosalie, the most innocent of them, becomes governess in the household of a baroness with delightful children and an affectionate husband. The girl soon comes to share the baron's esteem for his amiable wife. Notwithstanding, nature so works in her and in the baron that his abuse of her is hardly seduction. The upshot is the baron's pretended suicide and his flight from France with his fellow-victim of circumstance. The argument does not seem over-strong thus far, unless one admits that no pretty girl a degree above the rank of menial can safely be admitted into a household containing a middle-aged husband. Rosalie, Sandra the Italian, Magda the German, and Fanny the Englishwoman, in different fashion, bring havoc and ruin into the bosom of French families. We must refer the reader to the narrative for details; the author does not stint them. In translation, at least, the book is thoroughly disagreeable and only moderately impressive. It is too much like a mere story to be a good tract, and too much like a tract to be an effective story.

The Pillar of Sand. By William R. Castle, Jr. New York: Dodd, Mead & Co.

The aristocrats here brought forward and put through their paces do not strikingly remind one of the New England Brahmins one has met, whether in life or in letters. They mean to be very refined and noble and superior to proletarian clay; and that is all that can be said for them. They are less real than the aristocrats of "A Tale of Two Cities." Something may be said for the author, however. He may lay claim to the distinction of having undertaken an unpopular and disinterested task. The late David Graham Phillips used to love to assault the Harvard man and to snort at the claim for good blood. Mr. Castle does not hesitate to urge the obsolescent advantages of birth and breeding. His hero is a young Boston poet of weak exterior, but with the marrow of the Inner Circle in his bones. His villain is a fellow born without the pale, and therefore a cad, a liar, and a bully. Of course, Hugh Brandon could not steal: no Brandon ever stole. Of course, Francis Evans kept a mistress and abused her, dealt unkindly with widows, lashed children out of his path, plotted against an innocent man. His ancestors were not known on Beacon Street. The book is a queer survival; it belongs to the age of Sandford and Merton. We doubt if Boston Society will be deeply stirred by it.

Victory Law. By Anne Warwick. New York: John Lane Co.

Victory is a great actress, but she has the scorn of any healthy woman for the supposedly accompanying "temperament." She has no intention of falling in love with more than one man, and him she wants very simply to marry, and does marry. Two other men are in love with her, but one of them has the wit to keep it to himself, and the other she manages to transform into the devoted friend he has hitherto posed as being. The real conflict of the book is that between Victory's love for her husband and her love for the theatre. Her behavior here, too, is very human. She does not stand about balancing one force against the other; she is simply overwhelmed first by one need and then by the other. Each is imperative and irresistible, and it looks as if they would tear her to pieces between them. The husband finally has his eyes opened and learns to dissociate his enemy, the theatre, from fancied corporeal rivals, sees that it is not really an enemy at all—and then the three live happily ever after.

LORD MORLEY'S NEW BOOK.

Notes on Politics and History: A University Address. By Viscount Morley, O.M. New York: The Macmillan Co. $1 net.

In the summer of 1912 Lord Morley, as Chancellor of the University of Manchester, delivered the address which forms the basis of this precious little volume. Here is the wisdom of the foremost British historian and one of the weightiest British statesmen, now living, on the interlocking subjects—history and politics. With amazing brevity Lord Morley discusses the chief elements of politics—monarchy, absolute and limited; republicanism, the development of the Cabinet, the rise and power of the press—and he illustrates each point by concrete examples, drawn from his very wide range of reading. Instead of controversy, he teaches or suggests by the clearness of his statements, but he lets you see that, before reaching any conclusions himself, he has canvassed both or all sides of the question.

Coming to history, Lord Morley takes up the various methods of writing history, passing rapidly from Thucydides to contemporary historical writers, who are, and apparently must be, specialists. He ranges himself here, as he has done vigorously in many previous essays, with the "literary" historians, always presupposing, however, that they possess the solidity of information which patient research can alone supply. He touches upon the unity of history, upon the influence of churches in determining secular politics, upon nationality, and upon the Janus-faced problem of progress. He uses Treitschke and Taine to illustrate two important matters. Cosmopolitanism—promoted by science, art, and the present international Socialists and industrial revolutionists—he refers to as the step beyond nationalism.

Of science he says: "Besides all else that it is and does, [it] is the strongest unifying agent of the time, especially if we include the inventions that science makes possible, and the commerce that inventions stimulate and nourish." Of another similar unifying agent he remarks: "The curse of industrial life is insecurity. The principle of insurance applied to risks of every kind has extended and ramified in a truly extraordinary way during the last fifty years, until it is now one of the subtlest international agencies, uniting distant interests and creating perforce a thousand mutual obligations." But he adds, later: "The recruiting sergeant now holds the international scales."

Lord Morley concludes by considering modern theories of the state, and a few of the chief exemplars of different schools—Mazzini the prophet of nationality; Cavour, who worked through Liberty and "set ideas before cannon," and Bismarck, the protagonist of Authority, whose chosen means were blood and iron.

No summary can do justice to Lord Morley's survey, because it cannot reproduce the mellowness of his temper, or his sagacity and breadth of view, or his clear style. It would be hard to name a modern book of similar weight and significance that is written so simply. We might call this Lord Morley's political testament, were it not that on many questions he prefers to set forth the doctrines of conflicting parties rather than to emphasize or even to reveal his own. He has transmuted erudition into culture.

We note two or three slips in proofreading, for correction in subsequent editions: "Austro-Hungary," which is as monstrous a hybrid as "Anglo-Scotland" or "Belgo-Holland," appears twice (pp. 99 and 139); the omission of a comma converts "De Maistre Proudhon" into one person, p. 114; "Pontevechio" should be "Pontevedra," p. 120, n. 1; and "Ferrari" should be "Ferrara," p. 158.

ANOTHER LIFE OF BORROW.

George Borrow and His Circle. By Clement King Shorter. Boston: Houghton Mifflin Co. $3 net.

There were already four lives of Borrow in existence when Mr Shorter finished this volume, which has taken him "ten years to write, and has been a labor of love." He tells us frankly that his intention was not to compose a formal biography, but to follow the lead of his fancy and to draw on the large stores of manuscripts by and about Borrow which form part of his inexhaustible literary treasures. This was well, though it was scarcely necessary, however characteristic, to print the testimonies in praise of his earlier achievements in this same field. For those who need an introduction to Borrow's strange career, it must be said at once that the present work will not take the place of the elaborate, if somewhat overburdened, biography published by W. I. Knapp in 1899. Mr. Shorter also, from a proper wish to avoid unnecessary repetition of what others have done, makes little use of the "Letters of George Borrow to the Bible Society," edited by T. H. Darlow in 1911, which give so vivid an account of Borrow's life in Russia and Spain, and on which Herbert Jenkins drew so heavily in his biography, is ued about the same time.

Nor will the reader of critical taste find in Mr. Shorter's pages any attempt to throw a new light on Borrow's philosophy of life. Our annalist takes his task jauntily, and, if truth be told, is occasionally a bit down at the heels in his way of proceeding. He is at his best, we think, in the chapters that deal with his hero's early years in Norfolk and London. Here he has followed Borrow with indefatigable industry, and has untangled his wanderings and friendships as no one hitherto had been able to do. We get a clear idea of what Borrow was doing in those years when he was articled to Messrs. Simpson & Rackham, of Norwich, ostensibly studying the law, but in reality learning outlandish languages and preparing himself for his career of philological vagabondage. More particularly Mr. Shorter has made Sir Richard Phillips, the publisher under whom Borrow served his hard literary apprenticeship in London, a precise human figure, although the outcome in its larger lines is not much different from the portrait in "Lavengro." In regard to the mysterious novel, "The Life and Adventures of Joseph Sell," of which Borrow gives an account in "Lavengro," but of which no trace has ever been found, Mr. Shorter broaches a new theory. Dr. Knapp tried to get round the difficulty by declaring that it "was not a *book* at all, and the author of it never said that it was"—an explanation which Mr. Shorter promptly invalidates by showing that in nine lines of "Lavengro" the author four times refers to it distinctly as a "book." His own suggestion is taken from a letter of John Borrow's of 1829, which contains this significant passage: "Let me know how you sold your manuscript." Now as there is no record of the sale of any other manuscript in that year, Mr. Shorter asks whether this may not have been the lost "Joseph Sell," which the author, by a lapse of memory of the sort only too common with him, threw back to 1825. The suggestion is ingenious, but hardly more. Borrow had abundance of manuscript poems which he was likely enough to have been trying to vend in 1829, or in any other of his early years. It is easier just to suppose that "Sell" was never sold, except in the writer's imagination.

The manuscript material from which Dr. Knapp drew his book is now in the archives of the Hispanic Society in New York. The most important of the biographical documents in the possession of Mr. Shorter are the letters of Borrow to his wife and the correspondence of his step-daughter, Mrs. MacOubrey, by means of which he tries to mitigate the rather disagreeable impression we have had of Borrow at home and in his old age. From several chance expressions Dr. Knapp concluded that money, and not love, was the motive of Borrow's marriage to a widow aged about forty and somewhat his senior, and to discredit this insinuation Mr. Shorter now prints at length a number of Borrow's letters to her. These documents, not very interesting in themselves, leave it still quite possible to conjecture that when our Benedick came, as he says, "to suffer the halter," he had in mind, besides other feelings, no doubt, his

own adage: "Marriage is by far the best way of getting possession of an estate." But they do prove abundantly that he was a devoted and very dependent husband, and it is pleasant to have this softer light thrown on his somewhat embittered years of retirement.

Those who are familiar with Borrow's "Wild Wales" will be ready to believe that he was fond of his step-daughter Henrietta, and will be glad to have the worst stories about her challenged. After Mrs. Borrow's death it will be remembered that Borrow lived with his step-daughter and her husband, Dr. MacOubrey. This is Dr. Knapp's well-known account of his death, which conforms to the village gossip of the last thirty years:

> On the 26th of July, 1881, Mr. Borrow was found dead in his house at Oulton. The circumstances were these. His step-daughter and her husband drove to Lowestoft in the morning on some business of their own, leaving Mr. Borrow without a living soul in the house with him. He had earnestly requested them not to go away because he felt that he was in a dying state; but the response intimated that he had often expressed the same feeling before, and his fears had proved groundless. During the interval of these few hours of abandonment nothing can palliate or excuse, George Borrow died as he had lived—*alone!*

In rebuttal of this hateful charge Mr. Shorter quotes letters showing that the relations between Borrow and his daughter were of the kindest sort, and cites this brief note from her diary: "George Borrow died at three o'clock this morning." His comment on these words is convincing: "It is scarcely possible that Borrow's step-daughter and her husband could have left him alone at three o'clock in the morning in order to drive into Lowestoft, less than two miles distant. At this time, be it remembered, Dr. MacOubrey was eighty-one years of age." No doubt the story of Borrow's lonely death is legendary, at least in the precise form in which it has come down to us, but from the facts which Mr. Shorter himself admits the life of the three old people at Oulton was of a strange and unconventional kind, and it is more than probable that Borrow suffered from, perhaps unintentional, neglect.

Withal we have to thank Mr. Shorter for an entertaining and informing book on a subject which ought to be dear to every lover of good literature. May he give us others of the same sort from his great collection of documents. But one of his footnotes alarms us a little. He contemplates, he says, an edition of Borrow's works which is to include unpublished verse and, apparently, other new material. That may be of service to Borrow and to letters; but, alas, it may also be the reverse. There is no surer way to lessen the number of an author's readers than by loading his works with a mass of his second-rate and ephemeral writings which ought to have been burned by the first person into whose hands they fell. Mr. Shorter, in the opinion of some people, has already committed this unpardonable sin in the case of another, and we are uneasy for our much-loved Borrow.

THE IRELAND OF PARNELL.

Twenty-five Years' Reminiscences. By Katharine Tynan. New York: The Devin-Adair Co. $3.50 net.

The present reviewer's card of membership in the Irish National League is dated September 1, 1887—his twenty-first birthday—and is signed by "Tim" Harrington. In his youthful days he bought the suppressed *United Ireland* (at three-pence the copy) from ragged urchins who lurked in the doorways of Dame Street and College Green, and not infrequently produced the famous journal from under their shirts. Many a time in the dark days of 1882-1884 he saw "Foxy Jack" Spencer, with his flaming red beard and brave sad face, clatter down the street on horseback surrounded by his clanking escort of dragoons. He trudged away of a Sunday to Clontarf or Dundrum or what not to hear "Tim" Healy and "Joe" Biggar take a fall out of Col. Saunderson or Johnston of Ballykilbeg. He, too, has been in Sarah Atkinson's house, and she in his; and he has heard Rosa Mulholland read aloud from her wonderful store of fairy-tales, and knew the adventures of "Puck and Blossom" before ever printer saw the manuscript. He, too, was born into print in the *Irish Monthly* under Father "Matt" Russell, surely the kindliest, most painstaking, and most patient of all editors that ever lived. How, then, in Heaven's name, is he to "deal faithfully" with Katharine Tynan's "Reminiscences," the pages of which are besprent with names like these? What is there for him to do but give thanks to Heaven—and to his editor—that the book came his way, and to pray that it may so come to others of his race and time who, like himself, are twenty-five or thirty years away from Innisfail?

For it is for these that the book is written. There is in it something for those who are of to-day and of other lands. The chapters on the Rossettis and the Meynells will interest those who care little for the days of Parnell and the Ireland of the Land League, and there are anecdotes of William Morris, of Cardinal Manning, of Russell, of Killowen, of Oscar Wilde, of W. B. Yeats, and so forth, which will bear detaching and resetting. But it is first and last a book for Irishmen of the "Parnell times," written without restraint as intimately as a diary, wherein great and small, tragic and trivial, mingle and jostle as in a crowd. There is little form to it, no artifice whatever, and an utter naïveté of expression that is in itself a plea in avoidance of criticism. If one must pass judgment on it, then let it be quickly said that the chapters covering the author's childhood days are the best in form and expression, that some of her swans have a little of the honest "goose-look" about them in the cold gray light of twenty years after, and that it is precisely the unstudied, unfinished, disorderly arrangement of the matter that gives the book its peculiar charm for those for whom it is written.

The author is—or at least was—a good hater and a most loyal lover. She has perhaps added a line or two to the picture of Mr. Parnell as it stands to-day in the memory of Irishmen. The closing chapters on the "Parnell split" and 1891 vividly revive recollections of those sad days when the "dying lion" was making his last fight and when Irishmen were so sharply divided, and so bitterly. She tries to be just to the anti-Parnellites: "There may have been some honest among them," she admits! And she has at least had little to say of them *nominatim*, but, if one may say so, there is eloquent emphasis in her silences. These two chapters will make many an old wound sting again for a moment, and perhaps twenty-five years from now when she writes of her "fifty years" she may find it in her heart to delete here and there a sentence—there are not many—and save some one a smart in his old age. For Irishmen all they were in those days, however much they differed.

She ends her book with the burial of Mr. Parnell, and it is a striking picture that she draws of the last scene:

> We stood near the grave-head inside the line of *camans*. The storm had passed by, and it was very still and chilly, the air suffused with a clear green and gold light, the autumn evening fast drawing in. Stars were looking out of the quiet sky; and a great peace had fallen in the wake of the storm. At last came the procession and the solemn funeral service of the English church. . . . The voice of the reader was a good voice and he did justice to the glorious words. The great crowd, nearly altogether a Catholic crowd, listened in a mournful silence to the living words of hope and consolation while the Gaels, with their linked *camans*, kept the pressure away from the grave.
>
> The service went on to its close.
>
> "Man born of woman hath but a short time to live, and is full of misery: he cometh up and is cut down like a flower: he fleeth as it were a shadow and never continueth in one stay."
>
> The coffin was lowered. A woman shrieked, and there was a second's confusion; then stillness and the silvery voice of the reader. But as earth touched earth—and any one who was present will bear me out in this—the most glorious meteor sailed across the clear space of the heavens and fell suddenly. He had omens and portents to the end.

THE FRENCH PRESIDENT ON CIVICS

How France Is Governed. By Raymond Poincaré. New York: McBride, Nast & Co. $2.25.

If any one is qualified to tell "how France is governed" it ought to be a man who, after being a lawmaker for twenty-five years, a Minister for five or six, and a lawyer all the time, finally was elected to preside over the government of France. Obviously, when he wrote, for a publication addressed to young people, these elementary chapters on civics, M. Poincaré did not dream that they would appear in book form and be translated in foreign languages after he became President. But politics, nowadays, plays such tricks on Presidents of republics with literary pasts. M. Poincaré, however, has no reason to be ashamed of his book. Written for young Frenchmen, it will prove instructive to readers of all ages everywhere. The childlike simplicity, the familiar style, the homely similes, and humorous anecdotes can but add to its pedagogical value. Even if the author were not an expert conveying first-hand information on the workings of the government of which he is a part, his well-known lucidity of style and the solid historical background of his exposition would make the book invaluable for the students of politics.

It has, however, another and more personal interest. French Presidents, like Constitutional monarchs, once in office, have to confine their public utterances within the limits of universally accepted truisms. Hence there is something refreshing in getting here some of the last personal expressions of M. Poincaré's political thought before he became President. Thus the story of the Minister of Finance who, on an excursion through Auvergne, heard a peasant addressing his donkey as a "devilish Minister," is an amusing and instructive philological illustration, seemingly drawn from his own experience. The remarks about the "lamentable taste" of the frescoes in the bathrooms of the Château of Rambouillet may be of interest to artists only, although there is some humor in the fact that now he must use these bathrooms himself. But his political opponents, who have been accusing him of vague dictatorial designs, ought to rejoice to hear him condemn plébiscites as serving to confiscate popular sovereignty, while seeming to ratify it. The advocates of state ownership will welcome the statement that certain state-owned services are "indispensable to the progress of civilization," while the other side cannot but be pleased to hear M. Poincaré characterize state management of industrial affairs as being often "clumsy, idle, and dilatory." Furthermore, those who are familiar with the President's oft-expressed doctrines will not be surprised to hear him chide his fellow-citizens for their extreme reliance on the state as on a Providence that ought to distribute "relief, subventions, awards." Thus admonition mingles freely with exposition and narrative with description in this book, which aims at being both a text-book and a guide for good citizenship.

Unfortunately, the chapter on the military law is already out of date, and the very interesting treatment of the Wallon amendment has been entirely marred by a mistranslation complicated by a misprint.

Notes

The University of Chicago Press announces the publication of "Masters of the Wilderness," by Charles B. Reed.

Houghton Mifflin Company announces for publication early next month "South Africa" (The English People Overseas series), by A. Wyatt Tilby.

The Bobbs-Merrill Company will publish on Saturday "Pidgin Island," by Harold MacGrath.

John Lane Company will publish on Saturday: "Napoleon at Bay"; "The Tower of Mirrors," by Vernon Lee; "The Fortunate Youth," by William J. Locke.

Among the volumes announced for immediate publication by the Harvard University Press are: "The Spiritual Message of Dante," by William Boyd Carpenter (the William Belden Noble lectures for 1912-13); "Works of Vitruvius," translated by the late Prof. M. H. Morgan and edited by Professor Howard and Professor Warren; "The Harvard Expedition to Samaria," by Dr. George A. Reisner.

Students of the French Renaissance will welcome the reproductions of "Manuscrits à Peintures de l'Ecole de Rouen," prepared by Georges Ritter, of the Bibliothèque de Rouen and issued by the Société de l'Histoire de Normandie. The chief works of the school of Rouen owed their inspiration to Cardinal d'Amboise, and the influence of the models which he brought back from Italy is distinctly traceable in the beautifully executed manuscripts of Petrarch, Josephus, and Ovid, of which the finest pages are here reproduced. There are also illustrations from books of hours of the more strictly Norman school which followed.

Sidgwick and Jackson (Cambridge, Eng.) have issued an edition of "Tom Brown's Schooldays," with an introduction which relates the history of the book, and collects what evidence is available for the identification of the principal characters. The preface is written by Lord Kilbracken—better known, perhaps, as Sir Arthur Godley—who is a distinguished old Rugbeian.

Much interest has been aroused in England in the career of a new writer, Patrick MacGill, who has just written an autobiographical story, "Children of the Dead End." Though now only twenty-two years of age, he has worked for several years as a farm laborer and as a navvy. He wrote his first verses at the age of twelve while working from 5 A. M. to 11 P. M. as a farm hand in the Irish midlands.

A London publishing firm, according to Mr. C. K. Shorter, admits that last year it made more money out of selling rights of cinema production than out of publishing proper. But the picture palaces are starting a new copyright problem. At the last meeting of the committee of management of the Authors' Society it was stated that many authors and playwrights were being placed in a serious position, owing to the use by various film manufacturers of titles which had been employed by the authors for their books and plays. After hearing evidence on the point, the committee decided to take a test case into the courts. In the event of an unfavorable judgment, the Government is to be asked for remedial legislation.

Last year the two thousand charities in the British Isles of which particulars were forthcoming, had a total income of sixty-four millions of dollars. This was an increase of $1,000,000 over 1911. Such are the facts which the twenty-fifth edition of "Burdett's Hospitals and Charities" (London: The Scientific Press) is able to record. The volume contains its usual fulness of detail, despite the difficulty of obtaining the information sought owing to the inexcusable failure of institutions to respond to repeated requests. A good word is spoken for this country in the statement that "the better managed hospitals of the United States are gradually waking up to the necessity for some uniform system of keeping their accounts."

THE "Centenary Volume 1810-1910" of the Royal Belfast Academical Institution (Belfast: M'Caw, Stevenson & Orr) is an extraordinarily complete record of the foundation, the struggle for existence, and the final success of what was for many years the most important teaching institution in Protestant Ireland. At the beginning of the nineteenth century, Belfast, then a small but flourishing community, whose conditions and needs at that time are here described in detail, had a few fairly good private schools, but no public endowment for secondary or collegiate education. The Institution was founded by Belfast merchants, and thereafter maintained by them in the face of discouragement by the British Government, which was easily persuaded by the authorities at Dublin that it would be unwise to foster the education of the "disloyal" inhabitants of Belfast. A niggardly grant from London was awarded at last but was suspended for several years with the excuse that the school was not approved by the strictest Presbyterians in Ireland. The Institution, however, prospered in spite of meagre salaries for the instructors, unfinished buildings, of which Soane, the founder of the Soane Museum in London, was the unpaid architect, and, above all, in spite of the machinations of the Presbyterian Synod. Its history is a monument to the effective power of Scotch-Irish "grit." But it owed its success chiefly to the distinguished men who consented to teach

there for salaries ranging from £50 to £150. Among these was James Thomson, the father of Lord Kelvin, who, appointed at a salary of £50, held the chair of mathematics for seventeen years until he was called to Glasgow. The Institution, therefore, claims Lord Kelvin as one of her sons and gives him a full-page portrait, though he was only about eight years old when his family removed to Glasgow. The Institution aspired to become the University of Ulster, but the organization in 1845 of the Provincial colleges in Ireland and the opening of Queen's University curtailed this ambition. Among the famous men who were educated there were Allingham and Ferguson, the poets; Dill, the well-known authority on Roman Society; Darbishire, the classical scholar; Sir Joseph Larmor, the physicist; Sir Almroth Wright, the pathologist; Sir Donald Currie, the shipowner; Lord Pirrie, the shipbuilder, and many others whose portraits and biographies are given in this volume.

AFTER the coöperative histories of England from the hands of specialists, like the series edited by Oman, Poole, or Traill, there is a reversion to the J. R. Green type of a considerable survey from a single hand. In the first volume of his new "History of England and the British Empire" (Macmillan), Arthur D. Innes gives the story of English political growth, from the invasion of Cæsar to the end of the Wars of the Roses. The Tudor and Stuart period, from 1485 to 1689, will fill his second volume, and the last two hundred and twenty-five years the third and fourth volumes, bringing the narrative down to 1914. In thus giving a full half of his space to the period since 1685—a period which occupies less than a fifth of the space in J. R. Green's "Short History"—Mr. Innes wisely recognizes the increasing desire of readers to have the complicated recent history more fully treated than is usually done in the ordinary handbooks. The great economic changes, the important constitutional developments, the rapid growth of the overseas dominions, and the widening sphere of government activity in social legislation, amply justify this shifting of emphasis to the more modern times. In the volume before us Mr. Innes gives a clear impression of the unity and continuity of national development. He writes a brisk narrative of the political history for a period, and then adds a good summary of the growth of commerce and industry, of social changes, and of the development of literature during the same period. He gives more attention to Scotland, Wales, and Ireland, which are to be parts of the British Empire, and less attention to the details of constitutional history than most of the larger handbooks. His narrative, so far as we have tested it, is accurate and acquainted with the best scholarship, and is also very readable.

THERE is unquestionably a certain amount of careful information in Philippe Bunau-Varilla's "Panama: Its Creation, Destruction, and Resurrection" (McBride, Nast), but this is inevitably lost in the immense display of the author's vanity. For these 550 pages are one long look of the writer upon his work with ineffable satisfaction at finding it good in every part. It has been said that Charles Sumner's egotism was so great as to be equivalent to an insult to every man he talked with, but M. Bunau-Varilla leaves Sumner and all other vain men of whom there is a record gasping far behind him. His self-complacency is so colossal that the reader soon ceases to resent it, and merely rocks with laughter at it. Bunau-Varilla is Tartarin and a *cadet de Gascogne* rolled into one and delivering himself page after page in the most pompous and *staccato* style of Victor Hugo. He concedes, grudgingly as it were, something to the Creator for having made the Isthmus of Panama, and to Lesseps for having conceived the idea of cutting it, but all the rest he claims for himself. It was he who devised the modification of the original plans, which would have made the canal feasible and saved the company from bankruptcy, if only France had not been led astray by calumniators and traitors. Then it was Bunau-Varilla who converted the United States from Nicaragua to Panama, captured Mark Hanna, persuaded Roosevelt, compelled Congress to reverse its vote. It was he, again, who first thought of and plotted and carried out the revolution in Panama; who used John Hay and President Roosevelt and the American navy as his toys and tools; who, in fact, did everything that was worth doing and that was well done in connection with building the Panama Canal. A stupid engineering board has not yet come round to his notion of the "Straits of Panama," but this will surely be seen in time. M. Bunau-Varilla, however, does not wait for that in order to emit a pæan of self-praise. His book is so inflated with vainglory throughout that you finish it with all other feeling put aside except that you have been standing in the presence of the most ridiculous braggart who ever put himself in print.

FIVE new volumes of the Loeb Classical Library, though they perhaps show some improvement over earlier issues, only confirm the common judgment that a grave and, it may be, irreparable error was committed in entrusting the publishing of the series to a house which apparently lacks the sense of good form and style in book-making. We speak not of the Macmillan Company, who import the volumes, but who, if we are rightly informed, have no responsibility for their manufacture. That responsibility must be shared between William Heinemann and the general editors, and we can only wonder whether they are aware of the sort of comments that are commonly passed on the mechanical execution of their duty. In this respect, the Latin volumes are, as a rule, decidedly better than the Greek, but some of these, too, leave much to be desired. In the present issue, the first volume of the Suetonius is particularly bad. From the use of poor paper and from imperfect registering the lines often show through the page in a way quite offensive to the eye. The Cicero is less open to criticism in this respect, but even here one is annoyed by turning from a double-leaded to a single-leaded page, or *vice versa*, in the Latin text, when a little intelligence on the part of the printer would have arranged the lines and notes so as to avoid this fault. The Horace does not suffer from this defect, but lacks distinction, and is in its appearance without a touch of the "simple elegance" (to use Professor Bennett's happy rendering) which that poet might claim as a right. Of the two Greek volumes, one, the Dio Cassius, has a very clear impression of the text, and only suffers from unnecessary alternation of crowded and open type. The other, the second volume of Julian, is printed in such a way as sadly to try the eyes and temper of the reader.

WE have spoken of this mechanical aspect of the Loeb Library at what may seem undue length, but it is really a matter of supreme importance to the success of the undertaking. Otherwise, one recognizes gladly that excellent work is going into the books. Among the present volumes the palm for dexterous translation will probably go to Prof. C. E. Bennett for his rendering of the Odes and Epodes of Horace. He has eschewed metre, but has given his language a sufficiently poetical cast, without overstepping the bounds of prose taste. We have dipped into the book in many places, and have nowhere found a passage which seemed to us clumsy or inadequate, and have, on the contrary, often been surprised at the skilful imitation in English of some precious phrase or line which we had supposed incommutable. An index partly, but by no means wholly, supplies the absence of the few notes that should have been added, and very brief introductions might well have been furnished for some of the Odes.

THE volumes differ oddly in this matter of aids to the reader. In this respect, Prof. J. C. Rolfe has been unusually generous and judicious in the first volume of his Suetonius. His translation also is good, although at times the style becomes a bit languid. In some ways the task of Walter Miller in rendering Cicero's "De Officiis" was even more difficult than that of transferring Horace into English prose. Mr. Miller in one of his notes explains the difficulty as being due to the fact that Cicero had to invent terms to correspond to the ethical vocabulary of the Greek Stoics, and that explanation is no doubt in large measure correct; but beyond it lies the impossibility of finding words in any modern tongue which will convey the exact meaning of some of the classical conceptions of morals and manners. Nor is it much easier to find an equivalent for the Greek καθῆκον than for the Latin *officium* which Cicero uses. And in the nature of this difference in ethical ideas, it may be said in passing, lies the greatest value of classical study, as well as the impossibility of getting this value by the use of translations alone. Mr. Miller, in our judgment, has been successful in his search for the nearest possible equivalents for the Latin terminology, and has known how to be helpful in his notes without being diffuse. Were this the place, however, we should like to quarrel with his note on

I, xliii, in which he finds Cicero inconsistent in dealing with "wisdom" and the "bonds of union between gods and men." Possibly a closer tracking of Cicero's ideas in this place might lead to a clearer notion of the relation between the ideal *sapiens* and the man of practical morality.

MRS. WILMER CAVE WRIGHT adds the second volume to her Julian, of which we shall probably have more to say when the third, and concluding, volume has appeared. A translation of "the Apostate" is not so easy as it may seem, and Mrs. Wright is carrying out her task with notable success. In a few places her rendering is questionable, and once (p. 33), by an odd slip, she has given "staff" for the Cynic's *τρίβωνα*. A new project begins with Earnest Cary's translation of the "Roman History" of Dio Cassius. It was proposed at first to revise for this purpose the version by Foster published in Troy, N. Y., in 1905-06, but the revision was so radical that the general editors properly give the credit and responsibility of the work to the later man. The present edition when complete will run to nine volumes, the first, which now appears, containing the fragments of books i to xi. The various forms of a fragment, when such occur, are arranged on the same page.

ERNEST CUSHING RICHARDSON, who is Princeton's librarian, has studied and written to no small extent on the history of libraries. A volume on "Some Old Egyptian Librarians" appeared about two years ago. There have also been essays, in the professional magazines, on mediæval libraries, and other similar topics. And now we have "The Beginnings of Libraries," published at the Princeton University Press. Dr. Richardson looks upon these, including the present book, each as a "sort of preliminary report or investigation in the field, pending full and systematic report." This would seem to indicate that a complete work is contemplated, and that these books and essays will form parts of that work. It is likely to be on a rather ample scale. For when an author can produce a fair-sized little book of a hundred and seventy-odd pages, and scarcely touch his subject at all, any "full and systematic report" which he may make is sure to be pretty exhaustive. Some idea of his method may be gained from reading the third chapter, on the Definition of the Library. Dr. Richardson argues that a single book may be a library, that a single word may be a book, and that a single sign or dot may be a word. Therefore, we are led to the conclusion that any single mark or dot which means anything is a library. Surely, this is a case where the "scientific method" parts company with common-sense, and where it had been better to follow common-sense. Otherwise, an absolutely limitless field of unprofitable speculation is opened, and the investigator must ramble forever in a fog. There follow chapters on Antediluvian Libraries, Libraries of the Gods, Animal and Plant Libraries, Preadamite Libraries, and so on. All that the learned author can do is to indulge in learned guess-work about subjects of which nobody has knowledge. The remainder of the book is devoted to "quipus," message-sticks, wampum, leopard-teeth, tattooing, and other topics belonging properly enough to the anthropologist. Chapters about The Administration of Primitive Libraries and The Beginnings of Library Schools come near the close of the book, and indicate what can be done when a conscientious scholar tries his best to make a chapter out of nothing, and forgets to use his sense of tho absurd.

"CAMBRIDGE Poets, 1900-1913" (Cambridge, England: Heffer) is an anthology of verse written by Cambridge men, and a few Cambridge women, during the period mentioned, and piously collected by Aelfrida Tillyard. Surprisingly few of the poems owe their inspiration to University scenes or traditions; nor does the collection as a whole indicate that Cambridge has in the past few years produced any especial "school" of poets. It must, indeed, be reluctantly admitted that, though this volume contains some very creditable work, the general standard, whether of inspiration or of metrical skill, is by no means high; it is, in point of fact, hardly high enough to justify Sir Arthur Quiller-Couch's apology for the volume made in the preface that he contributes: "I shall take it to be conceded, at this time of day, not only that good poetry is worth writing, but that our language has a capacity and our nation a rather special aptitude for it." Elsewhere in his preface, Sir Arthur speaks a "small word of protest," deploring the predominance of the lyric form that he finds in the volume, and seeing in it the reflection of an unfortunate tendency of the age. In a collection, however, most of the contents of which is the product of adolescence, the predominance of the lyric is entirely natural. Much of the verse, as was to be expected, is imitative, and in two instances, certainly, the legends "with apologies to Robert Browning," and "with apologies to Rudyard Kipling" might not inappropriately have been appended to the respective titles. One of the most interesting pieces in the book is Harold Monro's "God," a clever poem in dramatic form. A pleasing fancy, gracefully phrased, is James Elroy Flecker's "Oak and Olive." We quote two stanzas:

> I ponder how from Attic seed
> There grew an English tree,
> How Byron like his heroes fell,
> Fighting a country free,
> And Swinburne took from Shelley's lips
> The kiss of poetry.
>
> And while our poets chanted Pan
> Back to his pipes and power,
> Great Verrall, bending at his desk,
> And searching hour on hour
> Found out old gardens, where the wise
> May find a Spartan flower.

There are some unfortunate examples of careless proofreading, notably on p. 58 ("The Challenge," third line), where the insertion of the word "own," evidently from the line above, gives an extra foot to the verse; and on p. 101 (third line from the bottom), where "beauties" is an obvious mistake for "beauty's."

"BUSINESS Organization and Combination" (Macmillan), by Lewis H. Haney, is the first attempt to present a systematic treatise on industrial organization. Written primarily as a college textbook, it should be estimated from this point of view. There have been many books on corporations and Trusts, but this differs from its predecessors in treating more systematically of the general nature and evolution of business forms. It considers the characteristics and adaptability of the individual entrepreneur, the partnership, joint-stock company, and corporation, and then investigates the development of the pool, the Trust, the holding company, the amalgamation, and merger. In each case the author has endeavored to weigh the advantages and disadvantages from the social point of view, a purpose which is admirable, but is in many cases carried out with such detail as seriously to confuse the student. The book lays its stress upon the administrative and legal aspects of business organization, and intentionally eliminates financial problems so far as possible. This results in depriving it of much attractive and useful material and leaves in many portions only dull administrative details of less fundamental value. For example, the chapter which discusses simple Trusts, such as real-estate Trusts, might well have been left to a legal treatise, and the one on internal organization seems superfluous. On the other hand, more attention might well have been given to corporation finance than the scanty treatment in the chapters on promotion, underwriting, and reorganization. But in view of the fact that the question of public policy occupies an important portion of the book, the most surprising omission is the failure to consider the history and interpretation of the Sherman Anti-Trust act, upon which has centred all discussion of the Trust problem for the past fifteen years. The author urges the need of a new form of organization to fill the gap between the partnership and the corporation, and suggests the limited-liability association. The book is well supplied with documentary material, and in spite of its omissions is a distinct addition to the literature of the subject.

"THE Ways of the South Sea Savage" (Lippincott), by Robert W. Williamson, is well defined by the sub-title as "a record of travel and observation amongst the savages of the Solomon Islands and primitive coast and mountain peoples of New Guinea." It is a volume of ethnological observations, interspersed with personal experiences and small adventures, gathered from cannibalistic tribes which had not hitherto been studied and the existence of which was hardly known, and is remarkable for its completeness, when the circumstances of the investigator are considered. Mr. Williamson is a lawyer, of London, who had nourished for many years the desire to do something of this character, but had been repeatedly prevented from beginning. He was entirely inexperienced in travelling in savage regions or in field investigations, was alone and weak with illness most of the time, and always at the mercy of

savages who, he well knew, had less regard for human life than for that of the pig which takes so large a place in their ceremonial as well as practical affairs. Yet he brought back an amazing amount of novel and coherent information, including large collections of material objects to illustrate the cultural stage and manner of life of each tribe visited. These, and the author's account, seem to indicate that the mountain tribes of New Guinea resemble in their habits and way of looking at things the more debased Africans of the upper Congo valley more nearly than they do any other barbarians. Mr. Williamson believes them to be a remnant of an aboriginal Negrito stock. The book, which is copiously illustrated from excellent photographs, is one that no student of the ethnology of New Guinea or of the Solomon Islands can afford to neglect.

AFTER seven years' labor, the Swedish Emigration Commission has finished its investigations into the conditions, in Sweden and in America, that may have promoted the emigration of large numbers of the healthiest and most energetic of the younger generations of Swedish farmers and city laborers. In his final report (Betänkande; Stockholm: Nordiska Bokhandeln), Gustav Sundbärg, the Commissioner, gives a summary of the twenty accompanying monographs, preceded by a statistical history of Sweden, the whole making a volume of 892 pages. Professor Sundbärg's conclusions are interesting from several points of view. He sees in the presence in America of friends and relatives one of the chief attractions that cause the present large emigration to this country. But the deeper cause he discovers in economic and social conditions in Sweden, the cure for which can come only from economic enterprise and social reforms. He adds that the present large influx of immigrants to this country from Southern and Eastern Europe is not calculated to attract immigrants of Germanic race. And this is serious for America, because:

> If we consider who the men were that built up the present greatness of the United States, we find at once that it has been, in the first place, immigrant Anglo-Saxons, Germans, Scandinavians, and Hollanders, and their descendants, in the second, and a few following generations.

And, further:

> It is manifest that other times are at hand in the economic life of the United States. We have above taken the liberty to declare the crisis of 1907 as the probable turning-point. During the last years progress has not come like an avalanche, as heretofore. The degree of rapidity shows more and more a tendency to become comparable with that of, *e. g.*, Germany, which in itself is very fine, but still does not correspond to what Americans have been accustomed to regard as normal.

Professor Sundbärg also remarks the extensive method of American agriculture, the devastation of our forests, and the fast-diminishing mineral resources of the land.

Harry Thurston Peck, who shot himself on Monday at Stamford, Conn., was born on November 24, 1856, at Stamford. He received his A.B. from Columbia in 1881, his A.M. a year later, and his L.H.D. in 1884, having in the previous year received the Ph.D. from Cumberland University. Becoming a tutor in Latin at Columbia soon after his graduation, he was appointed in 1904 to the chair of Anthon professor of the Latin language and literature, a position which he resigned in 1910. Professor Peck enjoyed a wide reputation as a classical scholar and an authority on Latin philology. He was editor of the *Bookman* from 1895 to 1902, and literary editor of the New York *Commercial Advertiser* from 1897 to 1902. He also edited a number of important publications, including "Harper's Classical Dictionary," the "International Encyclopædia," the "New International Encyclopædia," the "Library of the World's Literature," and the Columbia University "Studies in Classical Philology." Among his other writings may be mentioned "The Semitic Theory of Creation," "Latin Pronunciation," "The Adventures of Mabel," "The Personal Equation," "What Is Good English?" a volume of poems called "Greystone and Porphyry," "Life of Prescott," "The New Baedeker," "History of Classical Philology," and a translation of Petronius's "Trimalchio's Feast."

Science

THE BODY AND SOUL.

Matter and Some of its Dimensions. By William Kearney Carr. Library of Living Thought. New York: Harper & Bros.

The criticism of this book, which attempts to link the actions of man, occurring in space of three dimensions, to his spirit, which is supposed to exist in a space having four dimensions, is a difficult task. The first part requires a knowledge of physics, but the author fortifies himself against criticism by stating that "of all the attributes of the human mind, those which characterize the average orthodox scientist . . . are the least attractive." And as the second part finds the soul entangled in the body and influenced by its weaknesses, the author disposes of the criticism of his medical facts by saying that the majority of physicians cannot shake off the early influence of official training and that they often confound hasty generalizations with facts. He lastly characterizes himself thus: "All progress is from below upward; hence we should expect to hear wisdom from the humble and the unintelligent." Then he classes St. Francis of Assisi and Jesus with himself in the category of the humble and unintelligent from whom we should expect to hear wisdom.

The author's train of thought resolves itself into this: The modern theories of physics have replaced matter by electricity, which is a moral agent, and has sublimated material substance into immaterial ether. (He should read Sir Oliver Lodge's arguments for the massive nature of the ether published in this same Library.) This ether is but one of a series of ethers, each more immaterial than the preceding of the series; he settles on five as the proper number for this series. Matter is a stress in the coarsest of these ethers, and this gigantic stress cannot be kept up, "without a personality of some kind exerting it, and hence it is literally true that in the body or mind of some great Being all things do live." By a simple sifting process these five grades of ethers separate into five rings, each of a homogeneous sort, and the electrons of matter are entangled in the grossest ether only, which, of course, is the most immoral of them all. This is true because the author prints a picture showing just how it looks. "The only shocking element in the concept is that it places man so low in the scale of existence—almost at the foot of the ladder." But he takes some comfort in the fact that, while a man's body exists in this low form of ether and must be satisfied with only three dimensions of space, his soul is at the same time living in the next ring of ether and so can have four dimensions and a much better existence.

The body and the soul have a serious time of it, as one may well imagine, and it is no wonder that men are wayward, for their two identities are continually striving against each other. The thing to do is to get out of three-dimensional space and out of our bodies. This we do when we have visions or hallucinations. The author knows how to help us, for he has done it. Being a humble man, he has got into the four-dimensional space only twice in his life, and both times only after periods of great mental distress. Unfortunately he cannot tell us what he saw, for his eyes, his tongue, and his pen only operate in three dimensional space. But he does tell us how to follow him: "That the perfectly normal, well-sustained animal, man, ever reaches a great fundamental truth by deduction is to be doubted." We must make ourselves abnormal in order to have the vision of pure truth. Any of these ways will do—"a blow on the head, a brain lesion, the delirium of fever, prolonged fasting, or a congenital perversion of the nervous system." These are all pretty severe methods, and his other recipe of eating rice is probably just as good.

After these specimens of the writer's logic, it is needless to point out that his facts, whether drawn from physics, medicine, or from psychology, are for the most part false, or are twisted to mean things which are not germane to them.

It would have served no purpose to consider this book at length if it had appeared in the form of the usual freakish production. But included, as it is, in

a collection whose preceding volumes have borne the names of distinguished men of science who, while they may have indulged in a certain amount of speculation, yet had accurate knowledge at their command and did not confuse fact and fancy, this book assumes a certain importance and authority. It is an example, too, of the perils that confront any scholar who fills his head with vague scientific phrases and formulæ and then fuses these with equally vague ethical and religious ideas. There is more of this confused sort of thinking abroad, and even in high places, than might be supposed.

The Harvard University Press will publish shortly "Readings in Scientific Management," edited by C. B. Thompson, and "Preservatives for Food: Their Use and Abuse," by Dr. Otto Folin.

John Lane Company announces for publication on Saturday "The Garden Patch," by Edward Du Bois Flint.

Drama

REACTION IN FRANCE.

PARIS, March 10.

French plays, like French novels, have sometimes their vogue abroad after they have lost it at home. A change is certainly coming over the spirit of the French dramatic dream. All the insensitive cosmopolitanism of Paris is not proof against it. For it is only part of a whole nation's movement towards its own native traditions and habits of mind, which foreign and unnatural and morbid influences have been troubling for more than one generation.

Ibsen lasted but a season, and now naturalists and *intellectuels* find they have outstayed their welcome and must be packing, with Symbolists and Decadents and all the other shadows of dreadful night. Exotic subjects and treatment, scene decoration and ballet, have not been enough to keep going the opera and theatre which American money was supposed to subsidize for the bringing of novel art to Paris. The former success of Henry Bataille, with the continued countenance of the official Comédie-Française, and all his scintillations of lyric sentiment have not been enough to keep in favor splendidly acted parts which represent abnormal, unbalanced, hysterical, improbable human beings. Bernstein's matchless command of stage art has not held the public, which was expected to follow after him.

Take out all foreigners who are desperately resolved to be Parisian according to their preconceived ideal of what is Parisian; eliminate all Parisians whose snobbishness sets them running after every new fashion; and there remains this native public which may be despised, but which is necessary to the theatre's support, material and mental and moral. If any one says the passing season has been bad for the theatre, seek the cause no further. This necessary public is simply and spontaneously showing its dislike for plays which do not please it. And, with equal heartiness, it shows its liking where a play happens to please.

For once, the French Academy seems to be in agreement with the public. It has elected Alfred Capus, popular playwright for French people, to the chair of Henri Poincaré, who was a genius and master of mathematics for the whole world. It might be too much to call Capus a genius, and not all his pieces are equally popular; but he is more than a playwright. No French writer so completely represents the average Frenchman—orderly from an old, minute, refined civilization; nourished on the old humanities, in whose routine the art emotions of the world have run ever since Greece and Rome set the example; knowing the sorrows as well as the elation of our day's society, which lives for money and the pleasure money can buy; kindly, gay even as the untainted French have always been, in his outlook on life.

"L'Institut de Beauté," the piece of Alfred Capus which has had a half-year's run at the Théâtre des Variétés, is not one of his best; but it is good and representative of many things in this new spirit which is the old. Nowadays we are all of us *bourgeois*—middle-class—seeking more or less laughably to rise. Monsieur and Madame Lagraine are prosperous wallpaper merchants in mid-Paris; but they aspire—he to literature, and she, like a dutiful French wife, to pushing her husband. They change their comfortable, well-ordered life and seek society in fashionable hotels. Like the prudent *bourgeois* they are, they soon find 100,000 francs a year of expenses cannot be made to balance with 20,000 francs of receipts. Then the rich uncle of their expectations, who has always been dying, starts up serene and whole in body and mind, dispensing with his doctor by a sort of French Christian Science. Altogether, they try to raise the wind by opening an Institute of Beauty to heal the ravages of society among its devotees. Madame keeps her head when she turns one lady's complexion too ruddy—"That's our fashion this season!" But she also keeps her eye on her husband, whose poetry amid these fine ladies is particularly dangerous—until she seizes and brings him back, for safety and affection's sake, to *bourgeois* life and wallpapers.

There is no thesis to the play; but it is a kindly satire on the social incoherence of the times. And it is very *bourgeois* in the good sense—for it has nothing to do with Philistines—just as Brieux, who is also a member of the French Academy, is *bourgeois*. To his new piece at the Odéon, Brieux has even given the name, "Le Bourgeois aux champs."

The educated, rich inhabitant of a city, with a fortune from business—for this is really all that is meant by *bourgeois*—instead of aspiring socially, dreams of revolution in society, turns Socialist, and goes to grass; that is, he goes to live in the country with his wife and daughter, to do good, as the dilettante kind of Socialists understand social good. He takes for his chauffeur a bright young fellow who is just out of prison, where he had been sent for fighting a country policeman. Then he tries to get the peasants to drink boiled water and give up alcohol. And his daughter tries to marry a young landed proprietor of the region. Of course, the peasants teach him a thing or two; the young landed proprietor will not marry his daughter, and the father gives her to wife to the chauffeur, and himself goes into politics. But he keeps his château and turns his back on peasants, who find it odd he should like the country better than riches in the city. It is all very much like Balzac's "Paysans"—and it is another revival of very native French comedy and sentiment.

Another sign of the way the wind is blowing may be seen in the return, popular and fashionable, to a very French style of opéra bouffe. The Variétés, which has been reviving Offenbach for several years, has taken for its second half-year the "Merveilleuses" of Sardou, transformed by Paul Ferrier to music of Hugo Félix. Offenbach was not a Frenchman, but he was a genuine Parisian of Empress Eugénie's time, and court emotions swayed to his strains. So Hugo Félix is an Hungarian, cradled to music by the blue Danube of Johann Strauss; but he has drunk the latest brand of Parisine, and no wonder if his sprightly sonorities tickle French nerves in this changing period of the republic. For it is still Sardou that really counts, and he is native French enough for the most exacting Nationalist.

The play is of the society that amused itself after Robespierre was guillotined and the worst of the Revolution was over—a time of reaction. It was represented for the first time in 1873—in the reaction from the Commune. And now, disguised as operetta, it comes back when French society is again swinging to reaction. Five sets of police have to dart on and off the stage and save the Republic, one and indivisible, from these elegant and gallant and earnest Muscadins and Merveilleuses.

Sardou as a bashful boy was led out to dance by the compassionate widow of Le Bas, who was Robespierre's comrade in life and death. La Montansier, who

founded the Variétés, had her own neck saved from the guillotine by their death, and she thankfully steered her theatre along genuine French lines, to which it still keeps. Beaumarchais indicated them, first writing his "Barbier de Séville" as an opéra-comique, and then rewriting it as a comédie-vaudeville. This reaction keeps time with others—patriotism; art, from ballet to furniture; literature; and, it has to be said, sports. Men and women who go in for motoring and golf, aeroplanes, and boxing matches are no more capable of sitting through Ibsen—the object of Paris curiosity twenty years since—than Louis the Fourteenth's fencing courtiers who had seen the wars would have been.

Alfred Capus, in his weekly "Courrier de Paris," has told how far, both up and down, all this reaction of which the drama is the sign may extend:

> Shall the energy this generation shows push it back to Catholic unity or, overlooking religious questions, consecrate it to Patriotic worship alone? We can hardly see that it thinks of any other than these two directions—and it still hesitates between them. I know there is also a Socialist youth, but it has suffered its banner to be shut up among financiers—and without a banner there is no making enthusiasts.

But—as Capus notes elsewhere—we have also "the neurasthenia of the cinema—all that debauch of emotions on a background of sadness, which characterizes the strenuous life." S. D.

A PLAY OF REVOLT.

The Idol Breaker. By Charles Rann Kennedy. New York: Harper & Bros. $1.25 net.

This is the third play in the series of seven, for seven players, of which "The Servant in the House" and "The Winter Feast" were the first two. The subject of it is Freedom, and, like the preceding works of the same author, it is marked by uncommon literary ability, vivid characterization, and intense if not always profoundly philosophical earnestness. In many ways it is a notable addition to the rapidly growing list of the modern printed drama, and it might even be successful on the stage if actors capable of interpreting it in the right spirit could be found. It has a message, and delivers it potently.

But it has the defects of its virtues. In his zeal for the cause of the proletariat and the brotherhood of man, Mr. Kennedy seems to ignore the fact that in the social economy there are productive agencies besides physical labor. There are many kinds and degrees of workmanship, and not all the workers are unrewarded. Actually, he deals with only one phase of an enormously complicated question, and it is extremely doubtful, to say the least, whether the social revolution, of the kind suggested in his allegory, with all the workers self-dependent, rid of all their real or imaginary shackles, would bring about the millennium. The weaker still would go to the wall. This is the crucial and hard fact that all socialistic and anarchical enthusiasts of Mr. Kennedy's imaginative and emotional type always fail to take into full account. Their vision is obscured by their faith and their ideals. This is why in this piece, in which he poses as a seer as well as a dissector and satirist of the body politic, he is more impressive as a dramatist than as a prophet. Nevertheless, there is a body of historical fact at the bottom of his thesis, and enough actual unrest in the world to exempt him from the charge of being a mere sensationalist.

The scene of his drama, which is wholly symbolical, is a forge, the workshop of the world, and his hero, Adam the blacksmith, typifies all the creative labor since the beginning. The place, Little Boswell, is anywhere within the confines of modern civilization, although many of the references point unmistakably to the United States. Adam, the producer, in furious revolt against the organized system which, as he sees it, dooms him to perpetual labor for the benefit of others, is in the mood to smash things. He has been cast out by the Constituted Sons of Freedom as a crazy revolutionist when he denounced them as a community of slaves. To him, in the guise of a woman of the high road, clad in red, comes the spirit of Freedom, Naomi, who revives in him the memory of previous incarnations, his successive forms of servitude, his futile insurrections and renewed abasement. She tells him of the golden cities built by the workers of bygone ages and of the joys of individual liberty in wide spaces on the uplands, and helps him, in a scene full of broad humor and satire, to discomfit utterly a committee of Little Boswellians, representing the press, the Sunday-school, the law, and capital, appointed to discipline him. He would claim Naomi as his mate, but is confronted by the Wastrel Jake—the spirit of Hate—who explains that he has been her constant associate. This Naomi admits, but adds that to him she has ever been barren, and warns Adam that he will be lost if he listens to so evil a counsellor. Jake taunts Adam with his slavery, saying that he can be no mate to Freedom, who is royal, and urges him to seek his only possible satisfaction in violence; but the Smith rejects that temptation, declaring that he will seize Freedom for his own, by virtue of his self-mastership, and start with her to build new cities in remote regions, subject only to divine law. Naomi thereupon acknowledges Adam as her true spouse, but leaves him to continue her mission on the highway, while Jake, defeated, perishes. The curtain falls upon an intimation that the theories of Adam (who is also Charles Rann Kennedy) have prevailed at last in Little Boswell, where hereafter individualism will be supreme, and paradise on earth attained.

It would be easy to deride this play as the product of an anarchical rhapsodist. The generalizations in it are violent and the philosophy visionary. But the evils which it assails, and the proposed remedy for them, the acquirement by the laboring classes of equal rights and perfect individual liberty, in an evangelical spirit of brotherly love, is, if somewhat Utopian, altogether praiseworthy and legitimate. Unfortunately for the great mass of mankind, equal opportunities for all would mean little without an accompanying equality in character and brains. But the idea is a large one, and Mr. Kennedy has illustrated it with imaginative and dramatic ability and an adroit combination of symbolism and realism. His dialogue is simple and vigorous, and his three principal figures, Adam, Naomi, and Jake, are striking studies. A sketch of the yellow journalist, Snark, is a bit of savage but truthful satire. The technical workmanship of the play, the entire action of which occurs without break in the two and a half hours of its actual representation, is exceedingly skilful.

MARGARET ANGLIN IN SHAKESPEARE.

The notable points in Margaret Anglin's revival of "The Taming of the Shrew," in the Hudson Theatre, were in the stage management rather than the acting. The "Induction" was omitted—although an admirable Sly might have been found in Fuller Mellish—and the rest of the text was treated with scant reverence. But the piece was dressed and mounted with liberality and good taste, both scenery and costumes being artistic in an uncommon degree, while the action was smooth and rapid—proving careful and prolonged rehearsal—and the grouping exceedingly effective. In the general interpretation, however, the dominant mood was one of reckless and often undignified farce, the chief aim, apparently, being to compel laughter by the sheer extravagance of the situations. There is abundant theatrical precedent, of course, for treating the play in this fashion, which doubtless offers the easiest road to popular success. "The Shrew" is not a masterpiece demanding the profoundest respect, but it does possess some of the qualities of romantic comedy, and these deserve a consideration which was not accorded them on this occasion. Miss Anglin, overlooking the supposed social condition of Katharina, depicted her as a virago of an essentially common order. Her impersonation had broad humor and vigor, but little of the manner appropriate to a daughter of a merchant prince of Padua. Katharina, in her maddest fits, ought not to be entirely

unmindful of the dignity of her class. It is this, indeed, which should distinguish her from the common herd of scolds and give her increased dramatic significance. But Miss Anglin pitched her performance in a strident key and her company followed her lead. Eric Blind's exertions as Petruchio sometimes left him breathless and inarticulate, and what might have been a capital performance was spoiled for want of a little moderation. The best bits of individual acting were the Grumio of Max Montesole and the Pedant of Fuller Mellish. As a pictorial stage frolic the whole affair was very well managed and often highly amusing, but there was not much of the Shakespearean essence about it.

And the same remark is true, with minor reservations, of Miss Anglin's revival of "Twelfth Night." In this, too, a production notably good in some respects was spoiled for the true Shakespeare lover by the buffoonery—some of it doubtless rooted in theatrical tradition—imported into the scenes of broader comedy by some of the principal performers. One would suppose that there was enough of liquorish humor in Sir Toby Belch as he appears upon the printed page to supply the needs of any comic actor. Moreover, he is, as Shakespeare drew him, not only comic, but richly and entirely human. But with the accumulations of stage "business" centring upon him, in the course of years, he has been converted into a grossly impossible figure only fit for the circus. And in recent times there has not been a more violent expositor of him than Mr. Sidney Greenstreet, who played the part with all the license of burlesque, bellowing throughout like a bull of Bashan and indulging in all the old and some new extravagances. Of course, he provoked careless laughter and applause, but he hopelessly vulgarized and denaturalized the whole character. Wallace Widdecombe was more nearly human as Aguecheek, and therefore less open to criticism, but he also sometimes forced eccentricity to the boundaries of burlesque. Max Montesole played the Clown with welcome moderation and a clear if not highly developed appreciation of the Shakespearean humor.

The delightful episode of the beguilement of Malvolio was nearly spoiled by the excessive zeal of Miss Lillian Thurgate, who converted Maria—that delightful creation, instinct with Puckish mischief—into a shrill servant girl, whose artificial cachinnations caused exasperation, not merriment. But the Malvolio of Fuller Mellish was a delightfully ripe and artistic performance, sound in conception and finished in execution. Comic, it yet had the right quality of self-respect in its fantastic dignity, with a capacity for pathos and passion. It was a fine bit of Shakspearean interpretation, if not remarkable for brilliancy or inventiveness. Miss Anglin, though not physically well qualified for Viola, played the part with evident appreciation, and succeeded admirably in the scenes with Orsino and Olivia, but she followed a bad precedent in burlesquing the duel scene, which properly, of course, should be given in the vein of comedy. A word of praise is due to the Orsino of Pedro de Cordoba and the Olivia of Ruth Holt Boucicault. The scenery and costumes were of high artistic quality. J. R. T.

"A PAIR OF SIXES."

The new play by Edward Peple, which opened at Frazee's Longacre Theatre last week, has suffered perhaps from the enthusiastic encomiums of the daily press. It is an amusing farce, but it does not arouse the side-splitting merriment that we were led to expect by some of the critiques published after its première. The play cannot, however, be held responsible if it fails to match exactly the promise held out by critics who, after a succession of disastrous failures, were perhaps inclined to be over-indulgent in the presence of an undeniable success.

Mr. Peple has conceived of an excellent idea, the innate absurdity of which only commends it for farcical purposes. The two partners of a successful pill industry, failing to agree on any subject, call in the assistance of their lawyer. The partnership cannot be dissolved, for neither one will buy out the other; so the lawyer, in order that the farce may proceed to its appointed conclusion, hits on the device of deciding by a single hand of poker which partner shall continue to conduct the business for a year, and which shall serve the winner in a menial capacity during that period. A pair of sixes in the hand of George B. Nettleton gives him the advantage, and enables the author in the second act to present to us T. Boggs John in the capacity of his partner's butler.

The possibilities of the situation are obvious, and Mr. Peple has on the whole made good use of them. The play has one conspicuous merit in that the interest increases throughout and the last act is the best of the three. There are moments of dulness, notably in those scenes in which Nettleton's wife predominates, but there are a number of laughable situations and many good lines, and the climax, in which the subtle Boggs John, under the inspiration of his astute fiancée (well played by Miss Ann Murdock), delivers himself from servitude by his attentions to his master's wife, is ingenious. The play is well cast throughout, and George Parsons and Hale Hamilton are excellent as the two partners, while an individual success is made by Miss Maude Eburne as Coddles, the English maid-of-all-work. If we are prepared to grant that the natural destiny of our native farce is to be developed through a crescendo of noise, "A Pair of Sixes" thoroughly deserves the success that it promises to enjoy. We may, however, make the mental reservation that a certain amount of subtlety is not incompatible with the true spirit of farce. S. W.

"MARRYING MONEY."

As an experiment on definite lines, "Marrying Money," by Washington Pezet and Bertram Marburgh, which opened at the Princess Theatre on Wednesday of last week, is not without interest. For it is evident that the authors have studied French domestic comedy, and have attempted to discover an American equivalent for what has long served in France to centre drama of this class—jealousy. If in developing the American's love of money—the theme hit upon—and the position which it brings, the writers have resorted to marked exaggeration, that is no great sin in itself. Even such a strong piece as "Divorçons" is the essence of the improbable. But if extravagant, a domestic comedy, to please, must have compensations, such as sheer charm or subtle satire. It is the absence of these which makes "Marrying Money" an insignificant work. There are, besides, plenty of marks of the amateur. Important confessions are repeatedly forestalled by fortuitous arrivals, and, in general, the exits and entrances are clumsy.

It is not necessary to recount the plot, which hinges on the mistake made by a girl and a young man who are marrying each other for the money which each supposes that the other possesses, though the element of fascination is not entirely lacking. The climax is reached, after an elopement abetted by the girl's mother and by the youth's chum, when the time comes to pay the hotel bill. A Wall Street broker, who is also a baseball fan, a French count who is in love with the heroine and who, as it turns out, has money of his own, add to the rough satire. As yet another product, at least indirectly, of Professor Baker's course in dramatic composition, the play indicates that instructive experiments are going on at Cambridge. F.

NOTES.

Dr. Karl Holl, of the University of Liverpool, in his little book, "Gerhart Hauptmann: His Life and His Works" (McClurg), has given a succinct and fairly readable account of the most prominent of contemporary German dramatists. Dr. Holl in his preface hints at possible traces of foreign idioms in his style, which, indeed, he has not wholly avoided. He twice uses the word "novel" when he means *Novelle*, speaks in one place of "naturalistism," and on page 32 is guilty of a sentence which is simply not English at all. The most valuable thing about the book is the information concerning the many points of contact between Hauptmann's life and his works. The author has gone carefully into this matter and has brought to light a number of facts which even students of Hauptmann may not have known before. A short summary is given of the contents of the plays, which are divided for sake of convenience into social dramas, family dramas, and fairy dramas, though the classification is not quite consistently carried out. On questions of general criticism Dr. Holl is less satisfactory. He says that plastic imagination is the essential feature of Hauptmann's mind, which is doubtless true. He also adds that he is a dramatic genius, which is certainly false. He fails to comment effectively on Hauptmann's great weakness—his lack of motive power, of true dramatic nerve. Nor does he have anything to say about Hauptmann's failure to improve upon his own early successes. It is just this failure to develop which has made him, on the whole, a disappointing figure. Most people will agree with the author in ranking "Die Weber" as the best of the social dramas and, indeed, of all the plays. Whether

"Der Biberpelz" is "the best modern comedy in German literature" is more doubtful. There are several plays of Anzengruber to be considered. The book is furnished with a very serviceable bibliography.

"The Fugitive" (Scribner), by John Galsworthy, is written, of course, with definite purpose, much literary skill, and evident sincerity; but, in spite of its cleverness and vigor, it is an unsatisfactory work. The chief object of it, apparently, is to demonstrate the iniquitous effect of the English marriage and divorce law in holding a discontented wife to an irksome contract; but the argument, in effect, if not in intention, seems to favor experimental wedlock or free love. The heroine, bred in a poor country vicarage, is the wife of a prosperous business man. She is aspiring and imaginative; he completely conventional. Soon, without having any positive cause of complaint, she comes to regard him with contempt and physical aversion. One of her friends, a Bohemian socialistic journalist, preaches liberty to her, and urges her to break her bond. Finally, she deserts her husband with the view to making her own living, refusing absolutely to accept a separate maintenance, on the ground that she will not take money for which she makes no return. Unable to support herself, she seeks out the journalist and offers to become his mistress. With him she lives until her husband sues for divorce and damages. Realizing that this means ruin to her lover, and being assured that the suit will be withdrawn if she parts from him, she again takes up the battle of life, only to meet with renewed defeat, until, in despair, she resolves to sell herself to the first comer. On the racecourse she finds ready admirers, but at the last moment she commits suicide before taking the fatal plunge. It is a sordid and painful tale, most vividly related, with many strokes of descriptive and dramatic genius, but the effect of it is unsympathetic, because the fate of the unfortunate woman is plainly not the inevitable result of law or circumstance, but of her own defective will or character. It is tolerably clear that she would have fretted under the restrictions of any form of matrimonial relationship in which the partner fell short of her fancy. As an illustration of the danger and folly of improvident marriage, and the unfitness of a girl of no specific education to fight the world single handed, it has its moral, but not one of much originality or value.

The English Elizabethan Literary Society is about to try the experiment of producing a series of classical English plays which have not been publicly presented during the present generation. The programme for the first season will consist of Greene and Lodge's "Looking Glass for London and England," Addison's "Drummer," and Dryden's "All For Love."

"The Mob," by John Galsworthy, is to be produced by Miss Horniman at the London Gaiety next month. Its hero is a "pro-Boer," who is mobbed in the closing scene by a "mafficking" crowd. The production of such a play is a remarkable sign of changed popular feeling. Not many years ago Mr. Galsworthy and Miss Horniman themselves would have been mobbed if they had attempted any such thing.

Another London playhouse, the Little Theatre, is relieving the monotony of dramatic representations by a series of lectures or *causeries*. "Olympus in London," "Arcadia in London," "Athens in London," and "Parnassus in London," are the titles of lectures by Prof. Patrick Geddes so far arranged for. Lecturers of European reputation will afterwards be invited, with the object of linking the theatre with intellectual movements on the Continent.

Marie Jansen, the operetta singer, who died on March 20, was born in Boston, and made her début there in 1881, at the Park Theatre. She was the original Iolanthe in the Gilbert and Sullivan operetta in this country, and later played for several years with the McCaull Opera Company in "The Black Hussar," "The Beggar Student," and other operettas. One of her greatest successes was in "The Oolah" with Francis Wilson, and in "Erminie." Miss Jansen also created the title rôle of "Featherbrain" in London with Sir Charles Wyndham.

Music

PADEREWSKI IN AMERICA.

Paderewski's ninth American tour is nearing its end. His first appearance in New York was made on November 17, 1891. He had previously won favor in Paris and London, and while some of the New York critics qualified their first praise with ifs and buts, the public was conquered at once. After two concerts with orchestra in Carnegie Hall he began a series of recitals in the Madison Square Garden concert hall; but this was soon found to be too small, and he had to return to the largest hall in the city. In less than six months he gave 117 recitals throughout the country. The following season he returned for a shorter tour, embracing 67 recitals, which was a record-breaking financial as well as artistic success. Some have estimated that he has earned nearly a million and a half of American dollars.

These figures are of interest not only as showing that a pianist may be as great and as prosperous a popular idol as any prima donna or tenor, but as indicating that the genius of the greatest of living pianists is thoroughly appreciated here. "Paderewski audience" has long been a synonym for capacity audience, and the enthusiasm at his recitals exceeds that to be witnessed even in the opera house. There is something exciting, even thrilling, in the shouts of joy that often go up, not only from a miscellaneous audience attracted by the glamour of his name, but from a staid and dignified Boston Symphony audience, which would resent any exhibition of charlatanry or sensationalism. Of such things Paderewski shows not a trace, and that is one of the marvels of his sensational success, maintained throughout a quarter of a century.

Many professional musicians wish he would stop playing. He has established such a lofty standard that others must despair of reaching it. Joseffy once remarked to his class in the National Conservatory of New York that Paderewski differs from other pianists in being a genius. Like the only two other men who have reached his heights—Liszt and Rubinstein—he is a creator as well as an interpreter, which explains the difference—a difference not only in degree but in kind. He has composed a symphony and a number of piano pieces and songs equal to the best written by his contemporaries; also an opera which is the most inspired dramatic work composed since "Carmen," with the exception of "Parsifal." His concerto, which he has just been playing with the Boston Symphony Orchestra in Boston, New York, Philadelphia, Baltimore, and Washington, created everywhere a sensation—a delight mingled with astonishment that this superb work should be neglected by other pianists. Why should rivals add to his laurels? one might ask; but the rivals and colleagues of the greatest of violinists, Fritz Kreisler, often play his pieces. The eminent English pianist, Katharine Goodson, is an exception among pianists. She played the Paderewski concerto in New York a few weeks before he played it, and she did it well, though it is needless to say that she did not bring out all the details with the stereoscopic vividness he himself gave them.

Schopenhauer and Lombroso have commented on the conspiracies of mediocrity against genius. From such conspiracies Paderewski also has suffered, for musical success hath charms to rouse the savage breast. Fifteen years ago the small fry of musicians began to cry: "He has lost his grip." He did lose his grippe, fortunately, but this season he returned with neuritis, which nearly frustrated his tour. For two weeks its beginning was delayed. At his first recital of the season in Aeolian Hall, he played like one inspired from above—but not at the beginning. He was forty minutes late, had been annoyed, and showed it by hitting at the piano like an irate athlete. It did not last long, but the enemy next day raised a great clamor, crying: "Paderewski does not play any more; he pounds." It was useless to point out that Beethoven, when in a stormy mood, was accused of pounding; that Liszt sometimes broke two or three strings; that

Rubinstein, when in a tragic, leonine, orchestral mood, would fret and fume and wish he had twenty pianos to play on; that it is to these moods that we owe the sonorous pianos of our time, as they compelled the manufacturers to live up to them.

Beside this farce there was enacted a serious melodrama which might have had serious consequences. Paderewski was accused of having contributed $20,000 to a Polish newspaper which has been making war on Jews. In consequence of this, hand-bills were distributed in various cities, signed by Jewish associations, urging music lovers not to help him to send more money to aid a cause which led to the slaughter of Jews. Threats were made, also, of bodily injury or death, and in several cities the halls were watched by detectives during Paderewski's recitals. He finally put an end to this annoying situation by taking oath before a California notary public that he had never contributed any money to the paper in question. Educated Jews, it is needless to say, were not deterred by these accusations from attending his recitals any more than they were, a generation ago, from crowding to the operas of Wagner because of his two foolish anti-Semitic pamphlets. Most of them doubtless felt like the banker who had in his library a bust of Wagner with a rope round the neck—the bust to attest his devotion to the musician, the rope to indicate what he thought of his opinions.

While Paderewski has added no new pieces to his programmes, he has played the compositions he loves most—those of Bach, Beethoven, Schubert, Schumann, Chopin, and Liszt—more eloquently than ever. Already he has played six times in New York, and each performance seemed greater than its predecessors. He usually looks pale, and often suffers from the neuritis which compelled him to spend a fortnight in the baths in California. How, under the circumstances, he can add nearly an hour of extras to a two-hour programme, as he did at his fourth recital, is a mystery.

HENRY T. FINCK.

The Oxford University Musical Club recently held its one thousandth meeting. Its programme contained one unique item, the playing of a Mozart sonata, arranged as a duet for two pianofortes by Dean Strong, the present Vice-Chancellor, and Dr. Heberden, his predecessor in office.

A five days' Beethoven festival is to be held in the Queen's Hall next month, at which all the Beethoven symphonies and pianoforte concertos are to be performed. Henri Verbrugghen is to conduct.

A scheme is under way for an Arthurian festival at Glastonbury—the Avalon of tradition—in August. Three performances will be given of "The Birth of Arthur," the first of a cycle of Arthurian dramas written by Reginald R. Buckley and composed by Rutland Boughton. The Beecham orchestra will coöperate. A temporary theatre will be built, to serve for four or five years.

Art

THE ACADEMY EXHIBITION.

The eighty-ninth exhibition of the National Academy of Design shows in the main the same distinguishing features that for some years past have characterized it. There is, however, nothing surprising or disheartening in this fact, since the artists concerned are maintaining their standards and meanwhile are posing neither as revolutionists nor as prestidigitators in paint. Even the fact that a wanderer fresh from the Paris salons, taking in the Exhibition as a whole, might think it tight in handling, somewhat old-fashioned in aspect, and not exciting, need not be regarded as final or decisive, in view of the chaotic and overwrought condition of French art at the present time.

In truth—despite cramped quarters that have not grown to suit its needs, and despite the merry jests that are flung at it—we may as well acknowledge that the Academy is a conservative force of importance among artists and in the community. For the artists it signifies a sort of inner circle of their kind, in which they are glad to be included and from which they are gratified to receive recognition. For the public it means the opportunity to note the progress of artists with whom it is already familiar, and to make the acquaintance of newcomers as they appear. The intelligent visitor also realizes that by keeping in touch with this organization he now and again enjoys the pleasure of seeing the early efforts of exceptional talent. Then, too, such fortunate occasional experiences as this last have a tendency to create on the part of the observer a sort of buoyant, subconscious expectation of some day encountering on the Academy walls the great American genius who is to overshadow all past artistic efforts and thereby enlighten all those that are to come.

Apparently, as I have said, this is not the year for any such remarkable manifestation; yet there is more than one indication in this hanging that the artists are fully alive to the existence of the professional problems of the hour, and that they are independently considering them according to their best judgment. The result is good, honest work, which for a number of reasons is of varying degrees of interest and excellence.

That there may be excellence without great interest is sometimes due to the proneness of some artists to confine themselves, wholly or for the most part, to the variations of their past successes. Granted that a congenial subject, with a fortunate mode of expressing it, offers temptations, the artist with but one picture to put on his canvas speedily becomes as monotonous as the writer with but one story to tell. To cite an instance of this exhibition, there is Couse's Indian picture, The Beaded Bag. It may be called a good Couse, to be sure, but, speaking from memory, I can scarcely see that it has changed this year from the pose, the firelight, the pottery of other such pictures by him; even the shape and size of the canvas seem the same. Other examples of the kind are Richard Miller's lady pouring tea, with sunlight and foliage accompaniments, and Shurtleff's wood interiors—beautiful though they unquestionably are. On the other hand, when a painting of a certain kind makes but a minor part of the artist's equipment and is preëminently well done, then a new example of the old subject is quite welcome; for example, Chase's still-life of fish and the big copper kettle. Near by hangs his excellent portrait of Professor Taylor, to demonstrate conclusively his ability in an entirely different direction.

Probably the charm of the unexpected has helped to centre continued attention upon the work of George Bellows, who is given to seeking new fields for his art. On this occasion he has achieved a notable success and has received the Isaac N. Maynard prize for his full-length portrait of Dr. William Oxley Thompson. The doctor is of the class, now appearing often in portraiture, that is entitled to the dignity of the academic gown; but he wears his with a difference, for, thanks to Mr. Bellows's skill, the robe, despite its voluminous folds and the richness of its purple bands, is made of subordinate importance to the man who wears it. The pose is well taken to express self-confidence, which is further emphasized by the rugged strength of the ably painted head, and the grays and blacks that predominate throughout are managed with easy freedom; yet, though possessed of so much excellence, the portrait does not escape a crudity that distinguishes it from great work.

The zone of prizes, which lies chiefly in the neighborhood of this portrait, holds a number of pictures worthy of attention. The Inness prize has been given to Robert Spencer, an artist who has attracted commendation of late by his ability to give artistic interest to the native ugliness of factory buildings and their drear surroundings. The prize-winning picture is of the factory style of architecture, though called The White Tenement. Oddly enough, the tumble-down, shiftless shanties that cling about

the orderly, box-like building in the centre of the canvas, seem the least forlorn and most habitable part of the scene. The composition of the picture, its calm, decided grays and clear reflections in the water of the foreground, and, above all, the precision and shape of the paint stroke, make a style not unlike that of Sisley of early Impressionist fame.

Just next to this cool, gray-toned picture hangs Jonas Lie's Afterglow, which received the first Hallgarten prize, and on the other side the Portrait, by Cecilia Beaux, which received the Saltus medal. The first-mentioned picture is a view of the lighted city from the river just before twilight. It is beautiful in color and most interesting in pattern, with perhaps a trifle too insistent a feeling of lingering hurly-burly, bred of spots and smoke; which is to say that Mr. Lie's vigorous painting suits the rush of the morning hours rather better than evening. Miss Beaux has painted convincingly the portrait of a woman steadfast and true; there are excellent qualities in the work beyond question, but just why another medal should be added to her already long list, for a painting in which the light so distracts, is hard to understand. Sloan Bredin's Midsummer is another prize-winner—a quiet decorative, tapestry-like landscape, noticeable because of the rendering of the warm, over-cast aspect of summer heat. Near by hangs J. Alden Weir's portrait of Miss L., a fine example of his style, which puts within the limits of a narrow range of color both refinement and strength. In another room is the Odalisque, by Beatrice Whitney, to whom has been given the Shaw Memorial prize. The name of the artist is a new one to me, but she has the painter's eye and touch. There are personality and character in the rendering of her Oriental model, but going with these saving qualities is an unnecessary dinginess in the shadows of the dusky flesh.

In landscape there are several pictures that from their subjects might be regarded as a modern reincarnation of the grand style of Church and Bierstadt of the early Hudson River School. In those old days they put on canvas The Heart of the Andes, the Yosemite Valley, and the Falls of Niagara; to-day William Wendt has painted Mountain Infinity; Dewitt Parshall, the Grand Cañon; Edward Potthast, Illecilewaet Glacier, and Carl Rungius, the Canadian Rockies. The likeness, however, is but seeming; the difference between the old style and the new is evident. These later artists do not take their grand subjects with the idea that the more awe-inspiring the subject, the more noble the picture, but simply with the quite legitimate desire to express their understanding of nature's great moods by the artistic means of line and color. The result is interesting, not topographical, but, after all, touches only superficially the mysterious, forceful characteristics that make the mountains and the cañon tremendous aspects of nature. It is a curious fact that the sea, which can be in nature no less awe-inspiring than the mountains, does not hold itself so aloof from satisfactory pictorial interpretation. Paul Dougherty's Foam on the Rocks gives expression to the force and movement of the waves; Howard Butler's marine reveals the beauty of the play of sunlight; or, by way of contrast, there is the quiet, gently lapping sea about Louise Brumback's Green Boat and Hayley Lever's St. Ives Harbor, with rich, strong color in water and shore.

For restful calm Gardner Symons's Winter Evening is attractive. Here confused shadows seem unnecessary. There are simple masses of color, a wintry sky with a gleam of yellow that is cold as steel, and a stream where the water is coldly clear and moving slowly—only a few well-marked reflections; it seems simple, but with such means he has embodied the very spirit of the close of a clear, cold winter day.

This year for the first time, I believe, the Exhibition includes two cases of miniatures containing the work of members of the American Society of Miniature Painters. The catalogue list shows this Society much feminized, which fact confirms the popular belief of long standing that this branch of art is especially suited to women. And, though it may be reactionary, let it be said in passing that Miss Cockroft's over-large nudes and staring pillow arrangements in the Vanderbilt Room do not convincingly refute that old idea. Time was, however, when artists as strong and masculine as Holbein did not disdain to busy themselves with this delicate work. The miniatures shown are for the most part portraits; among the many, those by Helen Turner and Gertrude Bushnell are noticeable for the excellence of the drawing and the method of using color. Cecil Jay's more elaborate Le Billet Doux is dainty and Frenchy in style, with an air of Watteau's time, despite the stiffness of the composition.

As for sculpture, one would say the sculptors had all betaken themselves to San Francisco to work for the approaching Fair, there is so little shown to mark their existence—twenty-six pieces all told, and those small and not of unusual significance. Babyhood seems a good deal in evidence among these; Abastenia Eberle's Big Wave, with mother and child at play on the seashore; Evelyn James's Baby Faun Book Ends—too slight for their task, were it not for the joyous glee with which they undertake it; and Manship's Renaissance Baby Portrait, shown already in Philadelphia, but changed now from plaster to bronze, and rendered even more charming by the change. L. S.

The "Year-Book of Canadian Art, 1913" (Toronto: J. M. Dent & Son), reflects credit both on those who contributed its well-informed and discriminating articles, and also on the Arts and Letters Club of Toronto, which is responsible for its compilation. The "Year-Book of Canadian Art," with the annual "Review of Historical Publications Relating to Canada," offers a satisfactory survey of Canadian achievement in arts and letters. The latter review is, of course, confined to historical work, although history is broadly interpreted. The new year-book reviews the year's output in five sections: literature, music, painting, sculpture, and architecture. This volume contains, in addition to a number of general articles, well-considered reviews of the work of Goldwin Smith, Sir George Ross, Stephen Leacock, in literature; of Augustus Stephen Vogt in music; of A. Suzar-Coté in painting; of Walter Allward in sculpture, and of John A. Pearson in architecture. The Arts and Letters Club has been fortunate in enlisting the services as reviewers of men each of whom has a national reputation in his own field. The illustrations include not only portraits of men and women who have contributed to art and literature during the past year, but also reproductions of some of the more notable works of art, including the fine King Edward Memorial designed by Walter Allward for the national capital.

Wilton Lockwood, portrait painter, who died on March 20, was born in Wilton, Conn., September 12, 1861. After studying in New York under John La Farge, he spent ten years in Paris and a year in Munich. On his return to this country he settled in Boston. Examples of Mr. Lockwood's work hang in the Carnegie Institute, Pittsburgh; the Corcoran Gallery, Washington; the Museum of Fine Arts, Boston, and the Museum of Fine Arts, Worcester.

Finance

THE NEXT CHAPTER.

Briefly summed up, the existing situation, on both home and foreign financial markets, is this: Trade revival has not appeared, as had been hoped when the vigorous Stock Exchange revival came in January. On the contrary, there has occurred a slow relapse into the hesitation and uncertainty of three or four months ago. A feeling of despondency has seized upon the financial and business communities, in which every unpleasant event or possibility is magnified, while every agreeable and reassuring incident is ignored. Yet, with all this existing condition of the financial mind, the stock exchanges, having seemingly completed, for the time at any rate, their reactionary movement of the past six weeks, are cautiously advanc-

ing. The New York market has moved up, in entire absence of any definite news which should stimulate enthusiasm. At London, the price of British consols has risen nearly one full point, on the very heels of last Sunday's extraordinary developments in Ulster and the British army. All this suggests some reëxamination of the financial situation.

To this extent, the present mood of the financial markets is a psychological matter—that it follows a demonstration on the stock exchanges, last January, which at the time convinced the entire financial community that an early and positive change for the better was in store, but which was followed by what seemed to be complete dissipation of such hopes. Taken in conjunction with the present attitude of financial and business markets, the occurrences of January now assume, in the eyes of the financial community, the aspect of something like an unsolved mystery.

Not often in the experience of finance has the forecast of the stock exchanges and money markets been more positively pronounced than it was then. The meaning of the phenomena which were witnessed, on all the principal markets of the world, was unmistakable, if judged by the usual criteria. The changes for the better dealt with the fundamentals. They altered the situation in precisely those quarters of which it had been repeatedly declared, in 1913, that it was from such directions that the first trustworthy sign of return to better markets must be looked for. Furthermore, they were world-wide in their manifestation. Observers who became hopeful at that time are therefore naturally asking now, What did the events of January really mean? Or did they mean nothing at all?

It is still full early to attempt an answer to these questions. What is evident is that the influences which seem to be operating against revival in outside trade are precisely the influences which prevailed last year. The familiar arguments of last autumn are still in the forefront of all financial discussion; but that is only part of the situation. Such counter-arguments as were accepted by Wall Street in December and January—that the Administration was laboring for a peaceful adjustment of governmental disputes with Big Business; that Congress was acting in a conservative and not in a reckless way on current legislation, and that the currency bill's enactment promised much for future stability in finance—have since January been almost wholly abandoned.

Now there are three possible explanations, and only three, as to this curious sequel of events. The markets may have been drawing mistaken inferences as to those events, three months ago. The good influence of those events may have been superseded by other developments of the day. Or Wall Street may have been right at the opening of the year, but may have abandoned its inferences of that period, because their correctness had not been instantly demonstrated by the movement of prosperity. One of these three explanations will in the end be found to carry the solution of the present perplexities.

In view of the well-known principle that the financial year begins in the early spring, when the new governing influences of a period usually develop, and not with the opening of January, when the general influences of preceding months are usually continued, a further point of interesting conjecture is, what are the new influences that will arise when the new period begins, and how will they bear on the general situation? Briefly summed up, those which are certain to cut a figure in the next few months are the progress of the crops, the decision on railway rates, the arrangements for introducing the new banking system, the conclusion of the legislation of this Congressional session, and, later on, the campaign and vote for the autumn Congressional elections.

In these various and important matters, there are obviously numerous and diverse developments which may be witnessed between now and the year's later months. It is not easy to reason out, on the basis of present evidences, a series of further unfavorable influences in these directions. In the judgment of the grain trade, the present promise of the early wheat crop is exceptionally high; we shall have very definite information on it a month or six weeks hence. The Interstate Commerce Commission's action on the advance in Eastern railway rates may be taken as early as May; it is promised definitely before July. Like all such matters, its probable purport will be in doubt until the decision is handed down. In railway circles, and in a degree at Washington, the trend of opinion seems at the moment to be that part, if not all, of the advance applied for will be approved.

As for the inauguration of the new banking system, much will no doubt depend on the nature of the President's appointments, which should be made within the next few weeks. Much will also depend on the manner in which the banks take a hand in constructing the new reserve institutions. As to this, however, it is to be observed that, since practically all the national banks of the country have committed themselves to the system, and will have 6 per cent. of their capital and surplus invested in the shares of the new regional reserve banks, it will be to their vital interest to make the experiment a quick success.

There will remain, aside from the perfectly inscrutable Mexican complication, the conclusion of the session's legislation at Washington, and the autumn political campaign. The probabilities as to the one are fairly in view already; the sober and conservative action of the Congressional committees, on the hastily and imperfectly drawn-up "Trust bills," tells the story. As to the other, even the political prophets have not yet begun to conjecture. Wall Street is rarely in the habit of "discounting" matters of that sort, until the preliminary developments are in sight, and election contests in the United States are like the old-fashioned military campaigns in Europe: they do not begin until the traditionally proper moment.

"A dramatic critic of literary cultivation . . . a sample of contemporary American dramatic criticism very nearly at its best."—*Springfield Republican.*

". . . He knows the drama Mr. Winter is still talking about as well as that of the present day . . . those who seek more than amusement in the theatre will find the whole business and art of it reviewed here, and discussed with intelligence and sincerity."—*The Globe.*

STUDIES IN STAGECRAFT

By CLAYTON HAMILTON, whose "THEORY OF THE THEATRE" is already in its 4th printing. Either book $1.50 net.

This book, by one of our leading critics, gives a vivid idea of what contemporary drama in the United States has become, not neglecting such matters as The Drama League and The "Movies."

Henry Holt & Co., 34W. 33 St. New York

NEW MAGAZINE ON EGYPT

An illustrated quarterly magazine, beautifully illustrated, with news of late discoveries, edited by PROF. PETRIE. began with the January number embellished with frontispiece of jewelry in colors. Price $2 a year. The discoveries by Petrie and others for the EGYPTIAN RESEARCH ACCOUNT (Society) relate to the arts of Ancient Egypt and to its predynastic age. An annual quarto volume, profusely illustrated, and the magazine should be in all public and many private libraries. Circulars of these publications freely furnished. Address REV. DR. W. C. WINSLOW, 525 Beacon Street, Boston.

BLUEBEARD

A HUMOROUS MUSICAL FANTASY

By Kate Douglas Wiggin

Pure fun. It hits off with delicate satire, the solemn methods of musical experts. *50 cents net.*

HARPER & BROTHERS.

Java and Her Neighbors

A Traveller's Notes on Java, Celebes, the Moluccas and Sumatra

By ARTHUR S. WALCOTT

8vo. With 78 illustrations and a Map.

$2.50 net.

A most illuminating and entertaining account of travel among and within the Dutch-Malay islands. This volume should be of great service to travellers, in view of the practical hints it offers and the added pleasure received from a knowledge of the history of places visited,—and to the stay-at-home traveller through the many excellent and unusual photographs and the delightfully intimate text.

ESSAYS ON FAITH AND IMMORTALITY

By GEORGE TYRRELL. Arranged by M. D. PETRE. Crown 8vo. $1.40 *net.* (Weight 17 oz.)

This volume comprises, for the most part, matter hitherto unpublished, which existed in the form of notes and essays amongst the MSS. which Father Tyrrell left behind him. To this have been added a few articles already published, either in England or abroad, in various periodicals, but which are not now easily obtainable, and which possess a certain importance.

VOL. XCVIII—NO. 2544 THURSDAY, APRIL 2, 1914 Reg. U. S. Pat. Office. PRICE TEN CENTS

The Fundamental Basis of Nutrition.

By GRAHAM LUSK, M.D., Scientific Director of the Russell Sage Institute of Pathology.

This book contains a clear discussion of a topic of vital interest by an authority in that field. Written for the correct information of educated people, it is constructive in its criticism, describing the requisites of normal nutrition and outlining a rational method of general education upon this subject.

12mo. Cloth binding. 65 pages. Price, 50 cents; carriage 6 cents extra

University Sermons.

By Rev. HENRY SLOANE COFFIN.

Rev. Henry Sloane Coffin has come to hold a preëminent position among the young ministers of America. Perhaps his largest sphere of influence is in university congregations, where the appeal of his direct, simple, clean-cut thought is so thoroughly appreciated. Each sermon abounds in comparisons which might readily be extended into whole sermons, and each page adds new force to his challenge to the best in men.

12mo. Cloth binding. 280 pages. Price, $1.50 net; carriage extra

The Mental Health of the School Child.

The Psycho-Educational Clinic in Relation to Child Welfare. By Dr. J. E. WALLACE WALLIN, Director of the Psycho-Educational Clinic School of Education, University of Pittsburg.

In nineteen chapters of pointed discussion and original statistical and experimental contributions the author presents information dealing with the scientific study, conservation, and improvement of backward, feeble-minded, precocious, or mentally unusual children.

12mo. Cloth binding. Gilt top. 300 pages. Price, $1.75 net; carriage extra

The Department of State of the United States, Its History and Functions.

By GAILLARD HUNT.

The work is unique, the first and only history of the Department of State to be written by an expert. Through his career in the Governmental Service, Mr. Hunt has had a notably fine opportunity to familiarize himself with the workings as well as the history.

Trade Morals, Their Origin, Growth and Province.

An Interpretation. By EDWARD D. PAGE (Page Lectures).

The author has painted the evolution and structure of society, and of its influence upon the origin of moral principle; with especial application to the business problems of the present day. The book makes its especial appeal to the business man who is a student of ideas as he is of affairs.

8vo. Cloth binding. Gilt top. 200 pages. Price, $1.50 net; carriage extra

Popular Government, Its Essence, Its Permanence, and Its Perils.

By WILLIAM HOWARD TAFT, LL.D., D.C.L.

"Mr. Taft has 'a way with him' which makes his argument delightful reading, and a power of cogent analysis and compression which is masterly. . . . Mr. Taft's is no inhuman philosophy. To tell such an excellent story in a law lecture is a triumph even for an ex-Presidential professor."—*Westminster Gazette.*

(Second printing.) 12mo. Cloth binding. Gilt top. 283 pages. Price, $1.15 net; carriage 10 cents extra

Christianity Old and New.

Proposed Reconstructions Viewed in the Light of Historic Development. By BENJAMIN WISNER BACON, D.D., LL.D.

Professor Bacon champions Christianity, offering a sufficient answer to its recent critics. That Christianity has already met and dealt with many of the phases of the "new" criticism while it was still only one of many rival religions aspiring to control in the civilization of the Roman Empire is, in part, the author's contention.

12mo. Cloth binding. 133 pages. Price, $1.00 net; carriage extra

The Monroe Doctrine, An Obsolete Shibboleth.

By HIRAM BINGHAM, Ph.D., F.R.G.S.

"His little book is not a systematic treatise, but a readable, rather discursive argument for the abandonment of the Monroe Doctrine by the United States.

"As a popular statement of the problems which the Monroe Doctrine raises, Mr. Bingham's book is commended especially to those who still believe that the doctrine is the foundation stone of our foreign policy."—*Japan Daily Mail.*

(Second printing.) 12mo. Cloth binding. Gilt top. 154 pages. Price, $1.15; carriage extra

The Mechanistic Principle and the Non-mechanical

By PAUL CARUS

Cloth, $1.00

The truth of the mechanistic principle is here unreservedly acknowledged in this little book, without any equivocation or limitation, and it is pointed out that the laws of mechanics apply without exception to all motions; but they do not apply to things that are not motions. Ideas and sentiments as such are not motions. The physiological functions of thinking, willing, and feeling present uninterrupted channels of cerebral motions. Thus, while thinking is unquestionably a mechanical process, there is an element in our life that is not mechanical, and in this domain there would be no sense in expecting a mechanical explanation. How, for instance, can the meaning of a word, of thoughts or symbols of logical syllogisms be mechanically explained? The essential feature of all higher organic life is the appearance of purpose, and the task which the author sets himself is a careful investigation of the problem how purpose is possible in a mechanically regulated world.

A considerable portion is devoted to the mechanistic views of Mark Twain and La Mettrie. The philosophy of the former, here presented in copious extracts, is otherwise quite inaccessible to the reading public; and La Mettrie, the pioneer of this theory, appears rather one-sided in ignoring the factor of the non-mechanical.

Yet these non-mechanical elements play an important part in the mechanism of the brain.

Among the opponents of the mechanistic theory, the views of Dr. William Benjamin Smith and of Dr. James Thompson Bixby are discussed in detail.

NEW YORK, THURSDAY, APRIL 2, 1914.

Summary of the News

The split in the ranks of the Democrats in Congress on account of the repeal of the exemption clause in the Panama Canal Tolls bill, became more pronounced on Thursday of last week, when Speaker Clark issued a statement definitely aligning himself with those opposed to the repeal. On the following day, however, the supporters of the Administration won a victory on two test votes arising out of the application of the rule to limit debate. The vote ordering the previous question was 207 to 176, and the rule to limit debate was passed by 200 to 172. President Wilson has characterized as "insulting" the *canard* that there has been anything in the nature of a bargain between this country and Great Britain, calling for British support of the Administration's policy in Mexico in return for the repeal of the exemption clause. Sir Edward Grey also issued a specific denial of the report in the House of Commons on Monday. The vote on the Sims Repeal bill was taken in the House on Tuesday evening, the result being 248 to 162 in favor of the repeal.

The most conflicting reports have come from Mexico during the past week regarding the fighting around Torreon. Gomez Palacio, which was taken by Villa on March 24, was apparently recaptured by the Federals on the following day, and again retaken by Villa on March 26. This view would seem to coincide with the account of the fighting given out from El Paso on Monday by a war correspondent, who had left the front on Saturday. According to this account, the rebels were twice defeated at Gomez Palacio, but the Federal troops failed to follow up their advantage and Villa was able to recover his position and advance to Torreon proper. Reports from rebel sources, which, on that account, must be accepted with reserve, indicated on Tuesday that the Federal forces were reduced in numbers to some 3,000 men, but were still strongly intrenched and offering a stubborn resistance. There has been desperate street fighting in Torreon, and the losses on both sides, estimates of which vary according to their source, must have been heavy. From Mexico City the statement was given out on Tuesday that the capture of Torreon by Villa was not anticipated.

The suit brought by the Government under the Anti-Trust law against the Pacific Telephone & Telegraph Company was settled out of court on Thursday of last week. The Bell companies are ordered to dispose of their holdings in the Northwestern and Interstate companies and are prohibited from acquiring hereafter any interest in those companies. This is the third important anti-Trust suit brought by the present Administration to be settled by agreement, the other two having been that against the American Telephone & Telegraph Company in its relations with the Western Union, and that in connection with the New Haven dissolution.

The announcement was made from Washington on Saturday that Ambassador Gerard had been instructed to make representations to the German Government on behalf of the Standard Oil interests, if in his judgment the terms of the Oil Monopoly bill now pending in Parliament seemed to render the Standard Oil Company liable to injustice in respect to the taking over of its properties in Germany, which is contemplated in the bill. President Wilson has since explained that the instructions to Mr. Gerard called for an investigation and a report only and for nothing in the nature of a protest to the German Government.

Extensive retrenchments have been made by some of the important railways of the East. The Pennsylvania, the New York Central, the New Haven, the Central of New Jersey, and the Lehigh Valley have all made reductions in their passenger and freight service, and large numbers of employees have been laid off altogether or are working on half time. The action of the railways is attributed to adverse State legislation and to uncertainty concerning the Federal Government's policy with regard to increased rates. Particular complaint is made by railway officials of the full train crew laws of New York, Pennsylvania, and New Jersey. While the Eastern railways have suffered most severely, the lines of the West are also affected. Figures published by the New York *Sun* on Saturday show that the gross earnings of twenty-seven systems for February of this year were $6,465,140 less than for February, 1913.

Announcement was made on March 26 that a settlement had been reached in the long dispute between the Eastman Kodak Company and the Ansco Company regarding the "Goodwin patent" on pliable films. The claims for infringement of the patent made by the Ansco Company involved millions of dollars. The details of the settlement have not been given out, but it is stated that it was for a "substantial amount."

Some of the appointments sent by Gov. Glynn of New York to the State Senate on Saturday bear the unmistakable stamp of Tammany influence and have served to accentuate the cleavage in the Democratic party in New York State.

The arbitration treaty with Denmark proposed by Secretary of State Bryan has failed to obtain the ratification of the Danish Senate. The treaty provided that all matters of dispute between the two Governments should be referred to an impartial commission for investigation and report, and stipulated further that in case the dispute was not settled within one year after the commission had made its report the matter should automatically be referred to arbitration.

Other events in the political crisis in England have been overshadowed by Mr. Asquith's dramatic announcement in the House of Commons on Monday that he himself would assume the portfolio of Secretary of State for War. At the same time the Prime Minister announced that Col. Seely had felt compelled to resign from the War Office, and that the members of the Army Council, Field-Marshal Sir John French, and Adjt.-Gen. Sir John Ewart, who had joined with him in signing the "guarantee" to Brig.-Gen. Gough, insisted that their resignations be accepted. Mr. Asquith's acceptance of "an office of profit under the Crown" involves his resignation of his seat in Parliament and his returning to his constituency of East Fife for reëlection. The Premier will thus be absent from the House of Commons for at any rate two weeks. On Tuesday, Sir Edward Grey, in charge of the debate on the Home Rule bill, declared that the Government was not prepared to make further concessions beyond the six years' exclusion of the Ulster counties. In case of sporadic outbreaks in the province, he added, force must be employed.

A strike which threatens to become serious was declared on Monday by the coal miners in Yorkshire, England. The strike involves 170,000 men, and the demands made are for the introduction of a minimum scale of wages. The Miners' Federation of Great Britain has given its support to the strike.

The Swedish elections for the Riksdag began on March 27 and will be concluded on April 7. Unusual interest attaches to these elections, as they are expected to turn on the position of the King as a constitutional sovereign. King Gustav's assertion of his right to address the Swedish people directly on the question of military expansion led to the resignation of the Liberal Cabinet and to an appeal being made to the country.

The political situation in Japan has remained uncertain since the resignation of the Cabinet on March 24. Prince Iyesato Tokugawa, President of the House of Peers, having declined the request of the Emperor that he undertake the formation of a Cabinet, the Elder Statesmen on Monday submitted the name of Viscount Keigo Kiyoura for the Premiership. On the same day Vice-Admiral Matsumoto, who was involved in the naval graft scandals, was committed to prison after a prolonged examination. On Tuesday it was announced that Viscount Kiyoura had accepted the Premiership.

The deaths of the week include: Frédéric Mistral, Harry Maule Crookshank, March 25; Benjamin F. Keith, March 26; Tito Mattei, George W. Hill, Dr. Egbert Le Fevre, March 30; Timothy D. Sullivan, Sir Hubert von Herkomer, March 31.

The Week

For the number of men engaged and the obstinate character of the fighting, the battle at Torreon stands out pre-eminent in the history of Mexican civil warfare. Large bodies of men have been in collision on Mexican soil, but only when Mexicans have fought against a foreign enemy. Gen. Taylor had about 4,700 men at Buena Vista, but Santa Anna's defeated army numbered some 20,000, giving a larger total of combatants than has been engaged at Torreon. Gen. Winfield Scott landed at Vera Cruz with about 12,000 men. In 1863 the French invested Puebla with 20,000 men, and the garrison that surrendered was 15,000 strong. Four years later Puebla was retaken by Porfirio Diaz in a battle engaging about 25,000 men. In all, the fortunes of the Mexican people at various times have been decided by limited bodies of troops for a nation of fifteen millions. In view of this fact, it is somewhat out of place to sneer at Villa as a common bandit. He may be that by certain traits of character; he is more than that by his talents as a soldier. To have brought together one of the largest native armies that have ever fought in Mexico and to have led it with such military skill is a notable achievement.

"Shares in the textile mills in New England," said Senator Smoot in his big speech on the tariff last summer, "have declined greatly as a result of this proposed law. . . . It is estimated that only 50 per cent. of the mill capacity in the woollen and worsted mills is now employed, and that will be reduced 25 per cent. by the time this bill takes effect." Well, the bill *has* taken effect; indeed, it has been in operation half a year; and this is what we hear now:

> BOSTON, March 25.—The quick recovery in the American Woollen Company's preferred stock to $79 a share is, of course, a direct reflection of the maintenance of the regular 7 per cent. dividend rate, some doubts as to the status of which, on account of last year's unsatisfactory showing, had been expressed. It is said that the company is doing twice as much business to-day as at this time last year.

Just preceding the quotation we have made from Senator Smoot's speech are some profoundly gloomy remarks on the intimate connection between free-trade and pauperism. "With less than half our population," he informed us, Great Britain has "twenty paupers to our one," and we are "moving in the same direction by this legislation." As the statement of the imminent ruin of the New England textile industry was put forward as the first—and so presumably the most terrifying—of the facts bearing out this melancholy forecast, we trust that Mr. Smoot and the rest of the high-tariff prophets will now pluck up heart and indulge the fond hope that a fair proportion of the American people will remain outside the poorhouse even under the present tariff. By the way, what has become of the great exodus of manufacturers to Canada, the prediction of which was Gov. Foss's special contribution to the enlightenment of the public?

Senator Weeks's proposal that the five fast scout cruisers of the navy should be used by the Government to carry mail, freight, and passengers via New Orleans and the Panama Canal to the west coast of South America, until such time as a private line can be established, is a novel but not a practical suggestion. A few years ago it would have been resented as extremely paternalistic; but now that the Government owns a railway in Panama, and is about to expend many millions for another in Alaska, there is not likely to be opposition on this ground. But, as Senator Weeks must know, these ships are little fitted for such traffic; the largest ones, the triple-screw cruisers Minneapolis and Columbia, are twenty years old, and have always been extremely expensive to run, and, like the other three, they would necessitate heavy outlays if they should be equipped to carry numbers of cabin passengers. They have often been used to carry troops and marines, but there is a vast difference between transport and passenger service. The Salem, Chester, and Birmingham are more modern, having been authorized in 1904, and are about the size of many of the vessels in West Indian service. But they, too, were never built for cargo-carrying. If the idea is to find more useful employment for these boats, Mr. Weeks is justified; yet the amount of money they would lose in such traffic would, we fancy, be staggering. Still we, too, sincereiy trust that a fast line from New York to Valparaiso may speedily be found to be commercially profitabic.

The long-awaited decision of the Oregon Supreme Court upholding the constitutionality of the minimum-wage and ten-hour law has been rendered with a positiveness that will reassure the seven other States that passed such acts in 1913. This first complete test followed the prescription by the Industrial Welfare Commission of a nine-hour day for women at a minimum weekly wage of $8.64, and was instituted by a Portland paper manufacturer. Its ground was, of course, that the law exceeded the police powers of the State; and, more specifically, that it interfered with freedom of contract, while, by giving the Welfare Commission arbitrary decision upon matters of fact, it "took the property of the employer without due process of law." Justice Eakin's decision affirms that all "provisions enacted by the State under its police power that have for their purpose the protection or betterment of the public health, morals, peace, and welfare, and reasonably tend to that end, are within the power of the State"; and rules likewise that none of the law's provisions are subject to State constitutional inhibition. The radical and highly comprehensive nature of the Oregon law makes the decision important to those other States, from California to Wisconsin, whose enactments went into force at about the same time. Massachusetts's minimum-wage law was the only one passed earlier than 1913; her 56-hour provision for women has just been upheld by the United States Supreme Court.

It has been said that the decision of the Supreme Court of Tennessee, last week, holding that the Methodist Church has no visitorial rights over Vanderbilt University, dealt a powerful blow to a "bigoted ecclesiasticism" in education. This may be, but only as a remote inference from the Court's decision. The case was decided on strictly legal grounds. It turned largely on the terms of the foundation of Vanderbilt University and on the powers of the Board of Trust. The issue was raised in consequence of successively greater claims, on the part of the authorities of the Methodist Church, to control the

affairs and shape the destinies of the university. Appeal was taken by the trustees to the Supreme Court, and the long opinion of Judge Turner, reviewing the entire history of the institution, decided merely, as we read it, that this particular ecclesiastical encroachment, in the case of this particular university, was in violation of law. In this there is nothing to prevent bigoted ecclesiastics from controlling universities, if their right to administer the property is legally clear. At the same time, the friends of Vanderbilt University are justified in congratulating the faculty and trustees upon this satisfactory outcome of the litigation.

In the consideration of such renewed complaints of the wholesale delivery of the Philippine Government to the natives as Dean C. Worcester's letter to the New York *Times* and Dr. Luther Anderson's dispatch to the Chicago *Daily News*, it is to be remembered that the public hears only one side. That of the Administration and of the Filipinos is not yet stated. And as the real question at stake is the efficiency of the service, it is significant that the whole attack is being shifted from the changes in the major departments to those in the great body of subordinate offices. It was Mr. Worcester's heated claim two months ago that the promotion of Filipinos in the Health and other departments was sending everything to the dogs. Is it possible these men are playing their rôles too well for further criticism? It is obvious that nothing can be said about the competency or incompetency of men in the hundreds of minor posts, whether retained or new; and it is therefore easy to allege that their resignation "in flocks" proves the ruination of everything. As a matter of fact, Mr. Worcester's own figures show the steady growth of Filipino officeholders: 1903, 49 per cent.; 1905, 55 per cent.; 1907, 60 per cent.; 1910, 64 per cent.; 1913, 71 per cent. This growth should be continued, if not accelerated. It has further been made plain that many recent dismissals resulted from a new and praiseworthy policy of economy. The critics will have to show definite inefficiency; and to do this more is required than evidence that the Filipino bands are playing, not the "Star Spangled Banner," but "Aguinaldo's March!"

While Congress has been discussing levee projects, the lower Mississippi Valley States are becoming more outspoken about the duties of their Northern neighbors. Their suggestions as to flood prevention look to the distant future, but receive plausibility from the closeness with which they parallel the work actually under way on the Ohio. Thus the New Orleans *Item* calls attention to an averted flood disaster high up on the Missouri, where a January deluge, reaching proportions that once would have meant wholesale loss, was checked and diffused by reservoirs. "There are locations for thousands of similar reservoirs in the Alleghanies, the Rockies, the hills of Minnesota, the Ozarks, the Appalachian foothills of Tennessee and Kentucky—some to be built at great expense, some at very small expense. many, like that of Truckee-Carson, to pay for themselves." It is precisely such reservoirs that are now being constructed along the Miami and other Ohio tributaries. Supposing the matter left to State action, it will be many years before the growth of population and public improvements over the whole watershed is likely to achieve a marked diminution in the risk of sudden floods southward. But what will some day have to be understood is that combined local action may not merely solve local flood problems, but provide the surest way out of the Mississippi flood problem as a whole.

Non-partisanship, if we apprehend the matter rightly, is little better than membership in any other party than the Progressive. This axiom of the new politics makes the change in policy of the Boston *Journal* a catastrophe, if not a crime. For more than twelve months the *Journal* has refought the battle of Armageddon, and pointed the way to a triumph that should be more satisfying than the "moral" victory of 1912. But the Chairman of the Massachusetts Progressives has now decided that he cannot work for the paper and for the party, too, as the double job takes more than twenty-four hours a day. And so he gives up the paper, allowing it, despite his financial interest in it, to become non-partisan. This seems an unnecessarily lame and impotent conclusion. If non-partisanship should lead the paper to oppose the Progressive ticket, would not Mr. Hale's investment become hopelessly tainted? We know that the course of the Progressive party is paralleling that of the Republican party in the early and noble days of its history, because we have so often been assured that it is; this makes the *Journal's* change of policy very puzzling, for in those early and noble days Republican newspapers were everywhere springing up, not retreating from the heights of Republicanism to the bog of non-partisanship.

The defeat in the Milwaukee primaries, last week, of David S. Rose, five times Mayor, leaves the decks cleared for a straight-out action between Socialists and the present régime. The former made no secret of their hope that Rose, not Bading, would win the primary. "If Seidel is to win," as the *Sentinel* summarized their position, "it must be against Rose. No non-Socialist could have the scintilla of a reason to vote against Bading; and if the Socialists win at all, it must be, as it was before, by non-Socialist votes." But if Bading's renomination strengthens the prospect of Socialist defeat, there were other reasons also why the reform element so strongly supported him. His administration has combined efficiency with economy, and put a stop to the heavy bond issues that made the public improvements of his predecessors so falsely glorious. His stand for public order was in contradistinction to Rose's promise of "the good old times," which implied, as another newspaper remarked, "a continuous carnival, bands on Grand Avenue playing 'A Hot Time,' and similar shop-worn attractions."

Representative Burke's defeat of Senator Crawford for the Republican nomination for Senator from South Dakota is a cruel thrust at the Progressive dogma that the G. O. P. is dead and buried. South Dakota was not only for Roosevelt in 1912, but so strongly for him that it gave Taft and La Follette combined far fewer votes than it cast for the Colonel, and in November there were no Taft electors at all. The Roosevelt electors pledged themselves to vote for Taft if it came to a struggle between Taft and Wilson. Now Representative Burke, a Taft supporter, carries the State, although laboring under the disadvantage of being designated on the ticket as the "minority" candidate. We

wonder how he dared run, or even face his constituents, after being on the wrong side at Armageddon. Is it possible that South Dakota voters choose their officers upon some other basis than that of allegiance to the Progressive standard? The result makes one feel that there may be something symptomatic in the California registration figures of 145,000 Republicans and only 92,000 Progressives.

If the Colonel, when he gets back, fears that the people are not ruling directly as they should, let him look at Seattle. Its Charter Commission has included a division of the city into thirty-six councilmanic wards, "each ward to have the right of recall for its particular Councilman." The possibilities thus opened should satisfy a very glutton for direct democracy and political excitement. Does one block get a sidewalk and another none? Recall the Councilman! Do you dislike the policeman who patrols your corner? Is the city growing in the wrong direction, and your property values falling? The remedy is plain. As little transient gusts of irritation blow about over the city which has just seen a recalled Mayor inducted again into office, Seattle should be treated to a fairly continuous splutter of petitions and elections. In the face of this delightful prospect, it is disheartening to find the *Post-Intelligencer* raking up city history to prove that "it is clear by this time that a hair-trigger recall law is not advisable."

It is an ancient tradition, to which Commissioner Sells has just subscribed, that "the greatest menace to the American Indian is whiskey." Yet liquor continues to reach the reservations. The Commissioner has issued a letter to the 6,000 employees in the Indian Service emphasizing the importance of each man bearing himself as a personal object-lesson:

> As a matter of good faith to our treaty relationships, to legislative enactments, to the Congress which appropriates $100,000 a year for the suppression of the liquor traffic among the Indians, we should do everything reasonably within our power to justify this appropriation, and insure the best results obtainable. This accomplished, we have laid a substantial foundation for all of our work in solving the Indian problem, and made a long step forward toward their equipment for the responsibilities of citizenship.

Not merely are the members of the service asked to refrain from the use of liquor themselves, but they are reminded that the law cannot be enforced unless they themselves obey it. The violations that have been most flagrant, as pointed out by the last report of the Indian Rights Association, have been those on the part of employees. It specifically notes one, left unpunished, as evidence that in 1912 there was a certain laxity in the Indian Bureau as regards the prosecution of members. There cannot be one law in Indian country for Indians and a different law for whites.

Oberlin College's systematic study of college efficiency, published, after four years' labor, not merely for the benefit of Oberlin, but as "a guide for a searching investigation by any other institution of its own efficiency," has brought to the surface one notable conclusion. It is that for the college to render its full service to society it must contemplate a limitation of the numbers in its main or academic department. The growth of that department has been from 405 students in 1900, through 977 in 1910, to slightly more than 1,000 today. Notwithstanding a doubling of the resources of the institution, this growth has prevented the average size of classes from falling below 26.5—manifestly too large; it has decreased the proportion of full professors to students from one to 27 in 1900 to one to 44.4 in 1910; it has resulted in a deterioration of faculty supervision of student life and work; and it has made inadequacies in equipment more painfully apparent. "Whether the enlargement . . . of the quantity of the service rendered, in view of the quality, has been an unmixed blessing," the report concludes, is very seriously to be questioned. The significance of the recommended restriction is in its novelty; of 35 institutions of a status similar to Oberlin's, only two —and they women's colleges—could report a limitation. The position of many or all, as regards endowment, may be more fortunate; and one wonders if several would not arrive at the same decision as Oberlin if they should conduct an investigation of the same character and thoroughness.

In none of the dispatches from the seat of "war" in Ulster have we seen reference to a proclamation, or "Important Notice," as he called it, issued by Sir Edward Carson. It was to the effect that the Ulster Volunteers must not think they were armed to kill "those of our fellow-countrymen in Ulster" who are Catholics. "Our quarrel is with the Government alone, and we desire that the religious and political views of our opponents should be everywhere respected." This must have fallen like a wet blanket upon the fighting Orangemen of Belfast. For a hundred years they have been throwing cobble-stones and breaking heads over religious differences; and many of them must have felt that they were about to have the chance of their lives to cry "Down with the Pope!" and to smite the Papists hip and thigh. Indeed, it is highly probable that this feeling had become so manifest and threatening that Sir Edward Carson took alarm at it, and gave out his warning, lest the "holy war" should prove to be one purely of religious hostilities.

The fall of the Japanese Cabinet was undoubtedly hastened by the recent disclosures of corruption among officials connected with the Navy Department. But, after all, the naval scandals simply furnished the democratic Opposition in the Diet with a special opportunity in its campaign for a reconstruction of parliamentary institutions on a true representative basis. The influence of the Elder Statesmen has latterly been on the wane, but clan politics have still largely dominated Government policy. Such politics have taken the form of favoring the army or the navy according as members of the Choshu or the Satsuma clan have been in power. Prince Katsura was beaten last year on the issue of large army increases. Last week the Yamamoto Cabinet fell because of the drastic cut in naval appropriations made by the upper house of Parliament. The radical faction in Parliament, opposed to clan rule, is apparently ready to join issue with the army faction or navy faction as occasion offers, with the ultimate purpose of discrediting both. Even in Japan it is apparent that Imperialism is not based entirely on lofty patriotic sentiment, but that patriotism is apt to take the form of a larger army or a larger navy, according to the interests of the men in power.

HARRYING THE RAILWAYS.

It is an unusual day that does not bring news of fresh pin-pricking of the railways. Last week a suit was filed in Liberty, Texas, against the Atchison, Topeka & Santa Fé Railroad to recover $1,252,000 for the crime of operating one locomotive not equipped with the brake appliances required under the laws of Texas. A few days earlier the Missouri, Kansas & Texas and the Beaumont & Great Northern Railroads were sued by the same State for the modest sum of $8,400,000 for violation of the laws regarding safety appliances. Texas has evidently high hopes of replenishing her treasury at corporation expense, as well as highly fastidious tastes in the matter of railway equipment. Thus she requires *electric* headlights on all locomotives, entailing hundreds of thousands of dollars of needless expense. All this is particularly annoying to interstate lines, which often find themselves in danger of being punished in one State for conditions which merely conform to the law in another.

Lest any one think we exaggerate, we may point out that when the Kansas City Southern enters Arkansas it is compelled by law to place fly screens in the windows of its cars to protect its passengers from the malarial mosquito. When the train enters Oklahoma its crew is in duty bound to remove all these screens, since they are *forbidden* by law in that State. As the railway winds in and out of both States, the crews, if they would obey the law, find plenty to do. For all they know, State detectives may be in each passenger coach piling up evidence for a ten-million-dollar suit against the road. Now, we should be the last to defend the railways for deliberate and wilful failure to obey the laws of any State, but, as we pointed out last week, thoughtful people must sympathize with the unanswerable contention of the railways that, whatever their past sins, they are now constantly being punished by conflicting orders and laws from Legislatures and Commissions, State and national. The cost of these orders is never counted by the officials issuing them; that is not their concern, but that of the harassed managers.

In New York State, the Federal labor law prescribes eight hours as a working day, and the State nine. The State boiler inspection rules differ from the orders of the Federal inspectors. New York requires the washing out of boilers every thirty days, when everybody knows that some boilers need it every week, and others not in six weeks. Each washing must be attested before a notary, and his certificate must be framed in the cab. The Federal inspector may lay off any engine which does not please him. An interstate railway which starts from St. Louis finds its rates for hauling coal fixed by Missouri; on reaching Kansas it is compelled by State law to carry all passengers for two cents a mile; as soon as its trains arrive in Oklahoma they must stop at a station on the State boundary, whether there is even a hamlet there or not. Wherever a railway enters this State, it must maintain a State-line station. In Arkansas the law requires this same railway to carry an absolutely needless third brakeman on each freight train—only to drop him when Texas is reached and the electric headlight is turned on. This is merely a sample of what State control means, and on top of it all are the orders and regulations not only of the Interstate Commerce Commission, but sometimes of other Federal departments—the Treasury, it is reported, recently issued an order to the railways in regard to the use of drinking-water on trains.

Naturally, we repeat, the honest railway manager who is willing to recognize the changed conditions of to-day finds himself absolutely at a loss. How can he make a budget, when he may be suddenly ordered, like the Pennsylvania, to waste $850,000 under the needless full-crew law? He is between the devil of no dividends for stockholders and the very deep sea of Federal and State regulation. Is he to receive no chart and no compass by which he may steer a true course fair to all concerned?

One of the most serious aspects of it all is that regulation by commission is at stake; this, as every one knows, has been heralded as the middle road between Government ownership and the old haphazard legislative control. It is of vital interest to the country that our railway commissions should be put on the highest possible plane. Some of the questions which are now before them are of enormous importance to the general business interests of the country. Naturally, their authority is undermined if Legislatures like our own continue to meddle in matters which have been definitely allotted to a commission for control. To override it is to lower the commission in the eyes of the public and to breed contempt for it among those whom it is supposed to regulate, while leaving the railway manager utterly at a loss to know where he may obtain a ruling which shall be lasting—at least, for a few months—and shall not conflict with three or four others. It is a situation which calls for statesmanship, not for prejudice and partisanship.

THE ENGLISH ARMY MUTINY.

Publication of the official correspondence relating to the mutiny of English army officers in Ireland furnishes amazing and painful reading. That the Government was incredibly weak in facing the crisis was the first inference drawn. The great principle of civil control of the army was at hazard, yet the Ministry seemed to fumble as if it were merely a question affecting Little Peddlington. Army discipline was imperilled, but the War Office and the Crown went all lengths to soothe the mutineers. Now that all the facts are known, and prove to be even worse than the rumors that have been flying about, it is certain that there will be a blaze of indignation among English Liberals and Radicals. We should say, too, that thoughtful Conservatives, who care less for a party success than for the honor and stanchness of the army, and for the firm establishment of the doctrine of military subordination, must be staggered at the spectacle of a brigadier-general and fifty other officers impudently telling the Government what orders they would and what they would not obey. No wonder that these officers, coddled and almost apologized to, went back to the soldiers and gloried in the victory they have won over the Government. But it at once appeared that the War Office had acted without Cabinet authority. Hence the resignation of the Secretary for War.

It seemed impossible that any British Government, least of all a Liberal Government, could so have faltered and cringed. Mr. Asquith's policy has obviously been one of conciliation. For a long time he has sought in every way possible to arrive at a reasonable compromise on the Ulster question. This was entirely right, provided it was all

the time understood that no sacrifice of a fundamental principle would be permitted. It is wise to seek to come to an agreement with political opponents, but throughout the negotiations it must be made plain that a final challenge of the supremacy of Parliament will not be tolerated. For statesmen to be patient is well, but for an English statesman to permit army officers to dictate to him what policies he shall be allowed to carry out, with all the forces of the Crown if necessary, is unheard of since the days of the Long Parliament. Every one of those officers should have been instantly court-martialled and broken.

Whether one be by conviction militarist or anti-militarist, there can be no difference of opinion about the duty of an army, if we have an army at all. It must, in the first place, be implicitly and at all times subject to the civil power. The moment you begin to permit army officers to protest against the orders coming to them from the duly constituted authorities, that moment you prepare the way for the destruction of civil liberties, and for the setting up of a Pretorian Guard to decide who the authorities shall be. It is this aspect of the matter which fills English Liberals with shame and rage, and led to extraordinary demonstrations in the House of Commons. The question of Home Rule was temporarily lost sight of in the larger question of the supremacy of Parliament. It cannot be that the English democracy, which has at last got rid of the veto of the House of Lords, will lie down under the assumption of the veto power by the army. And as for the effect of the mutiny on the army itself, how can it be other than disastrous? For years the military authorities in England have been agitating schemes to make the army larger and more effective. But if soldiers will not obey orders, the more you have of them the worse you are off. The mutineers have struck a deadly blow at the army, both at home and abroad. Englishmen have been saying hard things of German military autocracy. Hereafter their mouths will be closed. Nothing that happened at Zabern is so bad as what took place at Curragh.

After all, there is small danger that Gen. Gough will succeed in the rôle of Col. Pride. Mr. Asquith has boldly met the challenge. Himself taking charge of the War Office, he will be in a position both to enforce discipline and to make the issue plain. The democratic and radical spirit has not risen in England to such heights as we have seen, to be beaten back by the waving of a brigadier's sword. The particular occasion chosen for the display of army insubordination will be seized upon, justly or otherwise, as proving that the privileged classes are ready to go to any extreme, even to tampering with the loyalty of soldiers, in order to repress the aspirations of the masses of Englishmen. If a political struggle shapes itself along those lines, there can be no doubt of its outcome. If the English Tories will not submit to the mild rule of Asquith, they may exchange for his whips the scorpions of Lloyd George. However that may be, it is certain that their readiness to throw the army into politics will return to plague them, if they come into office, and will, in any case, be used as a justification for excesses of lawlessness such as we had supposed had become forever impossible in England. It is already evident that the Unionists are waking up to the fact that they have made a great political blunder in fomenting army insubordination.

TENDENCIES IN CONTROL OF PUBLIC UTILITIES.

Upon the control of public-service corporations early centred the whole fight for cleaner and more efficient government. Chicago's contest of 1903 against Yerkes and the franchises he sought was carried through the Stewart-Harrison Mayoralty campaign, and culminated in a riot in the State Legislature that drove the Speaker from his chair. The days of Martin and Quay in Philadelphia, Folk's struggle in St. Louis, Bruce's in Pittsburgh against the Magee-Flinn spoliations, remind us how recently men began to realize that the old way of administering public utilities was outgrown. A vignette in Whitlock's "Forty Years of It" shows vividly this awakening consciousness: a mass-meeting gathering outside the City Hall, the leader reading the Constitutional guarantee of freedom of speech, and the crowd thundering "Let the franchise alone!" But if those were the days when public utilities corporations were guilty of excesses, they were also the days when political rascality made bad conditions inevitable. C. N. Fay tells in "Big Business and Government" how in the '80's Legislature after Legislature in Illinois drafted blackmailing measures which the leaders killed for a suitable consideration.

The flood of regulative legislation of the last three years has vested control in the State. The cities have raised the cry of "home rule" without much effect. Even the weighty Chicago delegation of last July was unable to defeat the establishment of a State Commission in Illinois with large powers, and the League of Nebraska Municipalities has proved similarly helpless. These State bodies represent development from the era when experimental State acts restricted by maximum and minimum rates, through the period when separate Commissions controlled separate public services. The Massachusetts Gas Commission of 1885 was the first of these, and was merged with its fellows only last summer. But in 1907 Wisconsin and New York had already placed all their utilities under centralized control, and before 1911 they were followed by ten other States. Last year, Missouri, Indiana, Pennsylvania, Maine, West Virginia, Illinois, Idaho, Montana, and Colorado established State Commissions. All told, twenty-four of the richest and most populous commonwealths have this definite form of regulation. Despite the protest of cities like Denver, St. Louis, Los Angeles, and Kansas City against State absorption, California alone provides for local option between municipal and State Commissions.

The obvious advantages of State control explain its easy triumph. City Commissions were too close to the seat of contention; they were open to public clamor, newspaper attacks, and private grievances. They manifested a tendency to meddle with operating details, and to become manager rather than regulator. The efficiency of commissioners depends upon continuity of term, and of subordinates upon a State-guarded merit system, while their work often requires expert service and equipment, such as is seldom at a city's command. Breadth of view is a further consideration, for the Commission should have authority to authorize or forbid the entrance of a new or the expansion of an old utility corporation. One of the most salient recommendations of State regu-

lation is the complete control afforded over the issuing of securities. That the large cities may render indispensable aid to the State Commission, especially in keeping watch over the quality of the "output" of any public service company, goes without saying. Peculiar local conditions, calling for peculiar service, are also to be emphasized by local officials. In Chicago the Board of Supervising Engineers has received certain of the functions of a municipal Commission, and New York's division of her Commission into two branches was a desirable step.

Credit for the fair temper of most of the regulation must be given to the Commissioners, who, as a rule, have been men of training, intelligence, and character. *Public Service* has charged them, in the main, with nothing worse than practical inexperience. An engineering journal recently showed that 48 per cent. of the appointees of the last two years were lawyers not in politics, and 24 per cent. engineers, with economists and journalists represented among the others. The chief count is that too few of the laws have been framed to give the Commission the same power to protect the corporation as to protect the public. Whereas such a body should be a court of the utilities as well as the people, in most States complaints and hearings are exclusively on one side. It was the complaint of the Illinois public utilities that the recent law "surrounded the power of control with protective measures which made regulation easy, and objection to the acts of the inexperienced commissioners hard." Only two or three States have followed Wisconsin in giving their Commissions power over municipally-owned utilities. It is unjust for the private plant to face comparison with those which may have transferred accounts, forgotten bond issues, with no allowance made for overhead charges or depreciation.

The sharpest injustices have been those wrought by varying and uncertain standards of valuation and rate-fixing. Sometimes the rates allowed have left a profit of 8 or 10 per cent.; often they have been cut to a barely non-confiscatory basis. When investors look to the immediate past, in some sections they have a certain ground for fear lest money spent now may in the future be legislated out of existence. The problem of valuation is a vexed one, and a thousand plans have been suggested. But there have been circumstances in which undervaluation of property is traceable either to plain stupidity or to a deliberate overlooking of the fact that public services are commonly built up at great risk, through many changes of administration and method. If they are to continue their amazing development, they must be made fruitful fields for enterprise. But it must be admitted that the future of State regulation seems bright.

SENATOR HOLLIS AND HARVARD.

Senator Hollis is the latest radical to fall foul of Harvard conservatism. In an address before the Harvard Union last week he voiced an old plaint in extreme language. He is quite sure that his alma mater "is not representative of the United States, nor of New England. She is too conservative, too hidebound. She lags behind the times. She does not lead; she follows." He believed, he said, that he was the first Harvard man of radical ideas to occupy a seat in the Senate; he was graduated a snob, from which unhappy condition he was saved in 1900 when he first heard William Jennings Bryan, to become at once his "ardent admirer and disciple." And then he polished off the entire American university world in these words, Harvard being, of course, the horrible example:

> The result is that our colleges represent a very thin upper crust of our great American life. They are always respectable, always conservative, always reactionary. That is why rich men, who find things rigged about right for their money-making operations, are glad to contribute to the colleges. The colleges are the greatest dead-weight the capitalists can fasten upon the necks of the American people. The standpatter is conservative, wealth is conservative, the college is conservative. They are all in the same boat.

Mr. Hollis is particularly angry because the bond between Harvard and our political life is not closer. He contrasts it with Western State universities, like Wisconsin, to whose faculty the Legislature submits important questions. He asks: "Imagine, if you please, the Legislature of Massachusetts requesting an opinion from the faculty of Harvard College. Imagine the reception it would get on Beacon Hill if it should find its way there." And then the money side! He finds the belief prevalent among public men in Washington that "every Eastern college is eating from the hand that has robbed the pockets of the people. Until this belief is dissipated, Congress will have little faith in our colleges or in college men." As for our students themselves, he thinks they should have their pocket-money limited, be compelled to use the Australian ballot in choosing class officers, who should be men of highest scholarship only—athletes barred—and be forbidden to use automobiles. Finally, and "most important of all":

> College men should be taught what is wrong with the world, and the way to set it right; what poverty is, and where it exists, what makes it, and what will prevent it; what injustice is, its causes and its remedies; the reasons for high cost of living, and the way to bring it down; the problems of immigration, and how to make country life worth living. They should be taught human interest, the brotherhood of man, the glory of self-sacrifice, the passion of service to mankind.

Now, it would be very easy to poke fun at all this, and to point out how wrong Mr. Hollis is in some utterances and how inconsistent in numerous places. He utters, perhaps, no worse indictment of Harvard than is warranted by the fact that he, a graduate, apparently has never heard of Charles Sumner, also a radical, a graduate, and a Senator, who cut quite a dash in the political world and ruffled it not a little about the time that Mr. Hollis was born, and for a long time before. He has not heard that President Lowell was summoned before a committee of the Legislature on Beacon Hill a week or so ago, as President Eliot often was; that Harvard has placed much of its machinery at the service of Cambridge and freely loaned its professors to aid it and the State wherever possible; that about the most useful State official for years past has been a Harvard Fellow. He has not heard the vigorous protests arising in the West because the State universities, notably Wisconsin, are too much in politics for their own good. It would be cruel to ask him whether *he* knows what is really wrong with the world and just what the remedy is; or if he knows how college professors regard Senators given to worshipping men who advocate national financial dishonesty, and Congressmen who speak with such looseness of statement as his.

We prefer to-day to pass over this unhappy side of Senator Hollis's speech in order to recognize it as the utterance of a man who is honestly striving for genuine democracy, both in the college and in the political world, and to point out that it has a considerable basis of truth. The agitation for greater undergraduate democracy at Harvard, Princeton, and Yale speaks for him; Harvard was and is divided into two camps, so far as its undergraduate life is concerned. It has always been too slow in taking part in reforms and forward movements—witness the Abolition agitation; Wendell Phillips obtained virtually no hearing at Harvard, and laid many of his Harvard friendships as a sacrifice on the altar of human liberty. Harvard needs in many ways to influence its students to live the simple and democratic life—as it seeks to through the new freshman dormitories; and it should do more than it has done to keep the undergraduates in touch with modern social and political conditions, and to promote the feeling of human brotherhood.

But to dwell on this aspect alone, to condemn Harvard and other Eastern colleges solely on Mr. Hollis's statement of the case, is a gross injustice. There *is* self-sacrifice in them, there *is* passion for human brotherhood; in a hundred classrooms and laboratories there is a selfless searching for the absolute, the scientific, truth, that finds little or no parallel in House or Senate. This devotion to the supreme scholastic aim may lead teacher and student far afield from political life, yet it is a search for that which, above all else, sets men free. To say, moreover, that this great body of teachers is palsied by the dead hand of gifts from men of great wealth is to shut one's eyes to facts; certainly it is to ignore the fact that the malefactors of great wealth who made it by statutory favoritism owed these statutes not to the colleges, but to the Senate and House of the United States during a long series of years. Mr. Hollis was in Harvard during the days of some great and free and noble spirits—such as Charles Eliot Norton, Nathaniel Shaler, Adams S. Hill, William James. What a pity he did not know them and profit by their liberty of speech, their intellectual freedom, their shining patriotism, their devotion to our democratic ideals! What a pity he is so out of touch with Harvard as not to know what public service his college renders in a hundred ways, and that it is graduating radicals, of all types, in abundance! To criticise usefully—as we know Mr. Hollis desires to—one must paint the whole picture, and not a part, and be one's self fair and just.

THE LESSER LITERATURES.

Frédéric Mistral was an excellent illustration of the truth that in the field of literature the spirit of modern imperialism is far from carrying everything before it. The future by no means belongs to the great nations. A people need not be powerful in a political or military or economic sense in order to produce great writers. The list of Nobel prize winners in literature is conclusive on this point. Of the fourteen men who have been honored since the institution of the prize in 1901, we may exclude two winners, Mommsen and Professor Eucken, on the ground that their work does not lie in the field of pure literature. Of the dozen survivors just half are the representatives of minor nationalities. The Scandinavian countries have contributed two in the persons of Björnson and Selma Lagerlöf. Belgium claims Maeterlinck by nativity and the spirit of his work. Mistral for Provence, Sienkiewicz for Poland, and Tagore for Bengal are the representatives of an historical past, and possibly of an historical future, but surely not of a present of first-rate political significance. It should be possible to develop a tenable argument against the prevalent contention which connects national greatness in a general sense with national preëminence in literature. It may be that the triumph of the Greeks over the Persians would account for the splendid outburst of Athenian genius, and that Sir Francis Drake and the Armada were one form of national expression of which Shakespeare was the other. But one can cite instances to the contrary from Isaiah to Goethe.

About such national revivals as Mistral represents there is a curious compound of the artificial and the natural. When an individual or a group of individuals set themselves consciously to recreate a language and a literature, we cannot help being reminded of what the philologians teach regarding the complex and hidden forces that condition the rise and fall of languages, irrespective of the will of man. Even when the organized attempt is successful, as it was in the case of Mistral and the Provençal tongue, the result still impresses one as something of a *tour de force*. The movement initiated by Roumanille, and carried on by the "seven" poets of the Félibrige, produced, after all, only one outstanding figure. Mistral leaves no successor of anything like his stature (even allowing for Félix Gras of the charming "Reds of the Midi"), and it may be that his death is the beginning of the end of the new Provençal movement. To that extent revivals of this sort are artificial. But they are natural to the extent that they do send their roots down into the soil. They are not movements made out of whole cloth. They are a return to a past that was real and splendid. Behind Mistral was the language and literature of the troubadours. Behind a Tagore is a literary and national tradition that stretches back through the centuries. Behind a Sienkiewicz is a tradition that ended but the other day in a political sense and is still vividly alive in the hearts of a conquered people.

One can understand how the hackneyed phrase, "literature and life," has a very real meaning to the nations that have fallen from a great estate or to nations whose dreams of greatness lie in the future. The philologian and the writer, upon whom the soldier and the man of action are accustomed to look down as at best a rather desirable national ornament, become in a very real sense the architects of a nation's repute among the nations. In the great competition of numbers and brute force, what chance do a mere ten million Scandinavians stand against the forward march of the great empires? But a people that has produced an Ibsen, a Björnson, and a Brandes need not bow the head before any one. To most of us, Scandinavia is precisely the native land of Ibsen, Björnson, Strindberg, Brandes. Their value to their countrymen might be almost translated into commercial terms. Their value in prestige of a more enduring nature cannot be calculated. This must be one of the reasons that explain the passionate struggle of Europe's minor and submerged nationalities for the preservation of their historic tongues. There is no people, however small, which does not cher-

ish dreams of conquest and empire. But until these dreams come true the little peoples know that their safety depends largely on the maintenance of their historic speech and traditions, and that their present prestige can be enhanced by the output of men of literature whose appearance is not dependent on mere strength of numbers.

THE COMPLETE ANTHROPOLOGIST.

As usual the last word on the subject has come from Germany. In his epoch-making book on "Modern Woman and Marriage by Capture," Professor Junker of the University of Zabern has demonstrated in masterly fashion how every physical and mental trait of the woman of to-day may be traced back to the time when the primitive male, whenever he wanted a wife, went out and caught one.

Why, for example, is long hair common among women and not among men? The explanation is simple enough. The primitive wife-hunter would naturally seize his victim and future wife by the hair, especially if he were on horseback and going at full speed. The short-haired women escaped capture and died unmated. The long-haired women perpetuated their kind. Thus, says Professor Junker, although in the course of time women have got out of the habit of looking upon their long-streaming locks (*langwallende Locken*) as a badge of servitude and have even learned to take pride in them, ladies will occasionally speak quite sharply to their maids who are engaged in brushing their hair for the theatre. This is undoubtedly an atavistic remembrance of primitive times.

Incidentally, Professor Junker points out that the same explanation will account for the evolution of a short-haired male race. Primitive woman, taken captive and thrown over the male's shoulder, would naturally struggle to escape. Burying her fingers in the man's hair, she would pull with all her might, tearing out large handfuls. This is why men, as a rule, are short-haired, with a tendency to baldness; the only exception being poets and musicians, who knew how to win women without capturing them and so were seldom in danger of depilation.

The age-old habit of struggling to get away from her future husband and of looking back with tears to the paternal home from which she was being abducted, undoubtedly, according to Professor Junker, accounts for woman's present habit of facing backwards when she is getting off a street-car. The writer does not allude to a second peculiarity closely connected with the first, from which in fact it seems to have been derived. We refer to woman's difficulty in finding the proper change when paying her fare to the conductor, or, better still, when she is purchasing her ticket at the ticket-seller's window with fifteen men in a line behind her and the train just pulling in. Under marriage by capture, woman never travelled of her own accord, but was always hauled or carried. Hence the queer survivals of inexperience in the matter of rapid transit.

As between a primitive maiden who went in for tight sandals and one who wore loose footgear or, better still, went barefoot, which would be most likely to escape the clutches of the wife-hunter? Obviously the free-shod maiden, says Professor Junker (*die freifüssige Jungfrau*), would go free, whereas her frivolous companion could only hobble and so fall a victim to marriage. This is why women of to-day still habitually suffer from tight footgear. And again, the primitive maiden who sought the refuge of the family tent with nightfall remained safe, but the girl addicted to loitering outside after dark was inevitably captured and married, and passed on to her descendants the faculty for getting to the theatre fifteen minutes late.

Foreign Correspondence

FRANCE'S FOREIGN POLICIES—M. DOUMERGUE'S STATEMENT.

PARIS, March 14.

A brief analysis of the text of M. Doumergue's statement before the Chamber on French foreign relations and policy should be interesting in these troublous days. The Prime Minister followed, in his discourse, the order dictated by the interests of the French Parliament. It is better here to take out the different items in the order which should seem most interesting to Americans generally—and to Congress in particular.

After the usual overture of "undying memories connected with the epoch of the liberation of the United States and, for us, mingled with the dawn of our own revolution," M. Doumergue noted: "At the request of the President of the American Federation, the Government of the republic has studied—with the care such a proposition merits—a treaty project to prevent conflicts of every kind between the two countries. I have just sent instructions on this point to our Ambassador at Washington, and I have no doubt that shortly a new treaty will cement the relations of confiding friendship between the two republics.

"On the occasion of the coming opening of the Panama Canal—an undertaking marked by the stamp of French genius and brought to a good end by stubborn American effort—such relations of confiding friendship cannot but be strengthened further."

It is already known in America that the Government's proposition of a Parliamentary appropriation for the official participation of France in the Panama Exhibition at San Francisco is held up, pending the previous settling of certain customs difficulties which have arisen between the two Governments. These chiefly concern certain conflicts of the Tariff law—and of local laws of separate States—with existing treaties between France and the United States. Of the new Tariff law in general, M. Doumergue said:

"A new American customs tariff is in force. In the course of its preparation, French diplomacy often intervened to throw light on the interests of our national commerce and to have clauses of a nature to harm it eliminated. It should be acknowledged that, on the whole, this new tariff brings with it a reduction of customs duties, by which our exporters will certainly be able to profit."

The Prime Minister explained the damage done by the civil war in Mexico to "the numerous and laborious French colony established there for so many years," and to "French capital so largely invested there in great business undertakings of textile factories, mines, railways and banks." He recounted measures already taken, and once more proclaimed French policy: "Like other European Powers, the Government of the French republic has refrained from all intervention in the domestic affairs of Mexico—thus giving credit to the policy of the Cabinet of Washington, which is more particularly interested in the re-establishment of order on its southern frontier. It will not, however, fail when the favorable moment comes to demand for French interests, which have been compromised or lost, equitable satisfaction."

The Balkan wars, which have left so many and complicated dangers for the Governments of Europe and for the finances of all the world, were taken up by M. Doumergue, in the order of French policy. Its general principle on which President Poincaré acted so efficiently when he was Foreign Minister, at the beginning of the troubles, was repeated with emphasis: "As in all the incidents of this long crisis, the Government of the republic will do its utmost to keep all the Powers in touch with one another and to secure, by permanent and trustful coöperation with the Cabinets of St. Petersburg and London, continuity of European action in the sense of peace."

It is significant of the present foreign relations of France that the Prime Minister should have given an entire paragraph to praise of Rumania, "whose intervention prevented the struggle [the second Balkan War] going on endlessly," while "she remains an important factor of peace—a powerful element of stability in the Balkan peninsula."

Perhaps more significant still was the tribute to the aged Emperor of Austria; for it is Austria that the new, sudden, and portentous campaign of the German press against Russia is supposed to aim at chiefly—to enforce an increase of armaments there also.

Turkey, while settling down to its new estate, is universally considered a storm breeder between Triple Alliance and Triple Entente. Three times the Prime Minister of France must have weighed his words before speaking here; and what he left unsaid was as noteworthy as what he said. Regarding the universally recognized predominance of French financial interests already engaged in the Ottoman Empire, he contented himself with announcing the near reunion in Paris of the International Commission whose work was interrupted by the second Balkan War. Its business is "to seek the solutions which are to be given

to financial and economic problems raised by the war."

As between Germany and France, the signature of their agreement for a division of labor in opening up Turkey in Asia has been announced as immediate. This relieves possible tension in that quarter, but M. Doumergue passed it over without explicit mention: "Points of friction have been removed in the equal desire of coming to an understanding and with care to do no harm either to the integrity or the necessary independence of the Ottoman Government."

With a like allusion, he passed over the solution of the never-ending question of Armenia, which, ever since the Prime Minister spoke, has been thought to be setting Germany and Russia by the ears. "We have constantly supported, in strict accord with England, the efforts made by the Russian Government. . . . The Government of the republic will continue this support for the good completion of the work, being assured that the coöperation of all the Powers has been obtained for it."

Italy was reminded of the helpful attitude of France during her conquest of Tripoli: "I doubt not, Italy will show a like spirit of frank friendship in the questions which this new neighborhood may start up." For here, too, between French Tunis, rich and with a large number of Italian colonists, and Italian Tripoli, sterile and undeveloped, there is a danger-point in storms sure to come.

With the obligato hymn to the Triple Entente, this important declaration—in the name of the French republic, no matter what Government is uppermost—concluded:

"France is resolved to keep in the world the place to which her past, her culture, and the labor of her citizens give her a right—and which her military and naval power guarantees—with menace to none."

S. D.

THE WEALTH OF GERMANY.

BERLIN, March 19.

Germany ten years ago was among the three foremost industrial and commercial nations of the world. The United States and Great Britain, the other two members of the triumvirate, have done exceedingly well during the prosperous decade that is past, but probably neither of them would assert that the national fortune has doubled in that time. The claim is made for Germany, however, and made with plausibility.

In 1904, Gustav Schmoller, the great economist of the Berlin University, estimated the wealth of the German people at fifty billions of dollars. The estimate, which was based on study of the returns of taxation, erred probably on the side of conservatism. The national income Schmoller put at six and a quarter billions, over two-thirds of which represented wages to workers. The next few years brought huge increases of taxation, which the people bore with such ease that Professor Schmoller's figures clearly required revision. Imperial taxation has been increased since 1904 by $172,000,000. State and local taxation, especially the latter, has kept pace with the increase in the demands of the empire. Yet the spending capacities of the people expand from year to year in a way that makes the tax-gatherer's mouth water.

Germany must be a great deal richer than Schmoller calculated. According to Arnold Steinmann-Bucher, the German fortune should be placed at between $94,000,000,000 and $99,000,000,000, or about $1,478 per head of the population. This amount is increasing annually by between $2,375,000,000 and $3,000,000,000. The national income in the estimates of the economists has likewise been increasing rapidly for years. Dr. Helfferich, of the Deutsche Bank, the last authority to speak positively, puts it at $10,000,000,000 and Steinmann-Bucher rates it higher. Helfferich's figure would give an annual income per head of the 67,000,000 of Germans of about $148. These figures, according to Steinmann-Bucher, in his newly published work, "Das reiche Deutschland," make Germany the richest country in Europe.

France, with a national fortune of fifty-six and a quarter billions and an average fortune of about $1,406 per capita, is behind Germany in the absolute amount as well as in the amount per head, although, as the French population does not increase and its income does, there is always more money in France than in Germany. To England this patriotic economist allows a fortune of seventy-five billions, which would make the average Briton, with $1,622, slightly richer than his German cousin; but the difference will be wiped out in a few years if German wealth is really expanding at the rate asserted by Steinmann-Bucher. The United States he leaves alone, partly because the huge statistical apparatus of the European tax collector does not exist there, and partly because the American figures would not help his main thesis, which seems to be that there is no country so good to live in and so easy to get rich in as Germany.

The totals for Germany are arrived at in the following way. The value of private property insured against fire in 1912 was fifty billion dollars. It increases at the rate of over two billions a year, and is now reckoned by Steinmann-Bucher at fifty-five billions. The argument that there is a great deal of over-insurance is met by the argument that there is a great deal of under-insurance and much insurable property that is not insured at all. So that the gross amount insured is as likely to be too little as to be too large. Municipal ground values without buildings account for twelve and one-half billions. Berlin alone accounts for over $1,250,000,000, more than 200 times as much as was officially calculated in 1830. In 1850 the value of the ground on which Berlin stands was $20,000,000. It swelled to $1,250,000,000 in sixty years. Nor are these figures exceptional. Berlin has trebled her population since 1871, but many of the large cities have done the same. Hamburg has quadrupled, and Leipzig quintupled hers; Düsseldorf has grown from 69,000 inhabitants to 558,000.

What the development of industry has done for the towns, the high tariff on foodstuffs has done for the country. The country population, it is true, has drifted into towns at an alarming rate, but it has been replaced by imported labor from Russia and Austria (which is not allowed to settle in the country), and the owners of rural land have as yet no cause to complain. Here the yield of the Prussian crown lands furnishes a clue which enables Steinmann to calculate the value of the 150,000,000 acres of German arable and forest land at twelve and one-half billion dollars. This was the figure which, when first published some years ago, led to the attack on the agrarian land-owners as tax-dodgers by Prof. Hans Delbrück, and inspired the movement for wringing death duties out of the Junkers, which only last year found indirect realization in the imposition of the increment value tax.

Fully a tenth of the national fortune belongs to the state. The state railways are valued at over six billions; state-owned mines, buildings, factories, canals, etc., at four and three-quarter billions; private capital invested abroad at over six billions; privately owned mines at between one and one and one-half billions; goods in transit on ships and railroads, and money in circulation make together one and one-half billions, and bring the total up to the amount mentioned at the beginning of this article. Steinmann-Bucher is an optimist in figures, and there are critics who accuse him of adding 10 per cent. out of pure patriotism to all his totals. But it is not easy to catch him tripping. If he rounds his figures upwards, he is justified by the trend of the times. A sign thereof is the way in which Germany is bearing the billion war levy, for which the taxpayers are now preparing, and the increase of forty million dollars of taxation with which they have to reckon in perpetuity. The people seem to have more money to spend than ever, and there are well-founded rumors that the billion levy will yield considerably more than that amount. It is characteristic, too, of the trend of things in Germany at this moment that Steinmann-Bucher is an enthusiastic friend of all war taxes. "Be of good cheer," he calls to his countrymen, "you can afford it. The more we develop our means of war through scientific taxation and finance, the stronger guarantees of peace we create. The deeper we look into the factors of power within our own economic life, the greater becomes our obligation not only to insure peace for ourselves, but to force it upon the nations among which we have so great a preponderance."

Certain it is that Germany is destined to become with every decade a more formidable opponent in war and peace. At present all that hampers her is lack of capital. She has no savings. In a recent case, France obtained huge orders for her industries from Servia by lending her the money with which to pay for them at a safe rate of interest. At the moment, France is the only country in Europe which can do business in this way, but Germany in less than another generation will have savings, too, provided they are not spent on wars.

Books and Men

"FIRST BOOKS."

"The Passionate Friends," by H. G. Wells, brings the number of his complete novels to a point somewhere between twenty and twenty-five. I do not intend to comment upon the newest one, for the simple reason that I have not read it. But if there were the slightest chance that it is as good a tale as his first, everything else should wait until I had finished it.

"The Time Machine," only preceded by "Select Conversations With an Uncle," appeared in 1895. Mr. Wells became famous through "The War of the Worlds," published three years later. With the appearance of "Tono Bungay" in 1909 he seems to have deserted the Jules Verne type of romance for the sociological novels, which, in the eyes of the critics to whom fiction is a mighty serious affair, give him a dignified place in contemporary English literature, and one worthy of their most learned reviews.

Even for those who prefer their novels undiluted with sociology, there is a great amount of entertainment in "Tono Bungay," in "Ann Veronica," in "The New Machiavelli," and in "Marriage." The uncle in "Tono Bungay," the love affair with the Hon. Beatrice Normanby in the same book, the Labrador experience in "Marriage"—these are examples of the humor, the romance, and the spirit of adventure which constantly interrupt Mr. Wells's more serious purposes.

But "The Time Machine" is almost pure narrative. A "lesson" or a "moral," or an allegory, or whatever you may choose to call it, underlies the tale, to be sure. It is a fanciful picture of the world when warfare, preventable diseases, noxious animals and insects, and hardships of every kind have been abolished. A great quiet has ensued—and with distressing results. The allegory is well hidden, however—the story, on the face of it, is merely one of strange adventure. It promises thrills to any reader at all susceptible to them. Mr. Wells is a master of the horrible—witness certain passages in this book, and in "The Island of Dr. Moreau." Only by producing the long and wearisome novel of psychology, of political economy, of sociology, could he expect to be recognized by the reviewers of this decade as really "significant."

Its author thinks ill of "The Time Machine." In recording a conversation he had with Mr. Roosevelt, he refers to the book as immature and trifling. Certainly, he might have continued to write such books all his life, and the usual critic would have dismissed him as a new kind of Jules Verne.

One of his readers, at any rate, enjoys the first books the most. He will read "Tono Bungay," "Marriage," "The Passionate Friends," and the rest, with enjoyment—once. But he returns to read, and re-read, "The Time Machine," "The Island of Doctor Moreau," "The War of the Worlds," "The First Men in the Moon," and "The War in the Air." The last of these, by the way, contains some of the most quietly humorous and delightful chapters Mr. Wells ever wrote—the incident of the forcible abduction of Bert Smallways by the runaway balloon.

The first book of an author forms an interesting topic. Many readers of fiction will recall a volume called "My First Book," which appeared twenty years ago. The papers composing it had been printed earlier in the *Idler*. Mr. J. K. Jerome edited it, as he did the *Idler* at that time, and there were contributions by twenty-one English novelists, and one American—Bret Harte. The English included Walter Besant, James Payn, Clark Russell, Hall Caine, Rudyard Kipling, Conan Doyle, Rider Haggard, "Q," and R. L. Stevenson.

Stevenson thought it no end of fun. He wrote, only a month or two before his death, to Conan Doyle: "It is a rattling good series; even people whom you would not expect came in quite the proper tone—Miss Braddon, for instance, who was really one of the best where all are good—or all but one! . . . In short, I fell in love with the 'First Book' series, and determined that it should be all our first books, and that I could not hold back where the white plume of Conan Doyle waved gallantly in the front."

But—in Stevenson's account of his first book, as it appeared in the *Idler*, there were two pictures. One was a full-length portrait of the author; the other was called "Stevenson Telling 'Yarns.'"

"I hope they will republish them," he continues in his letter to Doyle, referring not to the pictures, but to the articles, "though it's a grievous thought to me that that effigy in the German cap—likewise the other effigy of the noisome old man with the long hair, telling indelicate stories to a couple of deformed negresses in a rancid shanty full of wreckage—should be perpetuated. I may seem to speak in pleasantry—it is only a seeming—that German cap, sir, would be found, when I come to die, imprinted on my heart. Enough—my heart is too full. Adieu—Yours very truly,

"Robert Louis Stevenson
(in a German cap, damn 'em!)"

Of the other "first books" mentioned therein, how many would be chosen, as I have ventured to choose Mr. Wells's first, as the favorites with any reader? How many would be named as the writer's "best," or as one of his best? "The Wreck of the 'Grosvenor,'" by Clark Russell? Without doubt that would be named by many persons. The "Departmental Ditties" of Kipling? Hardly. "Treasure Island"? Probably. Many of the others are almost unknown titles. Exceptions may be made for "A Shadow of a Crime" by Hall Caine, "A Romance of Two Worlds" by Miss Corelli—which, as the most characteristic thing she ever did, ought to please her admirers best—and "Dead Man's Rock," by Quiller-Couch—a crude but "rattling good" story.

Many of the leading writers of to-day do not appear, naturally enough, in that collection of the early 1890's. Messrs. Shaw, Chesterton, Bennett, Galsworthy—these are all absent. Mr. Chesterton was then a youth of twenty. A few years later he published, not his first, but what seems to have been his second book, the volume of essays called "The Defendant." It is little read to-day, and seldom is any reference made to it. The Chestertonian form of humor, the paradox, and the grave assumption of the absurd, appear in it in all their glory, fresh and amusing. He has played many a different tune since then, but usually on the same fiddle.

EDMUND LESTER PEARSON.

Poetry

THE ACESTIAN.

The weak and the weary, and all who are fearful of peril, these set apart and let them have their walls in this land. They shall call their city after the name of the hero Acestes.—Aeneid, Book V, lines 716-718.

Safety is mine, and comfort, and the peace
Of broad, still streets, and the trim countryside
About the city walls, and docile-eyed
Respect of prosperous fellow-citizens, release
From straining toward the morrow and surcease
Alike of generous shame and generous pride—
One day but as another, multiplied
Still on and on while the dull years increase.

Only in blessed dreams my eyes are met
By far horizons of fair morning sky;
Only in dreams I hear the pleading voice
Of that great friend who led my youth, ere yet
He braved the last seas of his faith, and I
Entered the mean ways of my recreant choice.

AUGUSTUS MENDON LORD.

News for Bibliophiles

WORDSWORTH'S REVISIONS.

A set of proof-sheets in my possession, withdrawn from Wordsworth's (probably) next-to-final review of his "An Evening Walk" for the six-volume Moxon 1836 Edition, yields many variants for lines of this poem. That at least one further revision must be understood to intercept the definitive form of the poem for this Edition will be seen from a comparison of texts; *cf.* also a note in Wordsworth's hand on the back of p. 63 (63 as well in the Edition—finis of the piece): "Please to send a Revise. Mr. W. hopes this will be last revise required."

First is a completely excised couplet. Line 13 of the poem as finished was preceded in proof by

Fair scenes, with other eyes, than once, I gaze
Upon the varied charm your round displays,

"Fair scenes" being retained to preface it. The participle of line 20 has been shifted from the preceding line in the page, "Was heard, or woodeocks" displaeing "Or the first woodcocks."

For then, even then, the little heart would beat

becomes

For then, the inexperienced heart would beat (line 23);

while "Impatience, pointing upward" (line 25) has been evolved from "Impatience, *panting* upward"—perhaps a less happy change. The next line is wholly recast:

Through passes yet unreached, a brighter road

taking the place of

Where, tipped with gold, the mountain summits glowed.

A quotation in three states emerges from comparative study of lines 41-4, which run in the published text:

When crowding cattle, checked by rails that make
A fence far stretched into the shallow lake,
Lashed the cool water with their restless tails,
Or from high points of rock looked out for fanning gales.

The proof-page before corrections:

When, at the barren wall's unsheltered end,
Where long rails far into the lake extend,
Crowded the shortened herds, and beat the tides
With their quick tails, and lashed their speckled sides.

The quotation with Wordsworth's (first) corrections:

When, checkt and baffled at the bare wall's end,
By rails that far into the lake extend,
The cattle lashed the water with quick tails
Or from high points of rock looked out for cooling gales.

The evolution of the Alexandrine is interesting here; also the dubious judgment involved in sacrificing "quick."

"Humming elm" gives way to "broad-spread oak" in line 47, and

In the brown park, in herds, the troubled deer

to

In the rough fern-clad park, the herded deer

for line 48. "Where the huddling rill" for "up the huddling rill" in line 54, and "Brightens" for the present participle of the verb in line 55 are minor changes.

Line 161 shows the next correction:

Some (hear you not their chisels' clinking sound?)

for

Some (hardly heard their chisels' clinking sound)

and line 166 has

In airy baskets hanging, work and sing

for the proof-page original

Glad from their airy baskets hang and sing.

One feels that a third phase of this line, whether synthetic or not, might have been devised with advantage.

Beginning the next stanza (line 167) the poet supplants

Hung o'er a cloud, above the steep that rears

with

Just where a cloud above the mountain rears

and towards its end (line 187)

The druid-stones their lighted fane unfold

with (first)

. . . a perfect ring . . .

and (in the final text)

. . . a burnished ring . . .*

"Gazer's sight" in line 194 has become "shepherd's sight" and

Anon, in order mounts a gorgeous show (line 199),
Anon, appears a brave a gorgeous show

while "Shadows winding to and fro" in the next line is dismissed for "shadows moving." The concluding verses of this stanza are a very pother of inkish impatience. As they run in final form (lines 204-10):

While silent stands the admiring crowd below,
Silent the visionary warriors go,
Winding in ordered pomp their upward way
Till the last banner of the † long array
Has disappeared, and every trace is fled
Of splendour—save the beacon's spiry head
Tipt with eve's latest gleam of burning red.

And on the proof-page:

Lost gradual, o'er the heights in pomp they go
While silent stands the admiring vale below;
Till the last banner of the† long array
That tips with eve's last gleam his spiry head.

No mere extra foot here as a concession to the poet's cumulative rage, but three full lines—grist for the autograph hunter's mill, if not grist.

"Slowly-waving pinions" supersedes "red slow-waving pinions" in line 212; and then the poet fairly bursts upon his earlier muse (line 215 et seq.). Lines are quite lost in this skelter; clauses dodge about quaintly; "swan" and "road" wind interchangeably. The final text:

'Tis pleasant near the tranquil lake to stray
Where, winding on along some secret bay,
The swan uplifts his chest, and backward flings
His neck, a varying arch, between his towering wings:
The eye that marks the gliding creature sees
How graceful, pride can he, and how majestic, ease.

The proof-page:

How pleasant near the tranquil lake to stray
Where winds the road along a secret bay
[Where the swan winds along some secret bay]
By rills that tumble down the woody steeps,
And run in transport to the dimpling deeps;
Along the 'wild meandering shore' to view
Obsequious grace the winding swan pursue.
He swells his lifted chest, and backward flings
His bridling neck between his towering wings
[His neck a varying arch between his towering wings]
In all the majesty of ease divides
And, glorying, looks around the silent tides;
On as he floats the silvered waters glow
Proud of the varying arch and moveless form of snow.

Note the craftsman's reluctance to lose so good a phrase as "varying arch," also how compact the revamped picture.

"These floods" in line 233 becomes "this flood" in the final text, "whose leafy shades" (line 235) "Where leafy shades," "Where breathes" (line 236) "And breathes," "cottage bower" (line 239) "hutlike bower." Line 240, originally

Fresh water rushes strew the verdant floor

reads

Green water-rushes overspread the floor.

Line 244

With broad black feet they crush their flowery walk

transposes subject-verb and the first clause.

The while upon some sultry summer's day
She dragged [bore] her babes along this weary way

(lines 253-4) is changed to

When with her infants, from some shady seat
By the lake's edge, she rose—to face the noontide heat.

A hyphen is required of "mountain steeps" in line 323; "steaming" in line 333 shrinks to "steamy" and "boding note" (line 335) becomes "gladsome note."

Frosting with hoary light the pearly ground

(line 336) is corrected to read

While with a hoary light she frosts the ground,

"pouring" (line 337) to read "pours a," and "And pleased her solemn pomp" (line 339) to read "Pleased as she moves her pomp." "Mountain streams" in line 374 is hyphenated; "timid hare" replaces "feeding hare" in line 383:

The tremulous soh of the complaiuing owl

(line 384) becomes

The sportive outcry of the mocking owl;

and—"Mr. W. hopes this will be last revise required."

Correspondence

THE NEW "NATION."

TO THE EDITOR OF THE NATION:

SIR: As one who has followed the successive changes in the editorial management of the *Nation* with the keenest interest, and has frequent occasion to consult the early volumes, I am glad to confess that the first two numbers of the "new" *Nation* have allayed the apprehensions which the announcement of your recent programme aroused in me. Together with many of your readers, I felt that the *Nation* of Godkin and Garrison, of Lamont and More, was good enough for me, and that the new editor could have no higher aim than to follow in the footsteps of his predecessors. Like so many others to whom the traditions of the *Nation* are precious, I feared that there was some risk of sacrificing quality to quantity in the effort to broaden its scope, but it is evident that you are merely endeavoring to revert to certain features of the *Nation*, which, in the course of time, have either been obliterated or grown somewhat dimmer. To one who remembers the essays and reviews of Jeffries Wyman, Asa Gray, and Simon Newcomb, it is pleasant to see science restored to a more prominent place in the *Nation*, and if you can succeed in having weighty

scientific matters discussed by great authorities, you will doubtless attract many new readers. Similarly, it is a laudable purpose to devote more space to important foreign correspondence. It will doubtless be your aim to obtain letters that will compare in subject-matter and treatment with those which, in a former day, James Bryce, Auguste Laugel, Friedrich Kapp, Karl Hillebrand, Gryzanowski, and many other writers of similar rank sent to the *Nation*. Your able summary of the weekly news and the subject of your poem are also pleasantly suggestive of the older days.

A journal like the *Nation* can never, do what it will, appeal to the enormous audiences of our popular monthlies, but it can attract thousands of intelligent men and women throughout the country, who believe that nothing is needed so much at the present day as a periodical that stands for learned and philosophic treatment of the important matters in literature, science, and political life. Fortunately, with all the changes in taste and standards there are still enough readers in the land to give a new *Nation* that shall be old in the best features the warm support to which it is entitled.

GUSTAV POLLAK.

New York, March 30.

TO THE EDITOR OF THE NATION:

SIR: Allow an old reader (since Godkin's time) to say that he likes the new *Nation*. The enlargements are, I think, all for the better—news summary and all. This last I was sorry to have discontinued years ago. The newspapers in general are bad. The newspaper habit is bad. The more ground you cover, the more you do to tell people what they want to know (or what they ought to know), or what is being thought and done in the world, other things being equal, the better. It is a good change. You can make yourself more popular without popularizing, why not? Make yourself simply as cleanly and as soundly humane as possible—reach as many as you can of those who have a good interest in good things. Reach the very highest; of course, abate no jot anywhere of strictest principle; but see to it that the blood is not allowed to run too thin, too pale, too blue. You will pardon the freedom of an old friend, but I had lost a little of my faith in the oracle of so many years, a little of my old-time hearty liking for everything provided.

I. KENDRICK KINNEY.

East Andover, N. H., March 24.

THE LAW'S DELAYS.

TO THE EDITOR OF THE NATION:

SIR: With the cordial approval of many members of the bar, the St. Louis *Republic* has recently begun a campaign of education on the subject of reforming judicial procedure in Missouri. This campaign is remarkable in two respects. In the first place, the *Republic* recognizes, what so few newspapers heretofore have recognized, that the question of judicial reform is not a matter simply of professional interest, but is a social and national problem in the broadest possible sense. In the second place, the *Republic* is emphasizing a factor in the problem which—so far as I am aware—has never been emphasized or even mentioned by any other American newspaper.

What is the most important class of lawsuits from the standpoint of the average citizen? It is the class typified by the ordinary suit to collect money. Putting aside criminal cases and divorce suits, one will find that the average lawsuit is simply an effort on the part of a person who claims to be a creditor to collect money from an alleged debtor. In probably 90 per cent. of the sults of this nature, the person claiming to be the creditor is really a creditor and ought to win the sult. This does not mean that in 90 per cent. of the suits that are actually tried the alleged creditor ought to win, because the majority of suits filed are never tried, but are disposed of in other ways—sometimes by default, sometimes by settlement, sometimes by dismissal because the creditor becomes convinced that the debtor is judgment proof. Most lawsuits are brought by creditors. Delay of justice operates to the disadvantage of creditors and to the advantage of debtors. In England they recognize these facts of human experience, and in England every lawsuit starts with what in effect is simply an order on the defendant to show cause why judgment should not go against him. An elastic system of penal costs (very different from our American court costs) discourages and for practical purposes prevents the assertion of frivolous claims or dilatory defences.

Why do we have delay of justice in America? Who are responsible? The judges? Partly. The legislators? Partly. The lawyers? Partly. The American people? Partly, and also chiefly. As a nation we Americans love debtors. We worship them. We adjust our laws and conduct our courts to suit their convenience. An Irishman once said to me: "In my country it is a disgrace for a man not to pay his debts, but in your country it is a sign of honor and distinction." We have delay of justice in this country because debtors want delay of justice. Debtors are the spoiled children of America. They get whatever they desire. We lawyers are perfectly willing that debtors should enjoy exemption laws and bankruptcy laws. But as a class we lawyers are unwilling that debtors should enjoy delay of justice. We are trying to take delay of justice away from them. We cannot succeed unless we have the support of the general public.

The apotheosis of debtors in America began about a hundred years ago and has continued to the present time. In its origin the movement was humanitarian and praiseworthy. Imprisonment for debt was a reality in those days. But has not the movement gone too far and become ridiculous? The traditional debtor is a hard-working farmer or mechanic struggling to keep the wolf from the door. Is that a true picture of the twentieth-century debtor who glories in delay of justice? Most certainly not. The typical debtor of the twentieth century is a corporation organized along the lines that were so popular in New Jersey before Woodrow Wilson was elected Governor. The transportation and other public-service corporations are the champion debtors of America. They have been very clever. They have capitalized the ordinary American's sentimental affection for debtors. These corporate debtors are the chief beneficiaries of delay of justice in America, and they know it. That is why directly and indirectly they oppose all serious efforts to reform judicial procedure, and why they employ attorneys who are experts at "filling the record full of error." Their attorneys know which side their bread is buttered on. With my own ears I have heard two of the most prominent railway attorneys of Missouri make public speeches against judicial reform. Another one of them opposed judicial reform at Jefferson City in 1911. These were direct and honorable methods of opposing judicial reform.

Business men engaged in competitive trades and vocations do not ordinarily resort to delay of justice. It would hurt their business. It would be a bad advertisement. It is different with monopolized institutions such as the railways and public-service corporations. These latter institutions cannot be hurt, at least to the same extent, by the psychic attitude of their customers. They resort to delay of justice when it pays, or when the men in charge think that it pays. It does not pay a railway to ignore, or fight desperately, the meritorious claim of a large shipper who employs a traffic manager. It does pay a railway to ignore, or fight desperately, the meritorious claim of a small and occasional shipper; and, as a rule, all railways will ignore or fight such a claim. This conduct tends to discourage the assertion of such claims.

The most dramatic examples of capitalizing delay of justice exist in connection with reorganization schemes. No lawyer in St. Louis will deny this statement. Delay of justice, when combined with the tripartite agreement of 1904, has been worth hundreds of thousands of dollars to the United Railways Company of St. Louis. The tripartite agreement is explained in Barrie vs. United Railways Company, 138 Mo. App., 557, and in Johnson vs. United Railways Company, 247 Mo., 326. In form the tripartite agreement was a legitimate contract among a corporation lessor, a corporate lessee, and a syndicate of stockholders. In effect it was a trick to cast a doubt upon the validity of judgments and claims for personal injuries aggregating an enormous sum. Without delay of justice the trick would not have been worth very much. With delay of justice the trick was worth—nobody knows how much, but certainly a considerable amount of money. The claim agents were able to compromise meritorious claims and judgments for ten or twenty cents on the dollar.

Until many of our fellow-citizens are constrained to abandon the alchemy of making gold out of the law's delay—until that time comes, we lawyers are going to have difficulty in reforming judicial procedure. Reformers who attack property are always at a disadvantage.

TYRRELL WILLIAMS.

Washington University Law School, St. Louis, March 15.

FREDERIC MISTRAL.

To the Editor of The Nation:

Sir: The death of Mistral, at the age of eighty-three, removes from Provence its most significant and picturesque figure. As a poet and leader of the Félibrige movement, as personality and host, he was to all comers as well as all readers the embodiment of his country.

The unity of his endeavor, the secret of his force, is that he remained faithful to Maillane, his Provençal Abbotsford. During three generations, he resisted the lure of Paris and labored at home for his one mission: the establishment of a modern Provençal literary speech, the development of local patriotism and traditions among the Southrons, and the writing of poems that should artistically further and crown these ends.

How he and the other Félibres have worked and written in this cause is now a matter of history. The semi-centennial of the society was celebrated in 1904. During that period the chiefs of the new Pléiade—Aubanel, Roumanille, who was Mistral's teacher and inspirer, Félix Gras, known here as author of "The Reds of the Midi"—had sealed and delivered their work. For forty years the *Armana prouvençau*, organ of the movement, had incorporated everything pertaining to the region, from cooking recipes to masterly lyrics. Repeated festivals of the band emphasized the gayety of their *savoir*, and their invasion of Catalonia was followed by renewed alliances with France—for they did not lose the larger patriotism. Mistral himself contributed to the cause his monumental Provençal dictionary. And from the publication of his truly epoch-making "Mireille," in 1859, until his latter-day Memoirs, he never ceased to glorify the South in song and story.

The beauty and appeal of "Mireille" are gained chiefly through the intimate feeling with which Mistral presents the life and labors of his home-people. The characters are not studied with penetration, though they are drawn with strong, simple strokes. The story is of the slightest—merely a tale of young love thwarted. But it is told in an epic setting and for the most part with epic force. Especially is this true of the earlier cantos. When the situation is once posed, the author takes less interest in his protagonists than in the scenes through which they move and the legends connected with these scenes. That is indeed characteristic of Mistral's whole method, and is less of a blemish in "Mireille" than elsewhere. Here the descriptions are generally interfused with the very life and being of the people. The loves of Mirèio and Vincen pass naturally from the farm and the gathering of mulberry-leaves, through the scenes with the herders, even to the waste of the Crau. The homely picturesqueness of the many similes, the lilt of the pretty stanzas, are in harmony and proportion.

Not so the episodes, however well told. A particular discrepancy, in the midst of very human affairs, is the introduction of the supernatural. The fantastic side of Mistral's genius is evinced here, as well as his folkloristic desire to dwell on his compatriots' superstition. I refer to the Walpurgis-Nacht with the sorceress and the final mystic death of little Mirèio—a nun-like exit for the simple farmer's daughter, as a German critic indignantly declares.

"Mireille" is Provence. One can easily imagine that, as Daudet says, Mistral composed his poems singing beneath the evergreens. The varying rudeness and softness of the landscape is reflected in his language. We see again the dusty olive-trees, the hard-baked soil, and the red hillside; we feel his stinging ancestral wind over Avignon, together with the blinding sun that struck the girl; we hear the cool ripple of the Rhone, and then shift suddenly to the fields "clothed in universal harvest." The Doric strain is persistent; Lamartine, whose "Jocelyn" may have partly inspired the poem, compared its author to Homer, and the real Mistral is surely Greek. He is autochthonous, objective, plastic, simple. Add to that a verve and enthusiasm, an eloquence peculiar to his own soil. He sings of fields and the man, but most of the fields.

None of his other poems has such a wide appeal and excellence. If "Calendau" (1867) seems from one point of view an epic of a vaster and sterner inspiration, if it speaks even more directly to the heart of the Félibres, the fact remains that it has scarcely touched the world's imagination. The landscape here has shifted to the mountains and the Mediterranean. The story is that of an eighteenth-century princess, who is somehow identified with a fairy seeking refuge in the Estérel mountains. Calendau is her knight-errant, and the book largely recounts his exploits. These are not without their glamour, but so many episodes and descriptions, apart from the main action, are finally wearying. Much of it takes the form of an Apologia for Provence. The characters are scarcely realized and embodied. Many passages are nevertheless of a forceful beauty.

If "Calendau" is a *chanson de geste*, "Nerto" (1884) is a romance of chivalry. In jingling octosyllabic couplets we are told a fantastic tale of a fleeing maiden and an amorous prince, the last Pope of Avignon and a not very diabolical devil. The sprightliness and sweetness of this poem are again incrusted with Provençal antiquities and traditions. These have a better, because a separate, setting in "Les Iles d'Or ("Lis Isclo d'Or," 1875), a volume of lyrics which seem to constitute Mistral's best title to fame after "Mireille." A great variety of pieces, occasional, hymnal, romantic, are arrayed in an almost equal variety of rhythms. There are indubitable masterpieces here, among the best of which, for a foreign taste, are the ballads. Finally, brief mention only can be given to the "Poème du Rhône" (1897) and the "tragedy" called "La Reine Jeanne" (1890). The latter is by no means dramatic; Dr. Downer, in his really readable thesis on Mistral, styles it a pageant rather than a play. It is inappropriately written in Alexandrines, and except for its resuscitation of the Provençal queen *par excellence*, it has no great interest. The "Poème du Rhône" is more realistic and modern than anything else by Mistral, and yet he has mingled with this picture of river-side life a singular sprite-like little maid who gives the desired touch of *diablerie*. All these fantastic creations seem quite his own.

His Memoirs ("Mes Origines," 1906) tell in buoyant, gossiping fashion the early important years of his life. That life has reached its honored close just ten years after he shared the Nobel prize with Echegaray and two years after the final jubilee held in his praise. Throughout he has maintained that directness and simplicity of existence so striking in these bewildered days.

E. Preston Dargan.

University of Chicago, March 27.

SOURCES OF "THE ANCIENT MARINER."

To the Editor of The Nation:

Sir: Here is another grain of dust to be cast into the balance which, according to the editor of the Globe Coleridge, weighs the influences that went to round out "The Ancient Mariner." Even more convincing than any passage in Shelvocke's "Voyages," which Wordsworth had been reading; even more attractive to a poet's eye (if it ever saw it) than any entry in the log of Capt. Thomas James's "Strange and Dangerous Voyage," is the following sea-description out of the "Travels of Sir Richard Hawkins Knight," printed now in the Publications of the Hakluyt Society:

> All the sea became so replenished with forms of serpents, adders, and snakes, as seemed wonderful: some greene, some blacke, some yellow, some white, some of divers colours; and many of them had life.

This recalls irresistibly the stanzas:

> Beyond the shadow of the ship,
> I watched the water-snakes:
> They moved in tracks of shining white,
> And when they reared, the elfish light
> Fell off in hoary flakes.
>
> Within the shadow of the ship
> I watched their green attire:
> Blue, glossy green, and velvet black,
> They coiled and swam; and every track
> Was a flash of golden fire.

The verse, one is tempted to believe, is only the prose glamoured by Coleridge's high instinct in matters of omission and amplification. Might not the poet have seen the Hawkins, as well as the James, in the City Library at Bristol?

One is emboldened on this evidence to pound out one more link with which to connect "the glorious old romanticism of Elizabeth" (to use the words of your reviewer of Mr. Noyes's poems) with "that of Wordsworth, Coleridge, and even Shelley," which last, as your reviewer says, seems, beside the older rebellion, "tame and refrigerated."

If such a link is incapable of establishment, the incorrigible romanticist must yet be content to reflect that even the ship captains of that "great age of romantic barbarism," when the geographical imagination of Europe was awakening, and men seemed born to discover, were a poetic lot.

Urbana, Ill., March 15.

Fish and Fishers.

THE HUMANE ANGLER.

The misguided moralist may disapprove, the majority may remain blankly indifferent, but there is still a goodly remnant to whom the chirp of the robin and the flash of the bluebird's wing tell no cheerier tale than that the streams are again ready for the rod and the fly. The fish made its appeal to the palate of primitive man before the dawn of recorded history. The flint "gorge" with which he jerked his prey from the water in lieu of the far later hook is among the most ingenious tools of the early stone age, and thus has its place in the very foundation of that career of mechanical invention which has given mankind his hold upon the forces of nature. The art had gone much further when Homer could picture the monster Scylla, plucking the hapless comrades of Ulysses from the deck of his ship, under the simile of a fisherman dangling his bait into the sea from the end of a long rod and tossing the gasping fish out upon the shore.

Homer's simile does not suggest the gentler side, however, and whether the ancients ever made the transition from the attitude of the mere fisherman to that of the angler has been questioned. The angler is perforce a lover of nature, and there is a certain unwillingness to admit that the present-day feeling for nature had any close counterpart in the mental make-up of antiquity. But here we may call as witness the spade of the archæologist. A bit of early art has been unearthed at Kuyúnjik which depicts a man floating down stream astride an inflated skin, dangling a very modern-looking hook into the water with his right hand, while swinging behind his left shoulder is a wide-meshed net containing two or three two-pounders already taken. He has no reel or rod and his bait is but the humble worm, but the artist has put into his kindly face the unmistakable imprint of the real angler. His little net speaks of his own frying-pan and not of the market. He will handle tenderly all that comes to his hook; nor is he a man who could witness without instinctive aversion the loading of haddock into carts with pitchforks along the wharves of Atlantic Avenue in Boston.

"Can the fish love the fisherman?" the Roman epigrammatist asked. Perhaps not, if the query be restricted to the individual fish and its captor. Some reed-patch philosopher, however, wont to endow the lower forms of life with a human psychological outfit, might readily imagine a conference of game fishes seriously arriving at the conclusion that in spite of the hook and the frying-pan there is no better friend to their race after all than the angler.

And yet the genuinely humane spirit in angling, remote though its origin may be, has been only too rare an exception until within very recent times. The kindly spirit that breathes in every paragraph of Izaak Walton is notably absent from many a book which tosses out a few quotations from his pages as a lure for the reader's favor. The day is not far gone when the literature of angling, as of fowling and hunting, reeked with boastful records of the number and size of the catch. Many a man can recall the time when he would proudly have stood for his photograph with a catch of trout or bass which, because of the very number in which he then exulted, he would be ashamed to have any one see in his possession to-day. "Conservation" is now the watchword with every genuine angler, and a promising plan for improving the food supply of the fish, exterminating their parasitic enemies, or preserving the streams from contamination, will attract his attention even more than a new improvement in the bearings of a reel or the bend of a hook. But little has been said of large catches in respectable angling literature of recent date, and there will be still less in the future. Against those who refused to fall into step with the new movement effective appeal has been made to legislative restraint, and in many States a rigid limit is now placed upon the number of game fish that a single sportsman may take within a given time.

We might feel prouder of this protective movement if it had had its origin in high ethical motives rather than in the stern realization that angling as a sport was about to come to an end through the reckless extinction of all the most attractive game fishes. But the ethical motive has now been effectively enlisted, and nowhere more actively than among anglers themselves. As the present season opens, then, one may rub up his tackle with the comfortable feeling that he belongs to a fraternity which has taken the proper steps to clear itself of the charge of careless cruelty alleged against it in the past with too much plausibility. Whatever may have been true in Martial's day, if the fish does not love the fisherman now, the reason is simply its limited power to appreciate legitimate grounds for gratitude.

The old story of the lunatic, peering over the wall of his asylum and inviting the angler who had fished for four hours and caught nothing to come inside, is a good enough jest, as newspaper wit goes, and yet the number of anglers is increasing with whom the actual making of a catch is no absolute prerequisite to the success of a day by the stream. It is, of course, true that a stroll in the fields without bait or tackle, summer or winter, is always a delightful possibility to one who can find the time. Yet to many a man worn by the friction of business or professional life there is nothing like the appeal of the rod and stream to rouse the courage to break away for a day and seek renewed strength where it is to be found. Walton and his forerunners and successors have followed no false scent. To one rightly attuned there is no finer form of recreation imaginable. I can readily believe with Sir Izaak that Dean Nowel, who died at ninety-five with senses all alert and no mental faculty weak or useless, owed his healthy longevity in no slight measure to his persistent exercise with the rod. And, thanks to the spread of intelligent ideas of conservation, we need no longer fear the extinction of so commendable a sport. For, after all, whether the fish be actually caught in any given case or no, the feeling that it is really there is essential.

W. H. Johnson.

Literature

THE PROBLEM OF THE PHILIPPINES.

The Philippines, Past and Present. By Dean C. Worcester. Two volumes. New York: The Macmillan Company. $6 net.

While still a college student, Mr. Worcester went to the Philippines in 1886, with an expedition headed by the professor of zoölogy of his college, and spent a year there in zoölogical research. The scientific results were, on the whole, so satisfactory that in 1890 another similar expedition in the islands was started, which lasted for two years and a half, Mr. Worcester on this occasion being the leader. The party penetrated into regions still more remote than those attained on the first expedition and accumulated much valuable information concerning the fauna and flora of parts inhabited by primitive tribes which had never seen, or been seen by, a Spaniard.

Returning in 1892 to his work as an instructor of zoölogy at his *alma mater*, Mr. Worcester finally got out a book on "The Philippine Islands and Their People"; it appeared about the time of the outbreak of the Spanish War. An American who had visited the Philippines was then a very exceptional individual, and Mr. Worcester, being not only the author of the book mentioned, but otherwise a man of high scientific attainments, President McKinley sent him to Manila early in 1899 as a member of what has since been known as the First Philippine Commission, in the earnest hope that diplomatic intervention might avert bloodshed between the American forces under Gen. Otis and the Filipino forces under Aguinaldo.

But this Commission did not reach Manila until March 4, 1899, and hostilities between the American troops and tho Filipinos had already broken out on February 4.

The First Philippine Commission was succeeded in the spring of 1900 by the Taft Philippine Commission, Mr. Worcester being the only member of the first Commission retained on the second. There was no break in the continuity of his service. On July 4, 1901, civil government was organized in the Philippines, with Mr. Taft as the first Civil Governor, while the four other members of the Taft Philippine Commission constituted a sort of cabinet. There was a portfolio of Commerce and Police, another of Finance and Justice, another of Public Instruction, and another of the Interior. Mr. Worcester was appointed Secretary of the Interior, and he served continuously in that office from July 4, 1901, until September 15, 1913, when he resigned and came home.

It goes without saying that what he has to tell about the Philippines is highly interesting; also that he is entirely in sympathy with the policy which has been pursued in the islands during his long service there, and entirely out of sympathy with the policy of the present Administration. His work is partly historical and partly descriptive and informative. On this latter scientific side the author is perhaps better qualified to speak than any other living man.

After the battle of Manila Bay of May 1, 1898, while waiting for the American troops to arrive, Admiral Dewey had been prevailed upon to bring Aguinaldo and some of his followers down from Hongkong to Manila, with a view of letting him start an insurrection against the Spaniards ashore, the function of such insurrection to be, presumably, identical with the one Garcia was maintaining contemporaneously in Cuba, under the friendly auspices of the blockading squadron under Admiral Sampson. Dewey probably supposed that the United States was going to do with the Philippines what we had announced in the declaration of war against Spain we were going to do with Cuba, and Aguinaldo probably supposed so, too. But Dewey made Aguinaldo no promises other than such as may have been implied in bringing him down from Hongkong to Manila, landing him at Cavité, May 17, 1898, supplying him with guns and ammunition to begin the work which our soldiers were on the way out to complete, turning over to him from time to time as they surrendered Spanish troops whom the navy had no way to keep, etc. Aguinaldo constantly conferred with the Admiral also—"was most obedient," the Admiral is quoted as saying.

Before our troops arrived Aguinaldo had proclaimed himself head of a Provisional Government and, in its name, had issued a declaration that the Filipino people desired and intended to be free and independent. Also he had sent copies of all these documents to Admiral Dewey. On June 30, 1898, General Anderson, commanding the first batch of arrivals, told Admiral Dewey, to the latter's surprise, that when he left San Francisco, there was already much talk in the United States about retaining the Philippines, though the Senate resolution of April 21, 1898, declaring war against Spain in order to free Cuba had concluded: "The United States hereby disclaims any disposition or intention to exercise sovereignty, jurisdiction, or control, over said island except for the pacification thereof, and asserts its determination when that is accomplished to leave the Government and control of the island to its people."

Mr. Worcester quotes at length from many official documents and records to prove that neither Mr. Pratt, then Consul at Singapore, nor Mr. Wildman, ur Consul at Hongkong, nor Mr. Williams, our Consul at Manila, nor Admiral Dewey, nor General Anderson, nor any one else connected with the American Government in the Far East at that time, either said or did anything to give Aguinaldo the least ground for expecting independence at our hands. Yet Mr. Worcester's presentation of the case wholly ignores the causes of our war against Spain. Cuba is not even mentioned in his book. Naturally, the Filipinos were justified in confidently trusting that if they helped us drive out Spain, as the Cubans were doing, we would not give them a mere change of masters. Aguinaldo knew as well as any American Consul that what such consul might say to him was merely the expression of personal opinion, hopes, and good will. Mr. Worcester devotes too much space to what Pratt, Williams, and Wildman may have said, and too little to what our Admiral in fact did, and what our generals subsequently did in confirmation of Dewey's policy.

We are persuaded that the final verdict of history will be something like this: When the Spanish war broke out, all our representatives then in he Far East, consular, military, naval, etc., as well as all American citizens out there, took it for granted that our policy in the Philippines would agree with that proposed for Cuba. A little later the McKinley Administration began to think that it would pay to keep the Philippines, and as soon as our representatives in the East became aware of this, they had to trim their sails accordingly. Mr. Worcester devotes more than 100 pages of his book to proving that nobody connected with our Government ever held out false hopes to Aguinaldo. What he proves for us is merely his hatred of every Filipino who desires to see the independence of his country. All such persons he denounces as "politicos"—meaning demagogues. He resigned his connection with the Government of the Philippines last autumn, undoubtedly because he was not in sympathy with the Philippine policy of the Wilson Administration. That he had also become *persona non grata* to the Filipino people is not open to doubt. The present work breathes a spirit of animosity not often equalled in a work intended to be a permanent contribution to the annals of men's struggles for free institutions. In one place, for instance, in referring to one of his subordinates who died in the discharge of his duty during a cholera epidemic which the Health Department was trying to suppress, he speaks quite bitterly of this man's having laid down his life while endeavoring to do good to "an alien and hostile people." For the peons and the wild mountain tribes alone, Mr. Worcester seems to entertain a genuinely kindly regard. If the author is correct, no American official in the Philippines in the critical early days did anything he ought not to have done. Mr. Worcester is at great pains to prove that the Filipinos, and not the Americans, were the aggressors in the war. To us it does not seem necessary to determine who fired the first shot in order to decide who were the aggressors in that war. We coveted their country, and the Filipinos did not wish us to have it. It makes no difference that we really desired to make them happy. They did not care for our brand of happiness, preferring to undertake "the pursuit of happiness" in their own way. Here was an issue, and the issue was finally submitted to the arbitrament of war.

There are several chapters relating to the state of public order in the islands between the date of the battle of Manila Bay, May 1, 1898, and the outbreak of February 4, 1899. These chapters culminate in one entitled, Did We Destroy a Republic? All of them are by way of negative reply to that question. Two young naval officers made a trip through the interior of Luzon by authority of Admiral Dewey in the latter part of 1898, and on their return reported quite favorably as to the state of public order under the Aguinaldo Government. Professor Worcester says these young gentlemen were mistaken. He quotes copiously from captured insurgent documents to support his view. These show more or less abnormal conditions, brigandage, etc., in some of the provinces, but they also show two other things, viz.: (1) that every signer of every insurgent document making any

reference to Aguinaldo at all, recognized him quite loyally as the head of the Government; (2) the state of public order in each province depended largely upon the personal equation of the military commander representing the Aguinaldo Government in that province. For instance, in order to prove the existence of turmoil, he cites a communication from Gen. Juan Cailles to Aguinaldo in which the former says that conditions were much disturbed in the province to which he was assigned before he took hold. Then he goes on to tell how he promptly captured and forthwith shot a few of the principal brigands who were terrorizing the province, and took other steps dictated by common-sense, and that since then things have been reasonably tranquil.

In dealing with conditions in the Cagayan Valley under the Aguinaldo Government, the author grows angry with Judge James H. Blount, author of "The American Occupation of the Philippines, 1898-1912," for having said that the cruelties practiced upon the Spanish friars in that valley at that time were "ebullitions of revenge for three centuries of tyranny, and do not disprove capacity for self-government." In order to make these cruelties rival, in horror, those of the Spanish Inquisition, Mr. Worcester accepts at face value descriptions subsequently made in writing by various of the friars who escaped. Of course, when the Filipinos turned the tables on the friars in 1898, they put into practice some of the lessons in cruelty which they had learned from their Spanish masters, but when you subtract from the friars' testimony all but first-hand knowledge, the residuum appears just about as Judge Blount summed it up. Judge Blount made the additional point that many of our officers during the Philippine insurrection winked at torture practiced to extract information from insurgents as to the whereabouts of the enemy and of hidden guns. Mr. Worcester frantically denounces all these statements, in the face of the numerous courts-martial of officials for such offences, as not only, according to his belief, untrue, but also, in his opinion, "despicable" attacks upon the fair name of the army. This criticism of an officer who served honorably in the Philippine War is also interesting when we notice that in the second edition of Blount's volume there is printed a letter wherein Gen. Funston characterizes this book as "a remarkably accurate and fair history of the Philippine adventure to date."

The difference between the attitude of the two men is clear. Judge Blount's book was a brief for what may now be called the Wilson-Bryan Philippine policy; Mr. Worcester's book is a brief for the McKinley-Taft Philippine policy. Judge Blount took Mr. Worcester to task on the ground that his activities with, and wide advertisement of, the wild tribes of the remote interior tended to make the American people suppose that the Filipinos were mostly wild tribes instead of, as they are, a substantially homogeneous Christian people, whose distinguishing characteristics are respect for authority, love of family, home, and country, and consideration for one another, and that he dwelt upon the bitter hatred between Mr. Worcester and the people whose taxes for so many years paid his salary.

We are quite clear that valuable and striking as Mr. Worcester's book is, it will never stand as the final word about our occupation of the islands any more than will Mr. Blount's. Both are partisan, but, to our minds, Mr. Blount has the nobler and juster point of view, and we are the more reinforced in this by Mr. Worcester's present activities. He has allied himself with a company for the commercial exploitation of the Philippines which seeks money from the public in a sanctimonious, philanthropic-religious garb for the purpose of exploiting the Philippines—of course, entirely in their interests. Similar benevolent intentions have marked the history of all exploitation of the world's subject races, and a similar disregard of what the natives themselves would prefer or what is best for them, has made a sorry chapter in the world's commercial history.

CURRENT FICTION.

The Honey-Star. By Ticknor Edwardes. New York: E. P. Dutton & Co.

Critics nowadays are likely to do less than justice to this idyl type of romance. Our training, under Hardy and the realists, is in danger of making us forget that in "As You Like It" and "The Winter's Tale" the setting is merely decorative and the peasant characters furnish a picturesque background for the delightfully impossible central figures. The right question to ask is, "Does the author invest this setting and his characters with the imaginative charm which makes us accept them in spite of our sense of fact?"

On the whole, Mr. Edwardes succeeds in doing this. We do not care whether Elisabel March, the bee-master's daughter, who has gained her education in a draper's shop, could have developed in her surroundings or not; there she is, a charming and gracious princess in disguise. When Claud Laughton first sees her he is on his way to propose to a rich and beautiful girl for whom he cares little. Instantly he falls in love with Elisabel; what else could he do? And it would not be easy to find in recent fiction a better account of a man's falling in love at first sight. Laughton, too, is a bee-master, who has succeeded through modern methods where her father has failed; this fact, and the other girl and Claud's own past life, are barriers between them. But to summarize the plot would be an injustice to the story. Much of its attractiveness is due to the delicate finish and suggestiveness of the style; take that away, and the unreality of plot and character at once become overemphasized.

The Lodger. By Mrs. Belloc Lowndes. New York: Charles Scribner's Sons.

"In the long history of crime it has very, very seldom happened that a woman has betrayed one who has taken refuge with her." This is the text which Mrs. Lowndes has chosen to illustrate. Mr. and Mrs. Bunting are highly respectable people, formerly servants, who take lodgers. Their house is empty and they are in pecuniary straits, when the lodger appears, without luggage except for a small handbag, and takes their four rooms. He is a quiet, eccentric gentleman, with a fondness for reading the Bible aloud to himself and a habit of walking out at night. A series of terrible murders throws London into a panic. Gradually Mrs. Bunting comes to suspect, finally to be almost certain, that the lodger is the murderer. Her one instinct is to protect him. The nerves of wife and husband are kept on edge by the murders recurring every ten days, and by the frequent visits of Joe Chandler, a young detective, who is in love with Daisy Bunting. The book is not a detective story: the reader from the first recognizes the criminal. Mrs. Lowndes is interested merely in studying the mental contortions of poor Ellen Bunting, suffering under her terrible secret. She writes in the spirit of impartial curiosity, without a trace of sympathy. The book is a clever monograph in the form of fiction, a job hardly worth while, and well done.

Shallow Soil. By Knut Hamsun. Authorized Translation from the Norwegian by Carl Christian Hyllested. New York: Charles Scribner's Sons.

The author of this story has been famous in Norway for a quarter of a century, and well-known throughout Europe for many years. "In Russia," says the translator, "his popularity exceeds that of many of its own inimitable writers." German criticism has dealt seriously with him. Yet he is now first introduced to the English-reading public. Out of his thirty volumes—novels, plays, book of travel, essays, poems—"Shallow Soil" seems to have been chosen with some care as an entering wedge, being "in some respects the most contained of Hamsun's works."

The author has a special claim upon the interest of American readers because he underwent an important part of his

apprenticeship in this country. He was brought up on one of the Lofoten Islands, became a cobbler's apprentice, and while still in his 'teens wrote a long poem and a novel, and contrived somehow to get them printed. They attracted no attention. He worked his way to Christiania and into the university, but his independence and improvidence soon disqualified him as a student, and he sailed for America as a steerage passenger. "He had intended to become a Unitarian minister. Instead of doing so he had to work as a farm-hand on the prairie, street-car conductor in Chicago, dairyman in Dakota; and he varied these pursuits by giving a series of lectures on French literature in Minneapolis." He returned to Christiania and made another luckless attempt to gain recognition as a writer; but it was after three years on a Newfoundland fishing smack that he made his third and successful effort to reach an audience.

"Shallow Soil" gives a picture of Christiania towards the end of the century: a community lacking in political or social force; commercially strong but despising its "peddlers" and "hucksters," and strangely adoring a group of pretentious young poets. One of these contemptible fellows, Irgens, is the villain of the story. Into his nerveless hands fall the two women, Hanka and Aagot, who are so much alive in these pages. Hanka is the rebellious young wife painted by Ibsen, Aagot the innocent, characterless maiden whose sweetness and charm are at the service of any sufficiently insistent male. Hanka's eyes are opened, and she becomes a woman; Aagot we must believe lost beyond hope. But it is Aagot whom the strong man of the story, Coldevin, the poor tutor, is doomed to worship. He stands for what is sturdiest and most loyal, as well as most intelligent, in the Norwegian character. His presence redeems the book from mere satire, with a touch of true creative imagination. But it is clear that, more or less dimly, he identifies Aagot with his beloved Norway, and we leave him, convinced of the girl's shame, in the act of destroying the little bow of Norwegian colors she has given him.

The Hour of Conflict. By Hamilton Gibbs. New York: George H. Doran Co.

This is a story of happiness temporarily frustrated by social prejudice and maleducation. Everard Leyden is expelled from Oxford after sowing a full measure of wild oats. He meets Toinette Guerchard, an unsophisticated French village maiden. The eternal passion engulfs the pair, and the usual momentary indiscretion follows. Everard, who sought the affair merely as a pleasant diversion, finds himself changed from "a mere philanderer to a passionate lover." All might yet go well, could he but marry the girl. But his parents, to whom the young aristocrat is beholden for his support, could not be expected to consent. Toinette, ignorant of the ways of the world, insists on accompanying young Everard to his home. His repeated objections rouse her suspicion, and she flings herself into the sea. Everard returns to England, but the thought that he has murdered Toinette eats into his mind. He even attempts suicide. Finally, half-crazed, he returns to the little French village to join his Toinette at the bottom of the sea. He is saved from drowning, however, and learns that Toinette is not dead. The two are reunited, to live—we are left to infer—happily ever after.

Despite this decidedly romantic ending, the story is quite convincing, and has a number of intensely dramatic situations. The characters are well drawn. Especially noteworthy are the corpulent Hippolyte Guerchard, Toinette's father; the venerable abbé, her uncle; and Ruddy Laleham, the Bohemian artist, perhaps the most original character in the book. Indeed, the episode in which the last one figures makes a delightful little story in itself.

WILFRID WARD'S VIVID PORTRAITURE.

Men and Matters. By Wilfrid Ward. New York: Longmans, Green & Co. $3.50 net.

Those who are familiar with Mr. Ward's biographical writings need not be told what kind of style and what range of ideas to expect in this book of essays. If anything, his work gains in precision and persuasiveness from the greater condensation of the essay form, and it is possible to say of the present volume that no one can afford to miss it who is interested in vivid portraiture and in the more solid thought of the day. The reader's pleasure in the papers on Cardinals Vaughan and Newman, on Thomas Aquinas and other more frankly Catholic topics, will naturally depend somewhat on his own religious position; but to no great extent, for Mr. Ward is never bigoted or blind, and in general he brings to the questions of the Church the same judicious temper and broad outlook as to the problems of secular philosophy and government.

One of the religious essays, that on "The Conservative Genius of the Church," is devoted to a logical analysis of what he regards as the true office of conservatism in progress, and gives the key to his position throughout the book. "The first process, of resistance," he says, "is the work of authority, of Rome itself; the second, of assimilation, is the work of individuals, authority only tolerating and not necessarily helping it, until it is so far tested that authority can more or less ratify what individuals have initiated." As an example of this double process he cites the complete adaptation of theology to Aristotelian philosophy by St. Thomas Aquinas. A century earlier St. Bernard, as the champion of orthodoxy, had bitterly opposed Abelard's attempt to introduce the Aristotelian method which had recently been brought into notice by the Arabs—and rightly, from the Catholic point of view, for its acceptance then, before it had been properly digested, would have meant the disruption of the church. The feat of orthodox acceptance remained for a saintly theologian, who was impregnated by both the new dialectic and the tradition of the fathers. His work was thus "a gigantic scheme of conservative reform, a signal protest against the 'fossilism,' which calls itself conservative, the lines of the new system being mainly determined by the intellectual conditions of the time." Such a conservatism implies, of course, that the central structure, or tradition, is essentially sound and should not be swept away, but should be allowed to develop by the natural means of inclusion and assimilation; it can be imposed on those of radical temperament only by showing in each case that the slow process of growth is actually more progressive than a complete uprooting and new planting, and Mr. Ward's presentation of modern religious conditions is largely directed to just this end.

Probably most of Mr. Ward's readers will find more to interest them in his application of this rational conservatism to the problems of politics and secular life than in his specifically religious studies, though it must be a very unthoughtful man who is not made to pause by the discussion of "Reduced Christianity," in which the "Orthodoxy" of G. K. Chesterton and "The Gospel and Human Needs" of Dr. Neville Figgis are thrown into contrast with the sentimental maunderings of Mrs. Humphry Ward's "Richard Meynell." The first two essays of the book, dealing with Disraeli, are based on the new biography and on Lord Cromer's severe arraignment of the man; they form together a notable piece of political analysis and psychological portraiture. In the inevitable contrast between Disraeli and Gladstone our essayist naturally takes the side of the former and quotes with secret satisfaction his description of his rival as a "sophisticated rhetorician inebriated by the exuberance of his own verbosity." He thinks that the common opinion of Disraeli as an alien to the British aristocracy to the end is not correct, and in support of his view quotes the words of Lord Emly: "In 1878 the impossible had happened. He had won not only power, but general reverence. Our aristocracy not

only accepted him, but treated him with the utmost respect." In the famous matter of Disraeli's denial that he had ever asked Peel for office, Mr. Monypenny, we know, does not venture to acquit him of sheer untruthfulness. Mr. Ward leans rather to mercy in his view. He argues that it may have been a mere lapse of memory on Disraeli's part, and cites a curiously parallel case in which Cardinal Newman, whose word could not be doubted, fell into the same sort of error. His apology is minute and specious, but we fear that most readers will stand with Mr. Monypenny. Mr. Ward is, however, by no means a thick-and-thin admirer of Disraeli, nor does he attempt to slur over the shallow and fantastic aspects of his character. "Disraeli's sincerity then was real, but with a touch of underlying cynicism, and this undoubtedly told against scrupulous conscientiousness. There were certain great ideals which he meant to realize. If anything was worth while, they were worth while, and, to some extent, the end justified the means."

Even better on the whole is Mr. Ward's study of John Stuart Mill—a masterly piece of writing. He takes as texts Gladstone's characterization of Mill as the "saint of Rationalism," and Disreali's opinion, expressed with a shrug of the shoulders, "a political finishing governess." Between this Scylla and Charybdis, he sails with marvellous dexterity, and it is not often that one will find a character more touched to the quick or a philosophy more finely dissected. He does not deny the "thin lucidity" which Mr. Balfour disliked in Mill, but he has two points of sympathetic contact with him. In politics Mill grew towards the "speculative Toryism" of Wordsworth and Coleridge (Mr. Ward would no doubt add Disraeli's name), which he called "*tout bonnement* a reverence for government in the abstract"; and in his "Essays on Religion," published posthumously in 1874, he gave the shrewdest blow to atheistical rationalism which it had received in the century. The effect of this half-recantation Mr. Ward describes vividly:

Many of us still remember the shock which this essay created. Mr. Leslie Stephen was reported to have paced the room in indignation which could not be contained, while his wife yet further angered him by the poor consolation of "I told you so. I always said John Mill was orthodox." Mr. John Morley, in the *Fortnightly*, did not disguise his profound disappointment. This was not the Mill whose henchman he had been, and whose praises he had sung so enthusiastically only a year earlier, on the occasion of his death. Mr. W. L. Courtney testifies to the "consternation" caused "among those of Mill's disciples who had fed themselves on his earlier work" by an essay which seemed to recommend the renunciation of reason in favor of the twilight of faith. The religious press was, of course, jubilant. And the religious party scored heavily in a long-standing combat.

That is the very atmosphere of an age we are already beginning to forget; and always Mr. Ward has this apt and human way of illustrating the philosophical point he is discussing. He carries one along with him whether one agrees with him or not—and your reviewer heartily disagrees with him in at least one of his principal tenets. Others of his essays, as for instance those on Tennyson and George Wyndham, are purely literary and biographical; all are notably good.

PHILOSOPHIES OF THE ORIENT.

The Religion of the Samurai: A Study of Zen Philosophy and Discipline in China and Japan. By Kaiten Nukariya. London: Luzac & Co.

If the title of this interesting treatise implies that the Zen form of Buddhism was in an exclusive sense the faith of the Japanese Samurai, it is misleading, for the bulk of the warrior class belonged to other Buddhist sects or were Shintoists. Indeed, the Restoration of 1868 was accomplished by men who dreamed of the reëstablishment of pure Shinto, a difficult task, inasmuch as the deeper-rooted faith from India had so modified the native cult as to alter its whole complexion. But these dreamers certainly did not call themselves adherents of Zenshu, and were cold or hostile to the Buddhist faith. If, however, the title signifies merely that among Buddhist sects, which numbered as many as seventy, the three forms which Zenshu took were the most characteristic of Samurai ideals, the objection is partly or wholly met. One of the most exquisite and typical of Japanese landscape gardens, the Kinkakuji, or "Golden Pavilion," in Kyoto, belongs to a monastery of the Zen sect, whither one of the Ashikaga rulers retired and built himself a palace as a nominal retreat from the cares of the world. Indeed, when the Ashikaga shoguns were ruling Japan from Kamakura, most of the Samurai at their court were followers of Zenshu. And after the bitter struggle with Christianity three centuries ago, when the warring Buddhist sects banded together to oust the dangerous intruding faith, Zenshu was the only one which had vitality enough to send forth another branch, the Obaku, although its teacher, Ingen, founder of the temple of Obaku-san, near Lake Biwa, was a Chinese. At all times Japanese Buddhism has reverted to China or India for fresh inspiration, for in religion, as in other intellectual fields, the Japanese mind modifies rather than originates.

The history of Zen has been an honorable one. The typical hero of mediæval Japan, Kusunoki Masashige, who died gloriously near Kobe after his army had been crushed by a superior foe, was a follower of Zen. What is lacking in this admirable study by Professor Nukariya is any adequate historic setting. From the first page to the last everything is from the Zenshu priest's standpoint, with an evident and laudable desire to present a dignified and up-to-date confession of faith. Much, however, is read into Zenshu that is recent and belongs to the post-Samurai period of Meiji. The book, unfortunately, has no index, a lack that is not compensated for by the careful table of contents and the clear paragraph headings. The Keiogijiku, where the author is professor, was founded a quarter of a century ago by Fukuzawa, one of the great thinkers and leaders of modern Japan, and was at the outset officered in part by American teachers from Harvard, Unitarians. The faith that the author expounds recalls in many of its particulars creeds that have come recently from under the shadow of Harvard University.

The treatise is of interest as showing the intellectual activity that has begun to characterize Japanese Buddhists since the triumphant close of the Russo-Japanese War ten years ago. Under the long Tokugawa shogunate, when they enjoyed state favor, their church sank into moral lethargy and intellectual torpor. At the Restoration her clergy were ignored and despised, and they met the keen attacks of Christian missionaries with sullen silence or virulent abuse. Now they meet argument with argument, and dogma with dogma. Zenshu was a contemplative form of Buddhism, and its adherents rejected spells, prayers, incantations, or any elaborate ritual. The strongest of the three sects, the Soto, was always honorably distinguished by learning and poverty. Its teaching emphasized traditions of conduct and mental attitude handed down from master to pupil, from senior to junior, far above written doctrine or stereotyped lesson. Its practice of abstraction, of cultivating superiority to petty distractions, produced a mood that was scholarly and heroic. Zen inculcated austere discipline without asceticism. Later it was associated with culture and refinement, as in the tea ceremonial and the landscape garden. It was in the latter half of the seventeenth century, says the author, that Zen began to interest itself in the composition of the Japanese miniature ode, or *uta*, largely through the influence of Basho, one of the cult and a man of genius. "Again, it was made use of by the teachers of popular ethics, who did a great deal in the education of the lower classes. In this way Zen and its peculiar taste gradually found its way into the arts of peace, such as literature, fine art, tea-ceremony, cookery, gardening,

architecture, and at last it has permeated through every fibre of Japanese life."

While the author quotes familiar passages from Shakespeare, Milton, Whittier, and Longfellow when germane to his argument, we miss Tennyson's "Flower in the Crannied Wall," where it might come in very appositely. But as he argues keenly against individual immortality, a belief that is at the core of Tennyson's creed and message, the lack of sympathy is explained. The English poet had no liking for the "vague, unsweet" faith that teaches a general Soul, into which separate souls are fused. Zen, on the other hand, "gives no countenance to the superstition of Immortality, nor does it hold that the world is the best of all possible worlds, nor conceive life simply as blessing. It is in this world, imperfect, changing, and moving, that Zen finds the divine light it worships." To the follower of Zenshu, Nirvana "means the extinction of pain and the annihilation of sin."

The volume is to be welcomed as a distinct contribution to thought in a field of mental activity which needs ploughing just at present. If the followers of Jodo and Shinshu, both of which sects are represented by missions under the American flag, could give us like expositions of their creeds, they would meet a genuine want.

A NEW ENGLAND PIONEER.

Licutenant Joshua Hewes: A New England Pioneer and Some of His Descendants. With Materials for a Genealogical History of Other Families of the Same Name; and a sketch of Joseph Hewes, the Signer. Edited and chiefly compiled by Eben Putnam. Privately printed. New York: J. F. Tapley Co.

The pioneer ancestor of the Hewes family was Joshua Hewes, who was born in Royston, Herts, and came to New England in 1633. Settling in Roxbury, Mass., and soon becoming a freeman, he married the next year Mary Goldstone, of Watertown. He was a member and sergeant of the "Military Company of the Massachusetts," a deputy to the General Court, selectman and constable of Roxbury, and feoffee of the grammar school. Generally speaking, he was a merchant whose consignments between 1646 and 1650 seem to have been the largest in New England. He was also interested in the early Undertaking of the Iron Works, the failure of which brought trouble on the ironmonger, Joshua Foote, the uncle for whom Hewes was named, and ultimately contributed to the misfortune of Hewes himself. In 1656-7 he married again, this time Alice, widow of John Crabtree. On the death of Foote he had considerable difficulty in disentangling himself from the confusion into which his uncle's death had brought both their estates, and the closing years of his life did not fulfil the promise of his earlier activities. He was, however, a good citizen, and on his return from a more or less unsuccessful venture in Rhode Island did not lose the respect of his former associates.

In telling this modest story of a man of the first generation, Mr. Putnam has introduced a not inconsiderable portion of New England history of that period. The poor lieutenant is quite concealed in a maze of circumstantial detail, and his personality, for doubtless he had one, is lost sight of. Then follow the descendants of this Joshua Hewes, John Hewes, of Lynnfield; Joseph Hewes, the North Carolina "Signer"; George Hewes, of Salisbury, Mass., and Abel Huse, of Newbury. Other families named Hewes, Huse, and Hughes in New England, New York, Pennsylvania, Virginia, the Carolinas, Alabama, and Georgia are also described. Brief genealogies of the Tapley, Putnam, Norden-Copp, Johnson, Smith, Wellman, and Cogswell families, and a sturdy list of the Hewes pensioners of the War of 1812, find a place here. But most important of all is a sketch of David Hewes, a genuine '49er, still living, a graduate of Phillips Andover, of Yale, in 1852, "the most distinguished of any class graduated at Yale." While in college he invested $3,000 in

Peter Naylor's Iron Houses, obtained leave of absence from college, went to San Francisco by way of the Isthmus, erected his buildings profitably in Sacramento, and built a Congregational church, to which he gave a library brought with him. Later he went back to San Francisco and began the business of grading with a plant of one shovel, one wheelbarrow, and a Chinaman. In 1858 he bought out his partner for $42,-500, and graded Market and other streets and removed sandhills. Through these extensive operations he came to be called the "Maker of San Francisco."

In 1873 he sold his cars, engines, and other machinery to Henry Villard. He kept on buying city lots, and meanwhile constructed the first home-built locomotive in California. After the disaster of 1906 he put up at once a fourteen-story building, which was voted by the Trades Union to be the best erected since the earthquake. "Destroyed to-day, build to-morrow" was his laconic order. In 1869 he gave the golden spike and laurel tie that connected the Central Pacific and Union Pacific Railways.

He was the father-in-law of the late Leland Stanford, and a man of numerous activities which knew no bounds. Even on a wedding trip with his second wife his enthusiasm led him to purchase three mummies. On the whole, it is a brisk, American story, this life of a man who was part of an era in which the Central Pacific, towards the end of its long task, laid ten miles of track between sunrise and sunset, at the rate of 144 feet a minute. The record of such a family, of no exalted eminence, of no depth of poverty, illustrates well the essential stuff out of which the best of this country is made. The early strength of family character gave promise of continuous growth and not decline.

The first pioneer and the latest, Joshua and David, were not the only worthies bearing the name of Hewes. From George Hewes came George Robert Twelve Hewes, who was one of the Boston Tea Party, and his son of even stranger name, George Robert Twelve Fifteen Hewes. A manuscript diary of James Hewes, of Lynnfield, Mass., another '49er, here printed for the first time (pp. 166-179), describes a journey overland to the west coast of Mexico, then up to Sacramento. There seems to have been a scarcity of food, but of señoritas "very plenty." Possibly it was this Hewes who founded the first library at Lynnfield by inducing the newly chosen selectmen on election day to start a library fund with the money customarily spent in treating the free and enlightened voters at Deacon Parsons's bar.

Although Mr. Putnam put the book together and built it, rather too lavishly, as we have said, in parts, it is worthy of note that Mr. David Hewes spent thirty years in collecting the materials. Conjectural genealogy is never satisfactory, and for this reason it must be said that the words "possibly" and "probably" occur far too often. The plates are good, and the portraits show an uncommonly vigorous breed of wholesome men and women.

Notes

The Century Company will publish this month: "Idle Wives," by James Oppenheim; "Bedesman 4," by Mary Skrine; "The Rise of the American People," by Rowland G. Usher.

Henry Holt & Company announce that they will publish towards the end of April "The Myths of the Hindus and Buddhists," by the late "Sister Nivedita" (Miss Noble), completed by Dr. Ananda Coomaraswamy.

Little Brown & Co. announce the forthcoming publication of: "Ariadne of Allan Water," by Sidney McCall; "North of Fifty-three," by Bertrand W. Sinclair; "The Lone Wolf," by Louis Joseph Vance; "Felicidad," by Rowland Thomas.

McBride, Nast & Co. announce that they have in preparation for early publication Strindberg's "The Growth of a Soul."

A Pageant of English Literature is to be given in Oxford from April 28 to 30. The scenes will represent episodes in the history of English literature from Cædmon to Addison and Steele. Dr. T. H. Warren, the professor of poetry, has written Cædmon's ode for the first episode.

E. P. Dutton announces for publication at the beginning of May the following additional volumes of Everyman's Library: Biography: "The Oxford Reformers," by Frederic Seebohm; "The Life of Benjamin Disraeli, Lord Beaconsfield," by James Anthony Froude; "Pioneer Work for Women," by Elizabeth Blackwell; "Colley Cibber: An Apology for His Life," with an appreciation by William Hazlitt.—Classical: "Livy's History of Rome," Vols. II and III, translated by Canon W. L. Roberts; "The Muses' Pageant," Vol. III, by W. M. L. Hutchinson.—Essays and criticism: "Essays in the Study of Folk-Songs," by Countess Martinengo-Cæsaresco; "Letters from Dorothy Osborne to Sir William Temple," edited by Judge Parry; "An Anthology of English Prose," edited by S. L. Edwards.—Fiction: "Peter Wilkins, or the Flying Indians," by Herbert Paltock; Turgeniev's "Lisa," translated by W. R. S. Ralston; George MacDonald's "Sir Gibbie"; Morier's "Hajji Baba"; Mrs. Gaskell's "North and South"; Dostoievsky's "The Idiot"; "Pamela," by Samuel Richardson.

The Selden Society announces that the volume of its publications for the current year will be the "Bills in Eyre," edited by Mr. William C. Bolland, and that it has also in preparation for publication a volume of the Year Books of Edward II., edited by Mr. Turner and Professor Geldart. Volume 26 for 1911, the sixth volume of the Year Book series, edited by Mr. G. J. Turner, is still delayed, but is expected soon. Owing to the death of Mr. I. S. Leadam, who was engaged on a volume of Select Cases before the King's Council, the completion of that volume will be entrusted to Professor James T. Baldwin, of Vassar College.

AMBASSADOR PAGE was prevented by throat troubles, following an attack of influenza, from addressing the annual meeting of the Booksellers' Provident Institution the other day. John Murray expressed special regrets at this misfortune, as he had hoped to welcome in Mr. Page the first member of the publishing craft to rise to the position of Ambassador to England. A similar institution for the benefit of authors is to have Mr. Page's assistance on May 5, for he has promised to preside on that date at the annual dinner of the Royal Literary Fund. During the last year the fund has made grants, reaching a total of $20,600, to 52 applicants; three for archæology and topography, nine for history and biography, three for art, five for poetry and the drama, sixteen for novels and tales, three for education and scientific work, and thirteen miscellaneous.

LITTLE by little English universities are coming into closer touch with the State. There was a stiff fight at Cambridge recently over a proposal to apply for a Government grant for the Medical School. It was argued against it that the acceptance of Government money must in the long run mean some measure of Government control, and that, however necessary such subventions might be for the new universities which have no large body of alumni on whom to depend for help, they were not really needed for Oxford and Cambridge, and would, indeed, tend to discourage the generosity of private donors. On the other side, it was pointed out that the principle had already been conceded, as both the School of Agriculture and the Department of Astrophysics were in receipt of State assistance. The proposal was carried in the University Senate by 268 votes to 235.

IN pursuance of the action taken at the conference of professors, held at Baltimore last November, the chairman, Professor Bloomfield, was authorized to appoint a committee representing the principal subjects of study and the principal universities. After some unavoidable delays, the chairman of the conference has announced the composition of the committee as follows: Astronomy, George C. Comstock (Wisconsin); biological science, E. G. Conklin (Princeton), R. G. Harrison (Yale), and Theodore Hough (Virginia); classical philology, E. Capps (Princeton); chemistry, Julius Stieglitz (Chicago); economics, M. A. Aldrich (Tulane) and Alvin S. Johnson (Cornell); education and psychology, John Dewey (Columbia); engineering, Guido H. Marx (Stanford); English, J. W. Bright (Johns Hopkins) and C. M. Gayley (California); geology, W. H. Hobbs (Michigan); Germanic philology, M. D. Learned (Pennsylvania); history, W. E. Dodd (Chicago); law, Roscoe Pound (Harvard); mathematics, C. J. Keyser (Columbia) and Henry Taber (Clark); medicine, C. S. Minot (Harvard); Oriental languages, Morris Jastrow (Pennsylvania); philosophy, A. O. Lovejoy (Johns Hopkins) and Frank Thilly (Cornell); physics, C. E. Mendenhall (Wisconsin); political science, Isidor Loeb (Missouri); romance philology, F. M. Warren (Yale). Professor Dewey has consented to act as chairman. The committee may be expected to begin at once the consideration of the questions submitted to it; and it will doubtless be able to announce the date of the contemplated meeting, and its general proposals with respect to the association, within a few months.

NO more interesting American autobiography has appeared in a good while than Brand Whitlock's "Forty Years of It" (Appleton). It is not merely that he has the knack of telling a story—he has an unusually intersting story to tell. He strikes the keynote at the very beginning in the episode of the surreptitious release of a negro prisoner, restrained by ball and chain, and paying the penalty for some misdemeanor by aimlessly wielding a broom on the hot and deserted main street of the town of Urbana, O. Whitlock's grandfather was the Mayor of Urbana, and, calling the negro into his office, he unlocked his fetters and told him to get away without arousing attention. This putting of the human side first is the centre of Brand Whitlock's philosophy. It leads him into folly now and then, as when he decides never to prosecute another person, and leaves one to infer that we should be better off without courts than with them. But in general he is so sane as well as sympathetic that one can forgive him even this great error. He is a hater as well as a dreamer, and the objects of his hatred are two: reformers and Puritanism. Perhaps these are really but one. At all events, he hates them as fiercely as if he had been anything but the very advanced Mayor whose ambition was to follow in the footsteps of "Golden Rule" Jones. What distinguishes him, and distinguished Jones, from the kind of reformer that he scorns is his utter skepticism of panaceas. "The great emancipation will not come," he writes, "through the formulæ of Independents, Socialists, or single-taxers, nor through Law and Order Leagues, nor Civic Associations." This does not prevent him from being a single-taxer or from fighting his utmost for a three-cent fare. His lack of faith in these devices as final does not keep him from laying hold on such weapons as the times provide.

IT is necessary to speak of Mr. Whitlock's philosophy at some length because it more and more becomes his story, submerging incident in reflection. Yet he relates many events of fascinating interest. It was he who at Gov. Altgeld's direction drew up the famous pardon for the Chicago anarchists who had escaped the gallows and were serving sentences in the penitentiary. His work as a reporter in Chicago brought him into association with such different personages as James G. Blaine and Eugene V. Debs. But his heroes are "Golden Rule" Jones and Tom Johnson, and he makes them live again in his pages. No picture of this man, who was Jones's successor as Mayor of Toledo, serving four successive terms, would be complete that omitted his estimate of the relative values of politics and literature. He may be best known to the country as one of the new type of municipal executive, but his aspirations are all literary. Emerson and Whitman bulk larger in his eyes than a host of even honest and capable men in the troubled field of politics. These seem to him to be merely going through the motions of doing something, while one who writes works for eternity. Here again he will appear to many readers too sweeping, but this also is part of the man who has so well revealed himself and his time in this book.

THOSE whose appetite for the delicate lyric of India has already been whetted by the translations by Mr. Paul Elmer More and Mr. Arthur Ryder will be glad to know that the whole collection of the three centuries of Bhartrihari ("The Satakas of Bhartrihari," with an Introduction, by J. M. Kennedy) has now appeared in handy form in the Oriental Philosophy series (Boston: John W. Luce & Co.). The reason why Bhartrihari is thus linked with philosophy is that one century of his verses is of philosophical or at least of religious content. Mr. Kennedy is well known as a competent scholar, but we confess that we prefer his translations to his history. It is not at all certain that the first philosophers of India were martial aristocrats; nor is it even probable that the priests almost annihilated the warrior caste. Nor again is the Gita in the epic as strange as would be the Gospel of St. John in the Iliad. Finally, although it is said that some scholars assign Bhartrihari to the

second century, Mr. Kennedy strangely sets his date as "about the eighth or ninth century." Surely, 650 A.D. is a much more probable *terminus ad*, if only because Itsing mentions Bhartrihari, and that pilgrim died in 703.

WE are enabled by Volumes IV and V of "The German Classics" (The German Publication Society, New York) to recognize the aim of the editors more clearly than was hitherto possible. There is a far larger proportion of original translations, the introductions, by uniformly competent American hands, tell something like a consecutive story of the development of the various epochs of German literature, and the authors selected are thoroughly representative. We have in the volumes before us extracts from Jean Paul, Wilhelm von Humboldt, the two Schlegels, Novalis, Hölderlin, Tieck, Heinrich von Kleist, Schleiermacher, Fichte, Schelling, Achim von Arnim, and Clemens Brentano, the Grimms, Arndt, Körner, Schenkendorf, Uhland, Eichendorff, Chamisso, E. T. A Hoffmann, Fouqué, Hauff, Rückert, and Platen. The poetic translations, on the whole, are spirited and give more of the atmosphere of the original than do the prose renderings. These sometimes, as in the case of Frances H. King's excerpt from Wilhelm von Humboldt's essay on Schiller, intensify the original heaviness. The same translator, however, is inspired by "The Opening of the Will," from Jean Paul's "Flegeljahre" and by Kleist's classic story of "Michael Kohlhaas," to a far more graceful and idiomatic treatment. A conspicuously successful piece of translation is Professor Coleman's version of Rückert's "Parable." It is a literal rendering, which preserves, with the metre, all the ease and impressiveness of the original. Among the other translators of verse, who have grappled, not unsuccessfully, with difficult themes, Margaret Münsterberg holds first place. But none can compare with older translators (whom it is not always easy to distinguish from the actual contributors to these volumes) like Longfellow and Leland. The poets among the living who appear here as translators do not show to the greatest advantage. Hermann Hagedorn's rendering of Kleist's "Prinz von Homburg" has not a few harsh lines and doubtful colloquialisms, such as (p. 488, Vol. IV):

> You whimsical old gentleman, with you
> I get nowhere! You bribe me with your tongue—
> Me, with your craftily framed sophistries.
> . . . . . .
> Well, now, by heaven,
> I call that nerve!

NEITHER has Percy MacKaye achieved great success in dealing with his German fellow-craftsmen. As was, perhaps, inevitable in volumes so largely concerned with the period of German Romanticism, there broods over what is offered here to the American reader a strange air of unreality, which occasionally makes one wish for things more robust, and not so far removed from what remains eternally young and appeals to universal taste. The editors have certainly dipped into a long-forgotten past in resuscitating Friedrich Schlegel's "Lucinde," that lascivious production of his turbulent youth, of which the author himself grew to be so ashamed that he never wanted it included in the complete edition of his works. The illustrations are, in part, intended to run "parallel to the literary development" of which these volumes treat, but the charm of Schwind's romantic fancy has wholly vanished in most of the reproductions.

WILLARD GROSVENOR BLEYER'S "Newspaper Writing and Editing" (Houghton Mifflin) is distinguished from previous books on the same subject by its free use of facsimile newspaper headlines, its emphasis upon the importance of the "lead," the abundance of exercises for practice, and its attractive physical qualities of convenient size, thinner paper than is often used, and beautiful typography. The text is also better written than that of most of its rivals. The volume contains little that is new, but it carries the analysis of various kinds of "stories" further than is usual, and does this in a way to illustrate rather than to make more obscure the mysteries with which it deals. It does not make the common mistake of furnishing a "Don't" list.

THE latest addition to American Nietzsche literature is a book of 150 pages by Dr. Paul Carus, entitled "Nietzsche and Other Exponents of Individualism" (Open Court Publishing Co.). The author assures us many times that Nietzsche is not to be taken seriously as a philosopher, yet he has given a painstaking if somewhat unsystematic refutation of his theories. Dr. Carus believes that the old nominalistic school is the parent of Nietzsche's philosophy, and that unwisdom is justified of her child. The logical outcome of nominalism is philosophic anarchism. The book may be read with profit as a sort of corrective to the writings of Mencken and of other recent Nietzsche enthusiasts. On page 14 the date 1907 is given instead of 1887 for the visit of Deussen to Nietzsche. There are several interesting illustrations of statues and portraits of the German philosopher.

THE other exponents of individualism discussed in the book are Max Stirner and Mr. George Moore. The latter's "Confessions of a Young Man" is shown to contain many interesting parallels to Nietzsche's ideas, though Dr. Carus adds that Mr. Moore is "scarcely familiar with the writings of his German double." That may have been true in 1888, when the "Confessions" appeared, but it is assuredly not the case now. At the conclusion of his "Memoirs of My Dead Self," for example, there is an eloquent statement of the doctrine of Eternal Recurrence, as if it were a personal conviction.

J. A. R. MARRIOTT'S "England Since Waterloo" (Putnam) completes the excellent seven-volume "History of England" which has been appearing under the editorship of Charles Oman. The earlier volumes by Oman, H. W. C. Davis, Vickers, Innes, Trevelyan, and Grant Robertson have already passed beyond the first edition and won a deserved recognition from scholars and general readers. Mr. Marriott had a more difficult task than his predecessors. To treat adequately the domestic as well as the foreign affairs of England during the last century is no easy task. Though the multiplicity of unconnected facts which he compresses within 500 pages sometimes smacks of the "Annual Register," he has made, on the whole, a readable, trustworthy, and unprejudiced statement of the most important facts of England's development since the Napoleonic period. While his volume does not have the sustained interest and the personal atmosphere which gives such charm to the histories of Justin McCarthy, Spencer Walpole, and Herbert Paul, it is, nevertheless, more satisfactory to the student in being more compact with fact, more free from partisanship, and drawn with a better perspective. The author frequently gives vivacity to his narrative by quoting brief characteristic phrases which sum up a movement or a man. He gives almost as much attention to England's foreign affairs as he gives to her development at home, threading his way with a sure foot through the intricacies of European diplomatic affairs. His account of Palmerston, though brief, is a good example of his excellent way of characterizing the leading statesmen; it is fair both to the Queen and to Palmerston. Palmerston's foreign policy was so energetic that he was thoroughly hated on the Continent, and Germans used to declare,

> Hat der Teufel einen Sohn,
> So ist er sicher Palmerston.

Mr. Marriott has a good brief bibliography at the close of his volume, but his maps are altogether inferior to the text, being neither artistic nor accurate, nor as clear as one has a right to expect when so much detail has been omitted.

"POEMS by Sir John Salusbury and Robert Chester" (Bryn Mawr Monographs: Monograph Series, XIV), with an introduction by Carleton Brown, is interesting mainly on account of its connection with the problem of "The Phœnix and the Turtle," the least known and the most enigmatical of all the productions of Shakespeare's pen. The pieces contained in the volume are now edited for the first time from Christ Church MS. 184 and from the unique copy of poems dedicated to Sir John Salusbury by a certain Robert Parry and printed in 1597, which is preserved in the library of S. R. Christie-Miller at Britwell Court. The above-mentioned poem of Shakespeare's first appeared in a sort of appendix to Robert Chester's "Love's Martyr; or, Rosalin's Complaint, allegorically shadowing the truth of Love in the constant Fate of the Phœnix and Turtle" (1601). In the excessively long title-page the poem is said to be a translation from the Italian of "Torquato Caeliano." Professor Brown does not mention this circumstance, and his whole discussion is evidently based on the assumption that Chester's allegory is entirely of his own invention. This is probably true, but the Elizabethans did not hesitate to plunder the Italian poets even for occasional poems, for instance, elegies on the death of a friend or a patron, so that the state-

ment of the title-page, though it looks like a mystification, deserves some consideration. The appendix to "Love's Martyr," or "Poeticall Essaies," as the title-page calls it, contains, besides Shakespeare's poem, still other contributions on this allegorical theme of the Phœnix and the Turtle from Marston, Chapman, Jonson, and "Ignoto."

THE poems which Professor Brown now publishes for the first time have little intrinsic value, but they throw light on the literary tendencies of Salusbury and Chester and on their relations with one another. They were both devotees to acrostic verse, and the number and warmth of the pieces of this kind which Sir John addresses to his sister-in-law, Dorothy Halsall, arouse unpleasant suspicions. From the biographical sketch of Salusbury, which Professor Brown has worked out with great diligence on the basis of unpublished records at Hatfield House and elsewhere, it seems that in 1595 he was appointed one of the esquires of the body to the Queen and that he was knighted by her in 1601. It was on his visits to London during the intervening years, no doubt, that he was drawn into an intimacy with the great Elizabethan poets who contributed to the above-mentioned "Poeticall Essaies" in his honor. Professor Brown's researches in regard to Robert Chester have not been quite so conclusive, but he has proved at least that Dr. Grosart erred in identifying him with Robert Chester of Royston, and he has made it clear that the author of "Love's Martyr" and the poems here printed must have been closely connected with Sir John Salusbury's household—very likely as chaplain. His interpretation of the allegory in "Love's Martyr" is that the Turtle-dove represents Salusbury and the Phœnix his wife, Ursula Stanley, who was an illegitimate daughter of the Earl of Derby, and, furthermore, that the poem was written in commemoration of their marriage (1586) and a short time after the event. It could not have been very long after, for the Phœnix concerned was soon giving to the world a numerous offspring, instead of the traditional *one* which the legend required. The choice of allegory, it must be confessed, was not a very happy one for the celebration of a marriage, but Professor Brown's solution seems to us, after all, the most plausible that has been offered, and it explains satisfactorily also the "Poeticall Essaies," with the all-important exception of Shakespeare's poem. That remains as much of an enigma as ever. In this poem stress is laid on the childlessness of the couple. What business has such a poem in a volume which was manifestly compiled in honor of Sir John Salusbury?

IN conclusion, two details recorded here are worth mentioning. First, Sir John Salusbury was the lineal ancestor of Mrs. Thrale. This constitutes really his greatest service to the world. Secondly, the Christ Church MS. includes a holograph copy of a poem by Ben Jonson. The manuscript originated in the Salusbury family, and the above item furnishes additional evidence of the close ties that united Sir John to the giants of the Elizabethan age.

MRS. FRANCES BOARDMAN SQUIRE POTTER, professor of English literature at the University of Minnesota, died at Minneapolis on March 25. Mrs. Potter was born at Elmira, N. Y., in 1867. She was graduated from Elmira College in 1887, and took an A.M. degree there in 1889. She became a member of the Minnesota faculty in 1900. Mrs. Potter was well known as a lecturer on woman's suffrage, and wrote a number of stories and articles for magazine publication, a novel, and two plays.

Science

PSYCHIC ACTIVITY.

The Unconscious. By Morton Prince. New York: The Macmillan Co. $2.

Dr. Prince is well known to many who care little for neurology or psychology as the talented author of "The Dissociation of a Personality," in which he pictured in so fascinating a manner what he looks upon as the multiple individualities of Miss Beauchamp. In the volume before us we miss as little of the vivacity and charm of this earlier work as one could expect in consideration of the fact that the several chapters consist of lectures, which of necessity lose much in transcription; in this case mainly because of numerous repetitions which, while valuable in the classroom, tend to obscure the course of the writer's thought. Notwithstanding this, the book is a contribution to the subject considered that is valuable alike to the physician and to the psychologist: to the physician for its suggestiveness of method in treating those unfortunates who are troubled with what are roughly classified as nervous diseases; and to the psychologist for the accumulation, and more or less orderly consideration, of a great mass of facts that are significant for him as well as for neurologists.

This accumulation of facts emphasizes again the importance of the study of that realm of our mental life that is beyond the field of awareness, and which is usually called the sub-conscious; a term which our author quite properly uses as little as possible because of its vague meaning. Thus he divides (p. 352) the whole psychic field into A, attention, and the focus of awareness; B, fringe of awareness; C, co-conscious states (sub-conscious); beyond which he holds that there are D, unconscious processes, into which states C shade off, and which may develop any one of the states described under classes A, B, or C. In terms of these three classes he would explain a broad array of phenomena, and whether or not one agrees that these distinctions have the validity he claims for them, it must be acknowledged that they serve well to marshal the facts presented to us.

After a brief chapter on the Theory of Memory as a process, and three chapters devoted to the study of the extent to which life's experiences are conserved, he turns to the question (p. 109), "How, and in what form, manner, or way, are they conserved? In other words, what is the nature of the residuum? Is it psychical or physical?" and in a chapter entitled Neurograms he attempts the explanation of the puzzling problem as to the *modus operandi* of the retentive process which leads us to ask where the ideas that are recovered remain in the interval between their original existence and their recall. He concludes that they cannot be supposed to lie dormant as psychic existences, but that their corresponding "neurograms" may be conceived to remain dormant, and upon occasion to be aroused to such renewed activity as is necessary to the production of the recovered idea.

This conception, which is novel only in its mode of presentation, has to meet the difficulty that it assumes that the neural activity under certain conditions, and only under certain conditions, *produces* the idea; a view which contradicts the hypothesis of psycho-physical parallelism which he upholds. Furthermore, the notion of a dormant neurogram itself is far from satisfactory. Indeed, our author practically resuscitates the "store-house" theory of retentiveness, the inadequacy of which is now so generally appreciated. Nevertheless, as has been noted, he himself acknowledges (p. 352) that the "co-conscious" states *shade off* into the "unconscious processes," and beyond that holds (p. 534) that these latter ". . . may undergo sub-conscious *incubation* and *elaboration*"; and the facts which lead to these statements certainly indicate that we are unwarranted in holding that the experiences of life are filed away, as it were, for future possible use, lying "dormant" until called for. If we carry out consistently so thoroughgoing a parallelism between neural activities and conscious states as he would defend, it would seem to be but logical to hold that there must exist some "psychological dispositions" to correspond with the "physiological dispositions" which he calls neurograms. In truth, one of the most cogent arguments in favor of the hypothesis of the thoroughgoing correspondence between changes of neural activity and changes in consciousness lies in the fact that it enables us to express the phenomena of retentiveness in terms of readjustments of efficiencies, both physiological and mental; which are not entities that are dead or dormant when not evidenced, but which, being given in one moment, are permanent readjustments, which in a future moment may appear in familiar form, or as subjected to subsequent readjustments, according as the neural patterns

and their corresponding mental patterns of the future moment do, or do not, emphasize these efficiencies.

The remaining eleven chapters of the book are given mainly to the illustration of the thesis just referred to, and to the explanation of the varied ways in which the sub-attentive conscious processes affect the life of clear awareness. And here it may be noted that it will be a great relief to those who have of late been steeped in the Freudian literature to find an author whose grasp of the facts is so complete, and who employs the method of "psycho-analysis" without stint, making little of Freud's imaginative hypotheses, and rejecting his far-fetched erotic interpretations; and writing without such dogmatism or special pleading as Freud's works display. In fact, Dr. Prince goes far to refute the claims of the Freudians by showing that the facts presented by them in support of their theses are equally well explicable on other grounds.

The book is so admirable in many ways that it is a thankless task to dwell upon its shortcomings; but it is impossible to overlook them if for no other reason than that the author is so important a leader. Such a task is the less distasteful, however, because these weaknesses may all be summed up in one indictment, which is aimed, not so much at the author, or even at neurologists in general, but at psychologists as a class. For these latter in the past have practically closed their eyes to the facts relative to the "unconscious" upon which Dr. Prince fixes our attention; with the result that these facts have been brought into the light of day largely by neurologists who in the beginning have not been students of psychology, and who, when they have turned to the works of psychological experts, have found little reference to the subjects of their special interest. The neurologists have thus been led to think that they must work out a new psychology of their own; and this in a measure they actually have done, but not unnaturally without a mastery of the work of their predecessors in the psychological field taken as a whole. Under such conditions it is not surprising to find evidences of narrowness of reading, of crudities of thought, and of impatience with fundamental considerations which have become commonplaces among the psychologists of the older schools. Thus our author (p. 446) evidently thinks that McDougall was the first to maintain that our emotions are instinctive phenomena; overlooking the fact that Darwin in his "Expression of the Emotions," and James in his Psychology, emphasized this view; and that it has long since been generally conceded that the emotions are merely a special type of "instinct feelings." Thus, again, we find him casting aside almost with contempt (p. 312) what he calls "the conventional conception of perception as usually expounded in the text-books"; and again giving vent (p. 538) to somewhat violent denunciation in describing, in ignorance of the real import of the conception, the "unity of consciousness . . . as a cant expression uttered by some unsophisticated ancient philosopher and repeated like an article of faith by each successive generation without stopping to think of its meaning or to test it by reference to facts."

We must also lay upon the psychologists a large part of the blame for our author's unfortunate application of the term memory to facts of retentiveness; for not a few of those who lean towards the "new psychology" have been guilty of this iniquity. Nevertheless, we cannot acquit Dr. Prince altogether, for he need not have read farther than James Ward's article on Psychology in the Encyclopædia Britannica to have seen that it is retentiveness and not memory that is a common characteristic of our physiological and psychic life. Memory is, of course, based upon retentiveness; but memory involves the recognition of attachment to the individual's experience, and is the coördinate of expectation, as is not the case with retentiveness. The failure to distinguish the one from the other is a matter of importance in such investigations as our author is conducting.

But as has been already remarked, the philosophers and psychologists of the past have themselves to blame for all this. They have persistently overlooked what are now seen to be some of the most significant facts in relation to our mental life, and they must not be surprised if those who have had these facts forced upon them in therapeutic practice build a new psychological science, which is crude and incomplete in some directions, and in others inconsistent with the formulations of that long array of masters who have devoted themselves to the study of our mental life.

Dr. Egbert Le Fevre, dean of the New York University Medical School, who died on March 29, was born in Raritan, N. J., October 29, 1858. He graduated from Rutgers College in 1880, took his A.M. degree from the same institution in 1884, his M.D. from the New York University Medical College in 1883, and was an interne at Bellevue Hospital from 1883 until 1885. He received the honorary degree of Sc.D. from Rutgers in 1910, and the degree of LL.D. from New York University in the same year. Dr. Le Fevre was clinical lecturer on the practice of medicine at New York University 1888-1890, professor of clinical medicine 1890-1895, adjutant professor of medicine, 1895-1898, associate professor of therapeutics, professor of clinical medicine, and dean of New York University and Bellevue Hospital Medical College since 1898. He was a fellow of the New York Academy of Medicine, and a member of various other medical associations, and was the author of "Physical Diagnosis," published in 1902.

Drama

RECENT GERMAN PLAYS.

The plays published or performed in Germany during the year just ended suggest some reflections on the curiosities of individual development. The "Festspiel in deutschen Reimen," by Gerhart Hauptmann (S. Fischer, Berlin), predestined by the name of the author, as well as by the time, place, and occasion of its production to be the event of the season, became by its suppression at least the greatest sensation. An unusually interesting work it is, for the recent reading of which New York owes gratitude to Rudolf Christians, the director of the German Theatre. For the poet who had the courage of his convictions at a time when a rather archaic note of patriotism was forced upon the literary production of the year and gave rise to plays, novels, and lyrics celebrating the military glory of 1813, must have endeared himself even to those indifferent to his works by the dignified manner in which he avoided joining the choir of singers. The removal of the actors of his drama into the "Welt des Scheins" was a stroke of real genius. To whatever cause his recent dramatic failures are due, if one surveys his work from "Vor Sonnenaufgang" to the "Festspiel," this dramatic poem means a high-water mark in his development.

The same cannot be said of Hermann Sudermann's "Der gute Ruf" (J. C. Cotta, Stuttgart). It is a society play of Berlin W., with the apparently inevitable theme of marital infidelity, wives neglected by husbands absorbed in business, and consoling themselves by illicit attachments, yet zealously guarding appearances. There is a subordinate theme: a man at the head of a great industrial enterprise has been cornered by rivals and forced to take a position in the rivals' establishment. Here is an economic motive which might have given the play a wider meaning; but Sudermann employs it only to complicate the personal relations between the two families whose good name is jeopardized by the love game of the ladies. So in the end the play is nothing but a new variation upon his old and cherished honor motive.

From Frank Wedekind one must always expect the unexpected. After sorely trying the patience even of his admirers by his "Franziska," which he chose to call a "Mysterium," he has come out with a drama in verse, "Sim-

son" (Georg Müller, Munich), firmly and logically built upon the theme of jealousy. Delilah plays with Samson while the princes of the Philistines are courting her. To make him harmless, she has his hair shorn, and in a fit of jealousy orders him to be blinded. But when he is forced to work the treadmill, she visits him in his sordid exile and, in a streak of perversity which seems inseparable from the heroines of Wedekind, makes the Philistines witness the caresses she bestows upon Samson. When she finally chooses Og to become her royal spouse, the prisoner is summoned to dance before the royal party at dinner. Samson implores God to give him strength for his task, and dances. Og sees the eyes of Delilah fascinated by the spectacle, and cuts her throat. Then Samson throws the weight of his body against the columns supporting the dais; as they break, tearing down the balustrade of the gallery, the whole building seems to collapse, and the curtain descends upon a scene of ruin. Violent as the action appears, there is nothing forced or objectionable about it, the characters are well defined, the Oriental atmosphere admirably suggested, and the whole work is singularly free from the touch of burlesque which the author is wont to give his most serious works.

Max Halbe, who with Georg Hirschfeld has experienced nothing but failures on the stage of late, has paid tribute to the centenary of 1813 by a play, the scene of which is laid in Danzig and its environs, and the plot whereof deals with the fluctuating fortunes and wavering convictions of the people under the sway of the Corsican's magnetic power. "Freiheit" (Albert Langen, Munich) is a play that reads well, palpably conveying the turbulent spirit of the times and reflecting the unsettled condition of the country, political and social. There is plenty of thrilling action, but the main interest centres in the influence brought to bear by the rapidly following events upon the characters of two young men who have been drifting with the current of popular sentiment.

Herbert Eulenberg is untiring in his efforts to court dramatic success. He has had three or four premières within the year, and his latest play, "Zeitwende" (Kurt Wolff, Leipzig), has also had its initial production. The work has many elements of strong dramatic interest, with an array of striking characters and a well constructed plot. There is an old manufacturer who represents the social and business ideals of the past; his two sons, one of them a hopeless invalid, the other a fanciful dreamer; a daughter who is married to a slave of duty likely to be the old man's efficient successor, and an unmarried one who is courted by an unscrupulous adventurer who has been the sweetheart of the older sister and is determined by fair means or foul to get the old man's money. The most fascinating figure in the play is Sebald, the romantic, who goes through it in the way of a fool of mediæval drama or the chorus of antique tragedy, commenting in his erratic way upon the actions of the others. That the girl heroine, who has given her love to the villain, should come to a tragic end, seems a foregone conclusion. Otherwise, there is not a commonplace feature or line in the work, and though some years have passed since the author made his début as dramatist, there is hope that he will in the end produce a drama which will play as well as his work usually reads.

Ludwig Thoma has in his latest work, "Die Sippe" (Albert Langen, Munich), left the Bavarian village *milieu* which is so dear to him and has chosen for his scene a small town in North Germany, and for his theme the irreconcilable conflict between the narrowness of the old patrician stock and the broader conception of life which an artistic career gives. The heroine is an artist whose father has gone to America and has not been heard from for years. She has married the scion of a wealthy old family, and is contented as long as her husband stands by her against his fault-finding, prejudiced family. Then the long lost father suddenly turns up, a man who has knocked about the world without getting any wealthier or wiser, and, imprudent and unpractical as ever, shocks the staid and prosperous relatives by his unconventional frankness.

Otto Soyka's "Geldzauber" (Albert Langen, Munich) is based upon the popular conception of "Americanism" as identical with a commercialism which makes of everything—pleasure, charity, love—a business proposition and a marketable commodity. The play is meant to demonstrate the omnipotence of money. The hero is a young American millionaire, who has founded public libraries, had intended to serve mankind by becoming a physician, but found that the founding of hospitals would be more effective; wanted to devote his life to science, but established a fund which enabled twelve exceptionally gifted and efficient scholars to engage in that work, and is upheld in the growing conviction that he can obtain anything by money by the fact that he finds a young man willing to be his friend for five hundred dollars a month. They have argued the subject of woman's love and come to the conclusion that, though it may not be had for cold cash, it can be bought by gifts and favors. The plot of the play deals with the hero's efforts at storming the heart of a high-spirited young woman, an artist and daughter of an old pianist. Everything else falling, he engages the services of an agency, which procures for the heroine a purchaser for her pictures and arranges for the father a concert, fostering their illusion that they are independent of the American's money. In the end he wins her, because the girl has loved him before she knew that he was a millionaire.

Lily Braun, who has given us her confession of creed in the "Memoiren einer Sozialistin," and a year ago entered upon a new field of literary endeavor with her delightful "Liebesbriefe der Marquise," makes her début as dramatist in "Mutter Maria" (Albert Langen, Munich). The scene of her play is Florence and its environs in 1513. The heroine is a woman who in her girlhood had been loved by Julian the Medicean, and after the fall of the Medici had been married by Giuseppe the carpenter, who gave her and her boy his name and protection. Angelo is vowed by her to the church, and she is worried by the evidences of his talent for art, for during the time of her trouble she had been among those that were profoundly stirred by the words of Savonarola. The return of Julian with his mistress Lucrezia, who was one of Maria's girlhood friends, brings a revival of the pagan spirit. Julian discovers Angelo before the statue of the Medicean Venus, and learns that he is his son. He wishes to acknowledge him as such, and distinguishes him by marks of favor at a feast during which the statue is crowned and made the object of worship. A fanatical priest rushes at it with a hatchet, but Angelo lashes him across the face with a whip. Since he is under the jurisdiction of the convent, church and state clash over him, and when Julian's real character is revealed to him, Angelo secedes from both and stirs the populace by a sermon, for which he is seized and condemned to die at the stake. The mother appears at the critical moments of the story, exhorting, entreating, and consoling her son, whom she pities as a victim to the evil charm of the statue. The play is avowedly inspired by Botticelli's Magnificat, and contains a scene which conveys the very sentiment of Michelangelo's Pietà.

Oskar Kokoschka, the poet-painter of Vienna, is the subject of as much violent controversy as Arnold Schönberg, the composer. He had previously published a work illustrated by himself, "Die träumenden Knaben," but the volume of dramatic scenes, supplemented by reproductions of his paintings, and published under the title, "Dramen und Bilder" (Kurt Wolff, Leipzig), contains recent products of his pen. Barely twenty-eight, Kokoschka has years of material hardships and mental tortures behind him which in a large measure influence his vision and reading of life. There is in his writings, as in his paintings, something of the savage chafing

against the restraint of civilization, defying conventions, and a primitive simplicity which is touching. Personally quiet and modest, Kokoschka must have deeply resented the honor bestowed upon him by the press, which some months ago made copy of the fact that he had broken his engagement to the widow of Gustav Mahler because she enjoyed an income from her late husband's works. The biographer of Mahler, Dr. Paul Stefan, has written an introduction to the book, which furnishes a sympathetic interpretation of the author's puzzling personality.

A. von Ende.

"PANTHEA."

It is difficult not to compare "Panthea," a play in four acts, by Monckton Hoffe, which was produced by the Shuberts on Saturday evening at the Booth Theatre, with certain stronger plays which the combination of its title and theme inevitably suggests. It has in common with "Zaza" and "Camille" a dominating female character, whom consuming love leads to great deeds of self-sacrifice. There, however, the comparison ends. The play has not the compelling intensity of the other two. Lacking this, if it had presented a varied psychological study, or had beautified by sheer imaginative force the world in which its lovers move, it might still have appeared justified. But such analysis and imagination as it possesses are of an obvious order. The talk, to be sure, is of high ideals throughout, and for these the lovers are prepared to fight. Yet there are no sidelights which reveal great souls at work. The characters rise to the height which they reach by the lifting power of the rough situations; one never feels that the situations grow out of the characters. This is a very different work from Mr. Hoffe's slight but pretty play, "The Little Damozel."

Gerald Mordaunt, a young composer, has been living a conventional, shut-in existence with his wife and her people in Northumberland. The break between husband and wife has almost come, when there arrives through a shipwreck on the shore (note the symbolism which seems to declare that the long arm of coincidence is glorified when it is a case of the chance meeting of two perfectly congenial souls) the one being who can bring out Gerald's genius. Panthea, a felon escaped from Russia, requires but one glance at the assembled company to realize Gerald's present state and his supreme need of her. When it is learned that the Russian police are on her track, Gerald not only helps her to escape, but runs off in the night with her. In this scene the author betrays his slight grasp of characterization, which is responsible for that shallowness in the later scenes already referred to. Differences in minor personages are brought out by the elaborate sort of humor which over-patriotic Americans are apt to term "typically English"; and in the case of the central characters too much is left by the author to the individual acting.

In the second act, after a lapse of two blissful years, the two are seen living together in a European capital. Out of his great happiness Gerald has created an opera, successful in every respect save only this, that he cannot get it produced. At the moment despair has brought him to the verge of a breakdown, and he has been ordered by his physician to take a month off in the country. Here is Panthea's chance, and she accepts it with complete self-effacement. In order to obtain a hearing for the piece, she agrees to give herself for that month to the director of the Royal Opera, Baron de Duisitort. The third act pictures a setting not unlike the reception in "Camille," a dinner at the Baron's, at which Gerald is toasted as hero. Panthea, though present, is, of course, in no mood to participate in the jollity. It is evident that a revelation of her deed is approaching. Gerald, hearing all, smashes dishes, renounces his love, and leaves. Panthea continues the breaking, and kills, or apparently kills, the Baron, though later the old device of apoplexy is lugged in to save her from murder. In the final act Panthea extracts forgiveness from her lover by a rather bald statement of the motive of her offence. Here enter the Russian police to drag the lady off to Siberia, whereupon Gerald insists upon marrying her, that he may thus gain the privilege of accompanying her.

A story of violence assuredly is this, though its kernel possesses supreme possibilities. As the play stands, even great actors could not quite have redeemed it, and the acting on the opening night was not great. Olga Petrova, who hitherto had been seen in vaudeville, showed moments of real power as Panthea, especially in the scene of bartering with the Baron, and in the busy third act she was clever, if not profound. But in the main her work seemed imitative of at least two other actresses. She might better be content to develop her own striking personality. George Nash, as the old, profligate Baron, gave a competent performance, and Milton Sills was effective as Gerald, though his voice lacked that varied modulation by which great scenes can often be rendered without explosiveness and violent gesture.

F.

"LADY WINDERMERE'S FAN."

"Lady Windermere's Fan," which Miss Margaret Anglin revived in the Hudson Theatre on Monday evening, is perhaps the best of Oscar Wilde's comedies. In spite of the improbability and artificiality of its plot—with its long array of coincidence and convenient suppressions—it tells a good story and offers a series of situations which are exceedingly ingenious, if not particularly convincing, and of indisputable theatrical value. The dialogue, of course, although savoring very strongly of the lamp, is almost constantly amusing, being closely packed with epigram and paradox, in which much cheap and easy humor is illumined by frequent flashes of genuine wit.

The outstanding feature of the representation was the Mrs. Erlynne of Miss Anglin, who won a triumph in the third act, where the adventuress, by the sacrifice of herself, enables her imperilled daughter to escape from the rooms of the seductive Lord Darlington. Her performance in this critical scene—as, indeed, throughout the play—was notable for its complete comprehension of the assumed character, its artistic restraint, and its admirable finish. Miss Anglin, upon proper occasion, can be an emotional actress of great eloquence. But here, rightly mindful of the character of Mrs. Erlynne—a woman tried in the furnace of experience—she kept her emotions under strict control—suggesting by many subtle signs the inner anguish caused by the cruel taunts of her daughter—all ignorant of the relationship—but preserving an undaunted front, and prevailing in the end by force of dominant will. She was especially impressive in the passionate appeal which she made to the maternal instinct of the impulsive young wife, filling it with a fine sincerity. Her whole impersonation was a notable artistic achievement and fully justified a revival which in other respects was not brilliant.

Miss Margery Maude played Lady Windermere with intelligence and refinement and Pedro de Cordoba was an excellent Windermere, playing with distinction and spirit. Mrs. Le Moyne was curiously inefficient as the Duchess, and Arthur Byron was an exceedingly prosaic Darlington. It was distinction of diction and manner that the representation chiefly lacked.

J. R. T.

"CHANGE."

The Drama League of America could not have illustrated better its possibilities of usefulness than by lending its support to another New York production of "Change" at the Park Theatre at popular prices. "Change" is the drama by J. O. Francis which gained Lord Howard de Walden's prize offered for a Welsh play. It was produced some weeks ago with an admirable cast at the Booth Theatre, and by its premature decease at the end of two weeks illustrated the fact that the first-night critic still retains his power, if not to make, then to mar a production. For some reason a certain number of the critics decided that "Change" was not calculated to please the Broadway taste, and proceeded to cover it with ridicule. Had the play been able to survive the unfavorable impression created by some of the criticisms published in the daily press on the day succeeding its première it would very possibly have had a successful run, but by the time the more serious and responsible critics had published their appreciations of the strength and sincerity of the play the damage had been done.

The theme of the piece, the antagonism between the ideals of two generations, as reflected in the attitude of a family in a Welsh mining village towards the principles of syndicalism, is developed with great power and rare dramatic skill. Galsworthy has never done better work. The production and the acting, which were the points particularly seized upon for adverse comment, are in point of fact far superior to what is usually seen on Broadway. The cast lacks a high-salaried "star" and the play a star part, and possibly

for this very reason the general level of the acting reaches a high standard.

S. W.

SHAW'S "PYGMALION" IN GERMAN.

On Tuesday, March 23, the German Theatre of New York presented for the first time in America Shaw's "Pygmalion," and now has made it a regular part of the repertory. This play had its first performance last October at the Burgtheater in Vienna. The translation used is that of Siegfried Trebitsch, a well-known Viennese journalist, who has translated several other plays by Shaw.

"Pygmalion" describes the experiment which an ambitious professor of phonetics performs with a loud-mouthed flower-girl whom he happens to encounter one stormy night in front of a theatre. A chance remark to an acquaintance upon Liza's coarse speech, which his art could surely transform into language worthy of a duchess, had he only the opportunity to teach her, is overheard by the girl. She comes to him the next day, begs him to accept her as a pupil, and offers to pay him with the money he himself has thrown to her. The enthusiast is aroused; Professor Higgins pledges himself to make a lady of her, and thereupon enters into a wager with his friend and fellow worker, Major Pickering, that he will be able to introduce Eliza at an Ambassador's reception as a countess within six months. He takes the girl into his house, making her half slavey, half doll. Unconsciously he allows himself to become entirely absorbed in this new live plaything. Eliza's first venture into middle-class society is unsuccessful; the native color of her Dover dialect peeps out beneath the thin veneer of small talk which she has been taught to repeat. But the final test is a triumph for the master. However, what shall become of her now? Eliza's social conscience has been aroused, she does not wish to fall back into the lower world, nor is there any place for her in the new surroundings for which she has been artificially prepared. In terms no less strong, though perhaps a bit less colorful, than those which she employed before her metamorphosis, she expresses her indignation to her indifferent teacher. The confirmed bachelor must acknowledge that her society has become a habit which he would not miss, and the final scene implies a solution not unlike that of the Greek story which gives the comedy its name. There is little room for the exposition of social doctrines in this plot. But two scenes with Eliza's father, "the unworthy poor," supply this opportunity. The audience seemed to enjoy the humor of situation and of dialogue in Teutonic dress.

B.

NOTES.

In response to the suggestion of a newspaper correspondent that busy men would find from 5:30 P. M. to 8 a more convenient time for theatrical performances than the usual hours, the experiment is to be tried by Gaston Mayer at the Queen's Theatre, London, with "The Melting Pot." Mr. Mayer, however, confesses himself at a loss to know what title to give to such a performance, as he cannot call it either a matinée or a soirée. Among the suggestions offered him are "five-o'clock," "cheminée" (as indicating the fireside hour), and "apéritif."

M. Charles Truffier, the distinguished comedian, has retired from the Théâtre Français. A Paris letter in a London journal says of him: "I thought him better than Coquelin in non-sensational plays. There never was a better Mascarille, Scaramouche, or Arlequin. Yet 'low' comedy, as he appeared in these characters, never touched them. He played the eighteenth-century valet to perfection, and his personation of Figaro has entered into the Français tradition. Maître Patelin was also one of his best impersonations. He was not fond of Augier's comical bourgeois, yet he did marvellously well as Giboyer, a stupidly self-satisfied and upstart bourgeois. Of all the actors of his time Truffiier did best in De Musset's plays as a light comedian. As Mercadet, a half-dunce when gauged by high thoughts and standards, and a whole knave, he had no match. With all his culture and refinement he was fondest of Scarron—a cousin in mind of the author of 'Hudibras'—of Molière, and of Diderot."

A memorial to Richard Burbage, James Burbage, and other players of the Elizabethan period, who were buried in Shoreditch Church, was recently unveiled in London by Sir George Alexander. The memorial consists of a mural tablet within St. Leonard's Church, and a seat in the church garden, which is now used as a public open space. The tablet, which was designed by W. H. Ansell, bears the following inscription:

This stone is placed here to the Glory of God and in acknowledgment of the work done for English Drama by the players, musicians, and other men of the theatre who are buried within the precincts of this Church, and in particular to the memory of those who are named below.

James Burbage (d. 1597), a joiner by trade and the head of Lord Leicester's players, who, in 1576, built in Shoreditch the first English playhouse. Cuthbert Burbage (d. 1636), his son, who, in 1599, built in Southwark the famous Globe playhouse. Richard Burbage (d. 1619), also his son, the great tragedian, and the first actor to play the parts of Richard III and Hamlet. William Somers (d. 1560), Court Jester to Henry VIII. Richard Tarlton (d. 1588), one of Queen Elizabeth's players, and the foremost comic actor of his time. Gabriel Spencer (d. 1598), a player at the Rose Theatre. William Sly (d. 1608), and Richard Cowley (d. 1619), players at the Globe Theatre. Erected by subscription in 1914. Stewart D. Headlam, Chairman of Committee, London Shakespeare League.

Benjamin Franklin Keith, founder and owner of the string of vaudeville theatres under his name, who died on March 26, at the age of sixty-seven, was born at Hillsboro, N. H. His first enterprise was a miniature dime museum in Boston in 1882, with a single attraction, a midget. In 1885 he became part owner of the Gaiety Theatre, Boston, and there initiated the characteristically American idea of the "continuous performance." He gradually acquired more theatres, the Gaiety Museum in Providence, the Bijou Theatre in Philadelphia, the Union Square Theatre in New York, until in 1906 he formed the Keith & Proctor Amusement Company, controlling a number of theatres throughout the country.

Music

WOLF-FERRARI'S NEW OPERA.

Operatic managers are usually most generous in their promises of novelties, but it is not often that these are entirely fulfilled. This year the manager of the Metropolitan has redeemed all his pledges. Five operas were promised; five have been produced. The cosmopolitanism of that great institution is indicated by the fact that of these operas two were sung in Italian, one in German, one in English, one in French. The first of the novelties, Richard Strauss's "Rosenkavalier," has proved more of a success than its reception by the public and the press at the outset promised; yet the number of performances it has received falls short by about fifty of the number called for in Berlin the first season of its existence. Montemezzi's "L'Amore dei tre Re" also has made a considerable appeal to the opera goers, thanks largely, if not chiefly, to the revelation it made of Lucrezia Bori's winsome art as an actress as well as a singer. Victor Herbert's "Madeleine," though also well received, can hardly be placed on a level with his "Natoma," because in it he subordinated his rare gift of creating melodies to the *parlando* or conversational style which has come into vogue since Verdi's "Falstaff." The least successful of the new productions was Charpentier's "Julien," which even the combined art and popularity of Geraldine Farrar and Caruso could not save.

The last of the new operas to discuss is "L'Amore Medico." Its composer, Wolf-Ferrari, is the most conspicuous victim of the "Falstaff" delusion. When Verdi wrote that opera he was nearly eighty—too old to create new melodies. To atone for that senile shortcoming, he lavished on his opera an amazing skill in part-writing, in adapting the music to the words, in weaving an orchestral score with rare contrapuntal ingenuity. These things naturally interested trained musicians, but the public lusted for the melodic fleshpots of the Egyptian "Aïda," and after tasting "Falstaff" would have no more of it.

While the style of Wolf-Ferrari's first two operas, "La Sulamita" and "Cenerentola," is not known here, they were followed by two operas, "Le Donne Curiose" and "Il Segreto di Susanna," which pursue the "Falstaff" method of hiding poverty of melodic invention beneath a veil of technical ingenuity and refinement. For this ingenuity and subtlety of craftsmanship he received from the critics a great deal of praise, but the public, because of the dearth of melodies, kept aloof. Now, a composer cannot live on critical praise, so Wolf-Ferrari wrote his next work, "The Jewels of the Madonna," in the style of the neo-

Italian blood-and-thunder operas, the result being that, while the critics abused him, the public became interested, because, with all its vulgarity, the "Jewels" is, at any rate, not anæmic; there are real melodies in it. Immediately there was a demand for another opera from his pen, the result being "L'Amore Medico."

Everybody who knew the story of his career wondered whether the new work would be in the style of "I Gioielli della Madonna" or in that of "Le Donne Curiose." The choice of a libretto indicated that it would be the latter, for "L'Amore Medico" is based on Molière's "L'Amour Médecin," a comedietta in which the French playwright satirized the medical men of his time. Five of them (in the operatic version four) are called in to cure Lucinda, the daughter of Arnolfo, the owner of a villa near Paris. He has selfishly made up his mind to keep her always, and has shut his doors to suitors; yet she is pale and melancholy, the victim of love-sickness. Her maid, Lisetta, brings on a crisis by crying that Lucinda is dying, whereupon the four doctors are sent for. While they are quarrelling as to the diagnosis of the girl's malady, Lisetta brings in Lucinda's lover, Clitandro, disguised as a doctor. After talking with the girl he informs the father that her illness is purely mental, a foolish notion that she must get married. To cure this malady—which may become fatal if not attended to—he advises a sham marriage by a sham notary, he himself posing as the bridegroom. Arnolfo is pleased with the plan; the ceremony is performed, but by a real notary, and the selfish father discovers too late that he has been duped.

A play like this, to be effective, must be acted with lightning speed. Music inevitably retards the action, and unless it has great charm of its own it can only harm a play. Wolf-Ferrari's music has considerable charm, but not enough to counteract the disadvantage of unduly expanding a joke. In "Le Donne Curiose" a similar trifle is tiresomely spread out over three hours. "L'Amore Medico" is shorter by an hour, but still one feels the retarding action of the music unpleasantly; all the more so because Wolf-Ferrari really lacks the gift of musical humor. Most disappointing in this respect is the altercation of the four doctors, which might have been made most amusing. In the opera it is tame and tiresome—a great opportunity wasted.

On listening to the overture one gets the impression that the "Meistersinger," to which there are some distinct allusions, would play an important part in the opera; but this is not the case. Having paid his respects to Wagner, Wolf-Ferrari calls up memories of Rossini, Mozart, Charpentier, and others. His own contributions are not important from the point of view of invention. His workmanship is even more ingenious than in his other operas, and the orchestration is rich and varied; but these things do not suffice to make an opera successful. The reception of "L'Amore Medico" was not enthusiastic.

HENRY T. FINCK.

The new season of grand opera at Covent Garden will extend from April 20 to July 27. The programme will contain only two items hitherto unknown in London—Montemezzi's "L'Amore dei tre Re" and Zandonai's "Francesca da Rimini."

Art

THE NEW AGITATION FOR A MINISTER OF FINE ARTS.

LONDON, March 20.

From time to time an outcry is heard in England—mainly in London—that art is in a sad way, and that nothing can relieve it save the immediate appointment of a Minister of Fine Arts. Perhaps it is because of the present tendency in English politics to create for every new evil a new department, until the multiplication of officials is looked upon as the universal panacea, that the periodical demand for the new Minister is now louder and more persistent than it has ever been before, and that the artists who are making it have got so far as to appoint a committee, call meetings, draw up a scheme, and go through the inevitable British formula of agitation. Altogether, there has been a good deal of talk, if less thought, though the subject is one that, if raised at all, calls for careful thinking in England, and in America, too, for that matter, since America has begun to turn its fancy in the same direction.

As usual, when the question is discussed, France is pointed to as an example and a precedent. It does not seem to occur to anybody to ask if a measure that may serve the French is as well adapted to English needs. The French have had their Ministry of Fine Arts, or its equivalent, for a period to be reckoned in centuries. It has become an established and essential institution of the country like the Académie or the Théâtre Français. One feels it would be as shocking a piece of vandalism to do away with it as to pull down the Louvre or Notre Dame. That it has proved an unmixed blessing is open to doubt. Those who know the cathedrals and churches and castles of France, and have seen in them the traces of the passing of Viollet-le-Duc and Abadie, may well wonder if the gain has compensated for the loss, since they were turned into historical monuments under the charge of the Government. To go the rounds of the year's several salons is to wish the Government a trifle less liberal in its provision of galleries for current exhibitions. Nor is the Luxembourg collection a convincing proof of the Government's wisdom in its purchase of the works of living artists. The Ministry of Fine Arts has done and still does much good, but it is not infallible, and as a rule it is for its least admirable features that it is most admired by the Englishman who would have his country imitate it.

This is evident in the English scheme now proposed, and in the discussions, both public and private, that have followed in its support. For the constitution of the Ministry it is proposed that there should be a Minister, with a permanent secretary and a standing advisory council of about eighteen, its members to serve in rotation and to be chosen from "recognized authorities" in architecture, painting, sculpture, industrial art, and museums, while, curiously, one literary man, antiquary, dramatist, and musician are also to be included. For duties, the Ministry would have the care of all æsthetic matters of public interest, of the national museums and galleries, of town-designing and public monuments and "amenities," and of the acquisition and preservation of national art treasures. It is an admirable scheme on paper, but it is not difficult to foresee what it would be in practice. Indeed, it might seem as if the members of the preparatory committee had been selected with a view to making this quite clear, for they are mostly the Academicians and representatives of the other most conservative bodies in the country who already have a finger in every artistic pie, and who recognize none but official art. London, in its street sculptures, in the decoration of many of its public buildings, in its approved architectural plans, already groans under their tyranny. The British section of almost every international exhibition is in their hands. The Chantrey collection at the Tate Gallery sets their standard of modern art.

There is no special reason to believe that Academicians would advise a Minister of Fine Arts to better purpose than their president, or that they would be more disinterested in conducting the affairs of a State Department than those of their own Academy. It is amusing to see how large a part the future Minister's purchase of modern works of art plays in the public discussion and private gossip on the subject. At an official function the other evening applause was lavished upon the French Government for buying and exhibiting the works of young artists, who were thus enabled to obtain commissions, a form of encouragement, it was decided, much needed in England—though I have an idea that the French Minister of Fine

Arts would be more astonished than anybody to hear that his high office was used as an advertising and employment agency for the unemployed artist. Privately, I have been assured more than once of the advantage to the beginner could his work be bought by the state, for no matter how small a price, that the wolf might be kept from his door while he struggled to produce his masterpiece—though, if this sort of argument were carried out logically, the state might as reasonably be expected to print the unsalable MSS. of the literary novice, or give a concert for the unrecognized musical prodigy. But logic is not the strong point of many supporters of a scheme in which they see little beyond the prospect of public grants for modern art and the chance of their coming in for a share of the spoils.

In this vision of a Time of Plenty to be inaugurated by a brand-new Government department, two important, if simple, facts are forgotten. One is that all the officials in the world cannot create art; the other, that art patronage is more munificent in countries like England and America, where there is no Minister of Fine Arts, than in France, where there is. The French artist, who is offered by his Government the lowest price possible for his work, would gasp with astonishment at the sums often received by the English or American artist from national or municipal or other public authorities. I do not have to be told that the price paid for it has nothing to do with art, but it is made so much of in the present discussion that I should like to point out just what it amounts to in France, which is accepted as a model in these matters. There, the honor of being represented in the national or municipal collection is supposed to be the highest rate of payment the artist could desire; and the artist himself is of the same opinion. In England, where there is no Minister to confer the honor, the artist can still estimate his work by pounds, shillings, and pence, and for a place in the Tate Gallery, sometimes called the English Luxembourg, he has been paid prices by the Chantrey bequest that at times have become a public scandal. Nor has he to complain when his work is purchased for the large municipal collections. The galleries of towns like Liverpool and Manchester, Birmingham and Bradford, show that he has not languished for want of art patronage while waiting for the art patron of his ambition. As for the United States, there is no country in Europe where the artist rejoices in such important public commissions, where he is so liberally patronized by national and State and municipal authorities.

In other ways art in England is cared for, even if as yet there is no appointed Minister to give the initiative. Machinery in the Board of Works can be set going when it is a question of that preservation of ancient buildings which is one of the special duties of the Minister of Fine Arts in France. If the machinery sometimes bungles, who can say that the Minister so much vaunted does not make mistakes? America has not the same machinery, but manages nevertheless to extend a protecting hand to its historical sites and monuments. When, in England, it is a question of international exhibitions, the Board of Trade is no less well equipped, providing in its Exhibitions Branch the necessary office and the necessary officials, who, if slow and narrow, probably are no slower and narrower than they would be if the department to which they consecrate their services was called by another name. Criticise the Board of Trade as you may, here really is a branch of its work that might advantageously be copied, but on broader lines, at Washington, where neither our American Federation of Arts nor our National Commission of Fine Arts has, as well as I can make out, got so far as to insist that American art shall be worthily represented abroad, and to invent the methods by which this can be accomplished: the explanation, no doubt, of the cheerfulness of American artists in resigning their representations, when nothing better offers, to the care of the American millionaire. It is not to be wondered that American art is scarcely known in England or on the Continent.

If there is to be a Department of Fine Arts in England, or America, it would be unwise to drift into it blindfold. Its advocates naturally dwell upon the good it could achieve, and to this good I admit there would be no limit were it certain that a Minister with the intelligence of the great patrons of art—of Charles I in England, Philip IV in Spain, the Medici in Florence—could always be found for the office. If it were certain, then art could be left without fear to his splendid tyranny. But the true patron of art has ever been in the minority, which is why the evil that may come from a Minister of mediocre intelligence and taste should likewise be considered. Art suffers from officialism in France, where a Ministry of Fine Arts is in sympathy with the genius of a people who respect order above all the virtues. It can easily be imagined what might happen in England or America, where such a Ministry would be, at the best, a borrowed institution. To every question there are two sides, and the possible evil should be faced as well as the possible good, or, with the establishment of the new department, art might be more hidebound by convention and fixed by tradition than ever.

A few days ago, London was shocked by the news of the outrage at the National Gallery—the attack upon the Rokeby Venus by a suffragette. Before the Government begins to consider the question of a Ministry of Fine Arts, it might devote some of its attention to the proper protection of the art treasures it already possesses, or eventually there may be little for the new Minister to care for. The possibility of such an outrage makes it a reason for gratitude that so many of England's paintings and other works of art are passing to America. Had it occurred abroad, all England would have been virtuously incensed at the incompetence of the foreign official. But, since it happened in the heart of London, under the very eyes of the British Government and the British police, it is only an unfortunate accident. How inadequate the law is to meet such a crime is explained by the magistrate's regret, in passing sentence, that six months was the maximum he could give for damaging works of art, though for smashing a window he might have made it eighteen—a curious comment upon the country's appreciation of art. N. N.

Finance

LONDON'S MARKETS AND THE "ARMY CRISIS."

Nothing about the extraordinary complications between the British Ministry and the British army has been more remarkable than the absence of any visible sign of apprehension on the markets. The plain facts of the situation seemed to be that the officers of the army regiments in Ireland had refused to obey orders to move their troops into Ulster, unless they were assured as to what they would be required to do there. The ultimatum, it is true, was framed in the alternative of resignation of such officers from the army; but the number of those who took this action amounted to serving notice that the army was laying down conditions before obeying orders, and was doing so, in advance of having been ordered to do anything at all, except to guard the Government's military stores.

In any other country than England, this would have meant such insubordination as would have undermined the power of the state. Occurring in France or Germany, the incident would almost certainly have caused a convulsion in the financial markets. At London last week's successive announcements in the army imbroglio were greeted by a rise of half a point in consols, Monday (after a day of terrifying rumors, Sunday), by a further advance of ¾ on Tuesday, with reaction of less than ¼ point in the next three days, and sharp recovery at

this week's opening. Meantime, the general London market, on the whole, held firm, and on some days was distinctly strong.

There have been several explanations of this somewhat singular reception of the news. One, which is obvious enough, is that last week's markets had been led to expect an actual outbreak of civil war in Ulster, and showed their relief when that did not take place. But last month's London markets were only mildly unsettled, and that unsettlement was chiefly ascribed to other matters than Ulster. Since the London market, despite its reaction from the high February prices, still retains a great part of the vigorous forward movement of January and February, the more obvious explanation of last week's recovery would seem to be that Lombard Street thinks that both the civil commotion in Ulster, which it feared, and the coercive Home Rule legislation, which it detested, have been averted or blockaded by the action of the army.

Whether this is a short-sighted view or not, it remains for events to show. Outside observers have certainly drawn the inference that no situation could be much more obscure and dangerous than that which has suddenly arisen; the point being made that, even if the whole question is now thrown before the people in a general election, the campaign issues will not only be Home Rule, but the subverting of army discipline and the question, always effective on the hustings, of privilege versus democracy. Furthermore, it would seem that nothing could alter the fact of military insubordination.

Why, then, should the London Stock Exchange have retained such unmistakable composure? Perhaps the most satisfactory answer is that such an occurrence in the army causes less apprehension in England than it would cause in any other country. The loyalty of the army to the civil power is not questioned at all, in its general functions. Not only so; but England has heretofore been confronted with a much more alarming crisis of the sort, which it surmounted with unexpected success. This happened more than a century ago, but it still remains as an instructive object-lesson. The circumstances then were of the most formidable sort; they apparently threatened the safety of the country; yet even that episode ended in character with English traditions.

It was in 1797, when, with Napoleon victorious over England s ally, Austria, with a French fleet threatening Ireland, and with the English Channel fleet blockading Holland, the sailors mutinied. At Spithead they seized the ships; at Sheerness they captured and imprisoned their officers, and the mutiny actually spread to English vessels in such remote quarters of the world as Porto Rico and Cape Colony. At one time, the admiral who was conducting operations against Holland had only two ships obeying orders, and was able to deceive the enemy only by pretending to signal from those ships to the mutinous members of the fleet. London's financial markets took a very different view of the situation from what they took last week; at the crisis of the mutiny consols fell to 47½, as against 70¾ the year before, and for a time the Bank of England suspended specie payments.

Yet the sequel was as remarkable and unusual as the episode itself. The spirit of mutiny was quickly exhausted. Sailors of one squadron, who had mutinied against hard treatment, sent bitter denunciations to sailors of another squadron, who had been tampered with by revolutionists. There had been real abuses; the Government promised to remove them. It went so far as to promise pardon to all except the ringleaders in the mutiny. It offered increased pay, recaptured the ships, and brought them into action. Under the admiral who had sent the signals from his fleet of two ships, the united fleet attacked the Dutch flotilla and annihilated it. Only a few years later, the same English navy, fighting under Nelson, won the great victory of Trafalgar.

The case of the fleet in 1797 and of the army in 1914 presents few points of actual analogy; the only clear resemblance lies in the fact that the civil power lost control. There is one curious parallel, however, in the fact that on each occasion the episode occurred at a time when established ideas of things in general were being subverted by new and unusual propaganda. The theories of the French Revolution pervaded the whole political, social, and military world in 1797. What sort of theories are pervading the world today and upsetting old conceptions of precedent, authority, and conduct, is manifest to everybody.

The Unpopular Review

CONTENTS FOR APRIL-JUNE

The Soul of Capitalism
A Sociological Nightmare
Social Untruth and the Social Unrest
Natural Aristocracy
The Right to be Amused
How Woman Suffrage Has Worked
The Baby and the Bee
The Case for Pigeon-Holes
The Greeks on Religion and Morals
Our Sublime Faith in Schooling
The Barbarian Invasion
Trust Busting as a National Pastime
Our Government Subvention to Literature
En Casserole:
Special to Our Readers—A Specimen of "Uplift" Legislation—A Model of Divinatory Criticism—Some Deserving "Climbers"—Simplified Spelling.

Probably many readers would be interested in fuller treatment than The Nation's space permits, of many problems there discussed. They may frequently find such treatment in THE UNPOPULAR REVIEW by writers closely identified with The Nation. The objects and spirit of the two periodicals are virtually the same, the weekly supplying the fresh treatment of current matter, the quarterly supplying the fuller treatment of interests more abiding.

SOME CONTRIBUTORS, PAST AND PROSPECTIVE:

Prof. W. T. Brewster, Columbia; Mr. H. B. Brougham, N. Y. Times; Pres't N. M. Butler, Columbia; Profs. T. N. Carver, Harvard; J. B. Clark, Columbia; H. W. Farnam and Irving Fisher, Yale; Warner Fite, Univ. of Ind.; Prof. Fabian Franklin, N. Y. Evening Post, late of Johns Hopkins; Mrs. Katherine Fullerton Gerould; Prof. F. H. Giddings, Columbia; Mr. Clayton Hamilton; Prof. Alvin S. Johnson, Cornell; Chancellor D. S. Jordan, Stanford; Prof. V. L. Kellogg, Stanford; Mr. E. S. Martin, of "Life"; Profs. F. J. Mather, Jr., Princeton; Brander Matthews, Columbia; G. F. Moore, Harvard; Mr. Paul Elmer More, The Nation; Prof. W. R. Newbold, Univ. of Pa.; Mrs. George Haven Putnam; Profs. H. R. Seager, Columbia; S. P. Sherman, Univ. of Ill.; P. Shorey, Univ. of Chicago; G. Showerman, Univ. of Wis.; V. G. Simkhovitch, Columbia; Mr. F. J. Stimson; Miss Ida M. Tarbell; Profs. Calvin Thomas and W. P. Trent, Columbia; and Prof. Frederick Tupper, Univ. of Vt.

Specimen copies sent to any address, subject to return or payment at pleasure. 75 cents. $2.50 a year.

HENRY HOLT AND COMPANY 28 West 32d Street New York City

Initiation into Literature

With Additions Specially Written for the English Edition

By EMILE FAGUET

$1.25 net.

This volume, as indicated by the title, is designed to show the way to the beginner, to satisfy and more especially to excite his initial curiosity. It affords an adequate idea of the march of facts and ideas. The reader is led, somewhat rapidly, from the remote origins to the most recent efforts of the human mind.

G. P. Putnam's Sons NEW YORK LONDON

The Origin and History of Irish Names of Places

By P. W. Joyce, LL.D. One of the Commissioners for the Publication of the Ancient Laws of Ireland, author of "A Short History of Ireland," etc. **Vol. III.** Crown 8vo. pp. x + 598. $1.75.

The first volume was published forty-four years ago, and the second a couple of years later. They have both passed through many editions, and the work is now completed by the publication of the third volume.

LONGMANS, GREEN, & CO., Publishers

BROWNING'S COMPLETE WORKS

THE AMERICAN YEAR BOOK FOR 1913

D. APPLETON & COMPANY, Publishers

NEW SPRING BOOKS

BEHIND THE VEIL AT THE RUSSIAN COURT

By COUNT PAUL VASSILI. With 23 Photogravure Plates. Large 8vo. Cloth. $4.50 net.

Graphic revelations of social, political, and imperial life in Russia, recorded with unsparing frankness from many secret and official documents inaccessible to the public.

WITH THE RUSSIANS IN MONGOLIA

By H. G. C. PERRY-AYSCOUGH and R. B. OTTER-BARRY. With 50 illustrations and a Map. 8vo. Cloth. $4.50 net.

A really authoritative work dealing with the religion, commerce, and history of this "undiscovered" country.

THE TOWER OF THE MIRRORS

And Other Essays on the Spirit of Places

By VERNON LEE, author of "Vital Lies," etc. 12mo. Cloth. $1.25 net.

The Genius of Places is the principal theme of this book, which is full of those delicate and brilliant suggestions which inspire all this author's writing.

THE FORTUNATE YOUTH

By WILLIAM J. LOCKE. Eight illustrations by ARTHUR I. KELLER. Cloth. $1.35 net.

A great romance of life and love and ambition, the author's best since "The Beloved Vagabond."

"The whole story is as light, as joyous, as iridescent as a soap bubble; it glows, radiant with the very spirit of youth, of joy, and of adventure. But it has its philosophy, too. It is a charming tale, one that only Mr. Locke could write."—*N. Y. Times.*

THE FLYING INN

By GILBERT K. CHESTERTON. Second edition. Cloth. $1.30 net.

"With 'The Flying Inn,' Chesterton sets the seal on his versatility; It is a medley that out-Chestertons Chesterton." — *Boston Transcript.*

"A book that makes you want to get up and shout . . . which is a good feeling; a book like a brass band marching and playing over hills, with strong youths stepping to it; in fact, it's Mr. Chesterton at his amazing best." — *Hildegarde Hawthorne, in the N. Y. Times.*

VICTORY LAW

By ANNE WARWICK, author of "The Unknown Woman," "Compensation," etc. Cloth, $1.30 net.

"Miss Warwick's novel gives special emphasis to the fascination of the world behind the footlights; to the call of the stage ever ringing in the ears of those who have trodden its boards. . . . The book holds characters of very unusual interest and worked out with much subtle skill . . . A delightful book." — *New York Times.*

JOHN LANE COMPANY .·. NEW YORK

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth, $5.00 net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

A "BIG" NOVEL

The World Set Free

By H. G. WELLS

Author of "The Passionate Friends," "Tono-Bungay," etc.

Cloth, net, $1.35

"The goal of Mr. WELLS'S thinking is the end of war and the realization upon earth of a real 'parliament of the world.' . . . And his new book 'The World Set Free' embodies more of his creed than anything heretofore published."—*Review of Reviews.*

"A magnificent piece of workmanship . . . aside from the thrilling quality of the story itself."—*New York Times Book Review.*

In brief, the book is stimulating, reasonable, full of hope for the future. Its stirring story must appeal strongly to those who are looking to this modern prophet for inspiration.

BY THE SAME AUTHOR

The Wonderful Visit

Cloth, net, $1.35.

READY NEXT WEEK.

A re-issue of Mr. WELLS'S satirical story of an angel visitor to a country parish who actually practices the curate's preaching.

The art of it! He creates a character, ignorant of every social prejudice, yet not a fool; and quite without sin, yet not a prig.

Modernities **By Horace B. Samuel**
Ten studies of very diverse individualities who have this in common, that each expresses in high degree the spirit of modernity, the acceptance of experience, achievement, as the sole aim of life. *Cloth, net, $2.50*

The Romance of Names **By Ernest Weekley**
Exceedingly interesting chapters showing the curious and often romantic bits of history discovered in tracing the origin of surnames, place names, etc. By the author of "Romance of Words." *Cloth, 12mo, $1.25*

The Cult of Incompetence **By Emile Faguet**
"A mordant and timely criticism of pure democracy."—*New York Evening Post.* *New edition.* *Cloth, net, $1.50*

The Poetical Works of Edward Dowden
In two volumes, containing not only the "Poems" published in 1876, but many of later date, including his translation of Goethe's "West Eastern Divan." *Cloth, net, $4.00*

Gothic Architecture in Spain
The indispensable work of GEORGE E. STREET brought to date by GEORGIANA GODDARD KING, and made more useful than ever. *Cloth. 2 volumes, net, $2.00*

Greek and Roman Sculpture **By A. Fürtwangler and H. L. Urlichs** Trans. by Horace Taylor
The long needed abridged and revised English version of the standard German text-book. With 60 plates and 73 illustrations in the text. *Cloth, net, $2.50*

A History of Emigration from the United Kingdom
STANLEY C. JOHNSON, in this survey, supplies data of great value in any discussion of the restriction of immigration or the distribution of immigrants. *Cloth, net, $2.00*

The Railways of Great Britain **By Lord Monkswell**
Particularly timely in that it shows that such alliances between railroad systems as are being violently attacked in this country have proved the reverse of harmful, as managed in England. *Cloth, net, $2.00*

A Pilgrimage of British Farming **By A. D. Hall**
A survey of modern farming in Great Britain, as a money-making business, by the Director of the Rothamsted Experiments, author of "The Soil," etc. A model for any similar survey. *Cloth, net, $1.50*

The Higher Nationality. **By Viscount Haldane**
The address which the Lord Chancellor of Great Britain delivered last Fall before the American Bar Association, crossing the sea for this express purpose. *Cloth. 8vo, net, 60 cts.*

IMPORTANT NEW NOVELS

The Red and the Black **By Stendhal**
A chronicle of 1830. Translated by Horace B. Samuel. The greatest novel of its period, and one of the greatest of the whole 19th century. *Cloth, net, $1.75*

Liliecrona's Home **By Selma Lagerlöf**
Characteristic of the famous Nobel prize winner's art in reproducing the half-homely, half-magical atmosphere of the mountain farms of Sweden. *Cloth, net, $1.25*

PUBLIC LIBRARIES, SCHOOLS, COLLEGES AND UNIVERSITIES
A. C. McCLURG & CO., CHICAGO

Appleton's New Books of General Interest

Forty Years of It

By Brand Whitlock, Formerly Mayor of Toledo, Now Minister to Belgium.

$1.50 *net. Postage extra.*

This is the intimate personal account of Mr. Whitlock's experiences throughout his political career as one of the most progressive leaders of democracy in the Middle West. He has known intimately such men as Governor Altgeld, Tom Johnson, "Golden Rule" Jones. His reminiscences contain not only the important phases of their careers as political leaders, but he brings out many new and interesting facts concerning their daily life, presenting a new picture of these unusual personalities.

"A book to be read and re-read because of the human-ness of the biographer and the men he puts into it."—*The N. Y. Evening Sun.*

Hail and Farewell—Vale

By George Moore, Author of "Evelyn Innes," etc.

$1.75 *net. Postage extra. Ready April* 17.

At last the long-looked-for and final volume in George Moore's autobiographical trilogy is ready. In it Mr. Moore reviews his entire life, beginning with incidents of childhood, and continuing with characteristic comments upon Ireland in the seventies, reminiscences of the London stage, of his life in Paris, of his relations with the prominent men and women of the time, of his love affairs, of his views on art, literature, the drama, and of his final return to the land of his birth. "The literature of autobiography," says *The Dial*, "can show nothing to match this trilogy of George Moore's."

Beating Back

By AL JENNINGS *and* WILL IRWIN. *Illustrated with drawings by* CHARLES M. RUSSELL, *and with photographs.* $1.50 *net. Postage extra.*

For several years Al Jennings headed one of the most desperate gangs of train robbers that ever infested the Southwest. This is the account of his life as a train robber, hater of all law and order, his imprisonment and pardon; and the final determination to "beat it back and make good" of the man who is now a candidate for the nomination for Governor of Oklahoma.

Within Prison Walls

By THOMAS MOTT OSBORNE. $1.50 *net. Postage extra.* *Ready in May.*

This book contains an absolutely faithful account of the experiences of the author as a voluntary exile in Auburn Prison. It states the reasons for making the experiment and studying prison conditions from within instead of without, and it is a sympathetic document full of humor and pathos, unusual revelations, and suggestive of needed improvements.

Love and the Soul Maker

By MARY AUSTIN, *Author of "The Land of Little Rain."* $1.50 *net. Postage extra. Ready in May.*

An able study of the rights, privileges, and relationships of men and women, and of marriage in its relation to the problems of modern society.

Norman Hapgood, editor of *Harper's Weekly*, says: "It seems to express with wonderful charm, insight, and clearness the very essence of the feminist movement."

The Life of St. Augustin

By LOUIS BERTRAND. *Cloth, gilt top, uncut edges.* $3.00 *net. Postage extra.*

A brilliant account not only of the vital personality of St. Augustin, but also of the times in which he lived. The book is packed full of information so interesting as to make the life of St. Augustin seem more fascinating than fiction.

Psychology in Daily Life

By CARL EMIL SEASHORE, *Professor of Psychology and Dean of the Graduate College, University of Iowa.* $1.50 *net. Postage extra.*

A clear, non-technical interpretation of the relation of psychology to everyday affairs. It offers an excellent method for cultivating a good memory and for obtaining the maximum mental and physical efficiency. "It may easily become as fascinating as a novel."—*The Epworth Herald.*

Chemistry in America

By EDGAR FAHS SMITH, *Ph.D., Provost of the University of Pennsylvania. With illustrations.* $2.50 *net. Postage extra.*

The history of the progress and achievements in one of the most useful sciences in this country. Compiled, in response to an urgent demand, by one of the greatest chemists of the present day. The work includes many of the real treasures of the science which hitherto have not been accessible.

D. APPLETON & COMPANY, Publishers 35 W. 32d Street New York

SPRING PUBLICATIONS

HARPER & BROTHERS

H. G. Wells's SOCIAL FORCES IN ENGLAND AND AMERICA

Being a Series of Unrestrained Remarks upon Contemporary Matters

This new book of essays by H. G. Wells contains, as he says himself, "a fairly complete view of all my opinions. It is practically all my miscellaneous writings for the last four or five years, edited and drawn together into an effective whole." He discusses divorce, motherhood, schoolmasters, and doctors; diagnoses the political disease of our times; speculates upon the future of the American people; considers a possible setback to our civilization, which he finds menaced by panics and war. But neither does England escape his warnings. *Crown, 8vo.* $2.00 *net.*

Mr. and Mrs. Vernon Castle's MODERN DANCING

This book on the new decent dances of to-day—brought out under the auspices of several New York social leaders, and written by the one recognized authority on dancing of fashionable New York—makes it possible for every reader to know what the latest accepted dances are and to learn how to dance them. The new dances, such as the Castle Walk, the Hesitation Waltz, the Tango, are described step by step, and illustrations from moving pictures reveal the slightest change in the position of the feet. Above all, it is a practical book—practical as well as authoritative. *More than* 100 *Illustrations from Photographs and Moving Pictures. Post 8vo, Cloth.* $1.25 *net.*

Religion and Life

By DR. ELWOOD WORCESTER. "A sincere, even a valuable contribution to religious thought. . . . It is constantly at grips with the actual life about us. It reveals a personality rich and manly, full of insight and energy."—*N. Y. Times.* $1.25 *net.*

A Bishop Among His Flock

By BISHOP ETHELBERT TALBOT, Author of "My People of the Plains." This book is addressed to all those interested in the conditions, responsibilities and great possibilities of the Church. The relation of religion to business, the duties of the Church and its members to social service and to missions are clearly indicated. *Portrait Frontispieee.* $1.00 *net.*

THE IDOL-BREAKER

By CHARLES RANN KENNEDY. The theme of "The Idol-Breaker" is Freedom. The story deals with the modern proletarian struggle towards a real democracy. It takes place in a village of prejudices, traditions, blasphemous religionisms, and economic slavery. The comedy situations have never been equalled since the author's inimitable Bishop of Lancashire in "The Servant in the House." *Portrait Frontispiece.* $1.25 *net.*

Harper's Book for Young Gardeners

By ALPHEUS HYATT VERRILL. Shows how much profit and pleasure may be obtained from simple gardens. School gardening, experimental gardening, ornamental gardening are all explained. *Illustrated.* $1.50 *net.*

The Young Mother's Handbook

By MARIANNA WHEELER. The author, whose knowledge of children's needs is the result of long and unusual experience, discusses the details of diet, baths, and physical training of the infants and young children. $1.00 *net.*

Principles of Correct Dress

By FLORENCE HULL WINTERBURN. The principles this book embodies concern not the fashion of the moment, but the permanent rules of artistic individual dress. It contains chapters by Jean Worth and Paul Poiret, of Paris. $1.00 *net.*

FICTION

The Light of Western Stars

By ZANE GREY. "The real atmosphere of the West and its breath of life and wide breathing spaces, of men and women untrammeled by the petty conventions of cities."—*Boston Transcript.* $1.35 *net.*

The Forester's Daughter

By HAMLIN GARLAND. An idyllic story of the new, the real West, glowing with the love of a girl for the man who needed her care. $1.25 *net.*

Blue Beard, A Musical Fantasy

By KATE DOUGLAS WIGGIN. This musical fantasy is pure fun. It hits off in humorous manner the solemn methods of musical experts. *Frontispieee.* 50 *cents net.*

Under Handicap

By JACKSON GREGORY. A romance of reclamation—the reclamation of a Western desert by irrigation, and the reclamation of a rich idler (handicapped by his father's name and wealth) to strong, self-reliant manhood. The story has virile outdoor atmosphere, which recalls that of Rex Beach's successes. $1.25 *net.*

The White Sapphire

By LEE FOSTER HARTMANN. "All the thrill of a really good detective story, without any of the objectionable features of such a tale."—*Philadelphia Press.* $1.25 *net.*

The Masks of Love

By MARGARITA SPALDING GERRY. A sympathetic story of theatrical life in which a conventionally brought up girl learns to distinguish real talent and real love from their counterfeits. $1.25 *net.*

Our Mr. Wrenn

By SINCLAIR LEWIS. "The drollest book," says F. P. A. in the N. Y. *Tribune,* "I have read since 'Once Aboard the Lugger,' . . . yet, like most droll things, not so droll neither, but here and there a tear." $1.00 *net.*

Storm

By WILBUR DANIEL STEELE. A romance of Cape Cod, of the courage of fishermen, the patience of women, of the terrors of the sea and the eternal beauty and lure of it; of a woman whose loveliness cost the lives of men. $1.35 *net.*

Only Two Weeks Remain of Our Great Closing-Out Sale

on account of discontinuance of 23d St. Store. Hereafter our retail business will be concentrated in the Putnam Building, 45th St. just West of 5th Ave., where our Publishing Offices are established, and where for three years we have operated the new Retail Store.

We aim at *selling out* the entire huge stock of this completely equipped book store. Never before in 78 years of retail bookselling have we offered books at such prices. Shrewd buyers have realized this wonderful opportunity, and we have been shipping orders to all parts of the country to book lovers who appreciate that such a chance may never occur again. From many correspondents come letters expressing delight and surprise at the great values they have received in their purchases.

☞ *Readers of the Nation will find it worth while to give serious attention to this sale. Come to the store if you can. If not, study this ad. and the catalogues, and order quickly. For some books we have received TEN TIMES as many orders as we can fill.*

SPECIAL

ABRAHAM LINCOLN. Complete Works. Edited by Lapsley. With Essay on Lincoln by Schurz, Address by Choate, and Life by Brooks. Large type. 8 vols., 8°, bound in new ¾ red leather.

Price **$40.00** *net.* Offered at **$10.75**

A small supply was taken back from a bankrupt dealer for whom we made this special style, which we cannot sell through regular channels, which is offered, at this nominal price. When these few are sold, *they could not be duplicated at less than double the price.*

GOOD BOOKS FROM 23rd ST. STORE

Of these, varying quantities are offered but not more than a few of each. Some just lack the bloom of freshness, others are *slightly shelf worn or rubbed,* but otherwise perfectly good—of some items the entire small remainder of edition is offered.

*** But the above titles are merely a few selected at random from the immense stock. Our counters are loaded with thousands of books of solid worth, all kinds,—only one or two of a title:—History, Biography, Travel, Science, Belles Lettres, Poetry and Drama, Economics, Reference, old Medical books, Fiction and Juvenile. Most of these we don't attempt to catalogue. They are priced, as low as *one-quarter* to *one-third* of former marks, from 25 cents upwards.

*** ***A New Catalogue, No. 3 (100 pages), describes hundreds of items new and old, large and small, at most tempting prices. Send postal for it. Ask also for Catalogue No. 2 (50 pages), if you have not seen it.***

"The YALE REVIEW is not a Yale University review, but an American review. More even than an American review, it is a cosmopolitan review, and that of the highest order . . . ."—Westminster Gazette (London).

Literature in the April

YALE REVIEW

The New American Quarterly

Edited by Wilbur L. Cross

The Personality of Tagore, by BASANTA KOOMAR ROY.
An intimate appreciation by a fellow-countryman; new information on the career and aim of the most striking personality in Eastern literature and hitherto untranslated poems.

Stephen Crane as I Knew Him, by HAMLIN GARLAND.
A vivid portrait of a great writer who died young.

The German Theatre of To-day, by JULIUS PETERSEN.
A survey of what Germany is doing on the stage by a German critic.

The American Novel, by ROBERT HERRICK.
A continuation of the brilliant criticism of American fiction which has already attracted wide attention from critics and readers.

"Within two years, the YALE REVIEW has proved a clear title to rank with The Atlantic Monthly and The North American Review as one of the three leading American magazines which combine sound and serious qualities with breadth and variety of appeal."—*Springfield Republican.*

"The YALE REVIEW has taken a place immediately among the magazines to be reckoned with. Already this review has acquired an individual tone, which may perhaps best be described as the result of an attempt to emphasize the relation between the 'humanities' and the national life of to-day."—*Philadelphia Press.*

Other Contributions for April:

WOMAN AND SOCIALISM.....*Vida D. Scudder*
THE FEDERAL RESERVE ACT OF 1913 *O. M. W. Sprague*
ASH WEDNESDAY.....*John Erskine*
THE HANDICAP OF THE TROPICS *Ellsworth Huntington*
RURAL CO-OPERATION.....*Edward M. Chapman*
AN ANATOLIAN JOURNEY.....*Helen McAfee*
THE SERIOUS PEPYS.....*Wilbur C. Abbott*
BOOK REVIEWS.

75 cents a copy at leading Booksellers, or the Yale Publishing Association, New Haven, Conn.

OR

The April number free with a year's subscription, beginning with next issue

THE OPEN COURT PUBLISHING CO.'S NEW BOOKS

NIETZSCHE, and other Exponents of Individualism. By Paul Carus

"A two-fold purpose is served by this book,—a study of philosophical anarchism and an interpretation of Nietzsche."—*Brooklyn Eagle.*

"A brilliant refutation of the mad philosopher's doctrine."—*Toronto Globe.*

"This exposition of Nietzsche's life and philosophy is probably both truthful and fair, and as nearly just as any that can be made."—*Chicago Daily News.*

Cloth, 150 pages, $1.00 net.

THE SYSTEM OF THE VEDANTA. By Dr. Paul Deussen. Authorized translation by Charles Johnston.

There are two opposed views concerning the nature of the soul represented respectively by the Vedanta and Buddhism. Professor Deussen, who is both a philosopher and a most prominent Sanskrit scholar, has devoted his life to the affirmative phase,—the Vedanta —and in this great work he has collected all pertinent material. It will be important for psychologists, students of religion and philosophers.

Cloth, gilt top, 514 pages, $3.00 net.

ALGEBRA OF LOGIC. By Louis Couturat. Authorized translation by L. G. Robinson; with a preface by Philip E. B. Jourdain, of Cambridge.

"Couturat's treatise is fitted to serve as an introduction to the study of mathematical logic. Mr. Jourdain's preface is of an historical character and gives a very thorough account of the development of the subject and the various phases of it especially emphasized by each of its different representatives."

Cloth, 98 pages, $1.50.

RADICAL VIEWS OF THE NEW TESTAMENT. By Dr. G. A. von der Bergh van Eysinga. Translated from the Dutch by S. B. Slack, M.A.

This concise work takes up the question of the historicity of the gospels without dogmatic bias, and states very sharply the difference between so-called liberal Christianity and thoroughgoing scientific method in dealing with historical values in the stories of the gospels.

Cloth, $1.00 net.

A HISTORY OF JAPANESE MATHEMATICS. By David Eugene Smith and Yoshio Mikami.

The scientific attainments of Japan during the past four centuries is one of the marvels of history. This book will show to the West the nature of mathematics indigenous to Japan and serve to strengthen the bonds that unite the scholars of the world. The book is full of very interesting material even for the non-mathematical reader.

Illustrated, cloth, 300 pages, $3.00 net.

THE PRINCIPLE OF RELATIVITY, in the Light of the Philosophy of Science. By Paul Carus.

The author recognizes the correctness of the Principle of Relativity, but criticises the exaggerated statements which have done much to confuse students and to mystify the reading public.

Cloth, 165 pages, $1.00.

PROBLEMS OF SCIENCE. By Federigo Enriques. Authorized translation by Katharine Royce; with an introduction by Josiah Royce.

The author is professor of projective geometry and geometric drawing in the University of Bologna, and one of the most conspicuous of contemporary Italian scientists.

Cloth, 375 pages, $2.50 net.

THE MECHANISTIC PRINCIPLE AND THE NON-MECHANICAL. By Paul Carus.

The truth of the mechanistic principle is here unreservedly acknowledged in this little book, without any equivocation or limitation, and it is pointed out that the laws of mechanics apply without exception to all motions; but they do not apply to things that are not motions. The essential feature of all higher organic life is the appearance of purpose, and the task which the author sets himself is a careful investigation of the problem how purpose is possible in a mechanically regulated world.

Cloth, 123 pages, $1.00.

A NEW LOGIC. By Charles Mercier, Physician for Mental Diseases at Charing Cross Hospital, London; also Examiner in Psychology in the University of London.

It was as an introduction to the study of insanity that the author was first moved to examine logic. He holds the doctrine that, in mental disorder, as in bodily disorder, the study of order is an indispensable preliminary to the study of disorder; the study of the normal should always precede the study of the morbid.

Cloth, 422 pages, $3.00.

OUR OWN RELIGION IN ANCIENT PERSIA. By Lawrence H. Mills, Professor of Zend Philology, Oxford University, England.

These lectures, delivered in Oxford, present the Zend Avesta as collated with the Pre-Christian exilic Pharisaism, advancing the Persian question to the foremost position in our Biblical research.

"Dr. Mills is at home with the religious books of ancient Persia and India. He brings skill and learning to his task, and takes delight in revealing the treasures hidden so long to many about the relation of the Jews to Persia, and the influence of Zoroastrianism on the Jews and their faith."—*Chicago Daily News.*

Cloth, 200 pages, $3.00 net.

Our new complete Catalogue and samples of our magazines "The Monist" and "The Open Court" sent free on request

RECENT BOOKS

UNPOPULAR GOVERNMENT IN THE UNITED STATES. By ALBERT M. KALES, Professor of Law in Northwestern University.

The first part of the volume deals with the rise of the politocrats; the second discusses various expedients for restoring the American ideal of democracy; while the third considers constructive proposals like the commission form of government for smaller cities, and the application of the principles underlying this form to larger cities and the state, and to the selection of judges. These constructive suggestions are, in the author's judgment, summed up in the proposed political reform known as the short ballot.

270 pages, 12mo, cloth; $1.50, postage extra (weight 24 oz.)

MASTERS OF THE WILDERNESS. By CHARLES B. REED. (Chicago Historical Society, "Fort Dearborn Series.")

The opening essay, which gives its title to the volume, is a highly interesting and carefully wrought account of the origin and upgrowth of the Hudson's Bay Company with a portrayal of its powerful influence on the development of Canada. "The Beaver Club," the second essay in the volume, is closely allied to the first, and concerns a social club of Montreal, the members of which were drawn from the partners and factors of the Northwestern Fur Company, for many years a rival of the Hudson's Bay Company. The concluding essay, "A Dream of Empire," recounts with many fresh details the adventures of Tonty in Old Louisiana.

154 pages, 16mo, cloth; $1.00, postage extra (weight 12 oz.)

ANIMAL COMMUNITIES IN TEMPERATE AMERICA. A Study in Animal Ecology Designed to Serve as a Reference Work and Textbook. By VICTOR ERNEST SHELFORD of the Department of Zoology in the University of Chicago.

This volume presents the principles of field ecology, illustrated by the more widely distributed animal habitats of the eastern half of temperate North America, and the aquatic habitats of a much larger territory. Six chapters deal with general principles. In several chapters the animal communities are considered from the point of view of modern dynamic ecology. A valuable feature of the book is the three hundred figures of widely distributed animals chosen to represent the chief types of animal communities and their characteristic modes of life.

380 pages, 8vo, cloth; $3.00, postage extra (weight 44 oz.)

12*mo.* *Cloth.* 363 *pages.* $2.50.

Introducing the greatest of Danish dramatists to English readers. A study in International literary influence of unusual value.

The Year Books of Richard II (1388-89)

Edited by **GEORGE F. DESSER**, Librarian of the Hirst Free Law Library, Philadelphia, for the Ames Foundation. 8vo. *Cloth.* 461 *pages. With four facsimiles,* $5.00.

The first step toward filling the only gap in the English Common Law Reports. Arranged in the same size as the volumes issued by the Selden Society.

The History of the Grain Trade in France, 1400-1710

By **ABBOTT PAYSON USHER**, Instructor in Economics in Cornell University, Harvard Economic Studies, Vol. IX. 8vo. *Cloth.* 420 *pages.* $2.00

An illuminating study, based on hitherto unutilized manuscript sources, of the evolution of wholesale marketing of a staple commodity.

Burgage Tenure in Mediæval England

By **MORLEY DE WOLF HEMMEON**, formerly Assistant in History in Harvard University. Harvard Historical Studies, Vol. XX. 8vo. *Cloth.* 234 *pages.* $2.00.

An examination of the form of mediæval tenure which presented conditions of sale and devise most like those of to-day. Comparison is made with the Continental systems, and the German tenure is given a special appendix.

Selections from the Federalist

Edited by **WILLIAM BENNETT MUNRO**, Professor of Municipal Government in Harvard University. 8vo. *Cloth.* 202 *pages.* $1.00.

The most significant papers from this political classic, edited for class-room use, and now reprinted for the first time in accordance with the text of the first collected edition (1788).

The Scientific Work of Morris Loeb

Edited by **THEODORE WILLIAM RICHARDS**, Erving Professor of Chemistry and Director of the Wolcott Gibbs Memorial Laboratory in Harvard University.

8vo. *Cloth.* 349 *pages, with portrait.* $2.00.

A collection of the essays, lectures, and reviews by the late Professor Loeb, covering the life work of one of the pioneers, in this country, in the field of physical chemistry.

Complex Hyperbolic and Circular Functions

By **ARTHUR EDWIN KENNELLY**, Professor of Electrical Engineering in Harvard University. *Vol. I. Tables.* 8vo. *Cloth.* 211 *pages.* $3.00. *Vol. II. Charts.* 20x20 *in. Cloth.* 52 *pages.* $4.00.

Extended tables of complex hyperbolic functions, although never before published, are nevertheless greatly needed, because of their immediate application to alternating current conducting lines in electrical engineering. They are also valuable as a contribution to fundamental mathematics.

The Care and Feeding of Children

By **JOHN LOVETT MORSE**, Professor of Pediatrics in the Harvard Medical School. Harvard Health Talks, Vol. I. 16*mo.* *Cloth.* 53 *pages.* 50 *cents.*

Sound and consistent advice, by a recognized expert on diet in health and in sickness, clothing, exercise, education, and other problems that come before parents.

Harvard University Directory, 1913

8vo. *Cloth.* 1,652 *pages.* $2.50.

This Directory seeks to give the names, addresses, and occupations of all men now alive who have been students in any department of the University long enough to have their names included in the first annual Catalogue after their registration. The present edition includes 35,194 names, and addresses are given for all but 1,197. It is divided into two parts; the first arranged alphabetically; the second geographically.

Selections from Mr. Huebsch's spring list

HENRI BERGSON

Dreams

An Explanation of the Mechanism of Dreaming
Authorized edition, with introduction by the translator, Edwin E. Slosson, Ph.D.

From Joseph, in the Old Testament, to Freud, in Vienna, thinkers of all ages have interpreted dreams. It is not strange that Bergson, the most popular philosopher of the day, should give deep thought to the subject. In this brilliant essay on the causes and significance of dreams, he expresses the belief that the principal task of psychology in the twentieth century will be to explore the secret depths of the unconscious and predicts that wonderful discoveries—as important as those in the physical and natural sciences—will be made. *Boards; 60c. net; postage extra.*

HEINRICH HEINE

Atta Troll

Translated by Herman Scheffauer; introduction by Dr. Oscar Levy; illustrations by Willy Pogány

Of this universally applicable satire Brunetière wrote, "Lyric poetry in its most personal and subjective form and satire in its most mordant and ironical phase have never been more closely united nor more indissolubly and indestructibly welded into an harmonious whole than in this work *Atta Troll*. Like *Gulliver's Travels*, it is unique of its class." *Board sides, parchment back, $1.25, net; postage extra.*

GERHART HAUPTMANN

Dramatic Works

Edited by Ludwig Lewisohn

Three of the seven plays contained in the volumes now presented have not hitherto been translated. The four that are already known alone would make these volumes equal in importance to any in the series. Special attention is directed to *Henry of Auë*, a poetic drama worthy of the author of *The Sunken Bell*.

Volume III: Domestic Dramas
THE RECONCILIATION COLLEAGUE CRAMPTON
LONELY LIVES MICHAEL KRAMER

Volume IV: Symbolic and Legendary Dramas
HANNELE THE SUNKEN BELL HENRY OF AUË
Cloth, each volume $1.50, net; postage extra.

C. V. DRYSDALE

The Small Family System

Is It Injurious or Immoral?

On the basis of official statistics the author, a British scientist, writing for the non-professional, discusses the deliberate limitation of families and its physical and moral significance. Of this subject Bernard Shaw says, "It is the most revolutionary discovery of the nineteenth century." As a reply to the warning cry of "race suicide" this book demands serious consideration. *Cloth, $1.00, net; postage extra.*

SPRING ANNOUNCEMENTS

I

Billy: The True Story of a Canary Bird By Maud Thornhill Porter.
950 *copies, Fcap* 8vo. $1.00 *net*

The late Dr. Weir Mitchell in a letter to the owner of the copyright said among other things: "Certainly no more beautiful piece of English has been printed of late years." And again: "May I ask if this lady did not leave other literary products? The one you print is so unusual in style and quality and imagination that after I read it I felt convinced there must be other matter of like character."

II

Billy and Hans: My Squirrel Friends. A True History by W. J. Stillman.
950 *copies, Fcap* 8vo. 75 *cents net*

Reprinted from the revised London edition of 1907 by kind permission of Mrs. W. J. Stillman.

III

Books and the Quiet Life: Being Some Pages from The Private Papers of Henry Ryecroft By George Gissing.
950 *copies, Fcap* 8vo. 75 *cents net*

Since the days of Lamb and Hazlitt and Leigh Hunt, no more sympathetic and finely expressed thoughts of a devout book-lover have been set to paper than those now reprinted in this exquisite little volume.

Important Books from Winstons' Spring List

FICTION

The Sorcerer's Stone

By Beatrice Grimshaw, author of "Vaiti of the Island," etc.

This is a mystery story of adventure, rich in color and interest, by the master story-teller of the South Seas—a story that takes the reader into the tropic wildness of New Guinea in the feverish quest of "the sorcerer's stone," a wonderful diamond. There is a suggestion both of Kipling and of Stevenson in the vivid, breezy story as it is told by Flint, and the net result will be to greatly widen Miss Grimshaw's already large circle of readers.

Illustrated. 12*mo. Cloth.* $1.20 *net.*

The Uttermost Farthing

By R. Austin Freeman, author of "The Mystery of 31, New Inn," etc.

A rare treat for lovers of mystery and adventure stories. When Humphrey Challoner—a specialist in criminal anthropology—dedicated his life to the apprehension and punishment of his wife's murderer, he "started something" that is absolutely new in mystery fiction. Mr. Freeman has created a curious and indescribable atmosphere not only so weird and real, but so irresistible to the reader, that one is strongly reminded of Edgar Allan Poe.

12*mo. Cloth. Illustrated.* $1.20 *net.*

The Merchant of Venice

A Romance founded on Shakespeare's play and giving it complete in the form of fiction.

There is undeniably a large class of readers who have avoided Shakespeare because of the dramatic and poetic form of his work, and who are equally unsatisfied by Lamb's "Tales from Shakespeare" because of the inevitable fault to which Lamb confesses in his preface, namely, the restraint laid upon him by the necessity of brevity. To these readers the *"Novels from Shakespeare"* Series, of which this is the first volume, will immediately appeal.

12*mo. Cloth. Illustrated with eight fine color plates.* $1.20 *net.*

DECORATED EDITIONS

Love Letters of an Erratic Husband

By Arthur K. Stern.

Deliciously funny, unconventionally clever, these letters tell the story of a young millionaire's escape from luxury and love in the "Windy City" to solitary, work-a-day existence in New York. His search for a job, his efforts as chauffeur, his adventures as match-maker, are related to his wife with all the freshness and spontaneous humor of the born story-teller.

256 *pages, decorated in two colors, with cover inlay and frontispiece in four colors. Attractively bound.* $1.00 *net.*

Lorna Doone

Illustrated by Gordon Browne.

A handsome edition de luxe of this famous classic, illustrated by Gordon Browne with thirteen plates in full color and sixty-one pen and ink drawings. The bindings are very rich, royal blue cloth stamped in gold and inlaid.

Crown octavo. Cloth. 634 *pages.* 74 *illustrations.* $2.00 *net.*

HOUSEHOLD ARTS

Table Decorations and Delicacies

By "Hester Price"

A practical handbook for the hostess anxious to have her dinners and luncheons dainty and tasteful without the extravagance of a caterer. Contains ninety-six full-page plates from photographs of decorated tables and unusual delicacies for all seasons and occasions. The accompanying text gives methods, materials, and all necessary information, and contains a host of useful hints.

8*vo. Cloth.* $2.00 *net.*

TRAVEL AND DESCRIPTION

Hunting in the Arctic and Alaska

By E. Marshall Scull, author of "A Bit of Wild Africa," etc.

Of particular interest because Mr. Marsball Scull's party was the first one successfully to accomplish a hunting trip into this part of the Arctic. Mr. Marshall Scull tells the story of an adventurous big game hunt, of which the trophies included specimens of practically all the game to be met with in Alaska, the western Arctic Ocean, and the shores of Siberia.

Crown octavo. 320 *pages. With* 106 *valuable illustrations and* 10 *new maps.* $2.50 *net.*

From the Congo to the Niger and the Nile

By H. H. Adolf Fricdrich, Duke of Mecklenburg

An account of the German Central African Expedition of 1910-1911. The adventures and discoveries of the Duke of Mecklenburg's party make absorbingly interesting reading through two superb octavo volumes of a total of 526 pages, illustrated with 514 fine reproductions in color and black and white from photographs and drawings, together with a map of the regions explored.

2 *vols. Cloth.* 526 *pages.* 514 *illustrations.* $9.00 *net.*

The Story of Mexico

By Charles Morris, author of "New Century History of the United States," etc.

This interesting and timely work is a popular, comprehensive history of this romantic and beautiful land, with a graphic description of Mexico's civilization and its magnificent resources in fields, forests, and mines. The author deals frankly with the present unrest of Mexico and its causes.

Octavo. Cloth. 400 *pages.* 100 *illustrations.* $1.20 *net.*

Italy in North Africa

By W. K. McClure, London "Times" Correspondent.

A full, fair account of Italy's war for a desert. The diplomatic history leading up to the occupation of Tripoli and declaration of war on Turkey, the fighting around Tripoli, and the campaign in Cyrenaica, together with a general review of the campaign, precede interesting descriptive chapters on the Italian army, the Arabs and the Turks, and a glance into the future of the new colonies.

67 *half-tone illustrations, five maps and a full index. Crown octavo. Cloth.* $2.50 *net.*

EDUCATIONAL

Character Development

By Charles Kean Taylor, B.S., M.A.

A manual for the use of parents, teachers, and all interested in education, by the director of the experiment in moral education in the Philadelphia public schools, containing detailed plans for the carrying out of a complete system of moral education. Mr. Taylor brings in the entire moral field, considering the morality that should govern men as citizens, as workers, and as private individuals.

12*mo. Cloth.* 242 *pages.* $1.00 *net.*

Physical Examination and Training of Children

By Charles Kean Taylor, B.S., M.A.

A handbook for medical inspectors, physical directors, teachers, and parents, giving in minute detail the physical training work outlined in *Character Development*. It is very much more than a book of exercises, and makes the whole subject of physical examination and training so simple that even the teacher without any previous experience can follow it.

12*mo. Cloth. Illustrated.* $1.00 *net.*

At all booksellers, or from the publishers

Publishers **THE JOHN C. WINSTON COMPANY** Philadelphia

HOUGHTON MIFFLIN COMPANY'S
IMPORTANT SPRING BOOKS

Confederate Portraits

By Gamaliel Bradford This new volume does for a group of the more important Confederate leaders what Mr. Bradford's "Lee the American" did for their great commander. The men studied are Johnston, Stuart, Longstreet, Beauregard, Benjamin, Stephens, Toombs, Semmes. Each is dealt with from the fullest study of documents and other records, but with a biographic imagination and human insight that make the resulting portraits thoroughly convincing. The volume ends with a fine chapter on Gettysburg, which draws into a single dramatic climax the lives of the men whose careers furnish the substance of the book. *Illustrated.* $2.50 *net. Postage extra.*

Volunteer Help For Schools

By Ella Lyman Cabot

This monograph illustrates and classifies some typical examples of valuable volunteer service to our public schools. It will suggest to the amateur how to give help and to school authorities how to make the best use of this practical interest in the schools. 60 *cents net. Postpaid.*

WHAT MEN LIVE BY

By Dr. Richard C. Cabot

"Such writing, because it sets before the reader in a fresh and entertaining way beliefs and truths hitherto but vaguely held, must be richly inspirational in its effect."—Boston Transcript. $1.50 *net. Postage extra.*

The Social Emergency

By William T. Foster

Assisted by Specialists

A frank, sympathetic, and wholesome treatment of the serious problem of training the youth of our land to think intelligently and act rightly in the complex social relations that confronts them. $1.35 *net.*

The Americans in the Philippines

By James A. LeRoy Hon. William H. Taft says: "Nowhere can a clearer and more judicial statement be found than in these chapters which Mr. LeRoy, who had really given up his life for the Philippines, was able to complete. There will be differences of opinion with Mr. LeRoy's conclusions, but what makes his work so valuable is that he states the evidence on both sides of controversial issues, and while he draws his own inferences, he adduces the sources of his information and states the evidence on both sides in such a way as to enable the reader to exercise his judgment, and affirm, or differ from, the conclusion of the author. I sincerely hope that the work may have the circulation that it deserves as a real contribution to the history of a people whose fate is now so much bound up with that of the people of the United States." 2 *vols.* $10.00 *net. Carriage extra.*

The U. S. Internal Tax History from 1861-1871

By Harry Edwin Smith A study of the internal-revenue history of the United States during the Civil War period, including, under internal revenues, not only excise taxes, but also direct, income, and inheritance taxes. $1.00 *net. Postage extra.*

Memoirs of Youth

By Giovanni Visconti Venosta

Translated by Rev. William Prall. With an Introduction by William Roscoe Thayer.

These memoirs, now translated, represent the aristocratic attitude among the patriotic Italians, and give a personal and vivid account of the abuses of Austrian and clerical rule; of the outbreaks of 1848-50, their failure and cruel repressions. *Illustrated.* $4.00 *net. Postage extra.*

EMERSON'S JOURNALS

NOW COMPLETE

A Noteworthy Record of Fifty Years in the Life of Ralph Waldo Emerson.

Edited by

Edward W. Emerson and Waldo Emerson Forbes

In 10 *volumes. Illustrated. Each,* $1.75 *net. Postage extra.*

A Child of the Orient

By Demetra Vaka

A fascinating autobiographical story of the early life of a Greek girl in Constantinople. It has the exotic, Arabian Nights flavor of the same author's "Haremlik," with an even keener, more consecutive narrative interest. $1.25 *net. Postage extra.*

Elizabeth and Mary Stuart

By Frank A. Mumby Mr. Mumby, author of those very interesting and successful books, "The Girlhood of Queen Elizabeth" and "The Youth of Henry VIII," tells, in the actual correspondence of the chief characters, the story of that bitter and yet romantic feud between Queen Elizabeth and her rival Mary Queen of Scots. $3.00 *net. Postage extra.*

South Africa

By A. Wyatt Tilby This final volume in the English People Overseas series covers the history of the English immigration to the Cape, The Founding of Natal, The Great Trek, The Founding of Rhodesia, The South African War, and it concludes with an account of the Union of South Africa (1906-10). *Large crown 8vo.* $1.50 *net Postage Extra.*

BOSTON **HOUGHTON MIFFLIN COMPANY** NEW YORK

The Nation.

NEW YORK, THURSDAY, APRIL 9, 1914.

Summary of the News

The outstanding feature of the struggle in Mexico last week was the capture of Torreon by the rebels. Gen. Villa and his army entered the city on the night of April 2, after a battle which had lasted almost without interruption for six days. Gen. Velasco and the remains of the Federal army retreated to the South, pursued by Villa. The exact extent and effect of the rebel victory even now is difficult to gauge. If it was as complete as Villa and Carranza protest, it gives the Constitutionalists control over the whole of the states of Northern Mexico. On the other hand, Huerta has continued to issue denials of the rebel victory, and on Tuesday it was reported that Gen. Velasco had an army of 5,000 men with him when he evacuated Torreon, and was calculating on effecting a junction with 4,000 Federal troops who were dispatched as reinforcements from San Pedro de Las Colonias on Saturday. The two armies, it was said, would then combine in attempting the recapture of Torreon. Gen. Carranza's official explanation of the murder of Benton was made public on Monday. According to this explanation, Benton was not killed by Villa, but by a rebel major in whose charge he had been remanded as a prisoner, and the tale of the court-martial was a pure fabrication. The Mexican Congress, which had been adjourned since December 9, last year, reconvened on April 1. Gen. Huerta read a long and optimistic message, in which he alluded to "the strange attitude of a certain Power towards Mexico."

The Sims bill to repeal the exemption clause in the Panama Canal Tolls bill went to the Senate on April 1. It is impossible to prophesy when the bill will come to a vote, and a closely contested fight is expected. President Wilson, however, declares his confidence that the repeal will be passed.

Secretary Daniels issued an order on Monday, to become effective on July 1, prohibiting the use or introduction of alcoholic liquor upon any vessel of the navy or within the confines of any navy yard or shore station. Commanding officers are made personally responsible for the enforcement of the order, and its practical effect will be to impose total abstinence on officers of the navy.

The appointment of Major-Gen. Wotherspoon to be Chief of Staff of the Army, succeeding Major-Gen. Leonard Wood, whose term expires on April 21, was announced on April 1.

Congressman Oscar W. Underwood was nominated on Tuesday for the long-term United States Senatorship in the Alabama State primaries. As the nomination at the primaries is tantamount to election, Mr. Underwood will commence his term as United States Senator on March 4, 1915. Indications are that Mr. Underwood's place as leader of the Democratic party in the House will be taken by Representative Kitchin, of North Carolina.

Senator Theodore E. Burton, of Ohio, announced on Monday that he should not seek reëlection to the United States Senate after the expiration of his term next March. Among the reasons that he gave for his decision was the possible embarrassment of his candidature to the Republican party in Ohio, on account of his support of the repeal of the free tolls provision in the Panama Canal Tolls act.

The selection of the twelve Federal reserve cities, in accordance with the terms of the Banking and Currency law, enacted last December, was announced on April 2. A list of the cities named and comment on the selection will be found in our editorial pages.

News came on April 1 of a disaster to the crew of the sealing ship Newfoundland. On March 31, 160 of her crew had been sent on the ice floes, in search of seals, and were prevented by a blizzard which lasted for forty-eight hours from reaching their ship again. Other ships in the neighborhood sent rescue parties on the floes as soon as the blizzard ceased, and took off the dead and the survivors. On Saturday the Bellaventure reached St. John's, N. F., bringing seventy-seven bodies and 112 survivors. Another sealing-ship, the Southern Cross, with a crew of 173, has also been missing since the blizzard, and hope that she may have survived has almost been abandoned. It is understood that the Newfoundland herself is safe.

Mr. Asquith's vigorous action in assuming charge of the War Office and offering himself for reëlection from his constituency of East Fife seems to have had a marked effect in restoring the prestige of the Government and the unity of the coalition. The suggestion of a federal system for the entire United Kingdom, outlined last week by Sir Edward Grey, has been on the whole received favorably, although it can, of course, offer no solution of the immediate problem of Irish Home Rule. On April 1 Mr. McKenna made a statement in the House of Commons showing that Gen. Paget was instructed only to find out from commanding officers in Ireland whether they were prepared to perform their duties, and that there was no intention that subordinate officers should be consulted. On the same day the appointment of Gen. Sir Charles Douglas as Chief of Staff, in succession to Field-Marshal Sir John French, was announced. On Monday the second reading of the Home Rule bill was passed for the third time in the House of Commons by a majority of eighty. In the course of the debate Mr. Bonar Law reiterated the Unionist request for a general election, guaranteeing that, if the Home Rule bill was approved by the country, the House of Lords would pass it without amendment.

The Parliamentary commission appointed after the murder of M. Calmette to investigate the circumstances attending the postponement of the trial of Henri Rochette issued its report on April 1. The commission holds that pressure brought to bear by M. Monis, who was Premier at the time, at the request of M. Caillaux, was responsible for the postponement of the trial, and, while acquitting both M. Monis and M. Caillaux of any charge of corruption, adds the comment that "their actions constitute a deplorable abuse of influence." The report was adopted in the Chamber on April 3, with a declaration of regret that finances as well as politics should be intermingled with the administration of justice.

The legislative programme announced last week by Signor Salandra, the new Italian Premier, was approved on Saturday in the Chamber of Deputies, notwithstanding the combined opposition of Socialists and Radicals, by a vote of 302 to 122. The Chamber then adjourned until May 6. Signor Salandra's programme includes the introduction of financial measures to meet the expenses of the recent war in Tripoli, and calls for a further amount of $40,000,000 necessitated by raising the peace footing of the Italian army to 275,000 men, in addition to colonial troops. Italy's foreign policy, the Premier announced, would remain unchanged.

Early in his reign, King William of Albania is faced with trouble in his kingdom. Greek irregulars last week attacked the town of Koritza, in Epirus, and there has been severe fighting. The official explanation given out from Athens is that the trouble is due to the "insurgent" Greeks of Epirus, who are revolting against the decision of the Powers to include Koritza in the Albanian kingdom. A levy has been ordered in Albania for the suppression of the revolt.

Viscount Kiyoura, who accepted the Japanese Premiership last week, has found the task of forming a Cabinet impossible. On account of the naval scandals which brought about the fall of the Yamamoto Ministry, disinclination was exhibited to accept the portfolio of Minister of Marine, and the question was complicated by the demand that the new Minister should be a sailor. Vice-Admiral Kato was offered the portfolio, but declined it. The Premier was also in difficulties on account of the failure of the last Ministry to pass the naval budget, and the consequent demand that he authorize the advance of credits for the construction of warships, relying on Parliament to endorse them later. The failure of Viscount Kiyoura has produced an acute crisis.

The deaths of the week include: Paul Heyse, Robert Hirschfeld, Commodore George L. Dyer, April 2; Susanna Ibsen, April 3; Frederick Weyerhaeuser, April 4; Thomas Ryan, April 5; Cy Warman, April 7.

The Week

If President Wilson, in this matter of Panama tolls, has scuttled the Monroe Doctrine and sold out to a foreign Power, he is not the only contemporary American statesman of high rank who has laid himself open to the charge of high treason. Here, for instance, is a book by no less a personage than the President of the Argentine Republic, in which the Monroe Doctrine is described as absurd and capricious and sneered at as the "guttapercha Doctrine." The Argentine President is welcome, of course, to his opinion, but can we overlook the fact that about the time the book was probably written Col. Roosevelt was in Buenos Ayres openly lending aid and comfort to the idea that the Monroe Doctrine is not all that it is cracked up to be? When the degree of doctor of laws was conferred on Col. Roosevelt at Buenos Ayres last November, an ex-Foreign Minister of Argentina delivered an address, in the course of which he asserted that Argentina did not accept the protection of the Monroe Doctrine, and Col. Roosevelt in his reply admitted that Argentina did not need it. Doesn't that come pretty close to high treason, as Mr. Champ Clark sees it? And will Mr. Hearst, when he moves the impeachment of Mr. Wilson, include the Colonel as an accessory of some kind or other?

Friends of the President who are incensed by the cheap criticism to which he has been subjected in Congress are making a mistake in talking hastily about rules and procedures for safeguarding Mr. Wilson against insult. There are presiding officers in both Houses of Congress to keep debate within the bounds of decency. No set rule will prevent a Congressman who is driven by the irresistible impulse of his own nature to make an ass of himself, from satisfying that longing. Such exhibitions defeat themselves. Between the manly opposition of an Underwood and the wild-eyed accusations of a Knowland, the average citizen is quite able to draw the distinction. Irritating it may be for the President's friends, and possibly for Mr. Wilson himself, to have his personal motives aspersed by lurid orators, but they do little harm. Usually, such rough-and-tumble exhibitions deserve no notice. When a reply is called for, we feel sure that Mr. Wilson is fully able to supply it. We are not sure but that something worth while would have gone from our political life if the time-honored war-dance on the floor of Congress were to be suppressed.

A drop of eleven million dollars in the expenditure for war pensions is no small saving, and it might be supposed that it would be highly appreciated; and yet we fail to see any marked expression of satisfaction with it on the part of those who are in the habit of complaining of the swollen pension figures. But the reason is that, as the New York *World* puts it, "so far as Congress can prevent it, the country need expect little relief." The Spanish War list is getting ready to fill the gap made by the dying off of the Civil War veterans, so far as possible; the process of progressive loosening of the purse-strings in that direction has already begun. But the story of our war pensions is interesting nowadays as a "pointer" in a wider field. Some thirty-five years ago, when the Civil War pensions footed up about $30,000,000, Gen. Garfield stated that they might from that time forth be expected to go down; as a matter of fact, they have kept steadily swelling, almost without interruption, and have for years been at about five times the figure which Gen. Garfield thought was the apex from which there was bound to be a steady descent. Now, the question that naturally suggests itself is this: if the war veterans and their friends have been able to impose this sort of policy upon Congress, what would be the probable course of events under a general system of old-age pensions, in the magnifying of which a large part of the whole population would have a keen pecuniary interest?

Mr. Underwood's success in the Alabama Senatorial primary on Monday is to be hailed for more than personal or party reasons. It is a welcome sign of the times. It carries with it a certain reassurance in regard to the whole experiment of electing Senators directly by popular vote, to which this country is now committed. Of course, Senatorial primaries have for some time been the rule in most of the Southern States. There have been some notable contests, not all of which—as, for example, the one in which Vardaman triumphed in Mississippi—have given unmixed comfort to those who like to believe that the people never make mistakes. But no previous struggle of the sort has so filled and fixed the gaze of the nation as this one between Underwood and Hobson. If Hobson had won, every wordy and empty demagogue in the land would have thanked God and taken courage; while those who have been apprehensive lest the direct election of Senators degrade the Senate would have seen their worst fears verified.

And no one should think that Hobson's defeat was foregone. He has been making a dead set at the Senatorship for full two years. From his duties in the House he has almost constantly absented himself in order to nurse the Alabama voters. In campaigning he has been indefatigable, and was really a formidable opponent for Mr. Underwood to face. He had a large personal following, many qualities that take with the crowd, and a glittering programme. But Mr. Underwood never stooped to meet Hobson on his own ground. He went before the people simply for what he was—a Representative who had made a national reputation for himself as a steady and sagacious leader of his party in the House; not a showy man; not a clamorous speaker; but a man of tried character and solid qualities. And the people preferred him to his reckless and flighty opponent. It is a result heartening all round.

Those who would charge Congress with extravagance will have to look elsewhere than to the legislative, executive, and judicial appropriation bill just reported to the House. The sacred pension office is made a target for the economists: 175 employees are dropped, including 10 principal and 45 special examiners, and a reorganization of certain departments of the office recommended with a view to eliminating useless work. Other offices suffer a less drastic pruning, so that, even with a proposed addition of 77 employees to the new Washington post office and 22 to the Department of Labor, there is a net saving of 141 salaries. Republican attack upon a few positions created by the bill, such as four messengers for the Committee on Post Offices, is encouraged by the reappearance of the provision

substituting actual travelling expenses for the historic twenty cents a mile, which Congressmen now enjoy. There is no telling what may happen to the bill in its course through the House, but what stands out is evidence of a new kind of care in preparing an appropriation bill, so that it shall be comprehensive and self-explanatory.

The number of Congressmen put into the same box of self-contradiction as Senator O'Gorman on the question of party platform integrity was greatly increased by the vote on Saturday on the "mileage grab." The proposal of the Committee on Appropriations to economize was defeated 2 to 1. What was more, the united parties added insult to injury, from the standpoint of those who hoped for retrenchment, by voting themselves an extra provision of $132,000 a year for secretarial salaries. Is it possible that a Congress which has grown so heated in discussion of the binding nature of a party pledge could forget the Republican pledge last June "to secure greater economy and increased efficiency in the conduct of Government business"; the Democratic demand for "a return to that simplicity and economy which befits a Democratic Government," and the Progressive promise of a "readjustment of the business methods of the national Government . . . which will increase the economy and efficiency of the Government service"? Many would have had party planks override every consideration of conscience. Yet the high question of conscience here pertained to the maintenance of the 20-cent mileage rate which dates from the outworn days of the stage-coach, and constitutes a virtual inequality in the salaries of near and distant members.

Comments on Mr. Rockefeller's gift of $1,000,000 for the war against animal disease have properly emphasized its humanitarian aspect, but on the economic side it is no less significant as the first great private contribution to such a work. Congress has of necessity paid annual attention to the subject, and it is only a few weeks since $500,000 was appropriated for the eradication of hog cholera, with lesser sums for other diseases. In view of the outcry over the decrease in food production, the figures of the Agricultural Department on the loss from animal diseases should interest students of the cost of living. They include items of $75,000,000 from hog cholera, $85,000,000 from Texas fever, tuberculosis, and contagious abortion in cattle; nearly $10,000,000 from diseases of sheep, and $8,750,000 from poultry disease; and reach a total of $212,850,000. The total loss is obviously not represented by these figures, inasmuch as the various epidemics have plainly discouraged farmers and stockmen from prosecuting so precarious a business. The fund should not merely help the administration of known specifics and preventives, but in the case of diseases not fully understood command a more expert and thoroughly scientific investigation than agricultural officials and the State universities can carry on.

A magnificent prospect is opened up to the vision of New Yorkers by the announcement of a plan for the erection in that city of a group of museums devoted to the various arts of peace. An Association for that purpose has been incorporated, and the list of the directors and incorporators includes a number of leading citizens. Their purpose appears to be twofold. One object is to furnish opportunities for direct acquaintance with the various developments of the industrial, commercial, and other useful arts, to those specifically interested in one or another of them. The other is to stimulate popular interest and enlightenment in all these fields and also to supply a great and attractive centre of public resort. From this last standpoint the idea that has been put forward, of grouping the buildings around one centre, "preferably around a stadium that will include a great enclosure for public meetings," is of the utmost interest. Over and above all the special benefits that might flow from the use of the particular museums, a score of dignified public buildings, grouped around a space of this kind, would exercise an immeasurable elevating influence on the civic spirit of the community. The scheme is an ambitious one, and we do not know what the probabilities are of the raising of the requisite funds; but it is one which, if properly carried out, would abundantly justify the cost, and which must make a peculiar appeal to those men of wealth who have also civic imagination and high public spirit.

Another theatrical manager has come out against indecent plays, and the whole mess of sexual sensationalism on the stage, against which, he declares, a reaction is already in full swing. This is merely confirmatory of other similar signs of the wholesome change of view. The thing was certain to provoke revolt, if only through sheer satiety. It is all very well, as a curiosity, to take a theatre-full of people on a trip through the sewers, but to ask them to stay there indefinitely! It is an experiment which has been tried over and over again, in literature and in the drama, but has always failed. The public appears to want many strange things for a time, but one thing which it will insist upon getting, in the end, is a breath of pure air. To look for an immediate reformation or elevation of the American stage would be foolish, but it is at least a satisfaction to know that we are in a fair way to get rid, as the Elizabethan stage did, of "foul and unwashed bawdry."

The women's clubs of Arkansas are to be called upon to take a leading part in obtaining, by means of the initiative, an advanced child-labor law for that State. The bill is based upon the uniform child-labor law which was drafted four years ago by the American Bar Association, and its adoption will, according to H. H. Jones, special agent of the National Child Labor Committee, put Arkansas "in high rank with the States in the Union having the best child-labor laws." If we may judge from the tone of an article on the subject in the *Arkansas Gazette*, the prospects of the legislation ought to be good. "The present child-law in Arkansas is nothing," says the writer of this article. "Every bit of vitality in it is destroyed by exemptions. For all practical purposes it is as bad as the laws in Carolina, Georgia, or Alabama, which are a disgrace to the nation." Nor is this by any means an unwonted expression; we are continually encountering just such language on the subject in the newspapers of the States that are backward in the matter of child-labor laws and their enforcement. The progress actually made in the past few years, and the signs of genuine awakening which forecast progress in the near future, are alike encouraging. Certainly no such condition exists as would justify a great extension

of Federal power, of a sort full of the menace of indefinite extension in other directions, in order to cope with it.

A marked increase in Canadian crime during several years past rouses the Dominion press to comments, both puzzled and indignant. In 1912, out of every 100,000 Canadians, 208 were convicted of indictable offences; and the total convictions for all offences, indictable or petty, rose from 113,260 in 1911 to 146,527, an increase of 29 per cent. Yet it is denied that laws are more strict, while to the Montreal *Gazette* "it does not seem that the greater activity of the police can be given as a reason." It concludes that "the general result has to be ascribed to a falling away from rectitude by so considerable a part of the population that the standard is in danger of being lowered." The great increase in arrests for drunkenness, from 41,000 to 53,000, is to be noted both in itself and as helping explain the total of 15,567 found guilty of really serious offences. But the whole showing is not so damaging but that it is explicable by immigration and the ill-developed character of the country. The alien-born figure to an undue extent, as do the newly settled regions, east and west. "Many of the newcomers," the *Gazette* remarks, "come to do rough work in rough places, and under rough treatment develop rough ways. This is to be remembered, both for the sake of the foreigner and of the native-born." But to trace crime to rough conditions is only to push the problem one step back.

At the Ottawa Social Service Congress the other day appeared the founder of a system of rural credit societies which now numbers 120 organizations in Quebec and 19 in Ontario. They are, of course, coöperative, and, like the Raiffeisen and Schulze-Delitzsch credit unions of Europe, provide short-time loans on personal credit. Each branch "is an association of individuals who put their savings in a common fund, and who can borrow from that fund, with the approval of the officers, upon reliable securities, material and moral. The vote is by member, not by share; the area of operation must be small, a township or parish, so that the members are mutually known; and the capital must be withdrawable, for the individual cannot afford to immobilize his small savings." The parent society, typical of all, has assets of $270,000, of which $240,000 are on loan, and completely cares for the financial needs of its own community. Though it has made 6,650 loans in its fourteen years' history, it has not lost a cent. Despite beginnings in Wisconsin and the Northwest, America can show nothing like this; although, as the *Yale Review* has just remarked, the student cannot cease to wonder at our tardiness.

Though the Unionists in the House of Commons cheered on Monday when the majority on the second reading of the Home Rule bill fell to 80, it is evident that they were as men thankful for small mercies. The drop in the vote is explicable, and the coalition Government stands in virtually its full strength. And it is plain, too, that the events of the past few days, with the steady march of the Home Rule bill towards the statute book, have taken a good deal of hope and fight out of the Conservatives. Their speeches on Monday—even that of Sir Edward Carson—were much less bellicose. Bonar Law went so far as to say that he should be glad to reopen negotiations with Mr. Asquith for a settlement of the Irish question by consent. All this is in a very different tone from the one held by the Unionists two weeks ago. Then they were triumphantly talking of having wrecked the Home Rule bill and the Government at one stroke. The Tory *Morning Post* was so indiscreet as to say: "The Army has killed the Home Rule bill." It was Mr. Asquith's prompt meeting of that issue, together with the signs of immense popular revolt against the assumption of the Unionists that the Army was their private property, which brought about the revulsion of feeling and the present dispirited condition of the Conservative party.

The French general elections which take place next month can hardly fail to be affected by the disclosures attendant upon the murder of the editor of *Figaro*. Thus we have the report of the parliamentary commission which has been investigating the question of Ministerial responsibility for the delay of justice in the Rochette case. The report asserts that M. Monis, head of the Cabinet at the time the case against Rochette was prosecuted, was mainly responsible for the suspension of proceedings against the notorious swindler. M. Monis is supposed to have acted under pressure from M. Caillaux, making two former Prime Ministers under suspicion, and a third ex-Prime Minister, Briand, is now censured for his reluctance to further justice in an earlier investigation of the Rochette affair. The most that the investigating commission can say in defence of these statesmen is that their intervention did not bring about an absolute quashing of the case against Rochette; but inasmuch as the latter is now a fugitive, this is small consolation. "A deplorable abuse of influence"—in these terms the report characterizes the action of the Ministers involved. What the motives were, the country is left to decide for itself. In next month's elections these motives are pretty sure to be brought to the fore by anti-Governmental candidates.

Within South Africa there is intense resentment at the high-handed measures of the Government during the recent strike, culminating in the deportation of the labor leaders. Anti-Government sentiment in the Transvaal spoke out during the recent elections of members of the Provincial Council, when the Labor party swept the Rand by extraordinary majorities. Out of twenty-five seats in the Johannesburg and Pretoria districts the Laborites carried twenty-three, thus obtaining an absolute majority in the Provincial Council with control of the provincial executive. Under the Commonwealth Constitution the local legislatures in the former colonies have been abolished, but the Provincial Councils set up in their place exercise considerable powers in the field of local finance, education, agriculture, municipal government, and public works. Thus the Labor party in the Transvaal is now in a position to retaliate upon the Federal Ministry and the rural population, whose intervention in behalf of the Government brought about the speedy collapse of the railway strike. Should the Transvaal Government come into sharp conflict with the Commonwealth authorities, the abolition of the Provincial Councils, already discussed, may become a live issue.

THE FEDERAL RESERVE DISTRICTS

When Congress, in enacting the new Banking and Currency law last September, provided that "as soon as practicable, the Secretary of the Treasury, the Secretary of Agriculture, and the Controller of the Currency, acting as the Reserve Bank Organization Committee, shall designate not less than eight nor more than twelve cities to be known as Federal reserve cities"—each to contain the regional central bank for its own allotted district—it was recognized that probabilities favored selection of the larger number. When the bill was first discussed, an even more numerous body of independent institutions of the sort was contemplated. The House bill, as proposed and passed, named twelve. The Democratic report of the Senate Banking Committee cut the number down to eight; the Republican report to four; but as the bill passed the Senate, it provided for a maximum of twelve and a minimum of eight, and in that form passed the Conference Committee.

The plan for the more numerous districts seemed to be favored, mainly on the ground that predominance of any single district would thereby be avoided. The rather obvious fallacy in this argument lay in the fact that the smaller the average area and banking resources of the districts as a whole, the greater would inevitably be the predominance of such districts as included in their territory the great business cities. This has apparently been felt by the organization committee, and has led to some arbitrary division of territory on lines hardly warranted by actual financial and commercial affiliations. This will inevitably subject their arrangements to much criticism.

The twelve reserve cities, announced last week by the organization committee, are Boston, New York, Philadelphia, Cleveland, Richmond, Atlanta, Chicago, St. Louis, Minneapolis, Kansas City, Dallas (Texas), and San Francisco. The committee say that their choice was based on the ability of banks in a given district to subscribe the necessary capital for their regional central bank; on the "mercantile, industrial, and financial connections existing in each district"; on the probable usefulness of a regional bank to serve such district; on the "fair and equitable division" of the banking capital available in the several districts; on their "general geographical situation," and on the "population, area, and prevalent business activities of the district." To such a programme there can be little theoretical objection. The danger was that the various purposes thus assigned might be found to be mutually incompatible, and this difficulty, it seems to us, the organization board has failed rather signally to avert.

The selection of Richmond, for example, as a reserve bank centre, is difficult to explain on any of the grounds of selection set forth by the organizers; in order to make sure of the requisite banking resources, it has been necessary to include in its district such parts of the adjacent territory as Maryland and South Carolina, which will scarcely be described as normally in the Virginian capital's sphere of influence. The designation of Cleveland as the financial centre of Ohio, western Pennsylvania, and eastern Kentucky is perplexing in view of the commercial affiliations of Cincinnati. There were forcible arguments in behalf of regional banks at Boston and Philadelphia, and it was generally expected that the district to be served by the New York Federal reserve bank would not include all of what is now this city's actual field of commercial affiliations, since that would have given a quite overshadowing power of banking resources to the district. But that cities so intimately bound up with New York banking connections as Jersey City and Newark should have been placed in another district certainly does not conform to the committee's rule for recognition of "mercantile, industrial, and financial connections existing in each district and the relations between the various portions of the district and the city selected for the location of the Federal reserve bank." There may be good reason why Dallas, Texas, was selected in place of Galveston or New Orleans as the banking centre of the Southwestern cotton belt, but it is difficult to discover it at a glance.

We shall await some more definite explanation by the committee of these particular policies; merely expressing, for the present, our regret that the selections should not have been such as to bring out the cordial approval of the business community as the best that could have been done, under the assumption that twelve districts were to be the basis of the system. Meantime, it should always be remembered that, even when an arrangement of this sort is not what practical experience would have suggested, it does not follow that it will threaten the usefulness of the system itself. That the machinery for rediscount will not work as effectively under the proposed plan of districts as might have been expected if the natural business affiliations of all the cities of the United States had been considered, cannot well be doubted. There will nevertheless remain the fact that the banks and the banking resources of each district will still be combined for cooperation and mutual protection. So long as this end is cordially and disinterestedly pursued by all banks of a district, the regional bank should be able to do its service, irrespective of location. Nor, on the other hand, must it be forgotten that the new banking system, while it supplements the existing relations of banks in one city or section with the business of another, does not either abolish or supersede those relations.

COASTWISE-TRAFFIC INSINCERITIES.

Opponents of the repeal of the tolls-exemption clause of the Panama act have several arrows in their quiver. Their main argument is simplicity itself. The Canal is American and Americans can do with it whatever they please. If you don't agree to that you are a traitor. Thus the eminent Bourke Cockran asserted in Boston the other night that President Wilson had "approached the domain of treason." If you timidly ask these shouting patriots about the agreement we made in the Hay-Pauncefote treaty, they will tell you, first, that they have their own interpretation of that, and that, anyhow, it was a bad bargain and is therefore "voidable." Besides, the treaty does not apply to American coastwise vessels. This is their main tower of strength, in which they make their stand when driven from other positions. And they have two chief contentions—they are presented so clamorously that it is hard to call them arguments.

The first is that the exemption of coastwise traffic from tolls at Panama was designed to be a blow at the railways, and that, consequently, anybody who seeks to repeal it must be in the

pay of the railways. Dire pictures are drawn of the transcontinental roads, with oppressive freight charges, seeing the threat of a formidable competition from free ships via the Canal, and plotting to undo the work of Congress. So the cry is that every dollar you compel coastwise vessels to pay in tolls is, in effect, handed over to the railways. Apparently, none of these excited gentlemen stop to ask who owns the coastwise vessels. What will they say when informed that most of these ships are owned and operated by railways? The facts are of record. A report recently made by Congressman Alexander, Chairman of the Committee on Merchant Marine and Fisheries, said that 94 per cent. of all our coastwise shipping, on the Atlantic and in the Gulf, is owned by railways or by combinations in alliance with railways. How it is on the Pacific, we do not know, but everybody knows that the Southern Pacific has a fleet there. And other striking evidence was brought forward in the debate last week. Under the Panama act, railways owning ships are required to make a return to the Interstate Commerce Commission showing what boats they have and whether these compete with their transportation on land. Congressman Sims obtained the whole docket and had it printed in the *Congressional Record*. The exhibit was such as to warrant him in asserting that the chief "beneficiaries" of the coastwise traffic exemption would be "largely the railroads on both coasts." The other side did not challenge these figures. So much for the outcry about President Wilson and all who favor repeal being secretly in the pay of the railways!

In addition to this clap-trap, those opposed to repeal have one argument, as bearing on coastwise traffic, of really serious tenor. It consists of the statement that Great Britain has yielded the point. Senator O'Gorman has several times referred to the fact that the British Embassy at Washington admitted to the Department of State that the exemption of our coastwise traffic from tolls would not be a violation of the treaty. Let us ask what the facts are. It is true that in the British protest made in 1912 it was stated that there might not be objection to exempting coastwise traffic, provided—and this was the point—that it was bona-fide. Now, the slightest examination of what it is proposed to do, and what would infallibly be done, under the tolls-exemption clause, shows that the coastwise traffic would be converted into what is, for all intents and purposes, foreign traffic. President Wilson's antagonists concede that we have not the right, under the treaty, to exempt our ships engaged in foreign commerce. Yet they are ready to exempt nominally coastwise vessels that would actually be engaged in foreign commerce.

How this would be is shown in the April *North American Review* by the chief expert on Canal transportation, Prof. Emory R. Johnson. He sets forth the case with great directness and concreteness. Our coastwise ships would take from New York to San Francisco goods destined for the Oriental market. They would pay no tolls at Panama. A ship bringing similar goods from Liverpool or Bremen or Havre, with a similar destination, would have to pay tolls. Is this not a plain case of that "discrimination" which the nation solemnly bound itself never to permit? The reverse sailing is just as significant. Vessels from Seattle, laden with goods brought from the Orient, could carry to New York free of tolls goods brought from the Orient, though ships carrying such goods direct from the Orient or Australia would have to pay for transit through the Canal. The discrimination is glaring, and serves to show what the British note meant when it spoke of "bona-fide" coastwise traffic. Professor Johnson proves that much of ours through the Canal would not be of this character. His general conclusion is:

> The coastwise tolls-exemption clause of the Panama Canal act grants an unjustifiable subsidy. The taxpayers of the country who have paid for the Panama Canal are entitled to receive reasonable tolls from the individuals and corporations who use the canal and derive profit therefrom. When the general public clearly understands what is involved in exempting the owners and charterers of coastwise ships from toll payments, it seems certain that the Canal act of August 24, 1912, must be amended by striking out the tolls-exemption clause.

There is, happily, evidence that the general understanding of which Professor Johnson speaks is being brought to bear upon the controversy. Washington dispatches report a marked rallying of public opinion in support of the position which the President has taken.

MR. ASQUITH.

The rapidly shifting events of the past two weeks in England have thrust Mr. Asquith to the front of the stage. He has shown a somewhat unexpected ability to cope with an appalling political crisis, displaying both adroitness and high courage. It was with a good sense for the dramatic, too, as well as with great boldness, that he announced his decision to grasp the nettle firmly. There had been vacillation and weakness in the administration of the War Office. He would take it over himself. But as this step required him, under the statute of Anne, having accepted an office of profit under the Crown, to seek reëlection to Parliament, he would absent himself until his constituents in Fife had passed upon his conduct. The Prime Minister would not take advantage, as Mr. Gladstone did in 1873, of the legal doubt whether he was compelled to resign. He would make a clean job of it. Not one taunt would he leave within the reach of his opponents. Cutting through the Cabinet difficulty with one masterly stroke, Mr. Asquith walked out of the House amid the frantic applause of his own party and the visible consternation of the other. It was a crowded hour of glorious life for him. He seemed to have risen to a more heroic stature than ever before in his career.

Whether this be drawing to a close or not, Mr. Asquith is to-day not only officially, but by actual political power, the most influential man in England. It is a position to which he has risen slowly. His talents have never been of the showy kind. Nor is his an emotional nature. He has been thought a cold man, if not a trifle selfish; a formidable debater, a very instrument of precision in logic, but not a statesman of popular qualities. Sometimes, however, your slow and cool man breaks out in a kind of volcanic passion and glow. Mr. Asquith has done something of the kind more than once before. His opponents have found out that there was such a thing as goading the reserved and patient man too far. But never until he rose to meet the present crisis had Mr. Asquith flamed before the country as a man in whom parliamentary skill was united with daring resolution.

His earliest successes were won at the bar. After taking a first-class at

Oxford, he applied himself to the law, and rapidly rose to eminence. Before he was forty, he was associated with Sir Charles Russell in defence of Mr. Parnell. This recalls the opinion of him which Parnell expressed to Barry O'Brien in 1891. They were discussing various English statesmen as possible successors to Gladstone, with particular reference to Home Rule. The following dialogue took place:

I said: "Well, there is Asquith. He is a coming man. Some people say he may be the Liberal leader of the future."

Parnell: "Yes, Mr. Asquith is a coming man, a very clever man; but [looking me straight in the face] do you think Mr. Asquith is very keen about Home Rule? Do you think that he will risk anything for Home Rule? Mr. Asquith won't trouble about Home Rule, take my word for that."

This may sound laughable, in view of the length to which Mr. Asquith has since gone in behalf of Ireland, but there was some truth in Parnell's judgment of him. He was not heart-whole with Mr. Gladstone on Home Rule. Similarly, during the Boer War, he was not willing to follow the Liberal leader, Sir Henry Campbell-Bannerman. It was this detached and somewhat fastidious air which the Irish leader accurately noted in the Asquith of those days, and which made it seem impossible that he could long maintain himself at the head of the Liberal party, after Bannerman's death. But Mr. Asquith has now been Prime Minister for six years. There have been many grumblings against his leadership, but no one has risen within the party to contest it. To have held together a coalition Government so long is no mean feat. And while Mr. Asquith has not been a man to stir up excitement unnecessarily, and prefers to go along with the humdrum work of government unemotionally, he has shown a latent capacity to rise high at critical hours. He did so when the Lords threw out the budget, and also in the stress of passing the Parliament Act to clip the veto power of the House of Lords, meeting defiance with cool demonstration, and opposing to threats the firm exercise of constitutional power. If it be said that he rose on the monumental blunders and follies of the Conservatives, the reply is that to seize the skirts of circumstance in that way is the mark of genius in politics as well as in war.

One of Mr. Asquith's titles to distinction is that, in an age of verbosity, he is sparing of speech. He is a master of lucid condensation. He seldom speaks over half an hour. Recently he made a speech on the land question, of which Lloyd George said that the Prime Minister had said more in three-quarters of an hour than he himself had been able to say in three speeches of two hours each. But it is with grim realities that Mr. Asquith now has to deal. It is a singular coincidence that in his case the circle has swung full, inasmuch as his first notable act as a member of the Cabinet, when Home Secretary under Mr. Gladstone in 1892, was to order the troops to fire on riotous strikers. This was said at the time, so opposed was it to English ideas of the use of the army, to make it impossible that he should ever be Prime Minister. Now that he is, and is confronted with disaffection in the army, as well as open defiance of the law in Ulster, it is to be expected that he will stand firmly for the supremacy of the civil power over the military, as well as for the use of all the resources of the Government in putting down disorder.

THE NAVY AND DRINKING.

If it were possible to add to Secretary Daniels's unpopularity in the navy, his amendment of the regulations so as to prohibit the use or introduction of alcoholic liquors upon any naval vessel or reservation would do the work. But in this instance the unpopularity would not be deserved, in our opinion. Mr. Daniels's action is taken on the advice of the Surgeon-General; more than that, we have never been able to see why, if it is proper to forbid the use of intoxicants by the enlisted men of the service, the officers, supposed to be their exemplars, should be a privileged class. It is far more important from the point of view of navigating battleships that the officers should be sober than the men; and if railways and other large corporations are justified in dismissing men responsible for other people's lives because they use liquor, even though they do not abuse it, the Government certainly has the right to insist that its officers shall be abstainers when serving on ships or at navy yards. Elsewhere they may, of course, do as they please, provided they do not disgrace themselves and cause scandal.

How far we have progressed from the earliest days of our own navy, and the period of which Marryat wrote, a casual retrospect will show. Once it was deemed absolutely essential for the British or American naval officer to become drunk, and this he was encouraged to do, provided he got drunk in a "genteel" manner. As late as the fifties—indeed, down to the Civil War—grog was not only served to all the sailors, but all hands were expected to get drunk whenever shore leave was granted. In foreign ports, in the early part of the last century, immorality was also encouraged by the custom of the service; gradually, however, dissolute women were banished from our ships, and when, on September 1, 1862, the spirit ration was discontinued by Secretary Welles, there was little complaint, particularly as the navy was then at war. Many a promising naval officer's career was ruined by his turning to drink when on lonely stations. The late Commodore George H. Perkins made a three-year cruise to the West Coast of Africa, which ended with the outbreak of the Rebellion. Of his three commanding officers, one died of delirium tremens, and one was court-martialled for being drunk all the time and sent home in disgrace. Rear-Admiral Franklin thus told in his memoirs of taking a ship to sea in 1860:

The crew was hustled on board, and we were obliged to take care of them as best we could. Of course, Jackie was drunk—he always gets drunk on such occasions, or, I should rather say, he did in those days—and as we had no organization whatever, Lieut. Somerville Nicholson and I were obliged to organize ourselves into a police force. We were compelled to rush in amongst a crowd of drunken sailors and drag out until we succeeded finally in restoring order.

It is impossible to conceive of a ship's putting to sea nowadays with so much as a fraction of her crew in this condition. Yet such designation was not confined to the sailors. On receiving a startling bill from a contractor for one of his monitors when the Civil War was half over, John Ericsson's secretary made the following inquiry:

Capt Ericsson directs me to ask you to inform him if, of your own knowledge, 156 bottles of spirituous liquors were consumed by the guests invited to be present during said trial trip. If the above quantity of liquor was really consumed, the occasion looks more like a bacchanalian feast than a trial trip of a small gunboat. Capt. Ericsson desires to be informed if the trial of the vessel

was really made the occasion of such a disgraceful feast before settling the bill.

Even when it was the custom to use liquors to excess, there were always some officers who attempted with more or less zeal to set an example of temperance. The late Rear-Admiral Ammen was fond of humorously describing the downfall of a temperance society on board the Vandalia in 1838, which finally succumbed to the temptations of bread pudding and whiskey sauce. But there were fine officers, like Commodore Matthew C. Perry, who did achieve some success. Thanks largely to him, the serving of the spirit ration to minors was abolished August 29, 1842. He hated the flogging of the men—a custom the navy gave up as reluctantly as the wine messes of to-day will surrender to Secretary Daniels—because he found that in nearly every case it was due originally to the abuse of liquor by the poor wretch who was flogged. Because of his personal influence, many of the sailors and officers of the Concord voluntarily gave up the grog ration when he commanded her in the Mediterranean in 1832.

In the navy to-day, it will, we think, hardly be alleged that there is much intemperance. Dismissals for intoxication do occur, one such is impending now—not only for personal misconduct, but for serving intoxicants to enlisted men as well; yet there is widespread belief that the reins of discipline could well be tighter in this respect. The trouble is that the navy officers are expected to entertain freely, wherever they may be, particularly if in company with foreign men-of-war. It may hereafter be embarrassing to our officers when entertaining those of other services to be able to offer no wine. To our minds, this is far less vital than the removal from our young officers of the temptation to excess. Moreover, foreigners, when they are told that the absence of wine is due to a governmental order, will not only understand, but will respect a nation that can take so bold a stand. If the German Emperor can deny himself all spirits and encourage his officers to abstain totally in a beer-drinking country like his, our Government can take the position it has. Twenty years hence, if upheld by succeeding Secretaries, the wineless man-of-war will seem as much a matter of course as does the man-of-war without grog and the cat-o'-nine-tails.

THE YACHTING OUTLOOK.

The launching on Thursday of last week of Mr. Robert E. Tod's racing schooner, Katoura, is soon to be followed by that of the three America's Cup defenders—and we shall then be at the beginning of what bids fair to be a memorable yacht-racing season. There are to be no less than twenty-five races between the defenders, exclusive of those in connection with the New York Yacht Club's cruise, the first races taking place on June 2, 3, and 4, while the actual trials will occur in the middle of August. This will make royal sport in itself, aside from the international contests, for not since 1893 have there been as many as three designers represented in the trials. Mr. Gardner, who has planned Vanitie—a charming name for what should be a powerful boat—and Mr. Herreshoff, with his Resolute, are to measure their known powers against a newcomer in the field of large boats—Mr. George Owen, whose Defiance is his first big craft. Mr. Gardner's success with Atlantic, the champion ocean-racing schooner, and with such sloops as Medora, Gardenia, and smaller boats like Windward and Irondequoit, makes him a natural competitor of Mr. Herreshoff. The phenomenal achievements of two small boats from Mr. Owen's board would seem to prophesy a fine racer in Defiance.

In one respect, Mr. Herreshoff will be at a disadvantage this year. Charles Barr will not be at the helm of his boat. Indeed, there are those who believe that it was owing to Barr's rare skill alone that the older Columbia defeated the Constitution for the honor of meeting Lipton's boat in 1901. This year an amateur, Charles Francis Adams, 2d, whose yachting standing is of the highest, will sail the Herreshoff boat, with Barr's veteran mate, Christiansen, at his elbow. Mr. Cochran has selected a skilled American schooner-sailor, Dennie, to handle Vanitie, with Harry Haff as his assistant; and the captain of Defiance is also an experienced American, William Howell. The old charge that America has to import a Scotchman to retain the Cup will not hold if a Yankee boat goes to the front this year. But what is still more significant is that these new racers are, unlike their predecessors, something else than racing machines. Owing to the so-called uniform rule under which all racing boats of the Eastern seaboard have been constructed since 1905, they will be substantial craft, capable of being raced at comparatively small expense long after this coming season is over. It is true, of course, that their crews will not live on board of them; that they must have tenders to act as houseboats for the men, and that they are without bulkheads, doors, galley-fittings, or water-tanks. None the less, as compared with the Reliance and Independence type of craft, they are to be a remarkably sane and wholesome trio.

This is what makes the promise of the coming season so great for the whole sport. Everybody knows that the Columbia, Reliance, and Constitution were responsible for a multitude of freakish small vessels, from catboats up. A whole generation of yachtsmen sailed round in craft of a kind to make a real sailorman weep. It was only gradually that there was a recovery from this in the direction of solidly and soundly built boats that could be caught out and stay out in half a gale and survive without giving their crews heart disease. Last year there was a notable reaction from the auxiliary type towards purely sail-driven boats—there were actually more new sailing boats under construction twelve months ago than to-day. This tendency will be still further stimulated by the big racers of 1914, for the uniform rule favors displacement while penalizing excessive sail area, which means better boats and better sailors. In other words, this year's defenders have sharp ends and deeper and fuller under-water bodies, as opposed to freakish fin keels and long overhangs. It is a healthy development for which the true yachtsman is devoutly thankful.

Aside from the defenders, there should be good sport if there are to be brushes between Atlantic and the new Katoura. The indefatigable Mr. Cochran, not content with Vanitie and a steam yacht, is also building a three-masted schooner, which suggests an ocean race for this class before long. That the regular Sound regattas will be even more crowded than last year is obvious, while the proposed revival of the Mackinac race indicates that the Lake yachtsmen will not be behind their Eastern friends in

making this a memorable year. What better proof could there be than all this, that, however useful the internal-combustion engine, the real "windjammer" is with us to stay? Or that there are regular cycles of enthusiasm for wind-driven boats, with almost fixed periods of waning and waxing?

In the motor-boat world, also, it is interesting to note, there is a reaction against mere speed machines and an increase in popularity of stanch craft. Here, too, the desire is for a reliable and safe cruiser, one that does not roll itself almost over whenever there is a little sea, and compel the skipper to run for port at the beginning of a real storm.

SPRING GOLF PHILOSOPHY.

Golfers are well known to be among the most incurable philosophers, whether of the laughing or the weeping genus depends upon temperament—or the way the game has gone that day. Jaundiced critics, to be sure, allege that the endless golf discussions which go on in the clubhouse, and which make some enthusiasts a terror to their families and friends, are merely the drivel of vacant minds. But this is to do wrong to a deserving if not always appreciated class of men. They will tell you sincerely that they value golf almost less as a pleasure and beneficial recreation, than as a tonic to the moral nature and a stimulus to the reasoning faculties. No need to ask the inveterate golfer, "Hast any philosophy in thee, shepherd?" He is full of it. No event of the round, no mischance, no lucky accident, no dazzling success or overwhelming failure, but he can extract from it the sweet milk of philosophy. In doing what he wants he will see deep meaning; but a significance even more profound will he detect in not being able to do it.

This is what most strikes one about what may be called the spring philosophy of golf. In this latitude, the great majority of golfers are compelled to give up their game during two or three months of winter. A few struggle dauntlessly over the bleak links, but even they have had to put their clubs away, hereabouts, since the middle of February. A foot of snow and no greens made the attempt to play mere bravado. But does anybody imagine that this period of enforced rest makes the true golfing mind less active? Quite otherwise; it has furnished a new topic for debate. Is such a rest good for your game? High debate on this question has been held wherever golfers most do congregate. Abstract theory, experience, the inner consciousness, all have been searched in order to discover weighty reasons for and against.

There are two great schools of thought on this important matter. One holds that it is an excellent thing to give up golf for three months in the year. Then you emerge in the spring with fresh zest and briskness. The game will never have seemed so enjoyable. With eye glued to the ball and muscles working easily, you play better than ever, and come to understand for the first time what the political economists mean by "the reward of abstinence." Thinkers of this school urge the powerful argument from nature. She comes out all the brighter and more inspiring after the winter rest; why not the golfer? Moreover, there are wise saws and modern instances to be cited. Some fine players make a point of resting on their clubs, so to speak, even when they are not compelled to by winter and bad weather. In England, one can usually play the entire year through, if so minded. Yet the two men who have most often won the amateur championship, Mr. John Ball and Mr. Harold Hilton, seldom play in the winter. If they find that they come out in the spring fit and eager for the fray, why should not Topper and Slicer do the same?

The rival school of severe golf philosophers will tell you why. In the first place, the game is an exacting mistress, really demanding all of your time. When you cannot hope to reach your ideal of play without giving undivided attention, week in and week out, to every one of its minute details, why keep up the miserable pretence that a period of hibernation will do you good? As a matter of fact, you know what happens to you in the first few rounds of spring. You are either muscle-bound or flabby as a rag. You can't keep your head down to save your life. All the faults which you had toiled painfully through the summer to eradicate come rushing back, with a lot of new ones in their train, to make your game one to fill even your caddie with despair. The truth is, according to the doctrine of this school of philosophy, that golf demands as many laborious days as can possibly be applied to it. Every one lost is as hopelessly gone as the snowflake in the burn. Of course, the deprivation must be borne with as manful a spirit as may be summoned to meet this or any other calamity in life, but, for goodness sake, do not try to make people believe that you like it, or that it can possibly do you any good. Thus do these golf philosophers refuse to distil out the soul of goodness in those things evil, the three months of enforced absence from the links.

With the doctors of the game thus disagreeing, it would be rash for a mere writer to attempt to decide. If the whole dispute is left in the twilight zone, no great harm will be done; for then the golfing ratiocinators will only discuss it the longer, in wandering mazes lost. And it is certain that, whatever their premises, and whatever their reasoning, they will make the praise and glory of golf come out in the conclusion. We note only one point. The controversy seems to be largely between the Intuitionists and the Pragmatists. But it will be observed that Mr. Rockefeller, our greatest Pragmatist in golf as in some other things, promptly left the snow-submerged links at Pocantico and took a special train to Florida. *O, si sic omnes!*

Foreign Correspondence

THE POLITICAL CRISIS IN ENGLAND—THE KING AND THE ARMY.

LONDON, March 29.

"This is a wonderful Government," says the sarcastic Mr. Bonar Law. Indeed it is. At three o'clock on the afternoon of March 25 it appeared sick unto death, and its best friends gave it only a few hours to live. By six o'clock the same evening it had regained a more robust health than it had known for years. The Prime Minister's repudiation of Cabinet responsibility for any bargaining with the Curragh mutineers revolutionized the whole situation. It saved his Ministry from immediate extinction, and the democratic cause from a long period of internal discord and resultant helplessness.

The blunders and confusions of the last few days can be traced in large measure to two or three causes. One is the lack of clear thinking on the Unionist side—in Parliament and the press as well as in the army—as to what is meant by "the coercion of Ulster." There has been no coherent idea as to the nature of any possible coercion, or as to the means by which it would or could be brought about. The Ulster Volunteers have been organized to fight—against whom? Sir Edward Carson himself does not know. It has surely not been contemplated that, as soon as the Home Rule bill received the royal assent, a body of these volunteers should attack the Nationalist quarter of Belfast or lay military siege to Dublin. At the very earliest, the new act could not come into operation until the summer of next year. In the meantime, the Government of Ireland would continue, in every detail, precisely as at present. What would the volunteers be doing all this time? Nothing could occur that would call for the exercise of physical force on either side.

The Ulstermen and many of their supporters on this side of St. George's Channel seem really to entertain the mad idea that, as soon as the Home Rule bill was passed, the Government would send a large military force into Ulster to compel every dissentient to change his mind! Every house, they suppose, would be visited by a detachment of soldiers and the householder would be required to sign a document declaring his assent to Home Rule. If that is not what the Carsonites fear, what is it? They have been talking freely about "the invasion of Ulster" and "the conquest of Ulster." What ideas do they attach to the words?

The two final paragraphs of the so-called "Gough treaty" represent precisely the position of the Government and of the Liberal party. "His Majesty's Government must retain their right to use all the forces of the Crown in Ireland, or elsewhere, to maintain law and order and to support the civil power in the ordinary execution of its duty. But they have no intention whatever of taking advantage of this right to crush political opposition to the policy or principles of the Home Rule bill." These two sentences have

been cancelled by the Prime Minister because no Government can consent to bargain with troops as to the conditions of their obedience to orders in hypothetical circumstances. But, as a declaration of the Government's intentions, this statement is absolutely unexceptionable —so much so as to amount almost to a platitude. Nobody, either in Ireland or in England, who had given a moment's thought to the question, could expect the policy of a Government to be anything else. But Gen. Gough and his brother officers seem to have been obsessed by the idea of some sort of imminent attempt to use the forces of the Crown to "invade Ulster" or "conquer Ulster." No wonder that the conference at the War Office led to the discovery that there had been a "misunderstanding."

Another thing that has helped to complicate the situation has been the unfortunate fact that the Minister for War is himself a military man. It was a blunder of Mr. Asquith's to appoint a colonel as the Cabinet Minister in charge of the War Office. The usual practice has been to place this responsibility on a civilian. Col. Seely has the reputation of many high qualities, but his long association with the army has inevitably colored his views of the relation of the army to the civil government. Evidently, he had not the least conception of how the country would regard any suggestion of such compacts with officers as he has been trying to arrange. A civilian War Minister would not have looked at the question through "service" spectacles, nor would he have committed the blunder of letting Buckingham Palace play so active a part in the proceedings.

And what of the King himself? It appears evident that the Unionists have hoped to use him, together with the army, as their tool in bringing the Government to the ground. At the moment when their plot seemed to have succeeded, they openly boasted in the party press of the effect of his intervention. Then came John Ward's protest in Parliament against "interference from King or army," and the response to his speech made it clear that the country did not approve of his Majesty's being an "active agent" in such matters. Now, of course, it is the cue of the Unionist press to be highly indignant with the "infamous" conduct of those Liberals who have "bandied about" the name of the King.

The carefully worded disclaimers by Mr. Asquith and Col. Seely have not weakened in the least the widespread conviction that the King has been doing things that he had better have left undone. For months past some unseen but powerful influences have been at work, and if popular opinion associates them with Buckingham Palace, it is simply because no other hypothesis will fit the facts. Liberals especially resent his Majesty's frequent conferences with the Opposition leaders and with Lord Roberts. Technically, these consultations may be defended as perfectly correct, for one of the privileges of Privy Councillors is the right of audience with the King. But it is by the advice of his Ministers that a constitutional King is expected to govern. As to Lord Roberts, his visits to Buckingham Palace are certainly to be deprecated when one remembers that his was the first name appended to a covenant whose signatories declared that they should consider themselves justified "in taking or supporting any action" to prevent the Home Rule bill from being put into operation if passed under the Parliament act. Lord Roberts is an old man, and the memory of his distinguished services makes the supporters of law and order unwilling to regard his recent course as they would regard the same weakness in others. But he is emphatically not the sort of man who is a safe adviser for Buckingham Palace in matters affecting the relation of the army to the Parliament. H. W. H.

THE ELECTIONS IN SPAIN—PROBLEMS FOR THE NEW GOVERNMENT.

MADRID, March 28.

The recent elections for the new Cortes, as was foreseen, resulted in a very large majority for the present Government. The general system of choosing representatives has nothing in common with our own, since it is purely a question of following a particular political leader. No platforms are proclaimed, no principles of economic reform are announced, no promises are made. A candidate for office justifies his claims by showing that he is ready for a wider field in which to display his oratorical talents. If he is fortunate in his relatives and friends, some unsuspecting precinct may find his name posted in the public squares on the eve of an election; and if his party has control of the local machinery, he is certain to be elected by the unanimous choice of his constituents.

The campaign was lifeless. In Madrid the streets were deserted, and although there was some shooting and stabbing in provincial towns, in most places the day was much like other days. The followers of Señor Maura were the only ones who attempted to stir up an interest in the cause of their deposed leader. They issued a little booklet called "Catechism on the Doctrine of Maura," consisting of a series of questions and answers proving that Maura is the only person to save Spain from impending ruin, and that all of his opponents are enemies of the country and of the King.

The Mauristas also held several meetings at various theatres, at which there was little or no disturbance, which always goes to prove, here, that no one is interested in the cause; that is, sufficiently to break up the meeting. As there generally are entertaining sights at these gatherings, I went to one to get some information at first hand. The house was crowded, while the stage was occupied by about a score of men, party managers, speakers, and a few noted guests. Although many speakers displayed real oratorical power, not one presented any principles or platform, or proposed any particular legislation. It was all a question of personalities, every speaker making it as clear as he could that there was but one man in Spain whose patriotism, justice, and loyalty made him fit to govern the country. The speakers were frequently interrupted by cries of "*Viva Maura!*" and in every case, after closing his speech, the orator was effusively embraced and patted on the back by all who were on the stage. He then withdrew to some rear seat in order to recover from his emotions and to rest his arms, which he had waved incessantly for half an hour.

The result of the election has at least made clear one thing: Maura will not support Dato in the next Congress, and although the latter appears to have a very large majority over all of his opponents, it must be remembered that, by a peculiar election law, any candidate who presents himself in a specific precinct without any opposing candidate to contest the election with him becomes a Deputy to Congress without any struggle whatsoever. Thus about one-fourth of the membership of the New Chamber will consist of representatives whose real affiliations have never been publicly declared, and who cannot be counted on for a definite time to come. There seems to be some justification, therefore, in the frequently expressed view that the new Government, in spite of its seemingly large majority, cannot survive many sessions of the Cortes.

The chief parties have never been so broken up, there have never been so many petty leaders, and no election has ever brought out more bitter expressions of personal hostility, than the one just held. One result of the elections is, however, that the Republicans have decidedly lost ground in their chief strongholds, except in Madrid, where they elected five out of eight candidates. Nor can there be any doubt that the King is gaining in popularity. The great mass of the people seems to remain indifferent, for on them has fallen the bitter effect of centuries of misrule, and they see no hope of improvement. But there is less hostile criticism uttered, and friendly manifestations when the King passes through the streets are far more common than they were a few years ago. This may be ascribed first to the personality of the King, who in recent years has gone through some trying ordeals with admirable courage. In the second place, the continual unrest in Portugal has brought home to many Spaniards more than any local inefficiency the fact that Spain is not yet ripe for a republic.

The chief question for the new Cortes, one not once discussed during the last campaign, will be the budget. There have been many indications of increased national wealth in the last few years; economically Spain has improved. The revenues from customs receipts, for example, as well as the earnings of the railways, show a substantial increase. The latter item is particularly significant in the case of a nation the mass of whose people has been averse to travelling or moving about. But, owing to unusual expenses, such as the unfortunate Moroccan war, the balance sheet for the fiscal year of 1913 shows an unusually large deficit. The first grave problem will therefore be the increase of the revenue, with the possible reduction of the army in Morocco. R. S.

Books and Men

ANOTHER "EDWIN DROOD" TRIAL.

John Jasper, whose neck was saved from the English hangman through Mr. Bernard Shaw's desire to make an epigram, is again to be put in jeopardy of his life. This time it is in Philadelphia, where a mock-trial of the alleged murderer of Edwin Drood will be held on April 29.

It is a wonder they did not hang him in London. Foreman Shaw of the jury had his little joke about finding him guilty of manslaughter "in the spirit of compromise." But it is possible that all the jurymen would have voted for a verdict of murder in the first degree if it had not been for the prosecuting attorney. Mr. Cuming Walters, who "led for the Crown," arose at eleven o'clock in the evening and delivered a long, very earnest, and rather dull address. In short, he bored the jury, the Court, and the audience, "full of holes." Mr. Walters has written one book, compiled another, and published any number of letters, articles, and addresses to prove that Jasper's plot against Edwin Drood really succeeded. So he not only refused to be frivolous about the case, but he almost declined to be interesting. A discussion about the make-believe characters in a novel had no room in it, he thought, for lightness. And so the jury revolted and Jasper got off with his life.

The cards were stacked against Jasper from the start. The choir-master walked into court a half-doomed man. The defence seems to have taken a rather academic interest in an acquittal. But Mr. Walters's thirst for a conviction was very real. For nine or ten years (since his publication of "Clues to the Mystery of Edwin Drood") he has pursued Jasper as relentlessly as fate. And the defence virtually gave their case away before the trial began. They agreed not to produce Edwin in court, and then tried to clear his uncle of the charge of murdering him. This was an egregious blunder. Jasper's lawyers should have insisted upon producing in court a person—Datchery, or another—who would insist that he was Edwin Drood. Then the jury could have decided the question of identity.

If a writer who has recently described the approaching Philadelphia trial, in the Boston *Transcript*, is correctly informed, then the defence is going to make a worse blunder than that made in London. "It was proposed by the defence," he writes, "to call Drood himself to the stand by proxy, but the prosecution, rather than be handicapped by such a proceeding, agreed to admit that Drood was dead."

That was good of them! It gives them their case half-won. In London, Helena Landless was permitted to go on the witness stand and testify that *she* was Mr. Datchery; that she, the Oriental tragedy queen, already in love with that properest of persons, the Rev. Dr. Crisparkle, had been careering about Cloisterham in trousers and wig, eating fried sole, veal cutlet, and a pint of sherry for her dinner!

It is true that she said she did not drink the sherry, but poured it away. This is an invention of the exponents of the Helena-Datchery theory—Dickens says nothing about it. It is also true that the defence called Bazzard, who, in turn, testified that *he* was Datchery. Mr. Walters, in cross-examination, was far less successful in destroying his evidence than Mr. Cecil Chesterton, for the defence, had been in shaking Helena's story.

The identity of Datchery is, of course, a separate problem from the question of Jasper's guilt. It is, unless Datchery was Edwin Drood himself. And if the defence be not permitted to make this contention any argument about Datchery merely prolongs the trial—though it may add some humor to it. At the English trial Mr. "Justice" Gilbert K. Chesterton had to remind the prosecutor that his lengthy cross-examination of Bazzard was dragging a little. They must get on, for "we are all in high hopes of hanging somebody."

They say that the Philadelphia trial will be eminently fair because of the lawyers who are to take part in it. A Justice of the Pennsylvania Supreme Court will be on the bench, and the prosecution will be conducted by Attorney-General Bell and Judge Patterson, of the Court of Common Pleas.

Really, nothing could look worse for Jasper. Legally, the evidence against him is tremendous. It is because Mr. Walters and Sir Robertson Nicoll have looked at the problem in such a cold, legal light that they are sure of Jasper's legal as well as moral guilt. But imagine the choir-master's attorneys trying to present it as an artistic problem, as a study of the human equation! Those judges and lawyers would simply dance on the idea.

There is one ray of hope for Jasper. Among the talesmen are George Ade and "Mr. Dooley." The lawyers for the defence ought to see to it that these two humorists get into the box. They may find a way out for the prisoner.

The "legal" case for Jasper's guilt is very strong. Certainly, Dickens told Forster that his story was to concern an uncle who should murder his nephew. Certainly, the novelist's son and daughter believed that their father died still intending the murder to succeed. Certainly, Dickens told Fildes, the illustrator, that Jasper must have a black scarf—for with that "Jasper strangles Edwin Drood." Certainly, eighteen out of the thirty-two principal commentators on the problem have believed that the plot did not miscarry, and that Edwin's dead body was actually placed in the quick-lime after that sinister Christmas Eve dinner.

But—it is not a legal problem, in the narrow sense. It is a human problem—a question of the workings of a novelist's mind. Another novelist or literary man is a better judge in the case than any lawyer who looks at it in a purely professional light. That Jasper *tried* to murder Edwin is denied by no one; the question is whether he is legally as well as morally guilty. The list of literary folk, especially imaginative writers, who believe that Edwin escaped is rather impressive: "Orpheus C. Kerr," "Gillan Vase," Andrew Lang, William Archer, Comyns Carr, M. R. James, Clement Shorter, and Cecil Chesterton.

Forster and the Dickenses heard from the novelist that Edwin was murdered, but there is no proof that the plan was not changed afterwards. Charles Dickens was apparently in trouble with his plot towards the last days of his life. The statement to Fildes about the black scarf is not conclusive—an unsuccessful attempt might have been made with the scarf. (Fildes never seems to have drawn it, by the way.) Finally, and it is a point seldom emphasized, the machinery of the opium, Jasper's drugged trances, seem utterly unnecessary unless they were to prevent the murder. They would explain how the attempt failed, and do it beautifully. What other purpose have they?

EDMUND LESTER PEARSON.

Poetry

ON TWO POEMS IN THE "NATION."

Arcades ambo,
Et cantare pares et respondere parati.

Two shepherds on their oaten reeds
  Took up the pastoral song
(Poor Tityrus the while proceeds
  To drive their flocks along).

Menalcas wished it were his lot
  Beneath the beechen tree,
The turmoil of the town forgot,
  To whistle quietly.

Damœtas loudlier swept the string,
  "How dull is life," sang he,
"When every day it fails to bring
  Perils by land and sea."

Just then Palæmon chanced along;
  Requested, he decides:
"The Muses love alternate song,
  They like to hear both sides."

News for Bibliophiles

ORIGIN OF THE CLOSED COUPLET IN ENGLISH.

Who first cultivated the closed ten-syllable couplet in series, the chief vehicle of English poetry from the seventeenth century to the nineteenth? Who first, not by occasional chance, but by frequent design, achieved its self-contained unity and those traits of style which favor unity—restraint, neatness, balance, antithesis? Mr. Saintsbury, in his "History of English Prosody," thinks it was Sir John Beaumont, or George Sandys, during the reign of James I; Mr. Schelling, in the thirteenth volume of the Modern Language Publications, that it was Ben Jonson. If any one deserves to be called the father of English "classicism" in general, one must agree with Mr. Schelling that it was Jonson. But as to versification, Thomas Heywood, the dramatist, anticipated both him and the others, in the skilful translations of Epistles XVI and XVII of Ovid's "Heroides" which form 1,100 lines of his "Britaines Troy." This long narrative poem, mostly in the *ottava rima*, was published in 1609, probably antedating Beaumont's and Sandys's significant work, and certainly most of Jonson's. But, further, Heywood esteemed these translations so highly that he had woven many extracts from them into acts i and ii of his "Iron Age," Part I, which on good grounds is to be dated about 1596, though not published till 1632. Therefore, the translations date almost certainly from the sixteenth century, and probably from the early 1590's. As to technique, Heywood uses the "run-on" couplet only half as often as Ben Jonson does, somewhat oftener than Sir John Beaumont, much less often than Sandys, Denham, and even Waller, other pioneers. We do not find in him, or in them, the finish and austerity of Pope, or even Dryden, as to rhymes and as to pauses within or after the couplet; yet he clearly strove, especially in the second of the translations, for the terse effect given by the final pause and by parallelism and antithesis, of which we find many cases not in his original. The epistles abound in such passages as these:

> Fulnesse of wealth in all my Fleete I see,
> I am rich in all things, save in wanting thee.
> . . . . . .
> *Theseus* repented, so should *Paris* doe,
> Succede in Love, and in repentance, to.
> . . . . . .
> You are more earnest to pursue your game,
> I yeeld you not more knowledge, but lesse shame.

Heywood's originality has been the less recognized, perhaps, because these translations are not well known or easily accessible; the only copy of "Britaines Troy" known to me came from George III's library to the British Museum. But by a curious fortune they are to be found elsewhere. Jaggard, the unscrupulous printer of that poem, in 1612 put them in the third edition of "The Passionate Pilgrime," attributing them to Shakespeare. In spite of Shakespeare's and Heywood's indignation, expressed in the same year at the end of the latter's "Apologie for Actors," they remained among Shakespeare's poems in the first collected edition, 1640 (as well as in such later editions as those of 1710—Gildon's, 1725—Sewell's, 1775 and 1804). As a result of this dissemination and of Shakespeare's name, they may even have helped a little to promote a taste for the stricter sort of verse.

If we were only shifting a rather dusty laurel from one head to another, the matter would be of little interest. But there is a plain indication here from what this verse-form originated. Mr. Saintsbury suggests the influence of the succinct couplet-close of the English sonnet and *ottava rima;* and later, no doubt, the example of Malherbe and his followers helped, as did also the deep and wide trend towards a more severe poetic manner. But what started and doubtless always nourished the taste is suggested by the title and versification of another work, which appeared in 1597, probably some years after Heywood's poems were composed. "England's Heroical Epistles," by Drayton, Mr. Schelling rejects on no very clear ground as a forerunner of Jonson's closed couplets; yet they show a far higher proportion of such couplets than either Jonson or Heywood does, as well as much use of antithesis and the like. The title of the poem, as well as its contents, a feigned verse-correspondence between various romantic lovers in history, clearly shows that Drayton was imitating what Heywood was translating, Ovid's "Heroides," as Pope did in "Eloisa to Abelard" over a century later. The elegiac distich, in which the "Heroides" are written, is kept as strictly complete in itself as the couplet of Pope, and is as neat and antithetical in style; of all naturalized English metres, its unequal hexameter and pentameter go best into the ten-syllable couplet. In the Latin elegiac distich, more than anywhere else, we find the origin of our most "classic" style of verse.

Correspondence

THE NEW "NATION."

TO THE EDITOR OF THE NATION:

SIR: I have studied your recent prospectus and read the succeeding numbers of the *Nation* pretty carefully, and so far I see no reason to fear that you are headed for any dangerous reefs. I am no less anxious than Professor Reeves, or any other, that the *Nation* shall stand in the future for the same ideals as have characterized it in the past, but in entering a broader field it need leave no valuable trait behind, nor take up anything inconsistent with its record.

Born and brought up on the farm, I received my first knowledge of the *Nation* and the *Evening Post* from the college reading-room. I do not hesitate to say that this was the most important single event of my undergraduate life. I have acquired in the years following a fairly wide acquaintance with periodical literature, and know that I am within bounds in saying that through no other agency could I have been brought into contact with so many of the really important men and ideas of this and other ages as through the pages of the *Nation* and the *Evening Post*. It is rarely that I read any book which is not more easily understood, which does not mean more to me and suggest more to me, because of what I have gleaned from your pages since the beginning of my college days.

The stronghold of the *Nation* with those who know it is their conviction that its pages record the sincere opinions of its writers, and that there are certain fundamental principles for which it can be depended upon to stand in the future as in the past and present. Hold it rigidly to that standard, and you can enlarge its range of interest with entire safety. Whenever that is forsaken, the *Nation* will be dead, even though it may "have a name to live," as certain other periodicals of once high standing which have gone after strange gods. I have faith to believe that the thought of its apostasy from the ideals of Godkin and Garrison could be more repugnant to no one than to those by whom it is owned and edited. W. H. JOHNSON.

'CONSTITUTIONAL" GOVERNMENT IN MEXICO.

TO THE EDITOR OF THE NATION:

SIR: The prevailing amount of misconception in this country regarding Mexico, in spite of the countless books and articles which have recently been devoted to that unhappy land, is proof that words and phrases which sound alike may be capable of the most widely divergent shades of interpretation under different conditions.

What we understand by "constitutional" government is one thing; what Mexicans mean by it is another. We have a constitutional government to-day and have had one since the foundation of our republic. Mexico has none now, and has never had one in the whole course of her turbulent and disorderly career as a separate nation. The average American when thinking and talking about Mexico usually has in mind a picture of a country with ideals and a political existence like our own, although, it may be, somewhat more imperfect. He says regretfully how sad it is that our neighbor is now so distracted by civil warfare and how much it is to be hoped that "normal" conditions will soon be restored. As a matter of fact, conditions in Mexico to-day are perfectly normal and are merely reproducing the ordinary state of existence there, if we except the really abnormal years of outward calm under the dictatorship (it is absurd to call it a presidency) of Porfirio Diaz.

Nothing more is needed to prove this contention than a casual perusal of the history of Mexico since its separation from Spain. The long list of Presidents and revolutionary uprisings becomes monotonous; administrations have changed almost daily. And, in fact, nothing else is to be expected of Mexico in this regard. It was colonized by a worthless set of pirates, criminals, and soldiers. In con-

trast with the Anglo-Saxon settlements in the United States, where the colonists came for the most part from worthy motives and under the influence of centuries of development tending towards self-control and political freedom, accompanied in many cases by their wives and families, the Spaniards descended upon the beautiful but unhealthy tropics of our continent, not from worthy motives, but almost solely as adventurers desirous of making a speedy fortune in the mines or by Indian slavery and of returning at the earliest moment to enjoy their wealth in Europe. They did not bring women with them, the result being the mixture of European, negro, and Indian blood which now comprises at least 95 per cent. of the Mexican population, exclusive of the purely indigenous race still surviving in Mexico, like the Mayas in Yucatan, the Yaquis in the northern states, and others who have never yet acknowledged the authority of the Government of Mexico. Ask an inhabitant of Yucatan if he is a Mexican and you will always hear: "No, I am a Yucatecan." Perhaps 5 per cent. of the total population of the country to-day has a smattering of education; all the rest are plunged in an ignorance and superstition as dense as any of the Middle Ages.

The great need of Mexico to-day is agrarian reform—a system of revised land tenure enabling the "peon," the backbone of the country, worthless, ignorant, cruel, and innately lazy as he is, to obtain and hold agricultural lands to cultivate for himself and his family, in order that the feudal holdings of the great landed proprietors may be broken up and forced into immediate and much-needed cultivation by peasant proprietors. Such a system would displace the conditions of peonage, or slavery, which really, although secretly, exist all over the country. Although illegal, the peonage is in many respects the counterpart of the slavery of our South before the Civil War.

Elections have always been the veriest farces in Mexico, the idea of an honest or "untrammelled" election being a highly humorous conception to any Mexican. The candidate to be elected is decided upon in advance, and orders are issued to declare so and so elected to such and such an office. Not three men in a hundred, even of those entitled to a vote, will venture to go near a polling place, and those who do are bold, indeed, if they should venture to oppose the chosen candidate.

The natural result of centuries of misgovernment, both colonial and republican, has been that patriotism, respect for the Constitution, and political honor, as we understand the terms, do not exist in Mexico. The Federal Government is expected to do everything; individual initiative is frowned upon and scarcely exists. The theory sometimes held that Mexicans would unite against a foreign invasion is another misconception in American minds. The Mexican can and does fight like a wildcat when cornered, as he expects torture and death to follow surrender; but to expect any volunteer resistance to invasion would be to ask too much in a land where criminals at the point of a bayonet are forced into the ranks of the army to fight for the Government against revolutionaries.

To understand the situation in Mexico as it confronts us, we must abandon all our own ideas of a government by the people, for the people, and once for all realize that although in theory Mexico is a sovereign state with an advanced republican form of self-government, in reality it is and has always been governed by a system of despotism which, however repugnant to our feelings of the rights of a people, is, unfortunately, the only form of control which can hope to succeed in that country now for generations to come. Until the moment to which Madero looked forward, years in advance of his countrymen, shall come when education and practice in political freedom shall have made the Mexican people capable of self-government by law and order, until that time must Mexico be ruled by a strong hand, a despotic military autocracy. Constitutional government in that land is a theory never yet realized; anarchy and revolution, supposedly in behalf of some principle, in reality to act as a cloak for deeds of shameless brigandage, are the realities which confront the Mexican people and, what is worse, confront the American people. MONTGOMERY SCHUYLER, JR.

New York, April 3.

THE DUTCH NAVY.

TO THE EDITOR OF THE NATION:

SIR: The pessimistic letter of your Dutch correspondent about the sad condition of Holland's fleet is perfectly correct. But suppose that we should pay fifty guilders for every man, woman, and child in the country to build one or two dreadnoughts, what, in the name of common-sense, are we going to do with them?

England has twenty-nine, France seventeen, Germany nineteen of those big ships. Our one dreadnought might be gloriously blown to kingdom-come, but from a military point of view it would mean an absolute waste of men and money. The truth of the matter is that the small countries cannot possibly compete under a system which threatens to ruin the largest and most opulent nations. Building a modern fleet is not a question of patriotism, self-sacrifice, or courage. It depends entirely upon the size of the respective national bank accounts.

But here is another side of the matter to which I wish to draw your attention: From a legal and ethical point of view, ought the kingdom of the Netherlands to be allowed to enter the modern rivalry for big ships, and by so doing run the risk of war?

It has pleased the civilized world to make our national residence the centre of the movement for international peace. The edifice of the highest tribunal is situated a mile from the shore. Any respectable dreadnought, sailing peacefully in the North Sea, can shoot the Peace Palace into pieces in less than ten minutes. With our few ships and our necessarily limited means, we cannot possibly hope to defend the coast of the country, which in the general interest of the cause of peace ought to stay neutral during all future wars.

The only sensible solution of the difficulty seems to be this—let all nations agree to declare this territory an international sanctuary. H. W. VAN LOON.

Washington, D. C., March 29.

PAUL HEYSE.

TO THE EDITOR OF THE NATION:

SIR: Paul Heyse, who died on April 2, was born in Berlin in 1830. From his father, the celebrated philologist, Prof. Karl Heyse, he early learned to know thoroughly and love deeply his native tongue. No German poet, not even Goethe, has had a more perfect command of language. From his mother, a Jewess, came his artistic nature. At the age of seventeen when entering the University at Berlin, he was introduced by the poet Geibel into the house of the art-historian Kugler. Here the later so-called Munich school of poetry really arose. Heyse began his literary career with a volume of fairy-tales, "Jungbrunnen" (1849), in the style of the romanticists Brentano and Eichendorff; this was soon followed by a tragedy, "Francesca da Rimini," which shows unmistakably the influence of Shakespeare. After making a thorough study of Romance languages under the renowned Prof. Diez in Bonn, the young poet went to Italy to study Italian renaissance literature, and while there made fine translations of Leopardi and Giusti. On his return to Berlin in 1854 he married a daughter of Kugler, and went to Munich to live, having been called there by König Max at the suggestion of Geibel. In the meantime, he had published another tragedy, "Meleager," and several epic poems with the collective title, "Hermen." In Munich, where he became the King's constant companion and the acknowledged ruler of German letters, Heyse entered upon a period of very prolific production. He wrote a number of short epic poems, two of which, at least, "Die Braut von Cypern" and "Thekla," are excellent, and several dramas, one of which, "Die Sabinerinnen," took the Munich prize in 1858, but was not well received on the stage. Heyse has never been highly esteemed as a dramatist in Germany; he is by nature and preference an epic, not a dramatic, poet, and it is just in those dramas where broad epic rather than intense dramatic treatment is required that he is most successful. Of his twenty or more dramas the best are "Alcibiades," "Die schlimmen Brüder," "Ludwig der Bayer," and "Hans Lange." His essays in the modern realistic drama were signal failures.

Heyse found his true forte in the prose Novelle, of which he published several hundred. It was one of the first, "L'Arrabiata" (1855), which established his fame, and which still remains his best, as it is perhaps the most perfect short story ever written. Among his other Novellen the best are, by popular consent, "Zwei Gefangene," "Unvergessliche Worte," "Das Mädchen von Treppi," "Andrea Delfin," "Die Stickerin von Treviso," "Der Weinhüter von Meran," "Die

Dichterin von Carcassone," and "Grenzen der Menschheit."

Heyse has drawn his stories from nearly every nation and class of continental Europe and from almost all epochs. Never, however, has he written as so many Germans have, simply to depict a class or epoch for its value in the history of culture; with him class or epoch is always merely the background for a vital problem. He alone of all German story-writers is never pedantic or tedious. Just on account of his wide range of scene and intentional suppression of descriptive detail he has been accused of superficial observation and characterization. The accusation is utterly unjust. Heyse really gives by a few deft lines a picture of epoch and people more vivid than the average German writer does in as many pages. Only in his very latest stories, where most unfortunately he has been unable to escape the almost universal influence of so-called naturalism, has Heyse sacrificed eternal truth for ephemeral and fortuitous reality. He has been throughout a romanticist in his philosophy of life and art, but with a classic calm and restraint. He has held himself somewhat aloof, has thought perhaps too much of art and too little of life, has laid too much stress upon elegance of form and expression, but he has never degraded himself or his work by mere actuality.

About 1870 Heyse unfortunately turned from the Novelle, of which he was master, to the novel, in which he has done but mediocre work. "Die Kinder der Welt" (1873) is an attempt at a long novel of the revolution of German thought in the early '70's. It is a strange mixture of the philosophy of atheism and art, of Strauss and Schopenhauer. The main story, the struggle of Dr. Edwin between wife and mistress, is well enough done, but there is no unity to the book. Like all of Heyse's long novels it is a mere string of loosely connected stories with little or no development of plot and character. "Im Paradies" is a tale of Munich art-life, in which the doctrine of free love is openly preached. The only good feature of the book is the fine character of the artist Jansen, evidently drawn directly from life. In "Der neue Merlin" (1892) Heyse has sought to portray the fate of an idealistic poet in our realistic times. There can be no doubt as to who the poet is. Unhappily the author enters into long tirades against the new school of literature growing up in Germany and its adherents. It is regrettable that he attempted in a work of art to answer their scurrilous attacks upon him and his conservative attitude. Heyse's last novel, "Ueber allen Gipfeln," is another most unfortunate attack upon modern thought, upon Nietzsche and his Uebermensch idea. Here the author loses all control of himself—whatever Nietzsche's and his followers' philosophy may be, it certainly is not "the hideous nocturnal caterwauling of drunken, maudlin students."

As a lyric poet Heyse also attained eminence. His lyrics are always finished in form, often deep in thought and beautiful in sentiment; but they lack the spontaneity of Goethe's songs and have but seldom been set to music. Consequently he has never been a favorite with the German people in general. Forty years ago, among the literati, Heyse bore the proud and undisputed title of "Goethe's heir." Fifteen years later, when the great wave of naturalism had almost submerged German literature, he was ignored—even ridiculed as an "antiquated stylist." The naturalistic critics and propagandists had dethroned him, had, in fact, driven him from his native land. He went to live a retired life in his lovely villa near Gardone, on the beautiful Lago di Garda. Here I had the privilege of visiting him several years ago.

EDWARD STOCKTON MEYER.

Cleveland, April 4.

THE ROMAN LIBERALS TO LINCOLN.

TO THE EDITOR OF THE NATION:

SIR: To my letter in the *Nation* of March 5 I have received interesting replies from Mr. Hugh McLellan, of New York, and from Mr. E. S. Johnson, curator of the Lincoln Monument at Springfield, Ill. It is certain that the stone from the wall of Servius Tullius with an inscription in honor of Lincoln has been since 1870 in Springfield, and since 1871 in the eastern interior wall of Memorial Hall. Mr. McLellan has sent me the "History and Description of the Lincoln Monument," by J. C. Power (Springfield, 1872), which contains a photographic reproduction of the stone and what is known of its history in America. The stone was found in the basement of the White House in 1866; thence it was transferred to the crypt of the Capitol. In the *Congressional Globe* of April 11, 1870, I find a motion of Congressman Peters, of Maine, to warrant its transference to the Botanical Gardens in Washington. It was on June 17 that Congressman Cullom, of Illinois, amended this resolution, requesting its delivery to the Lincoln Monument Association, which was done the following month. Cullom's speech on that occasion appears in the *Globe* under that date.

Between the documents that Gerardi unearthed in Rome and those cited by Power there is considerable discrepancy. The *Address* published in Rome in 1865 (July) specifically states that the stone was sent in commemoration of Lincoln's death. In this case, the theory of shipment on the unfortunate Uhla sounds plausible enough. It is clear in any case that the stone must have been addressed to the President of the United States, which fact explains its presence in the White House. It is quite incredible that the stone could have so been delivered to the private residence of President Johnson, entirely without his knowledge, or that his efforts, as described by Power, to find out something about the stone in 1866 should have been wholly in vain. The inscription on the stone reads: *Abrahamo Lincolnio Region. Foederat. Americ. Praesidi. II*, etc.: "To Abraham Lincoln President of the United States *for the second time*. . . ." In view of this, it would seem that the stone must have arrived during April or May in Washington addressed to Lincoln, and during the confusion attendant in the White House on his assassination and the subsequent illness of Mrs. Lincoln, was overlooked for the moment and then finally forgotten. The Roman *Address* must simply have utilized the emotion aroused by Lincoln's death to give an actual news value to the announcement of the earlier action of the Liberals, really taken on a different occasion. The essential point, in any event, is that even if the stone was aboard the Uhla, it was ultimately able to record its message of affection and esteem from the Roman patriots above the tomb of Abraham Lincoln.

ARTHUR LIVINGSTON.

Columbia University, April 1.

CATALOGUES.

TO THE EDITOR OF THE NATION:

SIR: I read with amazement (*Nation*, March 12, p. 277): "It is only in Germany that one has the right to assume the existence of well-made catalogues." Now, confining my appreciation to the catalogues of picture galleries only, I venture to assert that no German gallery possesses a catalogue as complete and thorough as those of Turin (Bandi di Vesme), Nantes (Nicole), and Louvre (Italian and Spanish schools, by Seymour de Ricci). The two latter catalogues are hitherto, as far as I know, the only ones which give the *whole* bibliography of every work described. I will add that I know several catalogues of minor galleries in England (Glasgow, for instance), which are superior to the catalogues you may get of Darmstadt, Carlsruhe, Stuttgart, etc.

SALOMON REINACH.

Paris, March 26.

[Our reviewer somewhat exaggerated the primacy of Germany in art cataloguing, yet M. Reinach misconceives the intent of the phrase to which he objects. The question is not what are the best gallery catalogues, and where; but where are good gallery handbooks common enough to be the rule? The review itself was based on what is hardly more than a good gallery guide. M. Reinach's letter justly points out the notable progress made of recent years by England, France, and Italy. Germany holds her supremacy by a narrow and diminishing tenure.—ED. THE NATION.]

PUBLISHING JUVENILIA.

TO THE EDITOR OF THE NATION:

SIR: With the spirit of your editorial in the *Nation* of March 5 on the *fureur de l'inédit* I am quite in accord. Yet I submit that the publication of youthful productions is often of real service to the literary historian, if not always to the great reading public. The publication by Louis Conard in 1910 of the *Œuvres de jeunesse inédites* of Flaubert is a case in point. Two of the three volumes contain some real literature besides furnishing valuable material to the student of the author's artistic development. The third, containing "his lucubrations from his thirteenth to the end of his seventeenth year" also makes accessible the first rude sketch of what became the

"Tentation de Saint Antoine," a subject that haunted Flaubert for forty years. This is certainly of interest. Furthermore, although few of these tales are of value in themselves, they prove as almost nothing else could do the intensely romantic nature of their author and what a long road he had to travel to attain the method of "Madame Bovary."

A. COLEMAN.

Chicago, Ill., March 25.

History in Australasia.

SYDNEY, March 1.

Australia has completed the first quarter of the second century of its existence as a community. In that comparatively brief space of a nation's growth, in accordance with the law that a colony repeats the development of the motherland, it has retraversed a large portion of the history of England. Its settlement, with some differences, was the settlement of Britain over again. It witnessed the Heptarchy and its "battles of kites and crows," though in a bloodless form. Its political evolution and the acquisition of responsible government curiously reiterate the political development of England. Its struggles with the aborigines were not unlike the Teutonic conquest of the British natives. Its industrial progress, beginning with the pastoral stage, its primitive and tardy agriculture, and its late manufacture recapitulate the industrial progress of the mother-country. Its literature, science, and art have had like origins. We shall better understand the annals of the motherland, if we are thoroughly acquainted with the story of the daughter-colony.

Dr. W. H. Fitchett* is therefore right in saying that the history of Australia is the evolution of a nation, seen under a lens. But he does not trace the parallelism between the two histories—he does not even imply it, and still less does he describe the unconscious nisus of the immigrants towards the pastoral occupation of the country and the formation of a free community, in opposition to the submerging conviction of the settlement and its governmental Socialism. These are the two keys to the history of Australia, but the author virtually confines himself to its more picturesque aspects.

He brilliantly narrates the strange story of the old maps, which show that Australia was discovered in the dreams of geographers centuries before the first ship touched its shores. These and a long line of literary allusions, running back almost to Aristotle, reveal a ghostly continent that stretched up to the Equator or shrank down to the South Pole, while a succession of mythical discoveries kept up an intermittent dance all around it.

The real discoverer of Australia, Dr. Fitchett holds, was not Torres or Dalrymple, but Capt. James Cook, and his portrait of the great navigator, originally published in a magazine, is already a classic which figures in the new anthology of Australian prose. Is it partly imaginary, as when he finds that Cook's eyes "seem to be searching some far-off sea-horizon"? He naturally misses the fighting quality in Cook's face, and he is disappointed. A Methodist minister who has a true vocation for letters, and perhaps a more imperious vocation for battle, expects something more in history than the works of peace. The doctor's best books, where his diction rises to its highest point, are tales of the battlefield, and the present volume doubtless suffers by its having no "drums" and very few "tramplings" to record. It has, indeed, the dispossession of the blacks, and that he relates briefly, justly condemning it as "the tragedy of a vanished race"—a sacrifice to "human stupidity," he thinks it, when it was really a sacrifice to lust, folly, and greed. With equal brilliancy he tells the story of the early exploration of Australia, and there he leaves it. The as yet untold remainder will rise to the heroic. Evidently, though published as an independent work, the book is but the first of a series of volumes on the history of Australia. They will have high literary and ethical value.

Clearing a century at a bound, we pass from the beginnings of New South Wales to the beginnings of the young Australian Commonwealth. That could have had no more fitting historian than the eminent counsel, of Australian origin, but an English barrister, who has told the story of its embryonic life and its birth with a personal authority and a native distinction that few could rival and no other surpass.* As the loyal follower of the first great Federationist in New South Wales, the eloquent statesman, Sir Henry Parkes, he was behind all the scenes that accompanied the inception and early stages of the movement, and, when Parkes passed away, Mr. Wise became himself one of the leaders. Henceforth he took part in all its battles, and he is therefore fitted to describe "the policy and the passions of contending parties." He was in daily intercourse with its public men, and he sketches "the personalities of the rival leaders." He, a democrat by acquired conviction, not by training, who startled the Oxford Union of his time by his advanced liberalism, and who became the author of the industrial arbitration system of New South Wales, dramatically portrays "the ebb and flow of popular sentiment," recognizing that this was the decisive factor.

Mr. Wise puzzles over the attitude of a leader for whom the famous phrase, "Yes—No," was coined, without ever observing that, such was the overwhelming force of the movement, federation was brought about by one who did not believe in the wisdom of it. It is one of the ironies of history. It is another of those ironies that the results of federation have been diametrically the opposite of those expected by both its friends and its foes.

We desire a fuller account of the influence of the United States on the formation of the Constitution of the Commonwealth, but are grateful for what we receive in its place. Mr. Wise tells of Mr. Justice Inglis Clark, then Attorney-General of Tasmania, who was "more American than the Americans," and had a large acquaintance with the Constitutional history of the United States. In his speech at the Melbourne Conference of 1890 he deposited the germs of the ideas that afterwards dominated the convention which framed the Constitution. As one of the two draftsmen of the Constitution his influence was great, and it was exerted in favor of the United States Constitution, which he avowedly preferred to that of Canada.

The book is not, as it has been absurdly styled, an "ideal history" of the Federal movement in Australia; it is, as it professes to be, "a record by an eyewitness," and as such it has great value and authority.

A third volume* carries us back to the discovery of New Zealand. Mr. Robert McNab, once Minister of Lands there, worthily consoles himself for the repeated loss of his seat and consequent exclusion from political office by dedicating his energies to the pre-history of his colony. Like the discoverers of the Accadians and the Hittites, he has had the rare good-fortune to strike an absolutely virgin tract in its annals. Who, before him, knew that in older days than the earliest colonists dreamed of ships had come thither from north and south, east and west, to carry on the once-important sealing and whaling industries? It is the southern parallel to the early fisheries that led the way to the settlement of North America. Two previous treatises had broken ground where no foot had trodden, and since they were published Mr. McNab has made another tour of the globe, visiting old and tapping fresh sources of information. After the old newspapers, where interviews with the sea captains were reported, the best were the logs of the American whalers preserved in the libraries of the historical societies on the east coast, from Salem to Washing-

**The New World of the South; or, Australia in the Making.* By W. H. Fitchett, LL.D. London: G. Bell and Sons.

**The Making of the Commonwealth.* By B. R. Wise. Longmans.

**Old Whaling Days.* Melbourne: Whitcombe & Tombs.

ton. Unique among these is the log of the Mary Mitchell, which he found at Nantucket, and this he prints in full. He visited the descendants of the old whalers of New Bedford and other Eastern ports, and found them proud of their ancestors, as also communicative of old documents. He ransacked the MS. reports sent to England by the Governors of New South Wales, French official reports, custom-house entries, and still other materials.

He aimed always at producing "absolutely the earliest attainable version of the incidents chronicled." His method is that of the strictest historian, and he ignores all statements where the authorities are not named. This is admirable; but with what results? What is the outcome of so prodigal an expenditure of time, labor, and money? He professes to cover the history of New Zealand from its discovery by Tasman in 1642 till it was ceded to Great Britain in 1840, but between these two dates no British community existed. A chapter on American Whalers and Scientists sounds promising, and the information it contains is new; but it belongs rather to the history of marine industry and exploration than to the history of New Zealand. J. C.

Personality of Species.

THE DOMESTICATION OF WILD BIRDS.

The squat dâk bungalow fades into the dusk as I leave it at early dawn and walk quietly into the heart of the Burmese jungle. The sounds of the night are dying away and the morning chorus has not yet begun. It is the first of the only two intervals of stillness which the tropical wilderness ever knows; the second being the breathless heat-silence of blistering high noon. A sombre, sluggish stream slips noiselessly through the ferns and I wait by its edge for what the wilderness may offer. The first sound of diurnal life points my paragraph; a sudden, shrill crow—broken but unmistakable. Junglefowl are afoot and drinking. The bird crows again, the sound cutting through the silent dawn. A distant band of monkeys, already warmed by the sunlight in the tree-tops, bursts into Zoroastrian chorus. Close at hand comes a sharp *tuk-tuk-tuk-tuk-tukáuk!* and I know that a junglehen is watching me and is suspicious, not yet alarmed.

There is no more startling sound than the sudden crowing or clucking of these birds in the heart of the jungle. It is as if one of the flock of parrakeets swinging past should scream down "Hello, Polly!" It seems wholly out of tune with all the wilderness sounds, and unconsciously one looks for native houses where one knows no man has ever lived. No wilder bird exists than the red junglefowl which has not come into contact with mankind. Yet no living organism ever becomes so completely human-ordered, such a commercially reproductive machine, as this same jungle bird after a few generations of captivity.

Around the native villages there is constant crossing with the red junglefowl, but far from mankind, along the back reaches of Burmese and Malayan rivers, we find these forest fowl as wild as any pheasant. Trap them, and for a time they beat against their cage. Then quiet settles over them. They feed and crow and fight and court and breed. But their congeners, the other junglefowl, are altogether feral. They half-heartedly consent at times to lay eggs, but their offspring are always true to their savage inheritance. The chicks of the captured red junglefowl represent a considerable advance towards the inmates of the barnyard, and in the ensuing generations white feathers may appear and the high caste of courtship and normal nesting begin to break down. They soon show signs of that marvellous unnatural fecundity which renders them of such untold value to man.

The rock pigeon—ancestor of all our squabs and cote inmates—goes even farther in voluntary association with man. Of its own accord it will take up its abode in villages and cities, and I have seen scores roosting amid the noise and smoke of a Punjab railway station. We know how thoroughly domestic are the ordinary breeds of pigeons. The nearest related species of wild birds suffer death before they admit such intimacy.

It has escaped general notice that there are some phases of mental phenomena which can be carried up from the individual to the species. These are not dependent on physical environment or similarity of habits, but are inherent qualities. They are as rare as they are striking, and as yet we find no point of attack for explanation. This species personality presents an outlook upon life, an acceptance of changed conditions, which is like the spirit of the flock, of the herd, or common to widely scattered, wholly isolated individuals.

Take, for example, a pair of wild mallard ducks and a pair of teal. Feeding together on the water of the bay, they present no mental distinctions. Both are equally on the alert, both ready to take to flight when still beyond the range of gunshot. They ask nothing of man but to be let alone. They nest as far as possible from his presence. On migration they approach his haunts as little as need be. Their lives are virile, competent, independent. If every mortal should be swept from the earth tomorrow, the races of mallards and teal would suffer no change. Thousands of years before tree-men let themselves gingerly down from the lowest branches and began unsteadily to stagger about upright on firm ground, mallards and teal fed together on the waters of the bay, no different in form, in feather, in alertness.

But once in captivity, the teal and the mallards show an extraordinary difference of behavior. Years pass and the teal will still scurry away like frightened mice at our approach. If the teal have a pond and plenty of companions, they tolerate captivity. They are content so long as they are undisturbed, but they never cease to suspect, to be on the lookout for sudden attack. Their life in captivity is filled almost as constantly with apprehension as is their wild existence. As a species, they live and they die untamed.

The wild mallard for a short time resents confinement, but abundant food soon absorbs his interest. He ceases to look for danger when day after day the appearance of man coincides with a shower of manna. In a month he has accepted captivity and lives his new life to the full. Having tried his clipped wings and found them useless, he turns at once to the other joys of duck life, of sleeping, of swimming, of up-ending in the water, and dining on the essence of pond mud. Memory claims him only for a day or two at migrations when, compass-like, he wanders restlessly to north or south. His offspring are in very truth puddle ducks, overplump to do more than fly heavily around their natal landscape. The females of this generation hatch their own ducklings, but often leave them to the care of one bird, who vainly tries to cover forty or fifty at once. The ducks then make other nests and rear other broods. This is against all avian law and order as found in the wilderness, and reflects the degenerating influence of domestication. Whether from excessive appreciation of the advantages of the new régime, or from some mental state akin to fatalistic acceptance of kismet, or from sheer stupidity, we cannot say, but at all events, in the brain of the mallard there are latent possibilities which do not exist in his nearest of kin. Physically, the black duck differs in the case of the drake, which has retained somewhat of the plumage of the females of both species. Mentally, the two are as wide apart as the poles.

We are only just beginning to learn something about the strange birds of South America, but already we recognize in some of them still another phase of mentality—super-specific, almost continental. The screamers, the seriamas, the trumpeters, the curassows, and guans, all are mentally related. All submit gracefully to captivity and become so tame that even with liberty and full

wings they refuse to return to the jungle. But they also refuse to breed, and with a few isolated exceptions we may say almost that they never reproduce in captivity.

Between the two groups in point of mentality comes the peacock. He is neither a barnyard fixture nor a commercial servant of mankind. He keeps his caste. His courtship, breeding, plumage, remain undefiled. He walks alone, he condescends, he allows no feeling of complete possession.

William Beebe.

Joseph Conrad.

Conrad's place among current English writers is peculiar. It is detached, and a little aloof. It represents a literary career virtually contemporary with that of the group of brilliant irresponsibles which, during the past decade, has so joyously and consciously dominated the scene. Shaw is not Chesterton, and Chesterton is not Bennett; but they and their comrades in brilliancy are confessedly all of a piece in their attitude towards the public. Amuse the brute: if it wants a variety show, see that it gets its shilling's worth. Why be a homely slighted shepherd when one knows how to be a head-liner? Never mind dignity, never mind reserves—watch 'em sit up! Thus, to the amazement and consternation of a responsible America, has frivolous Britain conducted her recent experiments in what we have been bred to revere as English literature. The method has its penalties. "Have you seen Chesterton's latest?" or "Oh, Bernard Shaw, of course!" Contrast these social casualties, and the smile of easy patronage appertaining, with the expressions, verbal and other, of respect and esteem greeting the name Conrad.

"Esteem" is an old-fashioned word, but there is none which, after reaching middle age, an artist in any sort is likely to hold in higher regard. It means something solid, something stable and well-rounded in his make-up and achievement; something human, too, in a quieter and less spectacular sense, of that patient old word. People who have not read Conrad have this sort of feeling for him. It is in the air. Fame, indeed, is determined neither by a special constituency nor by a vast comprehensive public. It is less a matter of consensus than of general impression. And Joseph Conrad is a name which, by the general impression, stands for fine and strong work, and for an uncommonly interesting personality. Mention him in any company and you find him cheerfully conceded a place at or near "the head" in contemporary literature. Even persons who do not greatly relish his quality admit that it is there to be relished. There is a kind of glamour about him.

I.

This is due in part, no doubt, to the touch of exoticism in the man and in his work. His personal genesis has something to do with it. It is even more gratifying than surprising to English readers that a foreigner should have chosen our tongue for his loftiest uses, and have become a master of it. But such mastery could hardly be achieved of sheer deliberation. The slow and (for him) sure means by which Conrad made his way towards it involve an experience which is a romance in itself. The substance and meaning of this experience he has set forth in "Some Reminiscences," a volume that, by one of those unaccountable mischances which overtake English books on their way to America, came to us under the more pretentious title, "A Personal Record."

Joseph Conrad Korzeniowski was born in 1857, of a distinguished Polish family. A grand-uncle was a Chevalier of Napoleon's Legion of Honor, and took part in the disastrous Russian campaign. A family legend to the effect that in the course of the retreat from Moscow he ate dog—*a* dog—long obsessed the fancy of a young grandnephew. Conrad's father was a man of uncommon ability, an accomplished writer of prose and verse; and translated a number of English books into Polish. For his part in the luckless revolt of '63 he was condemned to exile. His wife had been seriously ill, but the Russian authorities gave her no time for recovery, and she left Poland only to die. In this instance exile did not mean destitution; Conrad was carefully educated, with a view to such a career as might still be fit and possible for a Polish gentleman. But his boyish ambition led in a very different direction. It was common enough in itself; multitudes of land-bound infants have dreamed of the sea. But with most of them the dream is brief or easily broken. The phantom of the sea-hero passes of itself, with those kindred ghosts of cowboy and detective, or is dissipated rudely enough by a taste of real salt water. With this boy neither thing happened; the dream persisted in making itself a reality, and the reality justified the dream.

Conrad's family could not foresee this, of course. Not only was it improbable in a general sense—there was no ghost of family precedent for the impulse. The boy himself could only assert it, not justify it: "Why should I, the son of a land which such men have turned up with their ploughshares and bedewed with their blood, undertake the pursuit of fantastic meals of salt junk and hardtack upon the wide seas?" There was no more explaining the impulse than gainsaying it; and the gallinaceous uncle who was then his guardian could only cluck remonstrably as, in due season, he put forth upon his strange element. He became a British seaman, and a British master mariner.

II.

If the sea had been his only passion, or if it had been able to absorb all his energies, we should have had no "Almayer," no "Lord Jim." But the faithful and able seaman had a spark of genius as well as a taste for books. During his later years in the merchant service—perhaps it would be more just to say during all of them—he was serving quietly and even secretly his apprenticeship in craft more difficult than that of the sea. It is amusing (if idle) to speculate upon what certain of his contemporaries might have achieved in similar conditions. Most of them have come into literature by way of the hard drudgery of journalism—and boast of it. What sort of first book should we have had from Mr. Shaw or Mr. Bennett as the result of twenty years' silence and self-discipline in a lonely cabin, on the high seas or elsewhere? A different world of "Truth About an Author" here!

It was the right way for Conrad, who has never sufficiently grasped the modern English fashion, to profess contempt for his art. By what slow and laborious degrees the dim figure of Almayer took on form and color in his imagination, and at last found expression in printed words, his creator has described in "A Personal Record." "Almayer's Folly" was indeed the focal object of those reminiscences. It is a book for which, as his first-born, the author has a particular fondness; and for the reader no later book is more typical of him. It was a product of experience and of sore labor. Conrad's human figures are drawn, not from life, but out of life. Almayer had a real prototype whom Conrad had once glimpsed, dingy and stranded, in a Bornean backwater. The figure had its haunting significance for him, and came by degrees to embody in his fancy a type too familiar in the tropics, that of the decadent European, struggling vainly against the stifling and enervating influences of his unnatural environment. Kipling has recognized it, but unwillingly, and only as a disgraceful antitype of his conquering White Man—a squalid supernumerary in his drama of a triumpnant (and British) civilization. It could not have occurred to Conrad, for his part, to attempt the rôle of spokesman for any race or set of conditions. He has seen much of the world, but he has mused and brooded upon the mystery of it instead of trying to reduce it to a formula. The doctrinaire is as strong in Kipling as the artist: in Conrad he does not exist.

Mr. Galsworthy has asserted that Conrad is singular among novelists in possessing the "cosmic spirit," in realizing that "the little part called man is always smaller than the whole," that "nature is first, man is second." To this generalization an American commentator, Mr. F. T. Cooper, has rightly taken exception. The power of Conrad's stories lies, he says, in "their vital and tremendous human interest. It is quite true that he deals with titanic forces. . . . But everywhere and always his unit of measurement is man: man measuring his puny strength against the universe, and foredoomed to defeat; yet in his defeat remaining always the focal point of interest." This is excellent as far as it goes. The conquering hero of domestic or imperial romance plays a small part upon Conrad's stage, and plays it with indifferent success. It is the hapless struggle of man with the universe which lifts his imagination—lifts it clear of the mere unpleasantness of pathos, fairly to the plane of tragedy.

III.

But it is not a merely physical universe with which he sees man haplessly and tragically at odds. He does not choose to belittle nature with a capital letter. No one has more wonderfully painted the ruthlessness of seas and winds; for there he has seen nature at her tragic task. But these perils are not for the mass of men; to the deeper imagination they are graphic symbols of infinitely varied forces of destruction. On land also Nature in her tragic mood works towards her ends of pity and terror, by slow pressure of inescapable circumstance, by trivial turns of chance, by searching out the minute and hidden flaws in the hearts of men.

A little examination of Conrad's work as a whole shows how small a part in the essential action of the stories is played by physical nature. In "Typhoon," to be sure, the storm has something like a malignant personality, against which no human strength or skill is of avail. The vessel crowded with its helpless mortals is of no more significance than a chip covered with ants in a spring freshet. In "Amy Foster" the sea plays a crueller trick upon the sole survivor of its latest wreck than casting him upon a desert island. He is tossed up on the English coast—a young Slav with no speech but his own, unable to find out where he is, or to explain whence he has come, terrified, hunted, and finally starved: the sea is responsible for this. But in the greater number of these stories actual sea-disaster is of little account. To "Lord Jim" the bitter irony of his case lies in the fact that there has been no disaster, but only the fear of it.

Here is a situation so typical, a theme so characteristic, as to be worth rehearsing, despite its familiarity to many readers who know little else of Conrad's work. Here, at the outset, is a young Briton such as Kipling is fond of portraying, a healthy, charming, apparently normal boy. He is secretly of romantic temper, and has fed his youth on dreams of heroism. He is fond of imagining perilous crises, with himself at the fore, leaping into the gap, rescuing the helpless, going down with the ship. "He confronted savages on tropical shores, quelled mutinies on the high seas, and in a small boat on the ocean kept up the hearts of despairing men—always an example of devotion to duty, and as unflinching as a hero in a book." His first years at sea were a disenchantment, for after many voyages he had found much routine, and no openings for heroic achievement. Then a minor chance landed him in the post of mate in a decrepit old steamer in Eastern waters, laden with hundreds of Arab pilgrims. One night they scrape along a submerged derelict, there is a breach forward, and only a rotten bulkhead keeps the old ship afloat. Only the officers know what has happened. It seems a question of minutes; there are only boats enough to hold a handful of the passengers: Lord Jim finds himself, he hardly knows how, in a boat with the other recreants, leaving the doomed ship, with its sleeping freight. He is a ruined man. That the ship does not go down, so that his shame is brought home to him, is not the main fact. He has been false to his ideals; and the punishment which follows him relentlessly through the years is rooted in his own breast. So is that of Falk, who cannot win back to peace from the memory of a revolting crime. Akin, too, is the tale of "Nostromo," the adventurer who in a strange land makes himself honored and trusted, whose whole satisfaction in life lies in his sense that he is worthy to be trusted, and who is finally warped by circumstance and the single temptation to which he is liable, into a thief.

In another series of tales the tragedy lies in man's unequal struggle with unnatural conditions of climate and environment. "Lord Jim" itself belongs in a sense to this class, since the man was not really fit for the sea, never loved it for its own sake. So Almayer, by no means a weakling, is doomed to degeneracy under the influences of his Malay life. The poignant element in his tragedy lies in the failure of his stubborn attempts to marry his half-caste daughter to a white man, and so, in some dim but to him essential fashion, to make terms with fate. Again, in "The Heart of Darkness" we find, with the depths of an African jungle as the scene of his mortal struggle, a white man losing, one by one, the qualities which make life worth living for him.

IV.

If there is one element in human life upon which, more than upon any other, Mr. Conrad's fancy habitually plays, it is the element of pure chance. His own career, he tells us, was assured at the start by a bit of chance. His tutor had been at him for two years to give up his hopes of the sea, and had almost prevailed, during a memorable argument on top of the Furca Pass; when the grin of a passing Englishman brought sudden and decisive reinforcement to the weaker side: "His glance, his smile, the unextinguishable and comic ardor of his striving forward appearance, helped me to pull myself together." The argument went on, but the cause was lost forever. In the novels, chance—seldom coincidence in the vulgar sense, but pure casual occurrence—is continually asserting its power. If the weak heart of the Patna's donkey-man had not given out at a particular moment, Lord Jim would never have taken the fatal jump to ruin. If the bomb-thrower in "Under Western Eyes" had not chanced to possess a keen eye for the "easiness" of a fellow-student, he would have sought another asylum—and there would have been no story. It is not surprising that we should now find "Chance" taken as the title of his latest story.

It is decidedly the best of the Conrad stories which are not exclusively stories of the sea. But though part of the action takes place on land, and on English land, the whole performance has the right sea-flavor. One fact, to begin with, will endear it to a multitude of readers: it is told for the most part by the inimitable Marlow, the well-remembered chronicler of "Lord Jim." He winds into his subject with all his old subtlety and exhaustiveness, his gruff pretences of cynicism and his underlying passion of sympathy. Nowhere has Conrad achieved finer character-study than in this portraiture of the good and solemn "little Fyne," his excellent and ridiculous wife, and their unhappy "girl-friend," Flora de Barral. Young Flora is daughter of a swindler whose huge and complacent frauds have finally left him behind bars. The shock of his exposure, and other shocks which follow, are almost too much for the girl's mind; and she is rescued just in time by a Captain Anthony, who marries her and takes her off to sea. A misunderstanding keeps them for a long time "married in name only." Its ending is a happy one in all senses. For if, on a certain dark night, Anthony's mate, young Powell, had not happened to stoop for a rope three inches from the skylight of the captain's cabin—if that skylight had not chanced to be patched with a bit of clear glass—he would never have seen—what he did see; and

the lives of a number of people would have been different.

V.

Winding into his subject, building his story as if at haphazard out of scenes and incidents rarely presented in consecutive order, is, of course, Conrad's method before it is Marlow's. Persons who insist on "a straight story," and who do not respond to subtleties of feeling or atmosphere, will make very little out of such a tale as "Lord Jim" or "Chance." But it is surprising what a large range of readers, some of whom would presumably be impatient of this writer's methods, yield to his charm. One may be impatient, but it is hard to put down such a story, once begun. The story-teller somehow manages to keep an even strain upon the slender line at the end of which the reader's attention may be straining or sulking. And in the upshot one feels how inevitable it has all been, how naturally, for this practitioner, the thing has been done. The subject, whatever its nature, appears then to have been not so much exhausted as illuminated from every angle. We feel always the dignity and restraint of the operator—his wise instinct to keep, even at the end, something up his sleeve.

But it is impossible to judge the substance of his work as apart from its style. Conrad was in his twentieth year before he knew a word of English. Less than twenty years later, he published his first book, and it was hailed at once as a masterpiece, in English. He has always been an artist, he has never put forth work representing less than a maximum of effort. Some seventeen years ago he expressed what has remained his creed as an artist, an utterance worth quoting for those who wish to understand the man and his work:

It is only through complete, unswerving devotion to the perfect blending of form and substance; it is only through an unremitting, never discouraged care for the shape and ring of sentences, that an approach can be made to plasticity, to color, and the light of magic suggestiveness may be brought to play for an evanescent instant over the commonplace surface of words; of the old, old words, worn thin, defaced by ages of careless usage. The sincere endeavour to accomplish that creative task, to go as far on that road as his strength will carry him, to go undeterred by faltering, weariness, or reproach, is the only valid justification for the worker in prose. . . . My task which I am trying to achieve is, by the power of the written word, to make you hear, to make you feel—it is before all, to make you see. That—and no more, and it is everything. If I succeed, you shall find there, according to your deserts, encouragement, consolation, fear, charm—all you demand; and, perhaps, also that glimpse of truth for which you have forgotten to ask.

H. W. Boynton.

Literature

VILLON AND OTHER FRENCH POETS

"François Villon—sa Vie et son Temps" (H. Champion), by Pierre Champion, is a book about a poet much loved for his few verses that have survived and known scarcely at all as a person save for a few very human actions and passions.

Thanks to the stubborn effort of erudite contemporaries of our own, we know of François Villon's life as much as might be held entire in one page. His work is made up of one scholar's poem, the "Lays," and the "Testament," which counts only for 2,032 lines. . . . How can we help agreeing with Clément Marot's wise policy of ignorance in so uncertain and parlous a matter: "As to the industry of *lays* which he makes in his *testament*, to know it sufficiently and understand we should need to have been of his time in Paris and have known the places and things and men of which he speaks." . . . In spite of the seeming paradox, we who are four centuries away know more of him than Clément Marot did, though he came scarce two generations later. . . . And so I have tried to walk with the reader through the Paris where Villon wandered, and point out the houses and particulars of streets and life which the poet mentions—that which a scholar of his own time would have seen in the great town. A journey of the imagination, if you will, but justified in whole and in part by documents.

The Preface details scrupulously the names and "effort" of students of archives like Gaston Paris, and Longnon, and Marcel Schwob, who labored to bring Villon out of the past so that "the only (French) poet of the Middle Ages read nowadays" might live for us as something more than a voice. Pierre Champion has already exercised his own hand at bringing back Charles of Orleans, whose singing is known to readers of Longfellow, and, of course, to all that cultivate the *rondeau* or the *ballade*, by his book, published in 1911, that received the Prix Gobert from the French Academy. For a dozen years, ever since the preparation of his thesis at the Ecole des Chartes, our author has thus lived in the time which he reconstitutes for us here.

The first chapter goes back to the uncle who was chaplain in the very Parisian church, dependent on Notre Dame, of Saint-Benoît le Bétourné (St. Benedict-awry, or ill oriented); and in its cloister, where he had a house, he brought up by hand his graceless but not ungrateful nephew François, who wrote his thanks long after:

> *Item*, et à mon plus que père Maître Guillaume de Villon.

Childhood passes round these churches with their illuminating symbolism, with Bible and saints' legends and moralities. Next come the schools for his university degrees, what he studied being known from traces in his verses; university troubles, in which he was sure to bear his part; taverns, and games, and night-walkers; serenades, and wrangles, and the watch in chase; clerics, and men seeking filthy lucre, and prisons—roundabout the greater Paris, with all it had for a poet to see, and do, and suffer. This is matter for the first volume.

The second volume goes on to Villon in loves and murders, in the singing of *lays* and robberies, leading straight to a life of forced wandering far away amid brigand bands of Coquillards—spurious pilgrim "companions of the Cockle Shell." All ends with the "Testament" of the last years and repentance, if only there were time for respectable living—and, after death, the inevitable legend. Besides continual footnotes and references, there are 110 pages of multiple appendix with genealogies and documents; and the fine inset plates are themselves documentary. Each volume has its analytical table of contents; and, at the end of the second, there are forty-three triple-column pages of alphabetical index of names and things and old French words—a complete apparatus for the modern student who wishes to go deeper than the mere reader of delightful text:

Though he was no "Master of Theology," Villon felt need to tell us he should be saved. A preacher of those other days like Michel Menot (a page from this Cordelier's simple sermon on the Prodigal Son closes the last chapter) would have thought so too. Without sharing their faith, it is impossible to appraise our poet's upsoaring and downfalling—our judgment is too rigid, our heart too dry. For us Villon remains an enigma.

Better, perhaps, than the author knows, his book establishes a canon of criticism for those, of other days and our own days, who, like Villon, "laugh in tears" and buy *remords de conscience*.

"La Poésie Française du Moyen Age" (Mercure de France), by Charles Oulmont, is a collection of original texts, with modern version and competent notices, of Old French poems from the eleventh to the fifteenth century, and thirty pages of literary introduction. It forms the opening volume, complete in itself, of an "anthology of French poetry from its beginnings to our day." It stops short before the coming of Charles of Orleans and François Villon, who will be taken up in the next volume on the poets of the fifteenth and sixteenth centuries—from the ending of the Middle Ages to the French Renaissance. The passages chosen for the text have an interest of their own. Each is prefaced by a list of manuscript sources—for we are not yet at the age of printing—and

the successive printed editions and commentaries. The first is "La Cantilène de Sainte Eulalie," the most ancient monument of the French language, and properly a *sequence*, that is, a short rhythmic poem sung at mass before the Gospel, between Gradual and Alleluia:

> Buona pulcella fut Eulalia,
> Bel avret corps, bellezour anima.

Narrative poetry has 100 pages, with twenty-five instances, such as the known "Chanson de Roland," the "Roman de Brut" of Wace, the "Death of Tristan and Yseult," "Aucassin and Nicolette," the "Roman de Renart," "Roman de la Rose," and several Fabliaux. Lyric poetry, apparently developing later, has also nearly 100 pages of Romances and Pastourelles, Bertrand de Born, Rutebeuf's "Complainte," and even Froissart, loved for his prose. There are twenty-five pages of dramatic poetry, with a Mystery of Adam and a Miracle of Notre Dame.

Sarcey poked fun at French examination papers in English schools demanding the feminine of the participle *resous*, which, he said, no Frenchman knows or would use if he did know—he himself did not know that it has still a technical use in pharmacy; but this rather adds point to his criticism. Our author frankly presents archaic French, but in morsels of good poetry which is always new; and it shows, moreover, how a people's life grows with its language and literature:

> Main se leva la bien faite Aeliz;
> Bel se para et plus bel se vesti:
> Si prist de l'aigue en un doré bacin,
> Lave sa bouche et ses oex et son vis;
> Si s'en entra la bele en un gardin.

(Early in the morning, buxom Alice rises; Fair her looks and fairer still her dress: Pours out water in a gilded basin, Washes mouth and eyes and face; So the belle into the garden goes.)

"Comment il faut lire les Auteurs Classiques Français' (A. Colin), by Antoine Albalat, is a useful work for the methodical reader of French literature; and its methods might profitably be applied to English authors. It is not a book of extracts, but the work of a practical critic who has published books on "the formation of style by the assimilation of authors," on "the enemies of the art of writing," and another, one crowned by the French Academy, on "the labor of style taught by manuscript corrections of great writers." His present motto is from Montesquieu's "Persian Letters" and runs counter to anti-Humanist pretensions of our day: "It seems to me that till a man has read the old books he has no reason to prefer the new."

This book is neither a History nor a Manual of Literature. . . . I have tried, most of all, to study the workmanship and processes and originality of classic authors . . . I have avoided as much as possible the discussion of general ideas and philosophic considerations. . . . I try to explain in what the great talent of writers consists and how we can come to love those who have the reputation of being somewhat hard reading. Another thing is too neglected and I have thought it my duty to insist on it—the filiation, origin, and descendance of authors. . . . I wish to teach the love of literature—no ordinary thing. . . . Classic authors will always be the basis of all solid instruction, because they are the basis of all observation and human truth, and because it is they who reveal to us our own originality and teach us even to do that which is contemporary and modern.

The work reaches from Villon to Victor Hugo, taking those authors whose writings, in a language cultivated like the French, are literally "classic" because used in the classes.

"En lisant Corneille" (Hachette), by Emile Faguet, is a typical book of that full and exact and ready Academician:

I purpose, while reading the author chosen for the day along with my reader, to situate him in his time and in the particular world in which he lived; to make acquaintance with his temper and character, especially with what he has said about himself or let clearly appear; to grasp the particular nature of his genius and do this from the text itself; to avoid as much as possible general ideas and arrive at intimacy with the author and live, as far as may be, with him.

Intrepid M. Faguet announces eleven other authors, down to Victor Hugo, for future application of the same process—which gives pause for thought, remembering the immensely longer list of books, all readable and many important, already produced by this relentless reader and teacher and writer. Corneille should have a particular good word, for he has always been esteemed more conformable to English thought, and present currents seem setting back towards him.

"Alfred de Vigny" (Mercure de France), by Léon Séché, is a characteristic book of this indefatigable writer of anecdotal studies, from unpublished documents, of the history of the Romantics. This is his sixteenth work of the kind, all revolving round Sainte-Beuve, Lamartine, Alfred de Musset, Victor Hugo, and the Cénacles, with many side-lights—and now this revived half-favorite of our capricious generation, Alfred de Vigny. The first volume deals with his literary, political, and religious life; and the second with what is labelled "la vie amoureuse," but including chapters on his mother and friendships as well. It is really a greatly enlarged rewriting of the first of all this author's researches in contemporary letters and gossip of the Romantic period; and he may well recall that, at the time, it was predicted historians would cut wood in his forest. Even so, he has had to reserve quantities of historical and critical notes on the separate works of Alfred de Vigny for the complete edition of them which he is now publishing:

How often, while writing this or that chapter, have I not said to myself: If Sainte-Beuve had known this letter and this document, what use he would have made of it! Surely, there was only he to understand how to uncover people and show their soul naked!

Those who seek understanding in such historical remains will find great value in the fifteen two-column pages of index of proper names.

CURRENT FICTION.

The Masks of Love. By Margarita Spalding Gerry. New York: Harper & Bros.

The lady-errant was to have been expected in this age of feminism. Why should not Dulcinea, as well as her lover, set forth in quest of adventure? But, of course, it is not romance that she seeks. Dulcinea is a college graduate, serious-minded, and thirsts for a knowledge of "real life." Be it life or death, as Thoreau says, we crave only reality. Marjorie Spofford is an orphan; her fiancé is studying abroad; she has a small income and can do as she likes. Without consulting her fiancé, or even notifying him, she decides to spend the year before her marriage in a search for real experience; and, of course, she seeks it on the stage. It is clear that such a story is intended chiefly for young persons who have an ambition like Marjorie's, but who are not so fortunately placed as to be able to realize it. In other words, here is what purports to be a slice of that ancient yet tempting apple which made so much trouble in the Garden.

It must be admitted in favor of the Serpent that he "delivered the goods." Not so much can be said for the author of "The Masks of Love." The story has about as much relation to reality as the old-fashioned Sunday-school book had. It is, however, readable, and calculated to give the young person the illusion that she is being enlightened. As usual, the method is a somewhat discreet exposure of the physical side of love. With what satisfaction will the ingenuous reader peruse such sapient absurdity as this:

Dimly she remembered words that some modern woman writer had written. . . . The idea was that love was a road lying between physical passion and spiritual emotion. A woman entered it by the gate of her spirit, and only sometimes travelled the whole road. With a man, it was passion which he knew first—and he did not always complete the journey. To-day this occurred

to her as lying at the heart of her ridicule.

"How true that is!" the gentle reader will say to herself.

Anthony the Absolute. By Samuel Merwin. New York: The Century Co.

When the musical scientist whose phenomenally delicate ear can distinguish eighty-one tonal intervals to an octave meets the woman gifted with a corresponding nicety of vocal pitch, there would seem to be a sufficiently novel story ready-made. Mr. Merwin, with whom the presentation of familiar American types against Oriental backgrounds is something of a specialty, has sent his pedant on a search for specimens of primitive Japanese and Chinese music with which to prove his theory, and for good measure has likewise set a bibulous and bloodthirsty husband to scour the China coast for the truant singer. He has even added, by way of an up-to-date garnish, a feminist problem and its solution. For Anthony, whose moral perceptions are no less refined than his aural sense, is the most enlightened feminist imaginable. To his ultra-sensitive conscience "to stop a woman's growth" by limiting her to the usual wife's sphere, is fully as abhorrent as a caveman's wooing would be to the average citizen. Is this the chivalry of the future wherewith shall be won the heart of the New Woman that Mr. Merwin, in the diary of his accurate, self-observant Anthony, has undertaken to declare unto us, slyly appending that the question of curtailing women's liberties can with perfect safety be left to the women themselves? Not that theories matter much in a bit of comedy lightly spiced with melodrama.

The Business of a Gentleman. By H. N. Dickinson. New York: G. P. Putnam's Sons.

A thoroughgoing British detestation of all the new-fangled notions that make the England of to-day so discouragingly unlike the good old England of several centuries ago speaks eloquently from these pages. Conflicting points of view on the social problem are shrewdly personified and made to serve as *dramatis personæ*. Right triumphs in the person of Bobby Wilton, Baronet, who summarily settles a strike, as he does all other questions of his life, by the fearless application of feudal principles. With Bobby's help the author demonstrates that what the malcontent workingman really feels the need of is the hand of a genuine, true-blue aristocrat to feed him and make him work and give him a beating on occasion. Consider the passionate servility of which the laboring class is capable. It is the point for which his race has been bred. Does not the presence of this quality postulate a ruling class—by natural law if not by divine right? Shall so-called labor leaders and crack-brained theorists deprive the helpless masses of their natural protectors? Shall female agitators and organizers and meddling supervisors of private morals and public affairs be permitted to achieve celebrity at the expense of the defenceless poor? Not while there are energetic gods in Olympus — like Bobby — and sweet, imperturbable goddesses like his lady wife, and mercurial imps of good family like his young friend, Eddie Durwold.

That part of the reading public that still thinks it worth while to regard G. B. S. as a menace to society will find in this book a rare treat, for, common as this kind of dogged prejudice is, it does not often find a spokesman who has the gift of wit and skilful persuasion. Most amusing to an American is the display of anti-feminist ardor. Mr. Dickinson includes a masterly study of one of the "deadly females"—a creature of really Satanic bloom. She is altogether the most significant contemporary specimen he has succeeded in catching, and he is far too clever a student of humankind not to make the most of her.

A GALLANT NAVAL OFFICER.

George Hamilton Perkins, Commodore U. S. N.: His Life and Letters. By Carroll Storrs Alden. Boston: Houghton Mifflin Co. $1.50 net.

Commodore Perkins was without doubt one of the most gallant and efficient of the younger officers of the navy who suddenly found themselves called by the outbreak of the rebellion in 1861 to positions of danger and of importance. One of the early graduates of Annapolis—at the foot of his class—he was a striking illustration of the ability of that school to take a raw country boy, who had never even seen the ocean, and to turn him out as capable a naval officer as any afloat. In many respects Perkins's early career was a close parallel to George Dewey's, but Perkins was the more distinguished when hostilities ceased. Both came of simple but sturdy New England stock, both were home-loving and of the stuff that yielded not at all to the temptations which wrecked so many capable men in the days of long and lonely cruises off the coasts of Africa, of Central America, or of other remote regions.

Thanks to his initiative and daring and partly owing to deserved luck, Perkins took a prominent part in three notable happenings of the war. As executive and pilot of the Cayuga he led Farragut's fleet past Forts Jackson and St. Philip and up to New Orleans, capturing at one time three of the enemy's gunboats and being the first target of the entire hostile flotilla. Next it fell to Perkins's lot to be one of the two officers who were the first Federals to land and demand the surrender of New Orleans, Capt. Theodorus Bailey being the other. There is no more thrilling episode in the history of the navy than the story of the appearance of these two unarmed men in the captured city. It has been often told, but never better than by an eye-witness, George W. Cable:

> About one or two o'clock in the afternoon (as I remember) I being again in the store with but one door ajar, there came a roar of shoutings and imprecations and crowding feet down Commons Street. "Hurrah for Jeff Davis! Hurrah for Jeff Davis! Shoot them! Kill them! Hang them!" I locked the door on the outside and ran to the front of the mob, calling with the rest, "Hurrah for Jeff Davis!" About every third man had a weapon out. Two officers of the United States navy were walking abreast, unguarded and alone, looking not to right or left, never frowning, never flinching, while the mob screamed in their ears, shook cocked pistols in their faces, cursed and crowded, and gnashed upon them. So through the gates of death those two men walked to the City Hall to demand the town's surrender.

After a long and weary service on the blockade of Texas, where three weeks might pass without the sighting of a sail—"it seemed," Perkins wrote, "like a living death to be on the blockade"—there came again a glorious opportunity, for the young commander, then but twenty-eight, was chosen by Farragut himself to captain the Chickasaw, one of the large double-turreted monitors, in the attack on Mobile. Here he acquitted himself with great gallantry to the entire satisfaction of his heroic chieftain. It was the Chickasaw, her captain fighting his ship from the top of the turret, which compelled the surrender of Fort Morgan and of the Confederate ram Tennessee, as attested by Farragut himself in these words: "Perkins was young and handsome, and . . . no braver man ever trod a ship's deck; . . . his work in the Chickasaw did more to capture the Tennessee than all the guns of the fleet put together."

After the war Commodore Perkins's career was as uninteresting as it had been eventful during the great conflict, and he was compelled to retire in 1891 because of failing health. Dr. Alden has drawn for his volume largely upon Commodore Perkins's home letters, of which most are excellent reading, direct and clear of style, and giving a pleasant picture of an honest and gallant gentleman. The author has on the whole done well with this memoir, but the last two chapters, bearing plain evidence of having been written to order, mar the book and should, if printed at all, have been

preserved for family consumption only. A pleasing picture of Commodore Perkins as a twenty-three-year-old officer serves as frontispiece.

THE ENGLISH CONSTITUTION.

The King's Council in England During the Middle Ages. By J. F. Baldwin. New York: The Oxford University Press. $5.75 net.

It is now just forty years since the first appearance of Bishop Stubbs's "Constitutional History of England during the Middle Ages." This still is, and probably will long remain, the best general account for the whole period; but the accumulation of printed sources in recent years and the increased and more easily accessible mass of manuscript material in the Public Record Office and in the British Museum have made possible, if not indeed necessary, a recasting of large portions of this monumental work. The present volume by Professor Baldwin, of Vassar College, is a distinct contribution to the history of the English Constitution in its formative period. While not departing in the main from the broad general outlines of the growth of the King's Council given by Stubbs, the author has presented a more detailed and intelligible account of that institution, and has shown in a clearer manner its relation to the entire system. He has corrected many misleading statements made by Stubbs and other writers and has elucidated many obscure points. The work supersedes the earlier treatises by Hale, Palgrave, and Dicey.

Mr. Baldwin dismisses the theory of origin during the reign of Henry III by the assertion that the King's Council "never had a point of beginning or initial organization. Its origin is found in the prevailing theory and practice of the feudal world, according to which the king, like any other lord, was accustomed to receive the aid and counsel of his vassals." The King's Council was not an offshoot, but the direct continuation, of the Norman Curia Regis, the vague, undefined, shifting body of counsellors, now contracting to a mere handful of household officials, now expanding into a general assembly of several hundred tenants-in-chief; a single, undifferentiated body, which, together with the king, exercised all the functions of the central government. This parent stem of the modern highly organized state was the product of the spirit of the Middle Ages, "its lack of confidence in individual initiative, and its distrust of individual authority." Much of the confusion and perplexity which characterize modern accounts of the origin of the English Constitution is due, in the author's opinion, not to the records themselves, but to a certain rigidity of modern thought concerning political institutions and a failure to appreciate fully the fact that the organization and functions of mediæval governmental bodies were in their very nature vague and undefined. Other writers have, indeed, observed these characteristics, but none have borne them in mind more consistently in their treatment of mediæval institutions.

Beginning with the single organ of the Norman state, the Curia Regis, Mr. Baldwin traces in an admirable and suggestive manner the gradual modifications of that body under the persistent assertion of royal prerogative against the disruptive tendencies of feudalism, in which it threw off department after department, and yet remained itself the formless, unrestrained King's Council. He abandons the well-known theory that these modifications were occasioned by classification of business, and advocates the theory that the changes were brought about by the introduction of new methods of transacting business. Thus the Exchequer was for a long time merely the Curia Regis, or King's Council, dealing with royal revenue according to a fixed routine; the Common Pleas was the same body trying certain classes of cases under the formulary system of the common law. In the course of time those portions of the Council, dealing with certain matters according to fixed rules, separated from the older unrestrained body, which might still and, in fact, often did attend to these affairs in its discretionary manner.

From the first there were two divergent elements in the King's Council: an inner, more or less permanent, group of royal officials, trained experts; and a larger, constantly shifting body of magnates, prelates, and feudal barons. The one tended towards bureaucracy and absolutism, the other towards limited monarchy. During the reign of Henry III the struggle was primarily between these two classes, rather than between Englishmen and foreigners. The struggle continued through the Middle Ages and resulted in a tendency to make more definite the organization of the Council and its functions. The barons were prevented, however, from realizing their purpose by their inability to provide a permanent body of magnates who were willing to sacrifice their personal interests and remain with the king or at Westminster.

A particularly good chapter is the one in which the author discusses the large variety of adjectives applied to the Council in the fourteenth and fifteenth centuries. He rejects the theory that those terms point to a series of concentric Councils with distinct powers, and concludes that they were employed by the writers of the age to express varying phases and to emphasize different qualities of the same body. He holds that the only vital distinction that had been drawn at the close of the Middle Ages was the one between Parliament and the King's Council; that the "great," the "wise," the "continual," the "full," and the "secret" Council were one and the same body, contracting and expanding as accident and the nature of business occasioned.

Under Edward I, Parliament was merely the Council increased by members of the three estates. Much of the constructive legislation of that reign was the work of the inner group of officials, approved by the estates whenever greater sanction was deemed advisable. The remark of a justice in a case in 1305, in which the interpretation of the Statute of Westminster II was involved, is significant: "Do not gloss the statute: we understand it better than you, for we made it." In the fourteenth century, when Parliament, the occasional meeting of the estates, had become a distinct branch of the government, the barons saw in the Council the chief menace to the limited monarchy, and made strenuous but only partially successful efforts to control the personnel and functions of that body. After the War of the Roses, the old barons were displaced by a new nobility, an aristocracy of service, willing to hold office and remain in attendance upon the king or at Westminster. The rehabilitated King's Council then became in a large measure an instrument of the royal will.

Mr. Baldwin has advanced many new views. While some of them will no doubt challenge criticism, it must be acknowledged that they are well supported, for the text, the footnotes, and a long appendix contain a large amount of source material, which for the most part has never before appeared in print. He sees in the Coram Rege of the thirteenth century the old shifting Curia Regis, or King's Council, acting with discretionary powers, and holds that it became the separate Court of King's Bench only at the close of the century, when it adopted the formulary system of the Common Law. He rejects the view of Madox, which has been generally accepted, that the Chancellor became the second man in the state during the reign of Henry III upon the disappearance of the Justiciar. He shows that under Edward I the Treasurer as frequently as the Chancellor was the acting head of the Council. It was only in the fourteenth century, through a struggle between the Chancellor and his clerks and the Treasurer and barons of the Exchequer, that the Exchequer became a separate body, one of the Common Law courts, with limited jurisdiction and fixed procedure. Many of the forms later employed by the Court of Chancery were used by the Exchequer while it was still in essence the old Curia Regis. The assumption that the early records of the King's Council be-

gan during the reign of Richard II is, he maintains, due to a misunderstanding of the nature of the Council and the character of the early sources. But he minimizes what has long been considered an irreparable loss to the historian, the supposed destruction of the Council records, 1460 to 1540. While admitting that some were lost, he shows that there are many still extant, and attributes the dearth of records at the time of Edward IV to a pronounced decline in the importance of the Council during those years. Mr. Baldwin finds nothing new in the Court of Star Chamber under Henry VII except vigor and purpose. With its summary procedure and wide scope of authority it was the institutional continuation of the old Curia Regis, which ceased to exist except in its offshoots after the abolition of that court in 1641. The volume closes with the reorganization of the Council in 1540, when, according to Mr. Baldwin, the King's Council as a single institution properly came to an end.

AN OCTOGENARIAN IN HIS STUDY.

Goldwin Smith: His Life and Opinions. By Arnold Haultain. New York: Duffield & Co. $3.75 net.

This volume by Goldwin Smith's literary executor is supplementary to "Goldwin Smith's Correspondence" which Mr. Haultain published a few months ago. The "Correspondence" reached over the whole period of Goldwin Smith's life from his student days at Oxford until his death at Toronto; it supplies the best possible account, from his own careful hand, of his public life as professor, author, and journalist, and it also reveals the extraordinary vigor and keenness of his private opinions at a period when he was at the height of his powers, battling for unpopular causes which he ardently championed. The present volume depicts the octogenarian in his study at "The Grange" at Toronto. We see him reading, dictating, revising proof, and revising revisions with a meticulous care for commas which was the despair of his assistants. We hear his reminiscences before the fireside and the comments which his faithful Boswell, Mr. Haultain, jotted down from day to day between the years 1898 and 1910. There is the same downrightness of opinion and the same vigor of expression as in the "Correspondence"; but there is also an added note of bitterness. The policies which he advocated did not prevail. He did not devote himself to any one field of history long enough to write the greatest work on the subject. His largest success was as a journalist—a Bystander as he called himself—but even as a journalist his influence was too often ephemeral. The mention of Disraeli always roused a stream of bitter thoughts; for in "Lothair" Disraeli had made a thinly veiled sneer at Goldwin Smith as a "social parasite," "an Oxford professor who was clever and extremely well-informed so far as books can make a man knowing, but unable to profit even by that limited experience of life from a restless vanity and overflowing conceit, which prevented him from ever observing or thinking of anything but himself." This unfair slander Goldwin Smith never forgave, but it was not, as has often been imagined, in any way the cause of his leaving Oxford and England. Mr. Haultain shows clearly enough that Goldwin Smith resigned his Oxford professorship simply because he felt it his duty to care for his father, who had met with an accident which resulted in insanity. After his father's death, when his Oxford professorship was gone and he had no immediate occupation, he quite naturally accepted President White's invitation to come and assist in the building up of a new university at Ithaca.

Boswell did not always endorse the opinions of his chief. When Goldwin Smith reiterated his diatribes against the Boer War, popular democracy, or old-fashioned religion, Mr. Haultain jotted in his diary: "It is with difficulty that I maintain a frigid silence." Mr. Haultain is often given to moralizing in his diary himself when we would fain have heard more from Goldwin Smith. Nor is he always quite accurate. The eminent German theologian appears half a dozen times as "Harnac." But these are petty matters which should not obscure the devotion with which the secretary served his chief for years.

In addition to the jottings from his own diary which comprise the greater part of the present volume, Mr. Haultain has printed a few of Goldwin Smith's letters to C. E. Norton, and also a series of "U. S. Notes," which he found in Goldwin Smith's own handwriting among the papers after his death. They are the brief notes of a tour which he made in the United States in the latter part of 1864, and are full of interesting observations like the following:

[Boston] Mr. Norton came. Went with him to Shady Hill. Mr. Lowell joined us in the evening. Long talk about American and English politics, American manners, etc.

American servants, restless desire to better themselves. Compare the English. Ladies inclined to complain. Mr. N. not.

The effect of climate on the race. Mr. Lowell thought the race did not deteriorate. Large men in New Hampshire and Vermont, as well as in the West.

[New York] Want of highly trained statesmen. There are a thousand men as fit to be Governors of a State as the man who has the post.

No Sansculottes except the Irish in New York.

[Washington] Saw the President. His stories—The three pigeons. The manufacturing population. They would annex Hell as a market for their cottons.

BACONIAN CONTROVERSIES.

Studies in the Bi-literal Cipher of Francis Bacon. By Gertrude Horsford Fiske. Boston: John W. Luce & Co.

This book is one more attempt to find Bacon's name as author in the Folios of Shakespeare's plays. The cipher which the author pretends to trace in those volumes was actually understood by Bacon, and is explained by him in his "De Augmentis." When the real Bacon wrote a genuine bi-literal cipher message, he used in his writing (or printing) two alphabets, the letters of the first being distinct from the corresponding letters of the second. In a printed message the characters of the first alphabet may be conveniently named those of the a-font, the letters of the second alphabet those of the b-font. The decipherer of Bacon's genuine message wrote an *a* under each a-font letter, a *b* under each b-font letter, and divided the long succession of *a*'s and *b*'s thus formed into groups of five. For instance, *aabba* stood for G; *abaab* for K. The letters thus derived spelled the hidden message. If the a-font were Roman and the b-font italic, an example of Bacon's method would be the following, line (1) being what the sender wrote, line (2) what the decipherer wrote, and line (3) the hidden message:

(1)..... I a*m* tire*d* o*f* al*l* this *w*ar
(2)..... a ab ababa ba aab aaaa baa
(3)..... F L E E

In certain parts of the Shakespearean First and Second Folios, the author discovers differences in the printer's letters (no surprising phenomenon in those days of crude printing machinery); and pretending to decipher by the above method, reads statements from Bacon and his friends. We find four sharp distinctions between Bacon's genuine cipher in the "De Augmentis" and the author's, which in our opinion render the latter worthless.

To begin with, the a-font letters in Bacon's "De Augmentis" are so clearly differentiated from the corresponding b-font ones that a child can distinguish between them. In the examples of our Baconian friend these differences are seldom striking, and frequently, in our opinion, do not exist. The author herself says: "Were it not that the slight differences are consistent whenever the letter is used in the text, one might be tempted to say that they were imaginary." We are tempted to say that a difference which is imaginary in one case can be consistent in a dozen cases only by being consistently imaginary.

The peculiar nature of the bi-literal cipher renders it untrustworthy unless the difference between the two fonts is clear in all cases. Since there are five letters in the document for every letter in the hidden message, a change of one of the five letters in the first will completely change the one character in the second. If the first four letters are clearly of the a-font, and the fifth is doubtful, the "decipherer" can begin his supposed hidden message either with A (*aaaaa*) or with B (*aaaab*). In other words, if one-fifth of the printed letters are doubtful, virtually every letter in the "concealed statement" can be changed at the decipherer's wish. If one-tenth of the letters are doubtful, the decipherer can arbitrarily change, on an average, every second letter in his deciphered sentence. If one letter among thirty in the text can be assigned to either font at will, the decipherer may be able in his derived statement to change a nonsense combination like *prknce* into such a significant monosyllable as *prince* (I being *abaaa*, and K being *abaab*). Yet our present author admits that in occasional cases the font is doubtful and is decided in the light of the context, and admits that many letters seem doubtful to all eyes except those of a Baconian.

In the second place, the writer's deciphered revelations, unlike the Latin of Bacon's real cipher, exhibit a great latitude in the matter of orthography. This may be in accordance with Elizabethan usage; but it enormously increases the possibility of finding English words as the mere result of chance. If we cannot make our cipher work with one spelling, we can always try another. In a single deciphered message (pp. 31-32) seven words appear in two different forms (sowe, sow; onely, only; penn, pen; be, bee; far, farre; gybe, gibe; Amy, Amie); and nearly thirty more which in modern English would end in *y* close at will with *y*, *ie*, or *ye*. Almost half of the words in the passage would allow of two or more spellings.

In the third place, the author gets around uncounted snags by a most astounding use of apostrophes. *Upo'* for *upon*, *inve'tion* for *invention*, *sla'drous* for *slanderous*, *answeri'g* for *answering*, *writi'gs* for *writings*—such are a few specimens. Then we have repeated abbreviations, such as *F.* or *Fr.* for Francis, *L.* or *Lo.* for Lord, *Qu.* for Queen, which are legitimate linguistically, but which, like the wide freedom of Elizabethan spelling, help one inestimably in making sense where no cipher was intended. We must remember that the apostrophes, periods, and capitals in the above are put in arbitrarily by the decipherer and represent nothing in the original.

Lastly, Bacon would certainly have given us clear and succinct English, not such grammatical anarchy as the following, which is a fair sample of the revelations throughout the book: "many old poems o' Sp. an' Sh. at a due time shew, mayhap, w'ch MSS. F. hid. But such nere won great praise—look'd, men now say, so faire, a subverti'g surrende' vainely should intrude. More pens did shine I find upon a veritable——," etc. Stripped of the capitals, periods, and abbreviations supplied by the modern Baconian, the first sentence of the above would read: "many old poems osp ansh at a due time shew, mayhap, wchmssf hid."

The tireless industry of so many Baconians has pointed out phenomena which seem to us merely chance combinations ingeniously juggled.

ESSAYS EX CATHEDRA.

The Lawyer in Literature. By John Marshall Gest. The Boston Book Co. $2.50 net.

The addresses and essays reprinted in this volume possess interest enough to warrant their reproduction in book form without the voucher of a third person, however distinguished. The Introduction, however, in which Dean Wigmore expresses his good opinion of the author, and discourses learnedly of the advantages to the practicing lawyer of a wide acquaintance with "the literature of the novelists," does the book no harm, and may win for it some readers who might otherwise pass it by. At any rate, we rejoice that neither author nor introducer has called the voucher a "Foreword."

Of course, the law and lawyers of Charles Dickens receive much attention. Judge Gest takes genuine delight in recounting the great novelist's experiences as a law student, and his many thrusts at the legal profession. At the same time, he is careful to call attention to the fact that Dickens was above all a caricaturist; and that his pictures of courts and lawyers are in the main sheer burlesques. He also points out that many of the evils of chancery, which were held up to a nation's scorn in Bleak House, had been abolished by Act of Parliament, before the novel was published. "Dickens, therefore," declares Judge Gest, "did not kill the chancery snake but only jumped on it after it was dead." Sir Walter Scott and Balzac fare much better at the hands of our author than does Dickens. Both, he says, were well-read lawyers and were impartial in their treatment of the profession. They could separate the evil from the good, and could contrast the upright and learned judge and lawyer with the trickster and the incompetent. The methods of Scott and of Dickens are contrasted in the following passage:

> There is a vast difference between Dickens's treatment of law and lawyers and Sir Walter's. Dickens saw nothing good in either, and caricatured both. Scott, on the other hand, was an artist; he knew a thousand times as much about the subject as Dickens, and in his fair-minded manner, endeavored to give a just picture of it. But, naturally, the scamps of the law play a larger part in literature than their betters, for a good, well-behaved lawyer is in sooth a very prosaic individual. But a bad lawyer is such a picturesque villain that he is the stock character of every novelist and playwright.

Balzac is described as a "stand-patter" in law and politics, who believed in a constitutional monarchy and an intellectual aristocracy as the only fit lawmakers. He derided the *Code Napoléon*, for he deemed it the leveller of all class distinctions. Although his father was a lawyer and he studied law for a time, the dry details of practice were revolting to him, and he declined to follow his father's profession. However, he put his legal knowledge to frequent use in his novels, as Judge Gest takes great pains to establish in his instructive paper on this subject. The author reserves his highest praise for Sir Edward Coke, whom he acclaims not only as a great lawyer, but as a learned classical scholar, and as a writer of rare literary taste. No one can dispute Coke's marvellous mastery of the common law, though the use to which he put his knowledge was not always above criticism. Nevertheless, many readers of this volume will rise from its perusal unconvinced, we feel sure, of Coke's right to a seat among literary immortals. They will readily admit that his "writings abound with quaint, axiomatic, idiomatic, and pithy expressions." But they will not hesitate to question both the literary merit and the legal soundness of some of the quaint sayings selected by Judge Gest—for example, the following about a hogsty as a nuisance: "One ought not to have so delicate a nose that he cannot bear the smell of a hog."

EDWARD THE SEVENTH.

More About King Edward. By Edward Legge. Boston: Small, Maynard & Co. $4 net.

When Edward VII ascended the throne he was so intent upon pleasing in every imaginable way the beautiful woman who had shared his joys and sorrows for nearly half a century that, much to her satisfaction, he placed her in the position of an actual Queen-Regnant instead of a mere Queen-Consort. It was a charming manner of atoning for any *péchés mignons* which he may or may not have perpetrated during their long and happy married life. Queen Alexandra is endowed with such a beautiful, loving, and forgiving character that it took, and still takes, a great deal to ruffle it, and it is conceivable, to employ a homely phrase, that she has had more to put up with since her beloved consort's untimely death than

during his life. This is the opinion of some who are not altogether ignorant of existence within royal palaces.

The above passage, taken almost at random, will serve to suggest the quality of this book. It is a sort of rider to the "King Edward in His True Colours" which was reviewed in the *Nation* about a year ago (April 17, 1913). That was bad enough. It gained a little dignity from its inclusion of extended tributes to the late King by men like M. Poincaré, Comte d'Haussonville, and the scholarly Vámbéry. In itself, as the original work of Mr. Legge, it was an absurd performance. Its chief source was in a pious wrath at the handling of King Edward by Sir Sidney Lee in the Dictionary of National Biography. Sir Sidney did not tell the truth to begin with (cried our champion), and in the second place, if it had been the truth he ought to have been ashamed of telling it. King Edward was not only a dead man, but a dead King, and "the legends woven by the people round their sovereigns ought not to be destroyed."

We supposed that Mr. Legge had, in his own opinion, polished off poor Sir Sidney pretty thoroughly, but he here returns to his bone. We will say bone. He acknowledges that, in spite of his disapproval, the Dictionary which has lent itself to the malicious purposes of the ignorant Lee may still be read—"continue to be patronized by club fossils and dipped into by the privileged persons who pass their lives in the British Museum." But "a museum is a fitting receptacle for it." One of the Lee canards which particularly enrages Mr. Legge is that Edward "was no reader of books," and "could not concentrate his mind upon them." Mr. Legge's refutation of this consists in the statements that the King was proud of his library at Windsor and would have visited it oftener if it had not been a mile away from his apartments; and that he was anxious to make his library at Sandringham "a feature of the house." To a very recent assertion in the *Times* that "it is well known that King Edward was no very devoted student of poetry," counsel for the defence devotes a chapter full of counter-assertions. The King—"Edward the Great" between these covers—"greatly admired and fully appreciated certain classes of verse." Mr. Legge is sure that he must have heard "We Are Seven" in the nursery; and obligingly offers to eat his hat if any one will prove that King Edward "had never read and re-read the 'Idyls,' 'Enoch Arden,' the 'Ode on the Death of Wellington,' 'The Brook,' 'The Princess,' 'Maud,' 'Crossing the Bar,' and many other Tennysonian gems." No doubt some venturesome spirit may be found to undertake the same feat if Mr. Legge can prove that the King *did* anything of the sort. The advocate's summary of evidence is too good not to quote:

It would be a reflection on his memory and his capacity for enjoying the deathless imagery of the great poets to suppose that he had not a fair acquaintance with the poems of Goldsmith, Cowper, Thomson, Pope, Byron, Shelley, Keats, Coleridge, Burns, Moore, Macaulay, Swinburne, Mrs. Hemans, and a score besides, not forgetting Dibdin, Tom Hood, Longfellow, Kipling, Praed, and Henley.

Notes

John W. Luce & Company include in their April list of announcements: "A Hand Book of Brieux's Plays," by P. V. Thomas; "Katya," by M. de Jessen; "Letters from La-Bas," by Rachel Howard.

"A Free Hand," by Helen C. Roberts, and "The Sheep Track," by Nesta H. Webster, are among the novels announced by Duttons for publication this month.

Longmans, Green & Company will publish shortly "Flight without Formulæ," by Commander Duchêne, translated from the French of John H. Ledeboer.

"The Influence of the Bible upon Civilization," by Ernest von Dobschutz, and "Life Histories of African Game Animals," by Theodore Roosevelt, will be published by Scribners this month.

Houghton Mifflin Company announces for publication on April 11: "Confederate Portraits," by Gamaliel Bradford; "Elizabeth and Mary Stuart," by Frank A. Mumby; "A Life of Tolstoy," by Edward Garnett.

THE *National Geographic Magazine* for March opens with an account of village life in Palestine, by John D. Whiting. Its peculiar merit lies in the light which it throws on the life of the people of Old Testament times. Many of the manners and customs which prevailed there then are still unchanged. How to attract birds to the vicinity of the house is graphically described by Mr. Frederick H. Kennard, with many interesting illustrations showing proper nesting sites. Mr. William J. Showalter tells what the "patient man of the microscope" has wrought in humanity's behalf in overcoming the tropical diseases.

NEW matter in "Bradshaw's Through Routes to the Chief Cities, Bathing and Health Resorts of the World" (London: Blacklock) includes mention of the latest archæological discoveries in Egypt of interest to tourists, details of the political and economic changes in South Africa, following the formation of the Union, and of the progress of the Cape to Cairo railway. Considerable space is given to the railway expansion of the last few years. The present edition is as remarkable as its predecessors for the multitude and the accuracy of its items, and the work is still without a rival as a single volume for the round-the-world traveller.

"ESSAYS, Letters, and Addresses on Physical and Social Vision" is the sub-title of Helen Keller's little book, "Out of the Dark" (Doubleday, Page), which contains hitherto uncollected magazine articles and addresses. These range from personal topics, such as "Christmas in the Dark," to so impersonal a theme as "The Message of Swedenborg." If Miss Keller is occasionally tempted to take up subjects a bit beyond her, she but falls into a common trap for writers, although one regrets the oracular tone that now and then creeps into her utterances.

"AT the age of seventy-seven, I begin to make some memoranda and state some recollections of dates & facts concerning myself, for my own more ready reference & for the information of my family." So begins, under date "1821, Jan. 6," the autobiography of Thomas Jefferson, destined to extend only to the year 1790. A reissue of this fragment (Putnam) contains the introduction prepared by the late Paul Leicester Ford for the Federal Edition of Jefferson's works and Ford's notes, a table of the chief events in Jefferson's life, and an engraving of Stuart's portrait, painted in 1805.

AN interesting chapter in the history of Boston is to be found in the Bostonian Society Publications, Vol. X. It is an account by Mr. Fitz-Henry Smith, jr., of the coming of the French fleets under Count D'Estaing and the Marquis de Vaudreuil to Boston during the Revolution, and the work done by the Frenchmen in the construction of fortifications at Hull and in the harbor. The despotic government of our ancestors is shown by Mr. F. E. Bradbury in his account of the laws and courts of the Massachusetts Bay Colony. In 1634, for instance, "John Lee was whipped and fined forty pounds for saying that the Governor was but a lawyer's clerk, and what understanding had he more than himself. . . . Roger Scott was whipped for sleeping in church." Laws were also enacted relative to the style of women's hats and the width of the female sleeve. In 1646 it was enacted that "a stubborn or rebellious son, of sufficient years and understanding, viz., sixteen . . . shall be put to death." As authority for this legislation, they relied on the Mosaic laws.

THE third volume of Mr. P. S. Allen's "Opus Epistolarum Des. Erasmi Roterodami" (Oxford University Press) includes the letters from July, 1517, to June, 1519, all of which, with a few exceptions, were written by or to Erasmus at Louvain during one of his quieter periods. "Totus, hoc est cum bibliotheca" (how beautiful the phrase!), he writes to George Halewin, one of his English friends, in August of 1517, "Louanium commigravi. Cum theologis altissima pax atque adeo necessitudo." The peace, however, was not quite perfect, and, indeed, Erasmus would scarcely have known how to adapt himself to so unwonted a state. His dear friend, James Faber, for one, had drawn him into an *odiosa disputatio*, in the course of which he had written to Faber himself, calling Christ to abandon him if he did not equally hate both the necessity of quar-

relling and his own victory, "which all with one mouth attribute to me." Towards the end of this period, also, we see the beginning of the rift between him and Luther. In 1516 Luther had sought to obtain, through Palatinus, some information in regard to Erasmus's views on theology, and had expressed the fear that human things prevailed in him over divine; but the first direct communication between the two representatives of the radical and the conservative reformation is a letter dated from Wittenberg, March 28, 1519. Here Erasmus is "decus nostrum et spes nostra," and Luther is a fool to approach him so familiarly—he an unknown man, with his unwashed hands; but it was not to be always thus.

THE most interesting feature of these letters, as in the earlier volumes, is the spirit running through them, which was in due time to create the school of the literary wits; indeed, it would not be amiss to call Erasmus himself the first of that school. It is the spirit expressed in a letter to Brixius, telling him that they ought to aid in "syncretizing" those who have been initiated into the mystery of literature, since the "muse-haters" conspire together so odiously. It speaks again in a letter from Richard Pace, scolding Erasmus for wasting so much breath "ad istos asinos ad lyram placandos." It helps, also, to explain why Erasmus took no pleasure in the heavier humor and direct persiflage of the "Litteræ Obscurorum Virorum." Mr. Allen's work as editor shows the same enormous erudition and inexhaustible patience as in the preceding volumes; his notes and introductions are a treasure-house for all future scholars in this field. He might, we think, as an interlude in his more arduous task, or as an aftermath, perform a very great service to the literary world by issuing a fairly comprehensive selection of the letters with biographical intercalations. And if the connecting matter were written in a Latin approaching Erasmus's own marvellously fluid style (which Mr. Allen's long intimacy with Erasmus should render easy for him), the result might be a volume, or pair of volumes, of extraordinary value and unique interest.

IN Edward Hungerford's "The Personality of American Cities" (McBride, Nast), the reader will find a series of clever "stories" prepared according to the current recipe of magazine journalism. They are written fluently, jauntily, knowingly; we suspect that they have "the punch." There is not a little material in them, but any appearance of care in employing it has been successfully avoided. In case of doubt, they use the hackneyed phrase. A split infinitive is a mild liberty with this writer, he has an evident disdain for syntax in general; and when he lapses into furrin tongues, he produces such italics as *via sacre, table d'hôtes,* and *restaurantcur.* But he has, no doubt, a hearty contempt for purism: the effect's the thing, and you can't "put it over" by writing like a book. These are not, and do not profess to be, studies of a philosophical or literary sort. They are excellent stories in the newspaper sense, and according to the newspaper standard—which is also the standard of our popular magazines. A good deal of pains has been given to getting them up, if not to setting them down, and the author has been successful in catching and conveying certain picturesque or salient features of some twenty-five American cities, including Toronto, Montreal, and Quebec.

TO undermine the tower of ivory and blow up the last great hereditary prince of the dilettantes emerges as the ultimate purpose of an exhaustive psychological study of Anatole France by G. Michaut, maître de conférences at the Sorbonne (Paris: Fontemoing). M. Michaut performs his task with the intimate knowledge and the half-regretful severity of a disillusioned lover, explaining and atoning for an infatuation of many years. Acknowledging the fascination of that intellect so fine, alert, supple, and curious, he pitilessly exposes its limitations: its discontinuity of intention, its lack of constructive force, its spectatorial detachment, its egoism and subjectivity, its subjection to the *tyrannic des souvenirs.* Turning, then, to the question of imaginative faculty, he declares that M. France's preoccupation with himself is highly unfavorable to invention; almost incomparably conversant with the arts and sciences of all times and places, Anatole France appears, when compared with Balzac or Dickens or Hugo, nearly destitute of "creative imagination"; investigation of his sources, his repetitions, and his recombinations proves his work to be a kind of superlatively brilliant *pastiche*—a triumph of learning and patient industry, rather than a fresh creation of a spontaneous and fecund genius. As for his taste, it is the expression of a temperament fundamentally sensual: of his art, his religious views, his loves, and his animosities, the tap-root is sensuality. In pursuing this theme M. Michaut displays at once his enchantment with the fairer flowers and his disenchantment with the root and the fruit. In the fall of the year he finds a rankness in the air and an odor of decay in the garden of Epicurus. At the end of a chapter illustrated by quotations of an exquisite and seductive grace, he puts the slughorn to his lips for this valedictory blast: "From the beginning to the end, with *nuances,* here more delicate, there more cynical, here more subdued, there more aggressive, his work is devoted *au Désir et à la Volupté.*" M. France, then, has a faith, such as it is; he has betrayed again and again the untenability of the skeptical dilettantism which he inherited from Renan. He struck the dilettante attitude, and deceived himself and the world for a long time. But, in accordance with a mysterious law of human nature, missing felicity because he sought it, he has lost his composure, and has been put out of his part; in the wrath and bitterness of disillusion, he has given way to raillery and derision and hatred, and has violently taken sides. In a second volume M. Michaut will exhibit M. France's "evolution." Meanwhile, he assures us that the experiment is conclusive: if M. France is one of the great men of dilettantism, he should be the last, and it should die with him.

IN "The Haskalah Movement in Russia" (Philadelphia: The Jewish Publication Society), Dr. J. S. Raisin describes the rise and development of what may be called the Russo-Jewish renaissance of the past fifty years. This period, which in its entirety is practically unexplored, seems to furnish a paradox in the history of culture. That under the pressure of social and political ostracism, so active and varied an intellectual movement could thrive, is at any rate a rare occurrence. The chapters which summarize the lives and chief tendencies of leading writers and scholars are told with sober discrimination and scholarly thoroughness. There is a refreshing absence of a certain exaggeration of which authors in this field are often guilty. The rapid growth of Russian literature doubtless had its influence on the Jew's intellectual life, despite his hapless position in the Empire. His exceptional treatment, however, instead of crippling his energies and producing torpor, aroused more keenly his mental powers. The volume is of interest to the thoughtful few who realize the importance of Russia in art, music, science, and literature; to the author's own special community it is an authoritative and attractive book.

A YOUNG American scholar, Dr. Julius Klein, of the University of California, and Harvard, recently discovered in Spain the long-lost archives of the famous Mesta, the ancient Spanish guild of sheep-owners, which bore many striking resemblances to our modern American industrial combinations. The Mesta was established about 1273, and was dissolved in 1836. Its archives had long been lost, until the *American Historical Review,* in its number for April, 1913, announced that, after many months of study and several weeks of research in different parts of Spain, Dr. Klein had found them in a room in Madrid, buried under years of dust. Since then Dr. Klein has been studying this hitherto unused source of material bearing on Spanish economic history, and his investigations reveal the presence of much valuable information concerning the ownership of land, the public domain, commons, forests, etc. The complete files of the minutes of the organization from 1499 and of its accounts from 1510 down to the nineteenth century, together with briefs and decisions of some 3,500 law suits in which it was a party from 1390 to 1790, form perhaps a unique collection of matter on the economic development of a country during the later middle ages and the early modern period. Dr. Klein has given an account of his find in the February number of the *Boletin* of the Real Academia de Historia of Madrid, where two of the oldest charters of the Mesta, with notes, are published, and others are to appear shortly in the *Bulletin Hispanique* of Paris. Dr. Klein is returning to the United States this spring, bringing with him some 350 photographs of the most important of these documents and a mass of other data and notes, when a complete history of the Mesta will be brought out, probably under the auspices of Harvard University, the preliminary work in Spain

having been carried on by Dr. Klein as Woodbury Lowery and Sheldon fellow in economic history of that institution.

"A Civil Servant in Burma" (Longmans) is the modest title of Sir Herbert T. White's record of his thirty-odd years of labor in Burma, which saw him rise from a minor position to become Lieutenant-Governor of a province larger than France or Germany. Such a life is bound to be interesting, and Sir Herbert has the seeing eye and ability to describe personal adventures as well as political changes. He writes history as he saw it in the making, and his life-story has become a part of the history of the "fairest and brightest of Eastern lands." Incidentally, there are charming pictures of the philosophical, happy-go-lucky native, who will not mend his roof when it rains, because then he cannot, nor when it is clear, because then it does not need repair; who is reputed lazy, and yet works better than a coolie; who is called a coward, and yet chases a tiger and beats it after he has driven it off with a knife—or does this prove only that it is the Burmese tiger that is a coward? Some charming photographs illustrate country and town scenes, but the best picture in this attractive book is that of the broad-minded and tolerant Englishman sympathetically fathering his adopted country. We doubt whether any German or Frenchman could have written such a book, and wonder why any Hindu is eager to throw off so gentle a yoke.

DO you count on prowling about Rome and making the trip from Arezzo to the Eternal City in an effort to identify all the scenes in "The Ring and the Book"? You needn't. It has already been done by Sir Frederick Treves in "The Country of The Ring and the Book" (Cassell). A completer companion for the topographical student of that unique poem, or indeed for those who are not uncompromising Browning enthusiasts, it would be difficult to produce. The opening section gives the record of fact as it may be gathered from the various documents of that now celebrated case bound up in the Old Yellow Book. This is not the bare recital one might expect from its dry-as-dust source, but one colored by flickering lights of humor and variegated by an occasional quotation from the poem. There is also a closing section furnishing a strictly unimaginative commentary on the various actors in that bygone tragedy "as they appear in the poem." But the purpose and justification of the book are to be found in part two, which describes with admirable minuteness and thoroughness all the places associated with that oft-repeated story of crime. We learn of the church where Pompilia worshipped as a child, of the kind of house, though not of the actual *palazzo*, where she spent her brief yet too long married life. We even learn why she and her friend the priest left Arezzo by the San Clemente Gate rather than the Porta San Spirito, and see the very section of the city wall over which the two climbed. On account of Browning's fidelity to fact in his versions such painstaking identifications are not only interesting, but lend the characters a new and distinct reality. This contribution is enhanced by a hundred and six illustrations, nearly all of which are photographs "taken by the author for the most part at or about the actual date in the calendar on which occurred the episode with which the scene is associated."

SURELY, no poetry has been subjected to such matter-of-fact and indeed intensely prosaic verification and identification. For all of it the lover of poetry, except in his idler, more curious moments, will have little occasion or yearning. He will follow the spiritual histories of the various personages who were bound together by the crime in the Via Vittoria on January 2, 1698, without troubling himself to discover whether the murderers first set foot in Rome in the Piazza del Popolo, or whether the moon was full on December 30 preceding. The play of motive and the changes of soul in the maleficent Guido or the guileless Pompilia will engage his attention. It is only when he has ceased to regard them as artistic creations, and begins to consider the figures in the sordid trial of the seventeenth century that the reader will turn to this exhaustive guide to the country of "The Ring and the Book."

NOTES FROM ABROAD.

SIMULTANEOUSLY with its reduction in price, the London *Times* has made another great change. Its printing office has become a trade union establishment, thus leaving the *Globe* alone in the London daily press as a non-union paper.

LONDONERS have been assured recently by Sir Laurence Gomme, perhaps the highest living authority on the history of London government, that their city is steadily improving. Largely owing to the work of Norman Shaw, its general architecture is more artistic than it used to be. Nor will Sir Laurence allow the common indictment that Londoners are not public-spirited. Their public spirit, he thinks, takes so many forms that one is apt to lose sight of it. He notes a special advance in the recognition of health and disease as public matters. "No one is now entitled to have smallpox to himself."

A FEW years ago one could pick up for sixpence a "remainder" entitled "The Truth about an Author." It was a reprint—still anonymous—of a series of brisk and candid autobiographical articles that had appeared in the London *Academy*. Its author, Arnold Bennett, has now issued a revised edition of the book under his own name. Writing plays is probably much more profitable, for "The Great Adventure" has now exceeded its 400th consecutive performance at the Kingsway Theatre. Only twelve plays produced in London during the present century have equalled this record. One of them was "Milestones," which ran to 608 performances.

ENGLISH actors, however, are confronted with an economic difficulty on account of the adoption by so many theatres—especially the small theatres of large cities and the large theatres of small cities—of the music-hall system of "two houses a night." Dramas have to be shortened in order to fit twice into the space of time between 7 and 11 P. M., and the curtailment is mainly done at the expense of the small parts in the cast, a much greater strain thus being thrown on those who play the large parts, to say nothing of the physical tax of more frequent changes of costume. For twelve or thirteen performances a week under this system, the actor receives no more than was formerly paid for six or seven. A "Pay for Play League" has been formed in order to seek remedies, and an attempt will be made to formulate the demands of the profession in view of expected intervention by Parliament. The Home Office is reported to be already considering the whole question of theatrical employment.

THE plain-spoken Bishop of Châlons-sur-Marne has delivered against worldly dinners and parties a Lenten charge which tallies closely with some recent French novels. "While the common people sap their vitality by intemperance in alcohol, which is worse for the race than war, the rich too often seek in combinations of sauces and viands that excitement of incendiary gastronomy which corrupts the blood and awakens all sorts of fevers. . . . When the clergy are gone, the best-kept houses transform themselves into very free theatres. Light pieces composed expressly are played, with double meaning which indeed may escape young *ingénues*, but whose words are so many stimulants to the sophisticated. Gay songs alternate with talk of pleasure. And all ends with dances often most familiar, to which young people give all their legs and hearts into improper hours. . . . On the ruins of society in which religion ails and fails, Christians might have something better to do than that!"

AMONG the hundreds of Paris charities, one of picturesque name has just had a week's sale at its single counter in the Bazar de la Charité which replaces that burned with so great loss of rich women's lives in 1897. It is the "Ray of Sunlight for Young Girls." In the ten years since its foundation, this good work has paid the expenses of wholesome vacations for 2,500 working girls. In the same week there was a benefit night in favor of the good work of "Aid for the Maimed Poor." The Lycéum—a woman's club with a separate branch for Paris Americans—under the patronage of the dowager Duchesse d'Uzès gave an entertainment for the "Labor works of all the Dioceses of France."

ANOTHER art has been admitted of late to the annual exhibition of the Société Nationale des Beaux-Arts, which was once known as the "New Salon" of Paris. It is Music—and it means that young or unrecognized composers have the opportunity of presenting their work to a jury and obtaining its public hearing, without expense to themselves. This section of the Salon is under the direction of Paul Viardot, who is the son of

the great Malibran's sister and rival singer. He has a jury such as exists for painting and sculpture and the other arts. This year more than 200 musical works have been submitted to the jury, which has accepted 122 for execution by a chosen orchestra at the Tuesday and Friday concerts during the ten weeks' exhibition from mid-April to the end of June.

AT the meeting of the Académie des Sciences Morales in the first week of March, a notice was read of the philanthropic work of the late B. Altman of New York. It included a description of the art collection he bequeathed to the Metropolitan Museum—and an analytical account of his profit-sharing foundation for his employees, with its novel reimbursement premium.

THE Société Nationale was founded in 1890 by Meissonnier, Puvis de Chavannes, Carolus-Duran, Besnard, Rodin, and others, who professed to open wide doors to youth and New Art. It has hardly gone beyond the brilliant close circle of its foundation in painting and sculpture; but the success of its section of Decorative Arts has forced a similar charitable opening of space to struggling artists on the official "Old Salon." The two exhibitions for some years have competed directly, as they take place at the same time at opposite ends of the Grand Palais.

THE Paris Municipal Council has always been open to new ideas, not only for the city's sake, but to encourage artists who give its character to Paris. A decorative experiment, which may be of great interest in the illumination of the modern city, is being tried in the Place de la Concorde, the largest open space in any European capital. There, as in the Champs-Elysées and the Grands Boulevards, a great part of the lighting is by "intense" gas lamps, which produce shadows as crude and unfavorable to architectural lines as the electric arc. At the entrance of the Place from the Rue Royale, the light falls on the two palaces which form the entire northern side. They were built with long colonnades by Gabriel before the Revolution; and one is now the Naval Office, while the other is divided between a fashionable club, the Automobile Club of France, and the Hôtel Crillon. At the entrance corners of the Place great candelabra have had their lamps fitted with ground-glass globes, giving a diffused, but still brilliant, light varying from opal to pearl. As a mere matter of convenience, the autobus stops in the long triple avenue up to the Arc de Triomphe had already been flanked with green lights. Paris may end with Athenian taste in lighting instead of the modern Babylonish glare.

WHAT the average man and woman think of the world around them is shown by the voting contest recently held among the readers of the *Matin* newspaper. Prizes to the amount of $130,000 were offered, ranging from $10,000 to a bicycle. There were forty of these prizes, to be distributed according to accuracy in guessing the seven wonders of the world to-day as decided by the majority of votes. First place was taken by the aeroplane, with 150,188 votes. The other wonders receiving a majority of votes for enrolment in the seven were, in order—wireless telegraph, radium, locomotive, human grafts (an echo of the interest stirred by Dr. Carrel's lectures in France last summer), anti-diphtheritic serum, the dynamo.

Science

ACHIEVEMENTS OF THE SPECTROSCOPE.

Stellar Motions. By William Wallace Campbell, Director of the Lick Observatory. New Haven: Yale University Press. $4 net.

The stars to the ancients were all at the same distance from us, and all set immovably in a huge transparent hollow sphere of crystal, like jewels in a crown. Perforce they could not move: they were prevented from so doing by the solid continuity of their environment; so they were "fixed stars" palpably enough, and as such were passed along from one age to the next, till it was universally believed that any such thing as a stellar motion was absurd. Obviously, too, all this vastness of the celestial architecture was regarded as centred about the earth; and its stately progress through the night meant that the gods had so decreed it for human edification.

Except for the inconceivably great distances of the stars, every postulate of the ancient view of the stellar universe was totally wrong. Giordano Bruno, martyred by the Inquisition in 1600 for original scientific views, among them his doubt of the absolute fixity of the fixed stars; Hooke towards the end of the same century; Bradley, third Astronomer Royal; Lalande, and the elder Herschel—all held the firm opinion that, as the last said, "there is not, in strictness of speaking, one fixed star in the heavens; . . . there can hardly remain a doubt of the general motion of all the starry systems, and consequently of the solar one amongst the rest." Nevertheless, Halley early in the eighteenth century appears to have been the first to adduce positive evidence that a few stars, at least, do not remain motionless with reference to their neighbors; that they have, in fact, what he termed proper motions, small in amount, to be sure, but nevertheless detectable, even by the instrumental means of his day.

The attempts had been many to ascertain the distance of a star, but none had succeeded till Bessel, nearly a century ago, had found an appreciable parallax of Cygni; and Sir W. Herschel's earlier inference that the stars must be scattered through space at widely differing distances, led up to Maedler's erroneous hypothesis of a central sun, Alcyone, round which the stars, our sun among them, majestically wheeled, as the earth and other planets of the solar system are known to travel round the sun. Herschel, too, found many stars with attendant suns, binary systems, that is, the bodies whirling slowly round each other, but nevertheless plainly in motion. No other stellar movements were recognized until a little less than half a century ago, when the advent of the spectroscope, under the deft handling of Huggins, and later of Vogel and Keeler, proved beyond a doubt the swift motion in space of all stars and nebulæ, some advancing towards the sun, some receding from it; others puzzlingly approaching for a time and then journeying away from us, and yet others whirling swiftly round each other, but so close together that no telescope could be built powerful enough to separate them.

Professor Campbell is not in the main concerned with stellar motions of this character, determined after the manner of precision of the older astronomy, although his comprehensive work shows him thoroughly adept in regard to it. He has devoted his pages rather to the achievement of the spectroscope, of which he lucidly says: "The ordinary [telescopic] *point image* of a star is as if all the books in the University library were thrown together in a disorderly but compact pile in the centre of the reading-room: we could say little concerning the contents and characteristics of that library. The *spectrum* of a star is as the same library when the books are arranged on the shelves in complete perfection and simplicity, so that he who looks may appraise its contents at any or all points." To carry the simile a step further, by letting the books in orderly arrangement represent the spectral lines, the slight shifting of a line to the right or left seems to have signified little more to the early investigators than the misplacement of a book on the shelf. Doppler in Germany and Fizeau in France gave the first hint of this importance of the spectrum; Kirchhoff overlooked it; Clerk-Maxwell in England first presented it in definite form; and Huggins made the first attempt to measure these minute displacements of spectral lines. Professor Campbell presents in outline the mathematical theory of these line-displacements, and shows how the careful measurement of them is translatable into the star's approach or recession. In other words, the star's radial velocity, or motion in the line of sight, is ascertained; and over a thousand stars have been submitted to this very critical and highly significant measurement.

Professor Campbell presents briefly, though sufficiently, the history and development of the methods by which results of this character are alone possible: how the efforts of highly skilled observers in both Germany and England were baffled for a quarter of a century; how every effort of the pioneers was

nevertheless an index to point the way of success to those who followed after; how Keeler, with the Lick telescope, gave us in 1890 the first trustworthy stellar velocity; how he followed it up with velocities of approach and recession of the great nebula in Orion and many faint planetary nebulæ besides; how Draper's stellar spectrograms of 1872 recorded spectral lines for the first time; how Pickering followed up the lead with vast amplifications at Harvard; and, finally, how Vogel and Scheiner at Potsdam proved the new photographic method to be so advantageous that visual measures were no longer even thought of. About this time, while Potsdam was waiting for new and ampler facilities, Campbell embraced the unique opportunity of a huge telescope on a high mountain in a serene atmosphere at an equable temperature, so to plan a spectrograph that it should yield a maximum efficiency in just one line of research. All tyros in spectroscopy should read his story of unremitting effort towards this end; how his design, ultimately successful, was "a bundle of fortunate compromises between a great number of conflicting interests."

We have little space for comment on Professor Campbell's treatment of visual and spectroscopic binaries. Pickering found the first binary of this intimate character in 1889, the star Zeta Ursæ Majoris, and Vogel the next one, Spica Virginis, which Baker has recently investigated fully. So distant is Spica and so close are the component stars of its system that a telescope of at least thirty times the power of the Lick glass would be needed to separate them. Beta Cephi, discovered by Frost, has the shortest known period of revolution, only four and a half hours. Over three hundred spectroscopic binaries are now known, and Professor Campbell presents a most interesting discussion of them:

> There is a possibility that the stars attended by massive companions, rather than by small planets only, are in a decided majority; suggesting at least that our solar system may prove to be an extreme type of system rather than of the prevailing or average type. This is not a casual and passing comment. We do not possess a shred of positive evidence that any other star than our own is attended by small planets; we seem powerless at present to obtain any evidence in favor of or against their existence; and the prevailing belief that planets exist in other systems rests upon analogy to the solar system. We *have* the evidence of visual and spectroscopic binary stars that other systems with two or more massive central bodies are extremely common.

The variable stars, whether short-period or long-period, are also considered, Professor Campbell regarding them as affording promise of great utility in solving the problems of origin of visual and spectroscopic binaries. Of Bailey's remarkable cluster variables, Professor Campbell thinks that, as the light fluctuations repeat exactly in time, we must be observing binary systems whose members interact upon each other in such a way as to vary their radiation output. The wonderful *novæ* are dealt with; but discussion is limited as far as possible to the bearing of radial velocity observations upon the interpretation of the phenomena of variables. Numerous hypotheses of the causes of variation are discussed. In the case of Cepheids and Geminids, for example, it is found that every star so far investigated attains its greatest brightness at or very near the time of greatest velocity of approach towards the solar system, and minimum brilliance at the time when the brighter star of the system has its maximum velocity of recession. Clearly, eclipses can have no part in the problem, and we can only be sure that the mysterious light variations are in some way connected with orbital revolutions in the systems themselves. Perhaps no other class of variables is more worthy of spectroscopic study; but the faintness of most of the uninvestigated stars of this type calls for greater optical power, such as only the huge reflectors of the future, as at Ottawa, Mount Wilson, and in Argentina, can be expected to supply.

The wide range of problems within the reach of radial velocity is admirably illustrated by the fact that such measures seem likely to provide an exceedingly accurate as well as simple and direct method of ascertaining the distance of the sun. Nearly a quarter century ago Professor Campbell wrote:

> By assuming the earth's mean distance from the sun to be 92,500,000 miles, which corresponds to a solar parallax of 8″.838, it is probable that the resulting orbital velocities (of the earth) will not be in error by more than 0.1 mile per second. There is reason to hope that the probable errors of spectroscopic observations will soon reach this low limit, in which case the problem will be reversed and the spectroscope will be used to *measure* the earth's orbital motion and thus to determine the solar parallax.

No less than two such determinations have been made in recent years, and their agreement with the geometric and gravitational methods of the older astronomy is gratifying.

In his chapters of studies of the stellar system, Campbell reaches many interesting conclusions. He finds that the scale of the universe of the brighter stars is a great deal larger than has been previously estimated; and more significant is his discovery that the progression of average velocity with advancing spectral type is clear and unmistakable: in other words, stellar velocities are functions of the effective ages of the stars. Our sun is, therefore, seen to take place as one of the slower moving and hence younger of the stars. The solar motion as discovered from stellar proper motions; preferential motion as in star streams; the distribution of the brighter stars; the possible slow rotation of our stellar system, are all considered, and these questions lead up to the central investigation of the volume, namely, the spectrographic determination of the solar motion. Here is found a masterly analysis of one of the greatest problems that have engrossed the human mind since the elder Herschel's first solution of it. Campbell marshals his unique collection of data in excellent geometric form, and makes a number of least square solutions on different suppositions. Through the timely aid of the late Mr. D. O. Mills in providing for the establishment and maintenance of an accessory station to the Lick Observatory in Santiago, Chili, Professor Campbell, with the able collaboration of Wright, Curtis, and Moore, was enabled to add the motions of stars of the southern sky to those of the northern, thereby rounding out his research to full completion. He finds that the sun and his family of planets are journeying Lyra-ward, at two-thirds the orbital velocity of the earth; sufficient to carry the solar system 560,000,000 kilometres in a year's time, or nearly four times the distance separating earth and sun. Does this bewildering inter-stellar motion of the sun take place in a regular curve, or in a straight line? Professor Campbell's judgment is that neither hypothesis fits the case; but that eventually the sun's path will be found to be composed of a succession of unrelated curves, owing to our journeying within the spheres of influence of other great stars one after another.

While Professor Campbell cannot be regarded as the Nestor of stellar spectroscopy, he is nevertheless a pioneer of the first order, and his book is a fairly complete summary of research on stellar motions, especially as determined by the spectrograph. His analytic development of the formulæ and methods of this new research will be found particularly welcome to students and investigators, and as such his "Stellar Motions" is certainly an epoch-making volume for which all astronomers will heartily thank, first, the author, and second, the Yale trustees who were empowered by the terms of the Silliman Foundation to engage Professor Campbell for that course of lectures which, delivered at the University early in 1910, formed the basis of this praiseworthy treatise. The index is ample and the volume is fully illustrated with diagrams, photographic spectra, and halftones of the observatories and instruments concerned, as well as with an exceptional series of portraits from Newton to Rutherfurd, and Herschel to Keeler.

Drama

THE HIGHER MORALITY.

The Comedy of Manners. By John Palmer. New York: The Macmillan Co. $3.25.

To the still-animated controversy between the artists and the moralists Mr. Palmer contributes a quite readable chapter concerned with the so-called comedy of the Restoration as represented by Etherege, Wycherley, Congreve, Vanbrugh, and Farquhar. In our opinion, these writers are the favorites of nature and of fortune. They were witty themselves, and they have been the constant occasion of wit in others. They have been brilliantly praised and brilliantly condemned. When they are not enjoying a *succès d'estime*, they are enjoying a *succès de scandale*. They keep up an enlivening sectarian buzzing in the Temple of Fame. While dust gathers in the niches of the unregarded classics, they with each revolution of taste are challenged, taken down, aired, dusted, and crowned with fresh bays. No one can approach them without a glimmer or sparkle of inner or reflected light. Mr. Palmer approaches them as gravely as possible, and with solemn æsthetic convictions. He holds that they have fared badly—have been grievously, nay, even tragically, misunderstood. "That Leigh Hunt's edition of the comic dramatists fell to be reviewed by Macaulay," he says, "is one of the tragedies of literary history. Macaulay's review undid all that the best critical intellect of his time had achieved for the reputation of English comedy." Yet despite this lugubrious overture, Mr. Palmer's book fairly coruscates with the wit of Etherege and Congreve and Lamb and Hazlitt and Hunt and Meredith. And with a touch of the Restoration grace Mr. Palmer quotes on the title-page: "Your judge-wit or critic. . . . He rails at all the other classes of wits, and his wit lies in damning all but himself: he is your true wit."

Mr. Palmer "damns" all the wits who have considered moral judgment a part of literary criticism. For a some-time scholar of Balliol College he seems curiously informed as to the date at which critics began to apply the "moral test" to works of art. In 1698, as every one knows, Jeremy Collier published his celebrated "Short View of the Immorality and Profaneness of the English Stage." He opened his attack with a traditional definition of the function of drama: "The business of plays is to recommend virtue and discountenance vice. . . 'Tis to expose the singularities of pride and fancy, to make folly and falschood contemptible, and to bring everything that is ill under infamy and neglect." From this definition, argues Mr. Palmer, everything that Collier urged against contemporary stage plays logically followed; and, he continues, the attempts of the dramatists to defend themselves were foredoomed to failure, because they accepted "Collier's moral test." The "inflamed Puritanism" of that misguided clergyman, Mr. Palmer would have us believe, has vitiated English criticism to this day. Following Collier's lead, that inflamed Puritan Dick Steele also applied the moral test and condemned the tone of the Restoration comedy. So, too, did those inflamed Puritans, Dean Swift, Sam Johnson, Coleridge, Macaulay, Thackeray, and George Meredith. Judge-wit Palmer, as we have said, damns the entire critical jury, discharging them on the ground that they have applied "precisely the test which *no one before Collier had ever dreamed of applying.*"

A rather stunning tribute to the influence of that virulent non-juring clergyman! But we must protest that he does not deserve it. Collier did not go about to make an innovation in the principles of dramatic criticism. Though his tactics in the actual conflict were faulty, his strategy in the preliminaries was admirable. In setting up the "moral test" he appealed to precedents which his bitterest adversaries acknowledged to be authoritative. His definition of the moral function of drama was not accepted by Congreve and the rest because they had been hypnotized by Collier, but because it had been accepted by Boileau, Ben Jonson, Sidney, the critics of the Renaissance, and by those inflamed Puritans, Horace and Aristotle. They possibly remembered that not merely Prynne in his annihilatory fury, but also Sidney in his glowing defence of their art, had cried out on these "naughty play-makers and stage-keepers" who had justly made comedy odious, "even in that point of laughter, and forbidden plainly by Aristotle . . . that they stir laughter in sinful things, which are rather execrable than ridiculous." They could extenuate their offence by showing that Collier had overdriven his point; but they could not exonerate themselves, what though the zeal of God's house had devoured some part of their prosecutor's good manners and civility. As Dryden admitted in his noble apology, "in many things he has taxed me justly."

Mr. Palmer reopens the case in an attempt to exonerate Etherege, Wycherley, and Congreve—Vanbrugh and Farquhar he allows were artistically and morally a little muddled. He wishes to restore to them the honors awarded by Lamb, Hazlitt, and Hunt, and ruthlessly torn from them by Philistine Macaulay. Now, Hunt was not very powerful as a theorist. Hazlitt confined himself pretty well to expressing his passion of delight in the perfection of literary craftsmanship—in the exquisite finish and flash of the comic dialogue and the sheer fineness of stroke in the character-drawing. And Lamb—well, Lamb had not Mr. Palmer's high seriousness. Poor Lamb, as Carlyle would say, had not heard of the "higher morality." Lamb, like "roguish" Pepys, indulged in Restoration comedy when he felt the need of taking "an airing beyond the diocese of the strict conscience." He accordingly invented his playful paradox that Restoration comedy is fairyland; and the able-bodied Edinburgh reviewer promptly demolished it. Macaulay argued that Wycherley's comedy, for example, was not fairyland, but did faithfully reflect the world he lived in; that the viciousness of this world passed the province of laughter; and that therefore Wycherley's laughter passed the province of comedy, and was bad artistically and morally. In other words, Macaulay confined himself rather closely to that part of literary criticism which discusses the *subject* of the artist, and he pronounced the subject unfit for art. Mr. Palmer denies the right of the critic to judge the subject. His argument, in a nutshell, is that, since Wycherley's comedy is a faithful reflection of the world he lived in, it is sound artistically and sound morally: "There is a higher morality than that of Jeremy Collier—a plane upon which Plato and S. Francis, Confucius and Elijah, may meet"—with Wycherley, presumably, and the other worthies of the Restoration.

This argument effectively disposes of the Puritans from Aristotle down, and there are indications that it is gaining ground among us. It has the superlative merit of justifying everybody's point of view. It puts public opinion quite out of court, and makes each artist advocate and judge in his own cause. He may be an anarchist, a sun-worshipper, or an eternal philanderer, but if he sincerely reflects philandering, sun-worshipping, and anarchy, he has produced good art and good morality. This is just the principle for which our democratic art has been seeking. One need never invoke it, to be sure, until one has transgressed the ancient common law of "honest civility." But it is very comfortable to fall back upon: in these days of naturalistic novels, slum-poetry, and medical dramas, one never knows when sincerity is going to call upon one to transgress. And it is not an entirely new principle, either. Robert Wolseley availed himself of it in 1685 in defending from Puritan onslaught the obscene juvenilia of Lord Rochester. Yet Wolseley himself, in the palmy days of the comedy of manners, admits that "wit" which offends common decency should be strictly reserved for the artistically elect. For Lord Rochester, he says, did not design his obscenities "for the Cabinets of Ladies, or the Closets of Divines, or for any publick or common En-

tertainment whatever, but for the private Diversion of those happy Few whom he us'd to charm with his Company and honour with his Friendship." Fortunately, our democratic criticism is putting an end to that kind of artistic exclusiveness. We are at last beginning to recognize that what is good enough for the "happy few" should not be withheld from the masses.

"THE BELLE OF BOND STREET."

We have travelled a long lane since "The Geisha" was regarded as the rather degenerate heir of "The Mikado," and its contemporaneous musical comedies as the left-hand relatives of the Gilbert and Sullivan comic opera. Legitimate comic opera seems in these days an ideal so unattainable that we have almost ceased to hope for it, and we would be content if only managers offered us productions that were really musical, and were really comedy. How far we have departed from the standards even of the musical comedy of earlier days was exhibited last week in New York at the Shubert Theatre, where was presented "an up-to-date version of 'The Girl from Kay's,'" with Sam Bernard and Gaby Deslys as the stars of the production.

"The Girl from Kay's" was one of the earliest of the musical comedies that professed to deal lyrically with the adventures of a "girl" from somewhere or other. It possessed, of course, nothing of the wit and satire of the Gilbert operas, nor was it even comparable with "The Geisha," but it was bright and sparkling, with plenty of vivacity and movement, and it belonged to an era before musical productions of this order had succeeded in divesting themselves of all the trammels of plot. The up-to-date version has made laudable efforts to free itself from this latter reproach, and has further demonstrated its modernity by eliminating from the score the two numbers which contributed most to the brightness of the original. To compensate for what has been lost in the modernizing process, we have a young Frenchwoman who is undistinguished whether as actress, vocalist, or *danseuse,* but who wears a bewildering variety of millinery, and is known to receive an extravagant salary.

"The Belle of Bond Street," which happens to be the title selected for this production by its recording angel, is, in fact, typical of the present tendency of musical comedies, in which everything is subordinated to the purely physical features of the production. In an effort, apparently, to emulate the spectacular features of the French *revue,* all idea of legitimate comedy, with a coherent plot, is abandoned, and its place is not taken by the satire on contemporary events and personages which redeems the *revue* from mere vulgarity. In favor of "The Belle of Bond Street" it must be said that the chorus is above the average in capacity and in training, and that Sam Bernard is more amusing than many comedians of his type. Furthermore, it is undeniable that just at present this is exactly the sort of thing that a considerable section of the public likes; but there is a ray of hope on the horizon—the department stores have also begun to display millinery to the accompaniment of music, and their productions are free.

S. W.

NOTES.

"The Red Light of Mars" (Mitchell Kennerley), by George Bronson Howard, published in the modern drama series, is an exceedingly clever skit, in which a number of old theatrical ideas are employed with notable ingenuity. It is not only very amusing reading, but is admirably adapted to effective dramatic representation. Although in the nature of extravaganza, it deals vigorously and satirically with many questions of present interest and tells a good human story. Into the details of this, as the piece is to be tried on the stage before very long, it is not necessary to go now, but it abounds in comical and emotional situation. The good angel of it is our old friend the Devil, who now figures as a benevolent agent engaged in the work of preparing mankind for ultimate translation to a loftier sphere of existence in Mars. The personages include a brilliant young chemist, who believes himself on the verge of the discovery of the secret of immortality; a multi-millionaire, who would bribe him to devote his science to mere money-making purposes; an anarchic Socialist who believes in bombs as the sole means of social regeneration; a cultivated widow who loves the millionaire, but will not marry him because she detests his business principles and methods, and her daughter, a frivolous, selfish girl, who refuses to marry the chemist, who worships her, unless he will abandon philanthropic experiment to earn money to keep her in fashionable luxury. When the chemist calls upon the Devil for aid, the complacent fiend—who is compelled on earth to occupy a human body—effects a general metempsychosis. He himself becomes the chemist, puts the chemist into the body of the anarchist, and the anarchist into that of the millionaire, whose disembodied spirit is condemned for a season to flutter disconsolately in space.

The nature of the misunderstandings, consternations, and self-searchings arising from these transformations may be imagined. Mr. Howard weaves them most dexterously into the action of his plot, and freights his whimsical notion with a plentiful ballast of common-sense. All the sufferers profit by their startling experience. The millionaire realizes that labor has its rights, and capital its duties, and thus wins the hand of his widow; the anarchist is awakened to the iniquity and folly of his ways, and is rescued from the police, and the chemist is made happy by the conversion of his charmer into a loving and devoted woman by the masterful conduct of the Devil while tenanting her lover's shape. Plentifully endowed by the repentant Crœsus, he is at liberty henceforth to work for the benefit of his fellow creatures. As serious drama the piece necessarily suffers by the serio-comic use of the supernatural element, but this is employed only as a means to situations which otherwise would have been impossible, and is fully justified by the excellence, literary and constructive, of the workmanship. Properly played the piece ought to attract much attention.

Sudermann's latest play, "Die Lobgesänge des Claudian" (Cotta; Lemcke and Buechner), reminds one in a general way of his "Teja." Germans in contact with Romans, and the moral triumph of German *Treue* supply the subject-matter. It may be safely predicted, however, that the new play will never be the success that its admirable little predecessor was. It is dull reading, and must be tiresome on the stage, for the author has not even employed his customary theatrical devices to arouse a momentary interest. The devolopment of the motive is feeble, and attention is divided between the real hero, Stilicho, and the titular hero, Claudianus, the last of the Roman poets. German critics have perhaps in these later years been unduly harsh towards Sudermann, who, after all, has not himself changed so much as has the general standpoint. His reputation, which seemed to flare up a little on the production of "Der gute Ruf" a year ago, will now smoulder lower than ever. If he wishes to recapture public favor, he should return to the writing of fiction. Even "Das hohe Lied" was preferable to the present drama. Your reviewer on finishing the play was moved to turn to Gibbon, and read again chapters 29 and 30 of the "Decline and Fall," where the same events are narrated. He is grateful to Herr Sudermann for having given him at least that impulse.

It is not often that pieces written by amateurs for amateurs contain anything worthy of publication or serious critical notice, but there is undeniable talent in the ten "Short Plays," by Mary MacMillan (Stewart & Kidd Co), written for the Cincinnati College and Cincinnati College clubs. Some of them, though well enough adapted to their professed purpose, have no distinctive quality, but there are four or five which arrest attention. They are somewhat crude and sketchy, but have variety, imagination, and descriptive facility. "The Shadowed Star" is a tenement-house study, with a picture of a woman, broken with years and suffering, cheered on Christmas Eve by hallucinations of a coming feast in the company of her long dead sons, while her daughter lies dying of want at her side. It is a striking bit of work in which realism and fancy are cleverly blended. With skilled actors, and a little judicious editing, it might be made very effective. "The Rose," an Elizabethan story, in which a gallant young knight bids temporary farewell to his love, at the behest of the virgin queen who is jealous of her, is prettily told in blank verse, always smooth and occasionally poetic. "The Ring," a farcical comedy of the same period, if not very happy in its imitation of the ancient speech, is full of action and simple fun. "Luck," a miniature four-act comedy, in which a materialistic young doctor offends his sweetheart by

his disbelief in the virtue of the charm which she has bought for him, and thereafter encounters all sorts of misfortune until he is converted, is amusing both in dialogue and incident. In "A Modern Masque," Miss MacMillan, greatly daring, makes Poetry and Drama the champions of Shakespeare, when he is threatened with deposition by Bernard Shaw, and endows them with sharp weapons of sense and satire. In "The Gate of Wishes," an episode on the afternoon of Hallowe'en, she shows imagination and metrical grace. In all the pieces there is more of promise than of actual achievement, but the natural gifts revealed are of a kind that merit recognition and encouragement.

The Abbey Theatre Company, of Dublin, will be at the Court Theatre, London, for their annual visit during June. The repertory of the company will include several new plays, besides old favorites. At present the "first" company is touring in America, under the direction of S. Lennox Robinson. It has played in Chicago and the Middle West, and is to go thence to Canada, returning home in May, in time to keep engagements in Oxford and Cambridge. The "first" company has with it most of the "second" company as understudies; but the Abbey Theatre is not on that account closed. Lady Gregory, with a third company, has produced a new play by a new writer, Mr. Edward McNulty's three-act comedy, "The Lord Mayor," besides St. John G. Ervine's one-act comedy, "The Orangeman," which was new to Dublin.

Music

A MUSICIANS' GUIDE.

The World's Best Music. Edited by Arthur and Louis C. Elson. New York: The University Society.

Volumes IX and X of "The World's Best Music" constitute an independent work, which bears the subtitle "The Musician's Guide." There are original articles by the editors and others, and reprints of a number of excellent papers that had previously appeared in periodicals. The first seventy-five pages will interest all students of the piano who would like to go to Europe to study with the most eminent piano teacher of the time, Theodor Leschetizky, but cannot afford to do so. These pages contain an excellent translation, by Arthur Elson, of the exposition of Leschetizky's personal views made by his pupil, Malwine Brée, and approved by him. It is the only authorized treatise explaining his method—the method which helped Paderewski and nearly all other great pianists of our time to attain their eminence. There are many excellent things about Leschetizky's method in a biography of this great teacher written by Annette Hullah and published by John Lane; but that is a purely literary treatise, while Mme. Brée's work includes many illustrations in musical type, together with forty-seven pictures of Leschetizky's hand in various positions.

Paderewski, the most eminent of Leschetizky's pupils, contributes a few pages of "Practical Hints on Piano Study." It is interesting to note that he still recommends Clementi's "Gradus ad Parnassum." Czerny is also in his list, as are, of course, Bach's "Well-Tempered Clavichord" and the études of Chopin. He cautions students against making their work too easy, "idling away hours in passing agreeably from one thing to another." T. P. Currier has an article on Paderewski, in which he says that that pianist practices with the keenest mental oversight of the smallest details. "He aims constantly to get the most out of every movement, every tone, and every minute spent in practicing." The question as to whether Paderewski "pounds" is also considered. Other famous pianists and their achievements are reviewed by Arthur Elson.

To the violin similar attention is given in a series of papers, and then come the singers, headed by Caruso, who talks about his voice and his singing. Another great favorite, Clara Butt, contributes a most readable paper, in which she warns against the folly, in which so many singers indulge, of having their tonsils cut. She gives some curious information about her singing in full voice while under the influence of ether. On the subject of singing in English, she naturally has decided opinions. Her great success is due in large measure to the fact that she can use her native tongue as musically and intelligibly as the great Italian, German, and French singers use theirs. One day the eminent teacher, Mme. Marchesi, said to her: "English is beautiful when sung like that." Talks with other singers—Olive Fremstad, Marcella Sembrich, Schumann-Heink, Boncl, and Campanari—are contributed to this volume by William Armstrong. Mme. Sembrich believes that the opera of the future will unite the best of the earlier operatic features with the Wagnerian reforms. Schumann-Heink, who deserted the operatic stage some years ago for the concert hall, maintains that concert-singing is really much harder because the artist does not enjoy the advantage of all the operatic accessories that help to move an audience.

Among the many more articles in these two useful volumes are "Making a Singer," "The Mandolin, Guitar, and Banjo" (which need not be sneered at, for they are taught in the leading music school of this country, the New England Conservatory); "Bands and Small Orchestras"; "The Art of Conducting"; "Choir Training"; "Municipal Music"; "Programme Music"; "Contemporary Music"; "Edward MacDowell" (with a discussion of what constitutes Americanism in music); "The Art of Organ Playing," etc. In this last-named article the eminent English organist, Edwin H. Lemare, has some remarkably sensible suggestions on the use of tempo rubato in playing Bach and other composers. The author also considers the subject of orchestral effects in organ playing. The last part of Vol. XII is taken up with concise dictionaries of musicians and musical terms.

Heretofore the most remarkable feats of juvenile composition have been Mendelssohn's overture to the "Midsummer Night's Dream," written when he was seventeen, and Schubert's "Erlking," written when he was eighteen. If Erich Korngold's "Sinfonietta," recently conducted in Berlin by Nikisch, is really as remarkable as some of the critics declare, it is even more precocious, for Korngold was only sixteen last year when he composed it. It is likely to be found, however, that, while Korngold surpassed both Mendelssohn and Schubert in the mastery of technical difficulties, he is far beneath them as the creator of new melodies. The mastery of technical difficulties is a good thing up to a certain point, but just at present it has degenerated into a disease.

Operatic managers in German cities are not allowed to get too rich, as may be inferred from the following information sent by August Spanuth from Berlin to the New York *Staats-Zeitung:* "News comes from all directions that the 'Parsifal' performances are profitable. At Halle the manager was forbidden by the city authorities to charge festival prices after the first three performances had put 20,000 marks profit into his pocket. That, the magistrate opined, was sufficient for him, and made it obligatory on him to let the citizens enjoy 'Parsifal' at the usual rates of admission."

The founder of the Chassevant system of musical education, Marie Chassevant, died a few weeks ago at Geneva, Switzerland. She had received medals of distinction at exhibitions in France, Italy, Switzerland, and Belgium; her method was adopted by Royalty in Russia; while her books have been translated into English by Miss Marian P. Gibb, of Edinburgh. The aim of the Chassevant method, says the London *Times*, is to teach not merely musical technique or musical theory, but also how to listen appreciatively and intelligently. First, ideas of time and rhythm are taught by means of a fairy-story, or rather a series of fairy-stories, which form the basis of a kind of game played by the children, and by which abstract musical notions are personified and materialized. In order to develop the child's activities Mlle. Chassevant invented her "Musical Compositor," consisting of an ingenious system of movable signs by which the children are enabled to "write" music and to make "pictures" of the musical sounds they hear. Here again the constant desire of the child to be "doing something" is catered for.

Art

THE JOHNSON COLLECTIONS.

A Catalogue of a Collection of Paintings and Some Art Objects. Vol I, Italian Paintings by Bernhard Berenson; Vol. II, Flemish and Dutch Painting; Vol. III, German, French, Spanish, and English Paintings. By W. R. Valentiner. Published privately in 300 copies by John G. Johnson, Philadelphia.

Ordinarily, privately printed catalogues do not come within the scope of the *Nation*, but in the present case the collection is so remarkable and the catalogue of such scholarly worth that an exception should be made. This gallery of about a thousand old masters and two hundred modern represents more than thirty years of keenly individual selection. Most of our great American collections have been assembled through a few dealers or advisers, Mr. Johnson has done his own buying. For many years he located and landed his pictures in completest privacy. Then, some dozen years ago, rumor began to divulge the contents of the modest mansion on South Broad Street. The collection became a place of pilgrimage for critics and amateurs of all sorts, the owner dispensing an unflagging and generous hospitality to all persons genuinely interested in his treasures. Naturally, the merry war of attributions began, and has continued briskly. The appearance of this catalogue should at least produce an armistice.

Mr. Johnson has planned his catalogue with the wisdom that has guided his collecting. The ample quarto form is sufficient to contain plates of good scale and offers under the care of the Gilliss Press a dignified and sightly page, but the volumes are practicable without the use of a lectern. Again, superfluous catalogue features have been sternly repressed. Obviously, where photographic facsimiles are at hand, the usual lengthy verbal descriptions serve no useful purpose. Moreover, indications of provenance are rarely given, though reference to literature or to the opinions of critics is freely made. The work of cataloguing is in the hands of two experts of highest competence. Everything has been planned for use, and nothing for show. As regards literary proportions, the catalogue is a kind of happy mean between the old catalogue of the J. P. Morgan pictures and Dr. Richter's voluminous lucubrations on the Ludwig Mond collection. The editors treat their respective portions quite individually within the general scheme. Dr. Valentiner is more punctilious in giving material and bibliographical minutiæ; Mr. Berenson is more personal and suggestive.

Mr. Berenson has never written more happily than in this catalogue. His terse notes, often witty or ironical, give the right fillip to the imagination. They go far to suggest the mood in which each picture should be enjoyed. It is a difficult form of comment, but worthy of study and emulation. This is not the place to weigh the new attributions. Enough to say that Mr. Berenson has gone far beyond the wont of cataloguers. Such new lists for minor artists as are presented under Francesco di Gentile da Fabriano and the Master of the Castelle Nativity are very interesting. The identification of a very early Sebastiano del Piombo, which reveals his dependence on Cima, is very important. Naturally, your reviewer dissents from a certain number of the new ascriptions, but is unwilling to be contentious except in the case of the remarkable Miracle of Christ ascribed to Masaccio. In this we can only see a ruined original from Masaccio's early time, the necessary prelude to the frescoes of the Carmine. Mr. Berenson's relegation of this important piece, which is described by Vasari, to the school, seems to be based on bad color, weak drawing, and shaky values, all of which are plainly chargeable, not to the artist, but to old and recent restorers. The architecture is drawn by some one closely associated with Brunellesco about the year 1419, when he was designing the Florence dome. No mere helper or plagiarist of Masaccio is likely to have had such facilities.

A few of the more important Italian pictures in the Johnson collection should be enumerated. Besides a monumental Pietro Lorenzetti, there is a full representation of the fourteenth-century schools of Florence and Siena. In the fifteenth century are such names as Antonello da Messina, Fra Angelico, Giovanni Bellini, Cima, Montagna, Botticelli (no less than five examples), Cosimo Tura, Crivelli, Matteo of Siena, Carpaccio—all represented by superior examples. In the sixteenth century the finest pictures are by Fra Bartolommeo, Lorenzo Lotto, Paolo Veronese, Palma Vecchio, Tintoretto, and Moretto of Brescia. Of such delightful aftercomers as Tiepolo and Guardi there is a sufficient display. The Italian pictures comprise some three hundred numbers, less than a third of the whole.

But the strength of the collection lies in the Northern schools. Besides remarkable examples of Jan Van Eyck, Rogier de la Pasture, the Maître de Flémalle, Thierry Bouts, Memlinc, Gerard David, Paliner, and Metsys, there are numerous school pieces even more alluring to the expert. The German and French primitives are also well represented by such masters as Schongauer Cranach, and the Maître des Moulins. When we reach the later masters they come in groups. Old Bruegel, Adrian Ostade, Jan Steen, Adrian Brouwer, Rembrandt are thus exemplified in many phases. There is a magnificent group of those color sketches in which Rubens most fully reveals his genius. Of the brothers Camphuysen, unduly neglected painters, there is a remarkable representation. That most exquisite of Dutch masters, Vermeer of Delft, is present in an engaging example. If one were to select the most attractive items from the Northern groups, a good choice might be the profoundly serious Van Eyck, St. Francis Receiving the Stigmata, the lovely Rembrandt, The Finding of Moses, and the Rubens studies as a group. Dr. Valentiner's portions of the catalogue lack the picturesqueness of Mr. Berenson's, but atone somewhat in solidity. In many cases Dr. Friedländer has also passed on the pictures. In general in these Northern schools documents and signatures are common enough to give an objective basis for *expert*. Thus the attributions are surer, and possibly the game of attributing by so much less delectable. At any rate, all the advantages of zest remain with the Italian editor. We may note in passing an unusual bit of iconography that has escaped Dr. Valentiner's notice. The Virgin and Child of the South French school, No. 759, is not surrounded by angels, but by six of the seven Christian and pagan Virtues, she herself with her Divine Son impersonating the highest virtue, Love. Excellent Goyas and Grecos and a magnificent group of no less than twelve Chardins may be mentioned in closing. There are in all nearly 500 pictures of the early Northern schools.

In any but the Johnson collection the modern pictures would loom large. To admirable examples of David, Ingres, Delacroix is added a very complete display of the masters of Barbizon. Corot is splendidly represented in every aspect. Manet, Puvis, Bastien Dagnan, Monet, Degas, Sargent, and Whistler testify to the catholicity of the collector's taste, but there are no cubists or post-impressionists.

From the point of view of art history, this is the most complete and important gallery in America, whether public or private. It is understood that on terms to be adjusted it will eventually be given to the city of Philadelphia. That city would be shortsighted indeed which should boggle over the conditions of such a gift. It is consonant with the magnanimity with which Mr. Johnson has conducted his collecting that this fine catalogue, which brings constant surprises even to those who know the pictures well, has been freely distributed to such institutions and individuals as may make the best

use of it. This offsets the usual regret that works of high scientific worth should not to a certain extent be offered for sale, even when their auspices are private.

Sir Hubert von Herkomer, who died on March 31, was born in Bavaria of humble parentage in 1849. He passed several years of his early boyhood in the United States, to which country his parents had immigrated, but in 1857 the family returned to Europe and settled in England. Sir Hubert received his early education in art at Munich and in the South Kensington art schools. His rise to celebrity was rapid. He became a contributor to the *Graphic* in 1866, and his picture, After the Toil of the Day, was hung in the Royal Academy in 1873. His best-known work, The Last Muster, was exhibited in 1875. It was possibly as a portrait painter that Sir Hubert achieved most distinction, but he was an artist of extraordinary versatility. He worked in oils, in water colors, in black and white, and in enamels; he was an etcher, an architect, a decorator, a designer of scenic effects for the theatre, the inventor of a process of engraving, a musician, and a composer. In 1883 he founded the school of art at Bushey. He was an honorary D.C.L. of Oxford and Fellow of All Souls, and for nine years, from 1885 to 1894, he held the Slade professorship of fine arts at the same University. Sir Hubert was the recipient of numerous decorations, was a member of various artistic societies, and was created a knight in 1907.

Finance

THE RAILWAY RATE CASE.

The comment of the average careful reader of the news on recent developments in the Interstate Commerce Commission's hearing of the rate case would probably be that the subject had been plunged into impenetrable confusion. On Tuesday, April 2, the Commission announced that the order as to rate charges on short links to industrial plants, which had been a complicating consideration, had been suspended, with the hearings on it, until a date which carried the question over to next autumn. On the same day, immediate hearings were granted to the Eastern railway officers on the general question of their petition for a 5 per cent. increase in transportation rates. This seemed to mean an earlier date than had been expected for the decision, which lately was believed to have been put off until July.

A few days before these announcements by the Commission it had become known that shop and track forces, on the Pennsylvania and New York Central, had been reduced respectively 35,000 and 25,000 men from the high mark of the autumn. The Commission's action was in part ascribed to the situation thus presented. But at the opening of this week the chairman of the Iowa Railroad Commission, who was at Washington as a witness, gave out a statement plainly intimating his opinion that these reductions in working forces had been made for the purpose "of browbeating this [the Interstate] tribunal," and that they "simply proved the colossal power of a few men, that can throw 40,000 poor families out of the means of daily sustenance."

On Wednesday, the same two railways published their February statements, that of the Pennsylvania showing 12 per cent. decrease in gross receipts from 1913, with net earnings only one-fourth last year's, while the gross of the New York Central decreased 15 per cent., with net less than one-fifth of last year's figure. Unusual snow blockades accounted for much of the very bad comparison, though it followed other unfavorable monthly statements, and yet these very figures were in turn followed by announcement that two United States Senators were about to denounce, from the floor of the Senate, these tactics of the railways, and that one of them (naturally Senator La Follette) had in mind a bill making it a penal offence to exert pressure on the Interstate Commission. As if to make the confusion of the case complete, the president of the New York Central, when questioned on the stand before the Commission, testified that, except for 1910, last year's net corporate income over all fixed charges was the largest in his company's experience, whereas the president of the Pennsylvania, next day, showed that, while property investment in his railway during the three past years had increased $207,000,000, net operating income during the same period had decreased $11,000,000.

Out of this strangely discordant body of views, opinion, and evidence, the Interstate Commerce Commission has to render its decision. To unprejudiced observers, the only plain facts appear to be, that working expenses of the railways have been increased through award of higher wages by the arbitration boards; that the margin of profit in a year of actual depression, or in a season of floods and snow blockades, has grown very narrow; that railway financing has become more difficult because of the close margin constantly reached between earnings and expenses; and that, since rates are fixed on an even scale for all competing roads, the affairs of the most unfavorably situated road must be the basis for such decision. How the Commission itself is leaning, is naturally a matter of which no information whatever can be had. The persistent belief, both at Washington and in observant outside quarters, that an advance in rates will be granted to the railways, is probably based on the considerations just set forth.

Of the fact that the business public generally has become interested to an exceptional degree in the outcome of this appeal for higher railway rates, there can be no doubt whatever. Few trade reports and few forecasts of the industrial markets fail to contain some reference to the influence of uncertainty over the "rate decision." On the Stock Exchange, which sums up all such influences, it has grown to be a commonplace of belief that no "turn in the market" will occur until the case is decided.

It is probable that the inferences, based on this view of the general situation, are exaggerated. They have their most plausible ground in the case of the steel trade, where orders from the railways make up a great portion of total consumption, where such orders have been extremely small since the beginning of the year, and where it is assumed that the railway buying will not be resumed until the rate case is decided. But there is another basis for the interest of the business community in the decision. The case at issue has been generally accepted as a test of the practical operation of Government regulation of industry—a supervision whose constantly wider extension is at least a subject of debate in Congress. If the Interstate Commerce Commission's supervisory power over railway rates is exercised in such manner, or under such delay, as to cause serious embarrassment to the enterprises, unfavorable inferences of broader application are sure to be drawn.

With all these not wholly unreasonable misgivings as to the Interstate Commerce Commission, there is one fact always to be remembered. Unrestricted rate-cutting, with the decimation of railway profits and the resultant disappearance of dividends, if not of solvency, was an almost invariable sequel in the half-dozen years which followed our older panics. It is at least in part the Interstate Commerce law which has prevented such results on this occasion.

FLYING;

Some Practical Experiences.

By Gustav Hamel and Charles C. Turner. With illustrations. 8vo. $3.50 net (weight, 48 oz.).

This work deals mainly with the practical side of Aviation, and contains records of numerous personal adventures. Mr. J. Elrick Adler contributes a chapter on the Physiological and Medical Aspects of Aviation, and the Hon. Guglielmo Marconi on Wireless Telegraphy, and there are other special contributions.

LONGMANS, GREEN, & CO.

NOW READY

GREAT JURISTS OF THE WORLD

From PAPINIAN to VON IHERING

BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth*, $5.00 *net*.

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

THE STUDY OF SOCIETY

To know the facts about our social organization is to be equipped to deal with it. No one who has not given time and effort to the acquiring of such knowledge is prepared to engage in social work.

For nineteen years *The American Journal of Sociology* has been publishing articles of fundamental importance for the study of society. They are written by leading investigators. They are wholly non-partisan. They cover the entire field of social science. They are clear and easy to read, not buried in technicalities. They are fascinatingly interesting.

Try the journal for a year. It will put you in touch with all that is best in the world of social study and work. In any case fill out and send in the attached request for full information.

LETTERS AND MEMORIALS

OF

Wendell Phillips Garrison

Editor of The Nation, 1865-1906

In one volume, crown 8vo, 300 pages, with photogravure portrait.

During the forty-one years in which he edited the *Nation*, with a thoroughness, ability, and conscientious devotion unsurpassed in the records of American journalism, Mr. Garrison was an indefatigable correspondent, never employing an amanuensis, but writing tens of thousands of letters with his own hand to his contributors, who embraced practically all the leading American scholars and critics of the period. From a dozen groups of these, which have been kindly loaned by the recipients, a sufficient number of selections has been made to illustrate the relations between Mr. Garrison and his great corps of contributors, the frankness and tact which he exercised towards them, and the wide range of his interests, tastes, and sympathies. The volume also contains a brief sketch of his life, a dozen of his best poems, and several of his characteristic editorials, reviews, and essays, besides a fine photogravure portrait.

Price, $1.50 net postpaid.

THE PSYCHOLOGY OF MANAGEMENT

By L. M. Gilbreth

This book seeks to interest and instruct manager and subordinate, employer and employee, by showing them in a practical way how to achieve their object with the least waste possible. How to eliminate wrong methods, how to standardize right ones, and the effect upon the mind of the various types of management, are the topics which it especially considers.

The exceptional interest manifested in this volume on publication, suggests how wide are the possibilities of the subject treated. For the reader who wishes a thorough initiation into Scientific Management, no more suggestive book has yet appeared. 8vo. $2.00 *net.*

HENRI BERGSON:

A Study in Radical Romanticism

By Emil C. Wilm, Ph.D.

To state the salient ideas of the great French philosopher in a dignified and scholarly manner intelligible to the educated layman, is the purpose of this book. It may be recommended as a work of genuine interest to the general reader and to all students of science and philosophy.

SOCIALISM AS THE SOCIOLOGICAL IDEAL

By Floyd J. Melvin, Ph.D.

Instead of basing the principles of socialism on the formal and materialistic science of economics, à la Marx, this book deduces the social system ordered by the more general science of sociology. It thus approaches its subject from a point of vantage that is altogether new.

THOMAS Y. CROWELL COMPANY, New York

The Medieval Popular Ballad

Translated from the Danish of Professor JOHANNES C. H. R. STEENSTRUP, by EDWARD GODFREY COX.

In place of accepting all hallads at their face value, Professor Steenstrup endeavors to isolate the genuine medieval features, "to know the hallads as they issued from the poet's mouth." The method used lays bare in great detail the original conditions of production—how hallads were sung to the accompaniment of dancing,—the nature and purpose of the refrain, and the structure of the rhyme, rhythm, and melody. It investigates the attitude of ballads toward questions of moral import, their feeling for religion, patriotism and historical truth, and their use of nature. The comparisons with the Norse sagas and the hallads of Germany, together with the plenteous use of extracts from the hallads of Denmark, all combine to set forth attractively the perplexing and fascinating question of hallad origins and distributions.

Just the book to put in the hands of the young man who loves outdoor life. Mr. Pinchot has written an inspiring volume on the profession which he has brought so forcibly to public attention.

NEW FICTION

FRANK DANBY'S

Finest and Most Powerful Work

FULL SWING

Ready April 30th

A book in whose rushing current glow two love stories of heart-gripping interest, passion, and tears are mingled in Frank Danby's masterly work, "Full Swing." Vivid, forceful, rich in character-drawing that challenges comparison with the best in English fiction. With dramatic scenes in abundance throughout the book, the interest increases steadily to the very end. No jaded reader, seeking a new sensation in literature, will be able to lay down the volume until the tale is finished. $1.35 net. Postage extra.

The Full of the Moon

By CAROLINE LOCKHART. Illustrated in color. $1.25 net. Postage extra.

JEANNETTE L. GILDER, in the *Chicago Tribune*:

"It would not surprise me if 'The Full of the Moon' proves to be the most popular of Miss Lockhart's novels, and if it does not ultimately find its way to the stage I will be very much surprised, for it has all the elements of popular drama in it."

The Best Man

By GRACE LIVINGSTON HILL LUTZ. Illustrated in color. $1.25 net. Postage extra.

NEW YORK TIMES:

"A romance of startling adventure. The action is rapid, everything moves in a breathless whirl."

The Red Emerald

By JOHN REED SCOTT. Illustrated in color. $1.25 net. Postage extra.

PHILADELPHIA RECORD:

"As always, Mr. Scott exudes modernity, his dialogue scintillates. . . . His viewpoint is that of a man of the world. . . . His courage falters not even before Grundy, hence his vogue among the pleasure lovers. That this is his best book many declare."

Anybody But Anne

By CAROLYN WELLS. Illustrated in color. $1.25 net. Postage extra.

BOSTON HERALD:

"The character of Fleming Stone appears even more wonderful and plausible than in Miss Wells's earlier stories. The tale is a baffling one, and the suspense is well sustained."

TRAVEL

UNKNOWN MONGOLIA: A Record of Travel and Exploration on Russo-Chinese Borderlands

By DOUGLAS CARRUTHERS. With 168 illustrations, three original colored maps, and three other maps. In two volumes. $7.00 net. Postage extra.

This will undoubtedly be one of the biggest travel books of the year. Mr. Carruthers spent nearly two years in exploring Mongolia and this work is the only authoritative one in English.

THROUGH JUBALAND TO THE LORIAN SWAMP

By I. N. DRACOPOLI, F. R. G. S. 44 illustrations and 2 maps. $3.50 net.

An adventurous journey of exploration and sport in the unknown African forests and deserts of Juhaland to the undiscovered Lorian Swamp.

IN FAR NEW GUINEA

BY HENRY NEWTON, B. A. 47 illustrations and a map. $3.50 net.

A stirring record of work and observations amongst the people of New Guinea, with a description of their manners, customs and religions, etc.

THE WAYS OF THE SOUTH SEA SAVAGE

BY ROBERT W. WILLIAMSON, M. Sc. With 43 illustrations and a map. $3.50 net.

A record of travel and observation amongst the savages of the Solomon Islands and primitive coast and mountain peoples of New Guinea.

AMONG THE PRIMITIVE BAKONGO

By JOHN H. WEEKS. 40 illustrations and a map. $3.50 net.

A record of thirty years' close intercourse with the Bakongo and other tribes of Equatorial Africa, with a description of their habits, customs and religious beliefs.

MISCELLANEOUS

THE MEANING OF ART: Its Nature, Role and Value

BY PAUL GAULTIER. With 36 illustrations. $1.50 net.

This work was crowned by the French Academy of Moral and Political Science. Mr. Gaultier's work will delight all lovers of the fine arts, and to many it will be the portal to a finer enjoyment of art and a deeper knowledge of its Nature, Rôle, and Value!

TEN SEX TALKS TO GIRLS (Fourteen Years and Older)

Emerson's Journals

Edited by EDWARD W. EMERSON *and* WALDO EMERSON FORBES

"NO MORE REMARKABLE HISTORY OF A HUMAN INTELLECT IN ITS UNTRAMMELED DEVELOPMENT HAS EVER BEEN WRITTEN."

Early in life Emerson began the practice of keeping a journal as a depository for his thoughts and a daily record of his spiritual life. This journal was continued for more than fifty years, and all that Emerson thought and felt went into the making of it. Never before has the growth of a wonderful personality, the spiritual and intellectual development of a man of pure genius, been revealed as they are in these pages.

The publication of this Journal is the most important literary event of years. It is unusual for even a small manuscript of a famous author to be published so long after his death, but here is the complete Journal of America's greatest philosopher and thinker, occupying ten printed volumes, supplementing his previously published works without in any way duplicating them, and constituting a fresh and living autobiography of the man in his environment.

EMERSON AS SEEN THROUGH HIS JOURNALS

No Life, no autobiography even, could give so fresh and vivid a picture of Emerson and his period as do these Journals. Through their pages we see him as a young apprentice, formulating his ideals and ambitions, learning the mastery of the written word, and turning at length from the pulpit to the lecture platform and to literature for the deliverance of his message. We see him attain a success beyond his dreams, gathering up the spiritual unrest of the times into a message of strength and inspiration for two continents. We see him in the sunny afternoon of his life, recognized as the foremost American writer and thinker, and reverenced as a seer by thousands of his countrymen. The most memorable phases of contemporary life are mirrored in the Journals. His impressions of foreign lands and of nearly every part of his own country occupy many delightful pages. Most interesting of all, perhaps, are the glimpses we have of Emerson as the leader of American thought at the period of its greatest activity. Gentle and reticent in society, he reserved for the pages of the Journals his real opinions of his contemporaries, and often they are of extraordinary pungency.

"UPON EVERY PAGE ARE THE OLD EMERSONIAN FELICITIES AND BENEDICTIONS, THE OLD FLASHES THAT GIVE INSIGHTS INTO THE NATURE OF MAN AND UNIVERSE."

Lovers of Emerson will be amazed at the wealth of these pages. Lavishly as the great philosopher poured out the treasures of his mind in essays and in letters, the reader will rise from the Journals with the conviction that what he gave in his lifetime was only a tithe of what he had to give. For not only do these ten volumes stand on a level with his published work in philosophic value and in unpremeditated felicity of expression, but, beyond this, they have a splendid vitality, a deep human interest in their wonderful revelation of intellectual and spiritual growth, to which his essays and letters seldom, if ever, attain. From every point of view, these volumes rank with the best of Emerson's writings, and without them his works are incomplete.

EMERSON'S JOURNALS, a chronological record of his life from 1820 to 1876, published in a style uniform with the Centenary edition of his Works and now a part of them. Completed by the publication of the tenth volume. Each volume, illustrated, $1.75 net. Postage extra.

The International Modern Language Series
RACINE'S ANDROMAQUE
Edited, with Introduction, Notes, and Vocabulary, by COLBERT SEARLES, Associate Professor of Romance Languages, Leland Stanford Junior University.
JUST PUBLISHED. 40 Cents
THIS edition of "Andromaque" emphasizes the literary excellences of the play as the first of those tragedies of pathos that depict the struggles and weaknesses of the human heart in the stress of human passions.
The introduction explains the circumstances of the play's composition and production, offers a brief discussion of Racine's dramatic method, and presents enough of the sources from which he took his material to enable the student to observe how he put that method into practice.
The frontispiece is notable as presenting for the first time to American students the recently identified portrait of Racine in the Museum at Langres. This portrait shows Racine at the age of thirty-six, at the height of his dramatic success, and is therefore much more characteristic than the later and better-known portrait of the dramatist.

SPANISH ITALIAN

THE SYSTEM OF THE VEDANTA.
By Dr. Paul Deussen. Authorized translation by Charles Johnston.
There are two opposed views concerning the nature of the soul represented respectively by the Vedanta and Buddhism. Professor Deussen, who is both a philosopher and a most prominent Sanskrit scholar, has devoted his life to the affirmative phase,—the Vedanta—and in this great work he has collected all pertinent material. It will be important for psychologists, students of religion and philosophers.

NOW READY

GREAT JURISTS OF THE WORLD
From PAPINIAN to VON IHERING
BY VARIOUS AUTHORS

With 20 portraits. Edited by EDWARD MANSON, Co-editor of the Journal of the Society of Comparative Legislation, and with Introductions by SIR JOHN MACDONNELL, Professor of Comparative Law in University College, London, and by VAN VECHTEN VEEDER, Judge of the United States District Court, New York. 8vo. *Cloth,* $5.00 *net.*

The aim of this volume in the Continental Legal History Series is to set forth the life, work, methods, and influence of the great jurists who have had more than a merely national importance in the development of European Law. This work is a sort of Plutarch's Lives for the History of Continental Law. Papinian, Alciat, Bartolus, Vico, Bacon, Leibnitz, Selden, Montesquieu, Cujas, Vattel, Savigny Bentham, Beccaria, Von Ihering, Mittermaier—these and a few other names stand out as landmarks for all European Law.

☞ *Send for descriptive pamphlet of the Continental Legal History Series.*

The Nation.

NEW YORK, THURSDAY, APRIL 16, 1914.

Summary of the News

Various complications have occurred during the past week to add to the difficulties of the Administration in dealing with the Mexican situation. Villa's action in expelling all Spaniards from Torreon was the occasion of an appeal by the Spanish Minister at Washington to the State Department, and representations have been made to Villa and Carranza protesting against the deportations. So far, however, the protest has been without effect. A serious incident took place on Thursday, at Tampico, where some American marines who had landed to obtain a supply of gasolene were arrested by orders of a Federal colonel. Rear-Admiral Mayo took prompt measures to have the men released, and demanded of Gen. Zaragoza, commander of the garrison, that his troops should parade and salute the American flag before six o'clock on Friday evening in token of apology. Subsequently the matter was taken up by the State Department with Gen. Huerta. The latter expressed regret for the incident, but declared that sufficient compensation had been made by the apology tendered by Gen. Zaragoza, and that it would be derogatory to national dignity to comply with Admiral Mayo's demand. On Tuesday, after a prolonged meeting of the Cabinet, Secretary Daniels ordered the concentration of the Atlantic fleet at Tampico, in readiness to enforce an ultimatum if necessary. The Administration has declared its determination to insist on the demand that the Mexican authorities at Tampico fire a salute to the American flag. The fighting during the past week at Tampico, in the course of which extensive damage was done to oil warehouses owned by foreigners, appears to have resulted slightly in favor of the Federals. There have been rumors, also, of rebel reverses at Torreon.

The Senate Committee on Interoceanic Canals began its formal consideration of the repeal of the exemption clause in the Panama Canal Tolls bill on Monday. The only important development of the situation has been Mr. Bryan's statement, made through the *Commoner*, that the free-tolls plank in the Baltimore platform was not rightly understood by the great majority of the delegates, and that in any case the Democratic party's traditional opposition to the principle of subsidies should govern the situation.

The agreement with Colombia, signed at Bogotá on April 8, should settle a ten years' dispute between that country and the United States. The treaty calls for the payment by the United States of $25,000,000, for recognition of the ancient boundary line of the province of Panama, and for the good offices of this country in the settlement of any dispute between the republics of Panama and Colombia. In return Colombia abandons her demand for arbitration of the question, and recognizes the independence of Panama as an accomplished fact. Dissatisfaction with the terms of the treaty has been expressed in both countries, and its ratification is not absolutely assured. Here the opposition has raised the familiar cry that the treaty is "humiliating," and in Colombia it is asserted by an extreme element that $25,000,000 is too low a sum to accept in settlement of its claim for damages. The Colombian Senate has been convoked for an extra session on May 1 to consider the ratification of the treaty.

Prospects of Congress enjoying a respite from its labors in the near future appear remote. Indications are that the President will not relax his pressure until the question of rural credit and the Trust bills are disposed of.

The Diplomatic and Consular Appropriation bill was reported to the House on April 11. Besides the authorized purchase of embassy buildings at Mexico City, Berne, and Tokio, the measure increases the State Department contingent fund by $33,000, so as to increase the rental allowance for the embassies at London, Paris, Berlin, and St. Petersburg to $15,000, and at Rome, Madrid, and Vienna to $10,000.

Only a light vote was recorded in the special election held in New York State last week, which decided in favor of a convention for the revision of the Constitution. The voting in the State was opposed to the project, but it was carried by the overwhelming majority in New York city. In consequence of the failure of the Legislature to pass appropriation bills in the last session, Gov. Glynn has issued a proclamation convening the Legislature in extraordinary session on May 4, in which he will recommend nothing for consideration except financial legislation.

The question of France's participation in the Panama Exposition is still being agitated. An article last Saturday in the Government *Petit Parisien*, according to the Paris correspondent of the New York *Sun*, quoted the President of the Paris Chamber of Commerce as declaring that "France must abstain from participation until the United States adopts less rigorous measures in the Customs Department, ceases the examination of French business accounts, and revises the laws against the importation of plumage." The article urges the Government to maintain a firm attitude on the question.

The situation in Britain on the Home Rule question has remained unchanged, Parliament having adjourned over the Easter recess. Mr. Asquith was returned from his constituency of East Fife to the House of Commons unopposed on April 9, taking his seat when Parliament reassembled on Tuesday. Lieut.-Gen. Sir Henry Sclater has been appointed adjutant-general to the forces in succession to Lieut.-Gen. Sir John Ewart, who resigned the post as a result of the Government's disavowal of the "guarantee" to officers in Ireland.

The proposed French loan to Turkey was ratified on April 10. The loan will be for $160,000,000, and in return France will obtain railway concessions in Asia Minor and at Jaffa and Jerusalem.

The Italian Government has made elaborate arrangements to cope with the general strike of railway employees which threatened to commence yesterday. Troops were posted at various depots, and, as it was feared that the seamen would join in the strike, warships were dispatched to Naples and Genoa to provide crews for steamers carrying the mails. The demands of the employees of the Government-owned lines are for a minimum wage of sixty cents a day, for shorter hours, and for the provision of pensions. Signor Salandra, the Premier, in announcing his legislative programme on April 4, adopted a conciliatory attitude towards the men, but made no definite promises. To meet the demands of the men, it is said, would increase the budget by $20,000,000, a strain which the country could ill afford at the present time, since provision has still to be made for the expenses of the war in Tripoli and for the increase in the army.

Official announcement was made on April 11 that Italy would refuse to restore to Turkey the islands in the Ægean that she still holds, except in return for railway and other concessions in Asia Minor.

In pursuance of her policy of naval expansion, announced by the Minister of Marine on March 19, Greece purchased last week for $1,200,000 the cruiser Fei-Hung, which was being built for China by the New York Shipbuilding Company at Camden, N. J. Simultaneously she ordered from a French company a 24,000-ton battleship of the Lorraine type, to be delivered in 1916.

The convention which has been held in China for the revision of the Constitution concluded its deliberations on Monday. According to the new Constitution, almost absolute power is vested in the President, who will be assisted by an advisory board in financial matters. The Cabinet is abolished, and its members become merely heads of departments. Provision is also made for the establishment of a Department of State modelled on that of the United States.

The deaths of the week include: George Bentham, Dr. Alexander F. Chamberlain, April 8; the Dowager Empress of Japan, Pierre Sales, Eben S. Draper, April 9; Lord Suffield, April 10; Col. Norwood Penrose Hallowell, Rear-Admiral Andrew Dunlap, April 11; the Right Rev. Charles C. Penick, April 13.

The Week

The general nature of the new treaty with Colombia seems to have been correctly described in the dispatches from Bogotá. A lump sum, $25,000,000, or something like that, is to be paid to Colombia by the United States. The latter is also to assent to the ancient boundary line of the province of Panama, and is to lend good offices to help bring about the settlement of the outstanding questions between Colombia and the Republic of Panama. In return for all this, Colombia will drop the claims against our Government which she has been urging for eleven years, and will consider that friendly relations between the two countries are completely restored. It is hinted that the treaty is also to contain, or is to be accompanied by, an expression of regret for the course of our Government on the Isthmus in 1903. Should this prove to be the case, there will inevitably be a furious outcry in this country. What, apologize? Never! Let us pay and say nothing about it. This very statement of what, we suppose, will be the attitude of many, shows that a formal apology is really immaterial. The probability is, we should say, that none will be made. It is not necessary. It is implied in the very act of handing over the money for the injuries done to Colombia.

The latest straw at which the opponents of the Panama tolls repeal are grasping is an alleged provision in the new treaty with Colombia. This is said to concede free passage through the Canal to Colombian public ships. And the cry is that here we have an admission that there can be discrimination at Panama, that the ships of "all nations" are not to be treated exactly alike. But Senator O'Gorman and those who think as he does will burn their fingers if they seize upon this too hastily. They will discover, first of all, that a similar provision covering public ships was made in the treaty with Panama. They will also find that a virtually identical provision was in the treaty which Secretary Root, acting for President Roosevelt, negotiated with Colombia, but which was not ratified. And what is the unavoidable inference? Why, that all the talk about our having absolute sovereignty in the Zone and over the Canal is a mistake. As Senator Root put it, we took title to the Zone and the Canal from Panama "impressed with a solemn trust." It was avowedly subject to all the stipulations of our treaty with Great Britain. If we violate those, we not only break a contract but are guilty of a breach of trust. The case was put with great power by Representative Stevens, of Minnesota, whose speech was quite the ablest made in the House. He proved conclusively that in the Canal we have "only a right of limited and qualified sovereignty in trust only for a specific purpose." This is why we think that those who oppose repeal had better let the Colombian treaty severely alone. Their whole contention is that we have unlimited sovereignty at Panama, and can do whatever we please with the Canal. But the treaty with Panama shows, what the one with Colombia will presumably show, that to speak of our absolute sovereignty in the Panama Zone is absolute nonsense.

The report by the House Committee on Insular Affairs of the bill "to provide a civil government for Porto Rico" is unanimously favorable, and puts in the way of prompt passage one of the essential measures announced in President Wilson's inaugural programme. Conferring United States citizenship upon the islanders, it provides also for an elective Senate of 19 members, thus placing the whole legislative power in the hands of the people. "The legislative branch of the Government should be entirely divorced from the executive," Chairman Jones declares, "except in so far as the Governor is given the absolute veto power over all legislation. Experience has shown that the Porto Ricans may be entrusted with the power to elect the members of both branches." A similar bill passed the House in 1910, but failed in the Senate. How antiquated is the governing enactment of 1900 is shown in the paradoxical fact that the Unionist party, the majority faction in the islands, is half-inclined to oppose the new law. The demands of the radicals are advancing to absolute independence, and they reason that the satisfaction of the popular desire for comparative self-government will shake their position. Citizenship, however, is urged by conservative Unionists, the Republican party, and by organized labor. The fitness of the islanders is indicated by the fact that the suffrage literacy test of the new bill could be met "by all who desired to become voters," so rapidly has education progressed.

The plan for a new basis of representation in Republican National Conventions, which has been sent out by a special committee of the Republican National Committee, has much to recommend it. It is not so radical as some that have been discussed, but it has what will be regarded by many as the great advantage over them of not reducing the Southern Republican vote to a position of utter insignificance, and thus in a sense giving the Southern elimination of the negro vote the status of a fact deliberately accepted by the Republican party. Under the plan proposed, every Congressional district will be specifically represented in the Convention; but this representation will not always consist of two delegates. There will be one delegate at least, and "an additional delegate from each Congress district in which the vote of 1908 for any Republican elector or the Republican nominee for Congress in 1904 shall not have been less than 7,500." The net result of this, it is stated, will be to reduce the percentage of the Southern and Territorial representation from approximately 35 per cent. of the Convention to less than 16 per cent. The measure would manifestly greatly increase the representative character of the Convention, and is open to a minimum of objection on abstract or general grounds. It now goes to the various State Conventions for approval. If ratified by States having a majority of the electoral vote, it will govern in the formation of the National Convention of 1916.

There is now and then a speech in Congress whose significance is at once apparent. In this class belong the remarks of Chairman Fitzgerald, of the Appropriations Committee, who on Friday used very plain English in telling his colleagues what he thought of their conduct in voting for "improper and improvident appropriations." He struck a hard blow in recalling how the Democrats "for thirteen years of my service in the House" charged the Republicans

with gross extravagance, only to grow lukewarm about the principle of economy when the reins of government fell into their own hands. An especially good point, related to a deeper matter than mere extravagance, was touched upon in his appeal for support of the recommendations of the Appropriations Committee by the majority. With our lack of a budget, it is highly desirable that anything approaching a budget should be altered only for important reasons, and if individual members of the House are to amend appropriation bills to suit their individual wishes, there is an end of even the little that we have in the way of scientific financial management at Washington.

The executions at Sing Sing of the four gunmen who were convicted of the murder of Rosenthal were repulsive in themselves, and were made more so by the minute exploiting of grewsome details in the press. But we have at least the satisfaction of knowing that there was no miscarriage of justice. The law being what it is, the death penalty must be enforced in cases where guilt is undoubted; and the last doubt that the convicted men were really guilty was removed by the confession of one of them. It would have been a terrible thing if the new Becker trial should have brought out evidence that the men put to death on Monday were not the actual murderers of Rosenthal. This is not possible now. No one who read the careful review by the Court of Appeals of the gunmen's trial could have felt much doubt that they were duly convicted on sufficient evidence. Still, there was a bare possibility of mistake. But even that is now swept away. To Gov. Glynn the confession must have brought immense relief. He had been put under a great strain by urgent appeals for Executive clemency, but may now feel sure that he did his duty in denying them.

Philadelphia's Chamber of Commerce has now aligned itself with similar bodies in New York, Cleveland, and elsewhere in support of the President's position upon the repeal of the tolls-exemption clause. What makes this action notable is that it is a reversal, and by a unanimous vote, of the position previously taken. This sets the example for the two Senators from Pennsylvania, an example they might the more readily follow since considerations of national honor were enforced with the argument that the repeal would be a good business stroke. All these resolutions of business organizations provide an instructive comment upon the eagerness with which we were urged to exercise Yankee shrewdness and "get something" that our fellow-bargainer did not suppose was in the instrument he was signing. Chambers of Commerce are not composed of theorizers or idealistic Presidents, but of more than ordinarily successful business men. Yet the most important bodies of this sort in the country are favoring the killing of the goose that was to lay golden eggs for Uncle Sam. It would seem not only that the goose was stolen, but that its laying powers were overrated.

Gratifying news comes from North Carolina that the Supreme Court of that State has declared invalid the ordinance of the city of Winston-Salem establishing segregation of whites and blacks. Thus far, every time one of these ordinances has been tested in the courts it has been thrown out as unconstitutional. Twice this result has been accomplished in Baltimore, and now a third ordinance is on its way to a ruling. A second ordinance in Norfolk, Va., will be tested as promptly as possible. In the Winston-Salem case, the Court is reported to have held that the ordinance sanctioned the taking of property without due legal process, and that the establishment of such a principle might result in such restrictions as to "drive out Republicans, Roman Catholics, or Jews." The Court has here put its finger on an ultimate danger from the establishment of this policy of segregation which Southern men ought never to lose sight of. It would be an entering wedge that might, and probably would, lead to other intolerable abuses which no man can now foresee. The only refuge for those who would establish the ghetto on American soil at any cost would seem to-day to be to follow the example of Clarence Poe, who is leading the North Carolina agitation for segregation of negro farmers in certain sections of the State. He declares openly that if a Constitutional law cannot be drawn to accomplish this "the South will find a way to get around the Constitution," as, he adds, it has already found several ways of circumventing that instrument.

The prompt action of the Rockefeller Foundation in appropriating $750,000 to the relief of Wellesley College, is a reminder of the care and discrimination with which the resources of this fund are managed, making its usefulness far greater than its mere size would guarantee. The trustees of Wellesley announce that they are going to start a campaign at once for the raising of a fund of $2,000,000, and they will undoubtedly enter upon the task with the greater heartiness and confidence because of the encouragement which this gift provides, and because of the relief from immediate perplexities which it affords. During its forty years of usefulness and success, Wellesley has established claims of affection and respect upon many thousands of women and of men, and we have no doubt that the efforts of the trustees will be heartily seconded in many parts of the country.

In preparing its "White List" of plays, the Catholic Theatre Movement is guided by rules as sensible as they are simple. In order that it be included in the list "there should be a general agreement that a play is clean and wholesome," and "the play should be fit for theatregoers of all ages and suited to varied tastes." For the purposes of a black list, these rules, or rather their converse, might be too exigent; but there is good work to be done by a white list, and the number of persons interested in it is far greater than is usually recognized. There are plays which fall outside the description cited, and which nevertheless have good reason for being; but there are thousands of persons, old and young, who wish to go to the theatre solely for recreation or edification, and who would most gladly pay the price of losing now and then a "problem" play they might have cared for, for the great gain and comfort of being protected against the whole brood of plays that offend either their taste or their sense of morality or decency. In providing the "average" man and woman, throughout the country, with a list of plays to which he can go, and take his young people, without

being confronted either with outrageous offensiveness or with performances that perilously skirt the border of it, the Catholic Theatre Movement is doing a good service.

Of Clyde Fitch's play, "The Truth," which has been put on for a revival, one commentator remarks that, to the great credit of the play, "it wears well and very few of its lines have grown stale in the interval." The play was originally produced in the dim past of seven and a half years ago. Considering the pace of life to-day, this must be accepted as a record that will easily hold its own against the three hundred odd years through which "Hamlet" and "The Merchant of Venice" have managed to keep their heads above water. Seven years of contemporary evolution are easily equal to a cycle or two of life in the pre-maxixe days. Yet sometimes one is inclined to wonder whether the Elizabethan dramatist and the dramatists of the age of Louis XIV, and other stuffy classics whom a modern age very properly sniffs at, did not succeed in putting something into their lines and something into their men and women which wears better than the up-to-date play of throbbing actuality produced piping hot off the griddle. Plays written twenty or twenty-five years ago need only to be half-rewritten to hold a present-day audience, say, for a two or three weeks' run. There are advanced young women in London who find Bernard Shaw painfully "Edwardian." How true to life those plays palpitating with the actualities of to-day must be!

No one can say that English men of letters are letting the legions thunder by while they are plunged in thought. The Ulster and army crisis has brought a number of critics and novelists and poets out of their ivory towers. Prof. George Saintsbury came up from his favorite haunt down among the dead men, long enough to explode in a letter to the London *Times* on "The Plot." His theory of it was that the Liberal plotters counted upon the failure of their scheme to provoke the Ulstermen to begin firing, in the asute conviction that this would give them a new "cry" —namely, "against the Army and perhaps against Some One Else." This, according to Professor Saintsbury, who in this matter is too clever by half, was the real "plot." But upon him Mr. G. Lowes Dickinson fell rather savagely in the *Westminster Gazette;* and in the same newspaper Mr. Maurice Hewlett declared, with a fine adaptation of his antiquarian studies to present conditions, that "the Feudal Party, the Norman party [meaning, of course, the Conservative], by its incredible levity and hot-headed panic has ruined itself." Finally Henry Newbolt makes an appeal to all moderate men, asserting as a good Liberal that "we cannot resign ourselves to the use of force until our opponents have rejected not only our reasoning but our courtesy."

Far be it from an American, after "The Girl of the Golden West," to question the glory of Puccini; but one wonders what will be the emotions of Seattle, San Francisco, and Denver, as they read in the *Mondo Artistico* of the "irradiation of the composer's works." This Italian journal is not content with Puccini's European triumphs, or with the fact that London companies have carried his operas into the Transvaal, India, and Australia; and that they may be heard in Turkey and in Japan. It goes even beyond New York for a climax. "In the Far West, where musical work has never before been heard, the miners bid for their seats with gold-dust; and a pair of scales, placed in the rude box-office window, weighs out the price of a ticket." It is comforting, in this conception of the opera-going public beyond the Platte, that the writer still thinks it so hungry for culture. But the *Mondo Artistico* should consider a single clipping from the Seattle *Post-Intelligencer.* That paper has been complaining that the trouble with Western opera is that the managers insist on $10,000 performances, with the result that the audiences are exclusively the silk and broadcloth class, glittering with jewels. The Italian journal could revise its picture of a Western Senator-millionaire, setting his pick in one corner as he draws from his overalls a bag of gold-dust.

News that Galdós, for years the foremost man of letters in Spain, is in such want in his old age that a popular subscription is resorted to in order to relieve him from actual penury, has pathetic bearings. These are public as well as personal. If any man in Spain could live by his pen, and lay up something for his later years, it would seem that Galdós could. With a literary career covering about forty years, fecund, popular, a really great writer—that such a man should be in need brings out afresh the meagre rewards which Spain can offer to even her most successful novelists and playwrights. Galdós has a long row of admired novels to his credit, not counting the many volumes of his "Episodios Nacionales," in which he put into fiction the most dramatic events of modern Spanish history. He also wrote several dramas, at least some of which provoked much controversy and had, for Spain, long runs. But now in declining vigor—his age is sixty-five —he has nothing. Private resources are, indeed, almost indispensable to the Spanish writer. Valera had independent means, and so had Pereda; while the now venerable dramatist, Echegaray, recently the recipient of the Nobel prize, was for years an active engineer.

It is hard not to read something of a public purpose into the approaching visit of Queen Eleonore of Bulgaria, officially undertaken for the purpose of making a study of hospital methods in this country. As an aftermath of the second Balkan war there has been active competition, especially as between Bulgaria and Greece, for the support of public opinion throughout the world. Up to date the Greeks have apparently had much the better of it. From the first outbreak of fighting among the Balkan allies, it was Bulgaria's complaint that Greece had obtained complete control of the channels of news, with the result that Bulgaria was made responsible before the world for the outbreak of the barbarous war among the allies and the unspeakable outrages visited upon the people of the territory conquered from the Turk. Investigation has by no means cleared the Bulgarian Government of responsibility in the matter. The Greek press campaign is still very active, and this country, with its large Balkan population, of whom, especially among the Greeks, many are prosperous, is by no means a negligible field for controversy. The visit of the Bulgarian Queen, for one thing, may well rouse the patriotism of her former subjects.

ISOLATION NOT AT ALL SPLENDID.

One advantage of the happy-go-lucky rules of the Senate, permitting a speech on any subject at any time, is that attempts to delay bills by holding them in committee do not prevent their discussion. They are not before the Senate, but they can be debated just as if they were. Senator O'Gorman's committee began hearings on the tolls-repeal bill, which are to continue for more than a week, but Senator after Senator is speaking on it. Several notable speeches have already been made in the Senate, but none of them will attract more attention than the one delivered last Thursday by Senator Lodge.

His support of President Wilson, in the matter of tolls-exemption, carries weight not merely because he has been a stern and unbending Republican, nor even because he is ranking minority member of the Foreign Affairs Committee. He does not agree in all respects with Mr. Wilson's interpretation of the Hay-Pauncefote treaty, but he does fully agree with him in affirming that all the world is against us in that dispute. And Mr. Lodge went further, declaring that the United States has fallen under suspicion in foreign countries. He traced the loss of "the commanding influence we held among the nations" back to 1909. It really traces to events long anterior to that year. But this does not now signify so much as the solemn warning which Mr. Lodge addressed to the Senate against supposing that we could safely go on even appearing to be a nation that held its treaty obligations light, that professed one thing and did another, that by its foreign policy implanted fear among the weak and provoked dislike among the strong.

Striking confirmation of Senator Lodge's belief that we have got ourselves looked upon with a mixture of dread and ill-will, at least in South America, has come to hand in the full text of the address of the President of the Museo Social of Buenos Ayres, at its banquet in honor of Col. Roosevelt, last November. The occasion was one of great cordiality, yet the President of the Museo, Dr. Emilio Frers, felt compelled in honesty to inform the guest of honor concerning the true feeling of South Americans about the United States. In words evidently weighed with care, he said:

> Gentlemen—There is a dominating fact in all Spanish America. It is a manifest and undeniable fact, and it would be a great error, to my mind, to attempt to silence or even to disguise it.
>
> This fact, gentlemen, is that there exists a deep sentiment of apprehension, which disturbs Spanish America and inspires it with precautions, causing it to withdraw itself instinctively, and to its own hurt, from the grand centre of civilizing light and power established in the North of the Continent. The establishment of United States interests in Spanish America is feared, because it is feared that they may incite and cause intervention, which no people can accept with good will. Such a fear holds it back from more open and friendly relationship with the great nation of the North.
>
> Col. Roosevelt, the nations of Latin America will not feel at their ease so long as they do not rest in the security that no master may arise for them, either from within or from without, and that no one, no matter where he may come from, may place in danger their integrity or their independence and sovereignty.

Senator Lodge would seemingly attribute this South American disquietude to Secretary Knox's Pittsburgh touch. The thing plainly goes further back. No complete and candid account could leave out the effect of the war with Spain, our course in Cuba, our policy in Santo Domingo, and our seizure of Panama. These were the events which, with their immense reverberation throughout all Spanish America, were chiefly responsible for causing our southern neighbors to feel that they must be on their guard in all dealings with the United States.

We do not care, however, to labor this point at present. It is not with the cause of the unhappy condition that we need to concern ourselves so much as with the course which it is necessary for us to pursue in order to remove it. Senator Lodge is of one mind with President Wilson in maintaining that true wisdom requires us to clear away every needless obstacle to the best of understandings with other countries, and to strain a point, if need be, in order to establish beyond dispute the purpose of the United States to be both just and magnanimous in every matter having international bearings. What the other view is we know. Speaker Clark set it forth with the old-style swash-buckling and ignorance of the corner grocery. We are to confront a world in arms. We are to call upon the God of our fathers to be with us yet. It is not necessary to repeat more of the stuff, which might be called childish if that were not to insult the child. The chief quality of it, however, is not its silliness, but its insincerity. None of these Furiosos have the slightest idea of fighting. Their rhodomontade about facing a hostile world in war is of the hollowest kind. They are not even talking for Buncombe, for Buncombe County itself has outgrown this kind of nonsense. They are really appealing to beings who do not exist—a sort of tribe of Hearsts, whom they suppose to be mouthing and gibbering in the depths of the forest. But everybody with intelligence equal to that of Silurian man knows that the idea of rejoicing because the hand of this nation is against every other, and that we ought to be proudest when most distrusted, can find lodgment only in the brain of an idiot. A great industrial democracy, our first and absorbing thought must be, not of war, but of commerce. With our trade pushing into remotest seas, it is our plain interest to conciliate the world, not to antagonize it. Our needs and our opportunity being what they are, a spirit of haughty self-sufficiency, much more a spirit of defiant isolation, would be pure folly.

THE "TRUST BILLS."

It has been intimated that Congressional leaders are seriously discussing whether the effort to enact the proposed or pending "Trust bills" should not be abandoned for the present session. What the Administration's precise policy on the question is has not been made wholly clear; but to most observers it has been evident, from the time when serious consideration of these measures began, in January, that the task was no such simple matter as may originally have been supposed. Even in the case of measures whose general purpose was to abate admitted evils—as with those aimed at holding companies and interlocking directorates—the first examination of the problem, in committee, showed the very great difficulty of prohibiting abuses without interfering with legitimate and necessary arrangements.

Sweeping prohibition would in the one case prevent the use of the holding-company device which laws of the separate States made indispensable to certain interstate corporations. Applied in the other case, it would prevent the proper selection of directorates for companies organized in hundreds of smaller towns. The Interstate Trade Commis-

sion, which the President seemed to have foreshadowed in his January message as a means of avoiding needlessly frequent prosecutions under the Anti-Trust law, was endowed with powers, in the original Clayton bill, which would have made it an engine of wholly superfluous and inquisitorial annoyance to every corporation in the country.

Even when modified, in deference to the unanimous disapproval with which its terms were received by conservative business men, the Trades Commission bill (the only one which has actually been drawn up and published) is obscure and vague in its terms and possibly unworkable in some of its details. As for the plan to construct a measure defining violations of the Anti-Trust law, so as to "limit the debatable ground," this was at once abandoned as impracticable. Congressmen who considered the suggestion promptly recognized that such an act would, as the eminent author of the Anti-Trust law put it, be an attempt at a "definition of a definition."

There would, therefore, be sufficient reason, in our judgment, for abandoning the programme from the simple fact that the discussion, up to date, has shown the entire unwisdom and impracticability of hasty procedure. It is well known in Washington that the committees which have in charge the various measures are in such disagreement over them as to be in a state of deadlock. Congress itself has shown little interest in the bills. It apparently recognizes both that no urgent public demand or public necessity exists for quick enactment of any such measures and that their prolonged consideration and discussion would impede the proper deliberation on other and more immediately important measures. This Congress has already been in practically continuous session for a much longer period than any previous Congress in the country's history; and its members naturally and properly wish to wind up the business at a date early enough to give them opportunity to prepare for the Congressional campaign.

Nor do these considerations exhaust the legitimate arguments for abandoning at present plans for far-reaching "Trust legislation." It is undeniable that, in the present condition of the country's business, the effect of the more or less futile controversy over the new proposals has been exceedingly unhappy. The contrast between the feeling of the business community towards Washington, as displayed three months ago, when the banking bill had been enacted, and as displayed to-day, is most impressive. We do not say that all of this change, from cheerful enthusiasm (voiced on the Stock Exchange itself) to the existing perplexity and depression, is a result of the intervening incidents in Congress. Other influences have doubtless been at work, and the tendency to place on "politics" all the blame for every trade reaction is a familiar story. More than this, we are ready to express our own conviction that if these "Trust bills" were before us in response to an urgent and enlightened public demand—with a view to reform of corporate abuses which required immediate correction and which only such legislation would correct—then the plea that Congress was "disturbing business" could not properly be considered.

But no such situation exists. Public demand for immediate action on the bills has signally failed to voice itself, in committee hearings or elsewhere. By common recognition, corporate abuses are at the moment being restrained, through the authority already in the hands of Government, as they have not been since the era of reckless High Finance began in 1899. But meantime, with business depression noticeable, despite the fact that predictions of the "flood of competing foreign merchandise" under the lower tariff have not been fulfilled, it is not surprising that the feeling of hesitation should be emphasized by the continuing great uncertainty as to this body of legislation. It is not unreasonable for business men to declare that the overhanging doubts about these bills are at least an obstacle to recovery.

The last thing that the Administration should desire just now is popular resentment over the irritating influence of the corporation legislation upon business sentiment. Though such resentment is apt to be based on extravagant, unjust inferences, it is very powerful in politics, and might cause a vote, next November, which would be hailed by the Opposition party as expression of discontent with the really great legislative achievements of the session.

NEW HOPE FOR PROTECTIONISTS.

The tariff question has so long seemed to have degenerated into a mere affair of particular rates and schedules, that we greet with joy a reminder of the good old times when antagonists joined issue on broader grounds. The Philadelphia *Ledger*, moved to stern condemnation of the Democrats by the showing of certain increased imports under the new tariff, is not content to rest its case on any mere details of this kind. It goes back to first principles; and for these it finds an all-sufficient text in this familiar "Lincoln" quotation:

> I do not know much about the tariff, but I know this much, when we buy manufactured goods abroad we get the goods and the foreigner gets the money. When we buy manufactured goods at home we get both the goods and the money.

We have never seen any reference to the place or time when Lincoln said this, often as we have seen it quoted; but possibly Lincoln did say it. Our Philadelphia contemporary accepts it as not only a Lincoln utterance, but as one of his greatest sayings. "His Gettysburg speech is a classic," says the *Ledger*, "but he did not compress in it so much as he did" in this wonderful statement about the money and the goods.

In thus not only recalling to life an old-time favorite of protectionism, but assigning to it a place alongside the most famous example of American eloquence, the *Ledger* may be doing a greater service than it realizes. The Republican party, ever since the split at Chicago, has been sadly in need of a rallying-cry. The tariff issue it still has; but all the snap has gone out of it. "Difference in cost of production" was fatally lacking in inspiring quality from the beginning; and the little virtue it did have was soon rubbed out of it by the hardest kind of wear and tear. Why not wake the country up with the slogan of "Lincoln Americanism—both the goods and the money"? That is something which the plain people could understand; and plain or not plain, everybody would rather have both the goods and the money than be content with the mere goods and let the money go.

If this goods-and-money declaration however, had no other merit than its vote-catching quality, we should hesi-

tate to recommend its adoption as the chief rallying-cry of a great party. What marks it out as particularly worthy of this distinction is that it not only harks back to the momentarily forgotten wisdom of the past, but holds out the possibility of new and beneficent developments for the future. For when the mind of the nation, freed from the trivialities with which the economists have been confusing it, gets the "Lincoln" doctrine firmly fixed in its grasp, we may confidently expect that doctrine to be applied not merely to foreign trade, but also to that vast trade within our own borders in comparison with which our foreign commerce is a mere bagatelle. Let the people once clearly understand that by sternly refusing to buy goods from other nations they could have the goods all the same, and in addition the billion dollars or thereabout which they now annually pay for them, and it will not take long for American shrewdness to discover that the game can be worked on a larger scale. Let the Middle West refuse to buy from New England, the Pacific Coast from the Middle West, the South from the North, and so on; it is clear that if each of these great sections holds on to the money it now sends out, while sacrificing nothing in the way of goods, the whole country will before long be blessed with riches beyond the dreams of avarice. Coxey himself could demand no more of his Government fiat-money printing-press than would thus be supplied to the American people, in the shape of good hard cash, by the normal operations of ordinary business.

It is true that in forming this picture of overflowing prosperity, we are ignoring the stock objections of economic theorists to the central principles of a simple and robust protectionism. But that is nothing to the purpose. As the Philadelphia paper says, Lincoln "did not have much use for theories of any kind; but he was gifted with enough horse-sense to understand what going abroad for goods meant." And all we ask is that while you are about it you should work your horse-sense for all it is worth. Don't be put into a position in which you may at any moment be asked to explain why it is not just as foolish for Massachusetts to buy automobiles in Michigan, or for Michigan to buy cotton and woolen goods in Massachusetts, as for our country to buy from Europe the manufactures we import every year. Have the courage of your convictions. The cure for protectionism is more protectionism. The mistake we have been making all along is to pay too much attention to the specious argumentation of theorists. If we had followed the dictates of horse-sense, we should have seen to it long ago that no section of the Union committed the folly of buying goods from any other when by making them itself it could have the goods and the money too. It is a little bewildering, to be sure, to think this doctrine out to its still further consequences; but few people will be so speculative as to do that. There is such a thing as running even horse-sense into the ground. We would suggest, therefore, as a first stage in the great scheme of the higher protectionism, the division of the country into twelve sections, coincident with the twelve areas tributary to the new regional banks. After each of these great sections has succeeded in pulling itself up by the bootstraps by means of a protective tariff directed against the other eleven, there will be time enough to think about further developments of the principle.

IS THE ARMY EFFICIENT?

Mr. Charles Johnson Post, whose severe criticisms of the army in *Harper's Weekly* have roused the enmity of the entire service, declares in a recent letter to the New York *Evening Post* that:

> The administration of the army is inefficient, due to the fact of an archaic system under which stupidity, viciousness, and favoritism shuffle along side by side with efficiency in an indistinguishable mass, getting promotions and responsibilities mainly as a matter of longevity.

He maintains that the laws and regulations under which the army is administered are largely obsolete, and can be turned about at will by those in power. He also affirms that "any organization from which, as has occurred in the army, over 46,000 men desert in ten years, preferring to accept the status of the hunted criminal rather than remain, is not only inefficient in its own particular domain, but is inefficient and derelict in its duties to the commonwealth." He adds that the plea that the army is at the mercy of politicians is a "pitiable shelter for officers to take refuge in" when excusing the derelictions of the service.

Yet it would be grossly unfair to the army not to take account of the actions of the politicians and War Department administrators, in assessing the blame for the army's shortcomings. It is in many aspects an inefficient department of the Government; the roll of desertions proves that, for the Government loses money whenever a soldier deserts. Efficiency would require every man to serve out the exact term of his enlistment, and the oftener he could be induced to reënlist the more veteran, and therefore more efficient, would be the various regiments. For this reason the *Nation* has long urged that the number of desertions from a company or a regiment should be entered on the record of each commanding officer. We venture again to assert that if this were done and officers were called strictly to account for desertions for other than unavoidable causes (such as the commission of crime by the deserter), there would be a marked decrease in the number of offenders of this type. Plainly, the responsibility for this rests with the War Department and not with the corps of officers. The efforts which have been made to check desertion have been along entirely different lines, such as rendering the service more attractive; but the bulldozing, overbearing officer, who appears now and then, is never punished —not if he drives fifteen or twenty men out of the service by the maladministration of his company.

There has as yet been no system devised for dropping an officer who is really inefficient, as would be done in any private industrial organization which had a pay-roll comprising 85,000 men. If he behaves himself he can hold on until he reaches the age of retiring; the promotion examinations do not interfere with his rise unless he is grossly ignorant. But in this respect the army is no different from any other branch of the service, unless the exception be the navy in later years. A Secretary of War once complained to us that the promotion boards did not promote properly or the retiring boards retire. The answer to this was that the War Department itself demoralized the integrity of such boards by constantly overruling them. We know of the case of a worthless coast artillery officer, son of a prominent Republican politician, who came before a promotion board in

a state of intoxication. The board declined to examine him, and so reported him to Washington. The answer was to go ahead with the examination. The board found this officer morally and professionally disqualified, yet it was overruled in each instance, and the officer promoted, to disgrace the service until his death. Now, how could Mr. Post, or a Secretary of War, or any one else, expect the members of that board to take any interest in examining an officer thereafter? In any such organization the tone is taken from the head.

There are many such cases which could be cited—notably at the outbreak of the Spanish war, when medical boards were constantly overruled by the politicians. Now, we do not altogether excuse the officers who try comrades and are often too lenient with them, as Mr. Post proves. They know the injustice done the service by retaining men guilty of misbehavior, and they ought to have a sense of honor to lead them to overlook the vested rights officers deem themselves to possess when once commissioned, and they ought to do their duty regardless of War Department politics. But we submit that present conditions of the War Department are s mething of an excuse—for past conditions; present conditions seem to be better than those for some years past.

There is in all this a wonderful opportunity for a great administrator within the War Department. For the inefficiency extends to business methods as well as to the handling of the personnel. The waste and slothfulness of almost every Governmental department are here manifest; and there is red-tape for those to see who believe that the Government is better fitted to manage railways, telephones, and telegraphs than are private individuals. Even in military matters there is much inefficiency. Has any plan been drawn for putting the militia in service if there should have to be intervention in Mexico? We are credibly informed that this has only recently been undertaken in the case of one division, and that for the rest of the country we should be no better off than in 1898. Mr. Post, too, is correct in saying that the army officer is hedged about by regulations more or less archaic. The average officer has no such fear of future damnation as he has of breaking some minor administrative regulation, and of being rebuked because of a failure to dot an *i* or cross a *t*. Therein the service's sense of responsibility is of the highest. Finally, the question presents itself whether the whole military idea does not at present render efficiency impossible or attainable only at the cost of such army domination as Germany suffers from. Are there more than two or three efficient armies in the world—the German, Japanese, and perhaps the French?

AMERICAN AND ENGLISH NOVELISTS.

Looking back over the output of fiction during the present year, one is driven to confess that the showing made by American writers against their British competitors is nothing to be proud of. Out of the novels of the spring flight hardly a book of exceptional distinction emerges. If we go back so as to include the novels of the autumn of 1913, the balance swings a bit more in our favor, with the advantage still greatly on the other side. A mere comparison of names is convincing. Against Galsworthy, Wells, Conrad, Hewlett, De Morgan, Chesterton, and a whole array of younger men—W. B. Maxwell, James Stephens, Compton Mackenzie, D. H. Lawrence, Gilbert Cannan, Hugh Walpole—we can cite, in the way of novels of more or less serious moment, Mrs. Wharton's "Custom of the Country," Mrs. Watts's "Van Cleve," and Mr. Dawson's "The Garden Without Walls." By stretching a point, we may include amiable bits of work like the late Dr. Mitchell's "Westways" and Meredith Nicholson's "Otherwise Phyllis." On the other hand, it is a question whether Mr. Dawson should not be credited to England rather than to America.

Names of respectable strength are obviously missing from the American list. Yet we may imagine such names inscribed on our side of the ledger and still see how strong the account would run against us. We have our moments of exultation when we assert our literary independence of England—we do it more frequently in the theatre than in the novel, to be sure—and we have seasons like the present to administer a healthy and necessary dose of humility. Often the reaction goes too far. There is still, without doubt, a very strong tendency towards Anglomania among us. If Mrs. Wharton were an Englishwoman there would be less hesitation in certain intellectual circles to do justice to her splendid talents. Mrs. Watts, writing in England, would be received as a "serious" writer by serious people in this country who are deceived by the simple, unforced quality of her truthfulness. On the other hand, we are apt to be awed into accepting everything from the pen of H. G. Wells as vitally true and significant, and to pay a little more than is due to the talents of a De Morgan, while we—at least the youngest of us—are rather patronizing to the noble artistry of the veteran W. D. Howells. Yet, with all exceptions taken, the case does run pretty heavily against us—a fact which thoughtful Americans regularly take to heart.

Mr. Robert Herrick, in an article in the *Yale Review*, which has received extensive comment, is the latest to deplore the sad estate of the American novel. He is not despondent about the future. The opportunities for the production of great fiction are so splendid that sooner or later they must enforce adequate treatment:

> No backwater this! No dead sea of a monotonous and fixed social surface. All is alive and striving for more life. Life seethes in America from ocean to ocean. . . . In the clash of wills that may ensue before we adjust ourselves to the relentless pressure of economic laws, the profoundest material for imaginative treatment will emerge. . . . The old urge of justice, the old cry of freedom from tyranny, . . . the desire of the individual man or woman to prove life under tolerable conditions—these are becoming heard more loudly every day. . . . We shall hear less, let us hope, about the "captain of industry," and more about the American ideal, the American will, the American character.

Let us hope that it is not over-condensing Mr. Herrick's argument to put it that as we grow older we shall grow more serious. As we grow older, as we are buffeted more by social forces, we shall think more deeply and write more honestly. Yet along with so much that is true in Mr. Herrick's summary of the problem, there is, in the manner of stating it, a very real danger that his message may be misunderstood, may be turned to the encouragement of a tendency in our literature which is one of the prime causes of its obvious limitations. We refer to those very "oppor-

tunities" which Mr. Herrick finds so abundant and so sadly neglected.

Altogether too much emphasis has been laid upon the "opportunities" that exist here in America for the creation of a great literature; as if great literature could not be produced and had not been produced under all opportunities and lack of opportunities, in the desert as well as in swarming cities, under despotisms and under political and social freedom, in great military empires and among petty nationalities. The opportunities are here, of course: democracy, vast populations, vast riches, racial complexity, magnificent geographical distances, stupendous economic forces. But none of those things, nor all of those things, when put into a novel, will make it a great novel. What makes a great novel is the soul of man. One soul is enough if honestly observed and honestly set down. That great opportunity is present everywhere. Cervantes found it in Spain and Turgenieff in Russia. We do not need the complexity of 100,000,000 people and two dozen strains of blood to foster great literature. Ibsen found plenty of opportunities in his two-by-four Norwegian native land.

Let us put into concrete terms the danger of misinterpretation which we discern in Mr. Herrick's remarks. What meaning will be read into them by the young American writer of talent who is ambitious to do serious work? Opportunities, social conflicts, justice, tyranny —why, the thing apparently to do must be to tackle some "problem of the day." And our young writer will immediately start to find his problem, the very captain of industry whom Mr. Herrick rejects, or the decay of religious faith, or the working classes, or suffrage, or rights and wrongs of a more abstract nature, but problems for all that. And with his problem he is lost, especially since he has not the supreme talent which may transmute a problem into universality. No; the trouble with our writers is not that they neglect their opportunities, but that they neglect their opportunity; that they think they are serious when they busy themselves with problems of the day, when they should be busying themselves with men and women.

Foreign Correspondence

A UNIQUE MAGAZINE.

(The Organ of the Liberal Party and Its Editor.)

LONDON, March 30.

The name of Charles Geake is unknown to the general public. It is unknown even to the rank and file of Liberal workers in the constituencies. But it is held in the highest respect by the leaders of the Liberal party, and by Mr. Geake's fellow journalists on both sides. "How unselfish his labors, how disinterested his work," was Mr. Birrell's comment on his career at a recent dinner given in his honor. "We are now dragging into the daylight," said the same speaker, "this shy and elusive figure, and hailing, perhaps for the first time, the author of our speeches and the purveyor of such of our facts as bear investigating."

As secretary of the Liberal Publication Department, Mr. Geake is especially busy at election times. But his activities are by no means limited to the periods when the two parties are contending at the polling-booths. He is responsible for getting out a shilling annual called "The Liberal Year-Book," and also the *Liberal Monthly*, an organ of popular propaganda, in which an effective letter-press is diversified by reproductions of the cartoons of "F. C. G." His most valuable services to the party, however, are probably those he renders as editor of the *Liberal Magazine*.

That much overworked term "unique" might justly be applied to this publication. If the Unionists have anything to match it, the existence of such a rival is an admirably kept secret. One may doubt whether its parallel is to be found in any other country. It might be compared in some respects to the campaign textbooks of the American parties, but there is the important difference that they are prepared for elections only whereas this is compiled and published regularly month by month all the year round. Like these textbooks, it does not attempt directly to win converts, but is for the help of workers within the party. It is primarily intended, so Mr. Geake himself puts it, "to assist Liberals with unassailable facts and figures, and watertight arguments."

In the first place, it supplies a diary of the political events of the previous month, including a record of the voting in the most important divisions in Parliament. The speeches of the month receive especially careful attention. They are rarely given in full, but extracts are made, with a precise note of place and date. "The right honorable gentleman is very eloquent to-day respecting the impossibility of raising wages by act of Parliament, but what did he say at Kidderminster on the 11th of November, 1912?" This is the kind of retort that tells, whether in a Parliamentary debate or before a popular audience, and Liberal speakers, as Mr. Birrell confessed at the dinner, owe to Mr. Geake much of their material for such rejoinders. "You may justly class yourself," said a Liberal M. P. to him the other day, "with the dentist who, as he complacently eyed a society beauty, said: 'Her smiles are mine.'" The remarkable thing is that Mr. Geake, in this capacity of a recording angel, seems to know not only what utterances are important to-day, but which of them are going to be important in five years' time.

There are usually also a few articles—closely packed with dates and quotations —tracing the recent developments of some particular question. If land reform, for instance, comes to the front, one is likely to find in the *Liberal Magazine* a summary of the policies advocated on the subject by the two parties respectively. Summaries are given of the most important bills introduced into Parliament, and of Government blue-books and returns, whether concerned with matters of party politics or not. Lastly, a complete index makes the bound volumes of the magazine virtually an encyclopædia of recent British politics.

When the political worker hears of a publication of this kind, there is one thing more that he wants to know about it. It may be a very skilful piece of journalism, and its summaries and comments may be cleverly written, but is there any risk of his getting into trouble if he quotes its statements or figures without verifying them? The answer is that never, throughout these twenty years during which Mr. Geake has edited it—so the Rt. Hon. Russell Rea, the chairman of the publication board, declares—has the magazine "been called upon to make a correction of any erroneous statement, or to make any excuse or apology for any misrepresentation of either the opinions or conduct of any political opponent."

If Charles Geake has been toiling for two decades in comparative obscurity, it is not because he had not the ability to cut a dash in public life if he had wished to become a prominent figure. He is a Cambridge man of high distinction, having been eighth wrangler, and a scholar, and afterwards a fellow, of his college. His mathematical training helped him in no small degree to tackle Mr. Chamberlain's elusive figures during the tariff controversy, besides giving him a precision of method that has served him to good purpose through his whole career. While at Cambridge he became editor of the *Granta*, a University magazine. One of his journalistic exploits is still joyfully remembered there. The hardest part of the mathematical tripos examination each year is the problems paper. It contains twenty-four problems, and a candidate acquits himself brilliantly if he can solve six of them. The paper is set on a Friday morning at nine o'clock, and half-past nine is the earliest moment at which an outsider can see a copy of it. One year Geake got three or four other expert mathematicians around him, and they set to work at 9:30 on the paper that had just been set in the Senate House. They kept hard at it all day long, and it was not until past midnight that the proofs of their day's work were passed. The subscribers to the *Granta* (including the examiners in the tripos), on opening their copies of the week's issue at breakfast on Saturday morning, were astonished to find

among the contents the examination paper of the previous day, together with a complete answer to every question. There was an editorial note, explaining that the office boy had amused himself during the previous day by working out the problems without interfering with his regular duties.

Mr. Geake did not stay long at Cambridge after taking his degree, but came up to London and applied his talents to a journalism of wider influence than that of the *Granta*. The Liberal Publication Department has not absorbed all his energies, for he has been for many years a member of the editorial staff of the *Westminster Gazette*, whose "Notes of the Day" offer good scope for his brilliance and originality. "If I were a politician with a past," said the *Westminster* editor, Mr. Spender, at the recent dinner, "there is no man with whom I would less like to fall into a controversy than Geake." H. W. H.

EFFECTS OF THE BALKAN WAR ON AUSTRIA'S TRADE — PROBLEMS OF EMIGRATION AND FINANCE— THE PEACE CONGRESS.

VIENNA, March 30.

The Balkan War closed a very important door for Austria-Hungary. She no longer hopes to send any part of her surplus population to the Balkans, and since the war her trade with the countries lying to the southeast has been much reduced. Turkey was an excellent customer; it was a maxim of the Austrian tradesman that "Turkey always paid," and this applied not merely to the national debt of the country, but also to small private accounts between Viennese firms and Turkish houses.

Now that Turkey in Europe has been reduced to Constantinople and its small hinterland, Turkey in Asia must be regarded as the most probable market for Austrian goods in the near future. With this fact in view Austria-Hungary has arranged to send an imposing fleet to cruise in the Mediterranean for the express purpose of capturing trade. They will touch at Korfu, Malta, Alexandria, Beirut, Smyrna, Mytilene, Salonica, and the Piræus. On the return journey they are to cruise near the shore of the newly created kingdom of Albania and will put in at Durazzo. The commercial progress of Italy and of Germany in the Balkans is causing considerable alarm in Austria-Hungary, and it is hoped that something can be done to regain the position which she formerly held.

While taking means to obtain fresh markets, Austria-Hungary is losing others by her policy of guarding the frontiers. The new regulations preventing men between sixteen and thirty-four from leaving the country without showing satisfactory evidence that they have served their time as soldiers and afterwards as reservists, is beginning to press very hard upon commercial travellers and others, not only on the Galician frontier, where trouble was expected, but also towards Italy. The new Russian Ambassador, Prince Schebeko, has already been instructed to protest against the way in which Russian travellers are treated on the Austro-Hungarian frontier, and, although this is mainly due to the spy scare, it impedes trade. Reports of scandalous proceedings at the frontier town of Oderberg, where hundreds of emigrants were detained because their papers were not considered satisfactory, have reached Vienna.

Unscrupulous agents invite a large number of "season" emigrants to come to the frontier town offering them work in Germany, and are often unable to forward them to their destination at once, even when they are provided with the necessary passes. Added to these are intending emigrants, many of whom have borrowed a military pass belonging to comrades who are already in America, or who are detained on suspicion for one reason or another. These people are all lodged in offices and in empty shops, unprovided for in any way, and it is probable that the Government, which has virtually stopped emigration by way of Trieste and Fiume, for the present, will also put a check on season emigration and the transport of male emigrants by train to ports in other parts of Europe.

The whole business is to be reorganized, as soon as the various companies concerned in the trade have come to an agreement. Whether this will actually make any difference to the number of people that leave Austria-Hungary annually, with or without permission, remains to be seen. An emigrant expert assures me that it will mean absolutely no reduction. "Emigration from Russia is illegal," he said, "and the annual contingent of Russian emigrants is very large. The people wade through rivers, cross mountain passes, and take any risks rather than be balked of their wish to leave their native land. And this will be the same in Austria-Hungary."

The Austrian loan which was contemplated has not been floated, owing to the fact that the Parliament is indefinitely adjourned. The Government is being carried on by Paragraph 14, and this means that no "permanent" burden may be laid on the State, including naturally a loan. The present state of affairs originated in Czech obstruction, which again is connected with the long adjournment of the Bohemian Diet, and as a consequence the work of the Minister of Finance has for a long time been hampered. The immediate result of this situation is that the Austrian Government has again had to resort to the issue of Treasury bills; $150,000,000 will be asked for in all. In the absence of Parliament a large amount of work will be carried through; the recruit law is already passed, and other laws are awaiting passage. These laws will be submitted to the Parliament for ratification on its reassemblage, but as they will have already been executed by that time, the work of the national assembly resolves itself into a mere discussion of what has already been done.

A Peace Congress, coinciding with the twenty-fifth anniversary of the establishment of the Berne Peace Bureau, will be held in Vienna from September 15-19 of this year, and preparations are already being made for the reception of members and participants. The programme includes a visit to Budapest. A banquet will be given in the Vienna Rathhaus, one of the most interesting and characteristic buildings in the city, where the corporation stores large stocks of wine, in the good years, when it is cheap and plenty, and retails it to the population when ordinary table wine is expensive, owing to a failure of the crop. It is expected that Count Berchtold will receive the members in the rooms of the Foreign Office on the Ballplatz, and that various other functions will be arranged for their benefit. Papers will be read, during the meetings, by Dr. James L. Tryon, secretary of the American Peace Society, Boston; Gen. Sir Alfred Turner, and George Herbert Perris, of London; Baron Korff, and others. The draft of an international treaty for the diminution of armaments will be one of the subjects of discussion, while the evil effects of increased military and naval preparations on commerce and industry will also be debated, reports on the subject being read by Herr Miljukoff, of St. Petersburg; Carl Heath, secretary of the National Peace Society, London, and Raphael G. Levy.

THE NAVAL SCANDAL IN JAPAN.

TOKIO, March 16.

For the last two months the people of Japan have been occupied with the navy "graft" scandal, which is still under investigation, and daily appears to promise more extensive proportions. Excitement is intense, and popular indignation general. Frequent mass-meetings of protest are held in various centres, led by the vernacular press and the opponents of the Government.

The main charges are that certain officers of the Imperial navy have been accustomed to receive "commissions" on orders placed with British and German firms. Though the whole matter is still *sub judice*, the public appears to take for granted that the charges are well founded, and certain officers of the navy, including a retired commander and a paymaster, have come forward to assert the truth of the allegations. The navy authorities aver that these assertions are the result of personal grudge, and without foundation.

Meanwhile a navy commission was appointed to inquire into the charges arising out of the trial of Carl Richter in Berlin, wherein certain documents stolen from the German firm of Siemens & Schuckert by Richter purported to show that certain officers of the Japanese navy were in receipt of "commissions" on orders placed with the said firm, as well as on orders placed with British shipbuilders. Telegraphic dispatches of the Berlin trial let the cat out of the bag, and then the Imperial Diet took up the matter, insisting on the appointment of the navy commission. But the commission had hardly been appointed when it turned out that the correspondent of Reuter's Telegram Company in Tokio had obtained copies of the documents in possession of Carl Richter, and was try-

ing to obtain money for them from those in Tokio who feared their contents.

Reuter's agent, Andrew M. Pooley, who was arrested, is still in prison, but Mr. Herrmann, agent of the Siemens firm in Kobé, who also was arrested, has been released on bail, at the instigation, it is alleged, of the German Ambassador. The British community is agitating for the release of Mr. Pooley on bail, but the authorities have so far refused the request, on the ground that his examination is not yet completed. Meanwhile investigation continues, and daily proves more interesting. Several officers of the Imperial navy, including Admiral Matsuo, have been arrested, their houses have been searched by the police, and important discoveries are alleged to have resulted.

The manager and other leading officials of the Mitsui Bussan Kaisha, one of the oldest and largest import firms in Japan, also have been arrested, as well as a number of minor officials connected in various ways with the Japanese and foreign firms named. The British firm of Vickers has been dragged into the affair, because, it is said, the Mitsui Company did its foreign business for the navy chiefly through this firm.

During the last few years the following ships for Japan were built by the Vickers Company: The Mikasa, 1898, price 12,615,042 yen; the Kashimi, 1904, price 15,092,179 yen; the Kongo, 1910, price 27,280,116 yen. The Japanese press declares it an open secret that on these ships commissions of 5 per cent. were paid. It is averred, for instance, that the actual price of the Kongo was only 25,000,000 yen, the balance being paid as commissions which have mysteriously disappeared. It is no wonder that the populace is greatly agitated over what is thought to be extravagant handling of money by a poor country, while the people are burdened with taxes.

There is consequently an almost universal outcry for the resignation of the Cabinet. Two attempts have been made to impeach the Government, but without success, owing to the action of the majority party, the Seyukai. For the honor of the nation, so the Peers say, they have been trying to take a hand in the affair; and in order to show their disapproval of the Government the House of Peers has cut off the sum of 70,000,000 yen from the navy budget. The lower house has not agreed to this curtailment, and there is at present a deadlock between the two chambers, for the adjustment of which a joint conference of committees of the two houses has been arranged. It is a question with many whether the Cabinet will be able to pull through the present session of the Diet.

The more patient of the population are awaiting the outcome of the naval court-martial with apprehensive interest, while the general populace continues to hold daily mass meetings to pass resolutions in condemnation of the Government. The investigation by the judicial authorities is so thorough and extensive that by the time it is finished Japan should be cleaned of corruption for all time.

J. E. B.

John Lothrop Motley.

CENTENARY OF THE HISTORIAN.

By JOHN T. MORSE, Jr.,
Editor of the American Statesmen Series.

It is not to be supposed that Nature pays regard to the artificial divisions of time arranged by man; yet with the approach of the year 1800 she seemed to take notice of the new century and to start then upon a fresh course wherein great writers and good books were to come by their own in this country, and to hold it for a period somewhat exceeding a generation. In 1783 Washington Irving was born, and in 1809 "Knickerbocker's History of New York" "established his literary position"; in 1789 Cooper, the novelist, followed; William H. Prescott was born in 1796; George Bancroft, in 1800; Emerson, in 1803; Hawthorne, in 1804; Longfellow, in 1807; Holmes and Poe, in 1809; Motley, in 1814; Thoreau, in 1817; Lowell, in 1819; and Francis Parkman, in 1823. The last to die of this famous list was Holmes, in 1894.

I.

Dr. Holmes, separated from Motley in boyhood by the yawning chasm of five years of seniority, became in later life, when that great chasm appeared only an unnoticeable seam, his intimate friend, and ultimately wrote his biography. That Memoir is probably little read now—more's the pity; for it is good work, and among other merits it perpetuates the impression made by Motley upon his contemporaries. The Doctor, with the experience of sixty-nine years passed in intercourse with mankind, was so fascinated by his subject that he seems to have dipped his pen in warm, bright sunshine for these pages, which have the atmosphere of eulogy rather than of biography. His sketch of Motley's early years takes us into dreamland. Born April 15, 1814, of a father and mother who were "the handsomest pair the town of Boston should show," Motley carried through life a wonderful beauty. Lady Byron thought him more like her husband in feature than any one else she had ever met; and Wendell Phillips regarded him as "handsomer than any portrait of Byron represents the poet." Fortunately, he had not Byron's foolish vanity and he had a gentleman's conscience. He was an omnivorous reader of poetry, romance, and drama; somewhat reserved, and chary of friendships; ardent, impulsive, imaginative; later playing the cynic, a little after the fashion of young men of his type.

He must have been clever, for he entered Harvard College soon after his thirteenth birthday, and during a part of his stay he stood very near the head of his class. At graduation, in 1831, being just outside the sacred band entitled to enter the Phi Beta Kappa, he was admitted thereto by a special vote. Then he passed two years in study in Göttingen and Berlin, forming a close friendship with Bismarck, which endured through later life. Returning home, he studied law for a while, but never undertook practice. The training, however, was useful, for his mental temperament was of the kind which usually has to be forced in order to acquire powers of sound research and accurate statements. A year in the Massachusetts Legislature extended his experience without stirring ambition for a political career. In March, 1837, came his marriage to Mary Benjamin, of Boston—a most happy alliance.

II.

Motley wasted little time in futile gropings, being led by a strong instinct to literature. Having fed full upon the old English chronicles and on romantic novels and poetry, he turned to like work. In 1839, he published "Morton's Hope." It was the crude work of a boy, and failed utterly. Not disheartened, he tried again with "Merrymount: A Romance of the Massachusetts Colony." This was better, but not good enough. In fact, he wrote only as one who, having read many books, would fain be a writer himself; not as one who had observed men and customs and had something to say.

Novelists then ranged chiefly in historical fields, and from romance to history was a short stride which Motley was already measuring even before "Merrymount" had failed. Some articles by him, appearing in the *North American Review*, attracted notice, and, like his hero in "Morton's Hope," he set himself "violently to the study of history." At that time history was not so much written as it is now, and he easily found an unworn period. He would have it that the topic found him rather than he the topic. Either way it was the magnetism of reciprocal sympathy; his genius and his subject accorded perfectly.

For years he read and wrote in Boston till volumes lay finished upon his table. In time, however, he came to appreciate that European history must be studied in Europe, and the family shortly set forth for the Netherlands. Here the important question of his persistency in wearisome labor was quickly put to the proof. Months passed into years and still he delved in the solitude of the store-closets of the State Archives, deciphering antique chirography, learning foreign languages, rummaging among dusty papers often to find nothing, unravelling complexities, sorting truth from false assertion—all with infinite patience. Inevitably he came thus to recognize the worthlessness of his long

labors at Boston. "There is nothing for it," he wrote, "but to Penelopize, pull to pieces, and stitch away again." So he actually destroyed all that supposedly finished manuscript and began afresh.

At last, after ten years of labor, the manuscript of the "Rise of the Dutch Republic" was in shape for the publisher. But who would publish three solid octavo volumes by an untried writer? Murray, prince of English publishers, would not. Chapman agreed to, but only at Mr. Motley's expense. The publication was made in 1856; and writer and publisher were not long held in suspense, for appreciation was prompt and cordial. The bulky work did not alarm the reader of those days, when leisure had not yet been so strangely filched from the world by devices for saving time. Moreover, it was with us a generation almost unreasonably addicted to reading: a transitory condition, soon to be displaced by war, and later by money-getting. Furthermore, thanks principally to Macaulay and Prescott, the discovery was spreading that history is not a field of dry stubble tedious to traverse, but rather a garden alluring to linger in. American writers, with limited opportunity as yet at home, busied themselves with the history of other countries than their own; and certain periods, complete within their own boundaries, have been definitively treated by Americans in books written with such thorough scholarship that they may well stand as permanently in their several domains as has Gibbon's "Decline and Fall."

III.

Motley's friends in Boston noted with interest his development. The exuberance of fancy and of language which had spoiled his romances had now been tempered by serious purpose, and by the sobering effect of years passed amid dusty manuscripts. Yet an ardent temperament and a dramatic genius had been only trained, not eliminated, and the vividness of his pages fired the enthusiasm of his readers. Critics might suggest that he was too splendid to be accurate and might controvert some of his views. This was quite natural; was not Macaulay meeting the like treatment? But the reading world refused to release itself from the fascinations of either Macaulay or Motley. His well-chosen method was to narrate events, with vivid portraiture of the actors, as Thucydides, Tacitus, Prescott, Macaulay had been content to do. The "philosophy of history," if there really be such a science, had happily not yet been discovered to injure its charm; and intelligent readers were assumed to be competent to do their own thinking. The only blemish in his writing involved, in a way, a compliment. He was prone to insert long extracts from the state papers which were his authorities. For scholars these excerpts from original documents were reassuring and had value; but readers in general inclined to resent a habit, which certainly grew to excess in his "Barneveld." They would have demanded that he should assimilate this material and convey it to them in his own glowing and racy style, which they so much admired.

Of course, the triumph of the "Rise of the Dutch Republic" insured the continuance of the great task which Mr. Motley, fearless of labor, had blocked out. Without pause he next engaged himself with the "History of the Netherlands," of which the first two volumes appeared in 1860, and the succeeding two in 1868. These fulfilled expectation and corroborated his fame. Some persons, measuring him against himself, would have it that there was less of movement and of fire in them, and found them somewhat clogged with detail; but it was a criticism rather of his material than of his treatment. He was dealing with less picturesque events.

The pleasure of reading Mr. Motley's books was not confined to readers of English. They were at once translated into Dutch, edited and annotated by the Archivist-General, himself "a distinguished scholar"; there was also the vexatious compliment of "piratical reprints." The French translation was under the auspices of M. Guizot; and there was a German translation, and even a Russian. A fame thus spread through European countries brought to him the honors of their universities and institutes of learning, so that the list of his more important distinctions fills nineteen lines in the Catalogue of the Harvard Alumni.

IV.

At home also Motley's distinction received unexpected and quasi-official recognition. He was chosen for the Austrian mission. The story goes that President Lincoln, chancing to meet him, was fascinated by his appearance, manners, and talk. If this be so, the choice showed Lincoln's shrewdness in estimating men. It has been said that a good historian is half a statesman; it would be malicious to suggest that the statement is mathematically accurate. Mr. Motley was more than half a diplomat, yet was not wholly one. Indeed, some of his most engaging qualities rather tended to unfit him for successful diplomacy. He was high-spirited and sensitive, ardent in his convictions, frank and outspoken, impulsive often to the point of imprudence, with the unpractical conscience of a gentleman, little submissive to the law of expediency or the exigencies of astute policy. But there were also quite other qualities for Mr. Lincoln to consider. There was about this very handsome gentleman a fine air of personal distinction and of good breeding; the aloofness of his youth had become a courteous dignity in middle age; he was a cultivated scholar and his countrymen could show no one of whom they had more reason to be proud. Mr. Lincoln was therefore wise in sending him to the Viennese Court, where the custom of ancestor-worship still flourishes, and where the relations with the United States were neither strained nor complex.

About six years he passed very agreeably in the Austrian capital, where he was not only the recipient of official courtesies, but was also accepted socially with cordial hospitality by a large circle of good friends. He was only once called upon to act in a matter of some delicacy, and then he acquitted himself with perfect success. During the Civil War he was restless at his remote post, because he could not personally contribute to the Northern cause. For all his long residences abroad, amid interesting pursuits and in congenial society, never in the slightest degree de-Americanized him; and in the years of stress and peril he even had to lay aside his literary work. Why write of a past struggle in a foreign land when his own was in mortal throes?

The Viennese mission had a sharp ending. The McCrackin letter, famous and infamous, did it. This missive, vindictive and vulgar, signed by a name never to be traced, came laden with ignoble gossip against Mr. Motley, from Paris to our State Department. It should have been burned, or at best hidden in a private pigeon-hole. But Mr. Seward chose rather to gather from it sundry offensive quotations and to send them to Mr. Motley for explanation. According to common belief, President Johnson gave the order, and Seward, unfortunately without demur, obeyed his chief. In earlier life he might have been less submissive, but a long career in politics had been demoralizing. Talk at the time, probably correct enough, was to the effect that Mr. Motley had expressed with imprudent frankness his disapproval of Johnson's policies, and that Johnson, revengeful and careless of courtesies, had delivered his blow as opportunity offered. Mr. Motley took neither time nor reflection for resenting it; within an hour after he had read the letter he wrote his reply resigning his post. It was precipitate action, certainly; but high-spirited and fine.

V.

A brief time only had elapsed after this unpleasant event, when Gen. Grant's election to the Presidency virtually assured to Mr. Motley such vindication, agreeable though not really needed, as lay in another foreign appointment. His friends naturally assumed that he would like, and would receive again, the Austrian mission. "And now you will go back to Vienna," said Sumner to him, in

after-dinner chat at Motley's house one evening. "No," replied Mr. Motley, "I want to go to London; and I want you to see to it for me." Sumner, surprised and perhaps not wholly approving, nevertheless did see to it for him; and in the spring of 1868 the nomination was made and unanimously confirmed. The auspices seemed good, for he was sure of a cordial welcome to the most agreeable circles in London; his fame was not less in England than in his own country; his eldest daughter was married there to Sir William Vernon-Harcourt, the eminent statesman and Cabinet Minister; finally, there was a recess in the irritating controversy of the Alabama claims, the understanding being that when the discussion was renewed it should be in Washington.

Yet his acceptance was given with an inexplicable foreboding. Early in his mission a slight rebuke came from the State Department, bearing chiefly upon phraseology used by him in an interview with Lord Clarendon. The undiplomatic mind finds the criticism captious and futile, and the trifling incident seemed to drop promptly into oblivion. Later months passed serenely with no symptom of brooding trouble, yet suddenly, on June 1, 1870, a letter from Secretary Fish requested Mr. Motley's resignation. Mr. Motley, astounded and indignant, would not resign, and in November he was recalled. Great excitement ensued and hot words were exchanged by angry partisans. The State Department harked back to the Clarendon incident; but that was absurd. The only explanation then or since accepted was that Mr. Motley was suffering vicarious chastisement. Senator Sumner, untactful by temperament and arrogant in his position as chairman of the Committee on Foreign Affairs, had almost reversed the proper relationship between himself and the State Department. By his speech advancing the theory of "indirect claims" in the Alabama matter, he had forced that difficult question into at least a temporary *impasse*. Yet the Government, even while stayed in its efforts to arrange the disturbing quarrel, bore with extraordinary patience his assumptions of authority, actually consulting his wishes in drafting instructions to Mr. Motley. It was not, however, in human nature that President Grant and Secretary Fish should accept such a situation with cordial and genuine good will. Accordingly, when Sumner's influence defeated Grant's pet project for acquiring San Domingo, the explosion came. Now, if Mr. Motley had been more shrewd and selfish in matters political he would long since have foreseen the hostility inevitably to be developed, and, with the fair excuse of duty, he would have made himself safe by comporting himself as the obedient subordinate of the State Department. But, unfortunately, his loyal impulses betrayed him to his undoing. He owed gratitude to the good friend in whom he heartily believed, and in his usual open fashion he allowed it to be plainly seen that he felt himself to be "Sumner's man" more than Secretary Fish's servant. When, therefore, the President and Secretary, especially the former, hotly incensed against Sumner, found him personally inaccessible to punishment by them, and knew that he would welcome rather than regret a conflict, they turned to the only obvious recourse for revenge. It was a mean and brutal recourse, certainly, to strike the friend when the principal could not be reached; and Grant was neither mean nor brutal; but just now he was in such a blind rage that he only "saw red," as the phrase goes, and delivered the blow promptly where he could. The letter of recall was dated on the day after a tie vote in the Senate had caused the San Domingo treaty to fail of ratification. The episode was worse for Mr. Motley than that of Vienna, since to be punished by Grant was very different from being victimized by Johnson.

Moreover, the repetition seemed to indicate an inherent unfitness on Motley's part, whereas no such unfitness had developed, and the two occurrences really constituted only a coincidence. Mr. Motley, however, took his recall in a way to show that he was in one respect ill-adapted to public life, for he could not bring himself to regard it as a mere incident, as a politician might have done; for him it was an affront which no gentleman ought to forgive or could forget, and it remained an aching wound to the day of his death.

VI.

Despite his mental suffering from this incident, Mr. Motley returned resolutely to his literary work, and gained relief in familiar toil on "The Life and Death of John of Barneveld." These two volumes, published in 1874, were, by the necessity of their subject, less generally popular than their predecessors had been. He had to deal with the bitter disputes of an era which recalled and exaggerated the theological savagery of New England herself. The ashes of those flames were still fiery hot, and Dutch scholars on the side opposed to that espoused by him published severe criticisms. But this was as it should have been; had his views not stirred just such antagonism he must have concluded that they were regarded as of no account. Moreover, he was defended as vigorously as he was attacked. Dr. Holmes interestingly suggests the presence in these volumes of a personal element which might not have been discovered by any one else. He says: "In this, his last work, it is impossible not to read much of his own external and internal personal history, though under other names and with different accessories." "Barneveld" was the third great section of his original scheme; a fourth section should have been added. This, however, was not to be, for his life's work was done; he was a worn-out man. Gen. Grant and Mr. Fish had dealt him a staggering blow; a worse and final one came when, on December 31, 1874, his wife died. Always a congenial couple, they had been especially thrown upon each other by their long years in foreign lands and among persons who, however friendly, were really strangers. A few months after her death Mr. Motley's own health began to fail; efforts to regain his vigor were futile, and on May 29, 1877, he died, near Dorchester, in Dorsetshire, and was buried in Kensal Green Cemetery, Dean Stanley performing the service.

A TRIBUTE FROM HOLLAND.

LEYDEN, Holland, April 4.

The centenary of Motley's birth furnishes a fitting occasion for paying special tribute to this brilliant writer who did so much to spread the knowledge of Dutch history. His name is ranked in our country with the greatest of those who have treated the earlier periods of the nation's life, and especially its more splendid chapters. His large views, his brilliant style, his intense feeling for the most prominent features of our national character, for our great men, our heroes in the struggle with Spain; his sincere love of truth, his passion for religious and political freedom, give him a place among the first historians of his time.

Motley's "Rise of the Dutch Republic," "History of the United Netherlands," "John of Barneveld"—in the original language, as well as in the Dutch translation, made with the supervision of our great historian Bakhuizen van den Brink and enriched by his annotations—still find a large number of admiring readers in the Netherlands. They turn particularly to his glowing pages on the retirement of Charles V, on the sieges of Alkmaar, Haarlem, Leyden, and Antwerp, on the fate of the Armada, on the most dramatic scenes. They linger over his striking characterizations of Philip II, William of Orange, Leicester, Alva; of Don John of Austria and Maurice, the great general; and warmly respond to his brilliant descriptions of sites and occasions on land and sea.

Since Motley's day numerous new documents relating to the Eighty Years' War have naturally been added to the store of information which he himself collected in the libraries and archives of London, Paris, The Hague, and Brussels, as well as a long series of mono-

graphs. Many of his assertions have had, of course, to be corrected, nor was he always accurate in his larger views of men and things. Thus it has been shown that his modern ideas on political and religious freedom influenced unduly his reconstruction of the times. But no one has doubted his motives as historian nor his constant endeavor to state the truth—nothing short of it—as he saw it.

So on the centenary of his birth a Dutch historian desires, in the name of the Netherlands, to do homage to one who so greatly helped to make a brilliant period of their history better known to the world—to the world-wide lovers of that religious and political freedom which inspired him to his noble task.

HIGGINSON AND NEWBURYPORT.

The life of Thomas Wentworth Higginson, by Mary Thacher Higginson, published a week or two ago, contains a chapter called In and Out of the Pulpit. The pulpit, the first ever occupied by Col. Higginson, was that of the First Religious Society of Newburyport. Architecturally it is beautiful and imposing, but at that date—1847—it proved too small for the enthusiastic young reformer. He was only about twenty-three, and he "preached himself out" of that pulpit in two years. He ventured to give his pro-slavery parishioners an abolition sermon once a fortnight, and they decided to accept his resignation.

The incident was most curious and interesting. The young minister was called to one of the most conservative towns in New England. Salem and Boston have the reputation of being a little staid, but it is probable that they might be regarded as hotbeds of radicalism beside their less celebrated neighboring city, Newburyport. Mr. Higginson was not unprepared what to expect. Another minister, he writes, in "Cheerful Yesterdays"—"Henry C. Wright, afterward a prominent Abolitionist—had lost his parish, a few miles above Newburyport, for the alleged indecorum of swimming across the Merrimack River." The wife of another minister, ten or more years after Mr. Higginson's departure, got herself into disfavor because she wore a *hat* on the Sabbath. This crime will seem a little mysterious to the present generation until it is understood that women of godly conversation, at that period, wore *bonnets* on Sunday.

These things, however, were trifles compared with Mr. Higginson's devotion to the abolition of slavery. "The parish," he writes, "which at first welcomed me, counted among its strongest supporters a group of retired sea captains who had traded with Charleston and New Orleans, and more than one of whom had found himself obliged, after sailing from a Southern port, to put back in order to eject some runaway slave from his lower hold. . . . One of them, perhaps the quietest, was the very Francis Todd who had caused the imprisonment of Garrison at Baltimore. It happened, besides, that the one political hero and favorite son of Newburyport, Caleb Cushing—for of Garrison himself they only felt ashamed—was at that moment fighting slavery's battles in the Mexican War."

Things were misunderstood at that time—by some, perhaps, wilfully; by others, through a blind trust in the lead of the "best" people. It was a guide to respectability, hardly to righteousness. Caleb Cushing is still admired in Newburyport for his intellectual power; his other qualities are usually discreetly ignored. But the despised printer and abolitionist is now known as her greatest son.

There were many lighter and pleasanter aspects to Mr. Higginson's sojourn in Newburyport. No one, and he least of all, could remain insensitive to the charm of one of the most delightful of New England seaports. A native does not like to use even the qualifying phrase. Mr. Higginson's successor of to-day in the parish, Laurence Hayward, writes that Higginson took the children to the country and seashore, teaching them where and when they might expect each flower and bird. "He organized picnics, among them several to Plum Island, and I have seen a copy of a beautiful Evening Hymn of Aubrey De Vere's, made by him for a lady of the parish, which he sung to them at sunset on one such occasion."

After he had severed his connection with the parish, Higginson stayed in Newburyport for two years. He even spoke of staying forever. In the last year of their residence, Mr. and Mrs. Higginson moved a mile or two out of the city, to a beautiful place called Curson's Mill, near the mouth of a little river, the Artichoke. The Avon is not half so lovely a stream. The new biography, by Mrs. Higginson, quotes from a letter of his: "The soft west wind blows into my window, rich with lingering apple blossoms and half-blown clover . . . thrushes' and bobolinks' and robins' notes . . . In these lovely spring days with the blue Merrimack waves dancing before me, the world seems very young, and all evil short-lived."

He interested himself in many things in the city. Even after his resignation he continued to teach in night schools which he had organized; he served on the school committee. A group of young women helped in this work—the most brilliant group, he declared, he had met anywhere. One of them was Harriet Prescott, now Mrs. Spofford.

The old town was rich in eccentric characters, as such towns always are. In another of Col. Higginson's books ("Contemporaries"), he speaks of a certain "Doctor Hackett," who at the time of the author's pastorate acted as a sort of unofficial tithing-man in the church of the First Religious Society, keeping a number of boys in order. This old gentleman, as the minister found when going to make a pastoral call, lived in a place "as weird in the approach as that of some enchanter in Spenser's poetry." He dwelt alone on a wide tract, then and now known as "Grasshopper Plains." His house was a small shanty, bought from some railway men—its small size caused the owner a little distress from the fact that he could not insure it against fire, as the smallest risk accepted by the companies was ten dollars in value. It stood in the midst of a little grove of birches, through which small paths led to the door:

"On all these paths he had made piles of small wayside treasures that had attracted his eye—horseshoes, padlocks, keys, hoops, bits of iron rod too small for junk, yet carefully classed and piled. Within the house the collection grew only more concentrated; pins, nails, rusty knives, bits of ribbon, bits of string were hung to the rafters, or arranged on the floor, leaving scarcely room for his microscopic housekeeping.

"As unmoved by his possessions as if it were a palace, he ushered you in, kept on talking, flung out flowery and long-winded words, and seemed a Bourbon concealed in a junk-shop. On your exit, he escorted you through his small dominions, first pausing to screw upon his door a large iron plate covering solidly the keyhole, since it seemed that vagrant boys found a wicked delight in filling the latter with gravel and small stones in the owner's absence.

"'Such conduct,' he said in his Micawber-like way, 'I should call, sir—with no disrespect to the colored population—niggardly.'

"While I wrestled in bewilderment with this unexpected use of language, as if John the Baptist had unguardedly slipped into a pun, he came back to the proposition—'I intend, sir, no disrespect whatever to the colored population.'

"'Certainly not, Dr. Hackett,' I replied, 'I should not suspect you of such a thing.'"

Edmund Lester Pearson.

Poetry

THE BLOOM-COLORED COAT.

"Well, let me tell you," said Goldsmith, "when the tailor brought home my bloom colored coat, he said, 'Sir, I have a favor to beg of you: when anybody asks who made your clothes, be pleased to mention John Filby at the Harrow, in Water Lane.' " "Why, sir," cried Johnson, "that was because he knew the strange color would attract crowds to gaze at it, and thus they might hear of him, and see how well he could make a coat of so absurd a color."

—Boswell's Johnson.

And there it is in Kensington,
Hung primly in its case of glass;
A faded coat, so dusty, dun,
So patched and mended, that, alas!

The "bloom" is gone—but can't you see
(When Filby at the Harrow sent
That coat, bloom-colored, just to be
One glorious moment's monument)

Can't you, I say, see Goldsmith there—
So frankly vain, so quaintly shy—
Advancing, peacock-wise, to where
Th' immortal company may ply

The little man with friendly jest,
Till Johnson thunders, ending it;
And Boswell, with untiring zest,
Records his master's heavy wit?

God's blessing on thee, Noll, thy fame
Needs no such dim sartorial shine;
But thou would'st smile to hear the name
Which jesting Fate embalms with thine;—

Would'st smile, and welcome Filby's shade
To share thy glory through the years;
And hover with thee, unafraid,
Mingling the laurel and the shears.

EDMUND KEMPER BROADUS.

SERGEANT ORDWAY'S NOTE-BOOK.

Dr. James K. Hosmer, in an admirable introduction to a reprint of Patrick Gass's "Journal of the Lewis and Clark Expedition" (Chicago, 1904), says, in speaking of the long-lost note-book of John Ordway: "His journal, which he contentedly sold for $10 to his commanders, could it be recovered, would bring to-day literally its weight in gold."

And now, ten years after writing these words, Dr. Hosmer may rejoice with many other scholars and students throughout the country over the recovery of this precious manuscript, kept for many months, if we may trust a family tradition, under the shirt of Sergeant Ordway, next his skin. For it was recently placed on deposit (having been discovered in the Biddle papers) with the American Philosophical Society of Philadelphia by its present owner, who, so far as the public is concerned, must for the present remain nameless. The journal, however, is to be made accessible to historical investigators.

Ordway's note-book, which is of considerable length and written on pages measuring 7¾ by 6¼ inches, is known to have been used by Nicholas Biddle in preparing his digest of the journals of Lewis and Clark for publication in 1814 (a notable piece of work when one considers the time and circumstances of its production), but it was later lost sight of, and eluded even that experienced searcher for source materials, the late Dr. Reuben Gold Thwaites, for many years secretary of the Wisconsin Historical Society, when he was editing a truly monumental edition of the original journals of this transcontinental expedition in eight volumes. (New York, 1904.)

The note-book now reposing safely in the archives of the American Philosophical Society appears to be complete, and covers a period commencing May 14, 1804, and ending September 30, 1805. Whether the journal contains matter of importance not made use of by Biddle remains to be seen. In any event, it is perhaps safe to assume that it deserves publication and wide circulation as an intelligent record of a momentous undertaking by one of the subordinate officers. And when the time comes for editing the journal, it is to be hoped that the task will not fall to the lot of one who thinks it necessary to polish the English of Sergeant John Ordway, thus lessening the charm and value of an original document of unusual interest. Patrick Gass's journal unfortunately fell into the hands of a schoolmaster, with the result that, while we no doubt have the facts straight enough, we lost Patrick himself by the process; and as Gass was a rather racy individual, what would we not now give to have his shrewd comments in his own words!

Besides the voluminous journals of the commanders of the expedition, possibly seven other members recorded the happenings of that remarkable journey. Until the recent recovery of the Ordway journal only three were known to have been preserved—those of Gass (in printed form only), Floyd, and Whitehouse. The note-books of Pryor and Frazier are still missing, and it is not certain that Willard kept a diary, although some of his descendants credit a tradition to that effect.

The discovery, after well-nigh a century, of John Ordway's note-book is an event calculated to warm the hearts of all who are interested in Western history, and it is much to be desired that the owner of the manuscript will speedily give the American Philosophical Society, or some competent scholar outside of that learned body, permission to edit and publish this worthy complement to what may still be regarded as Dr. Thwaites's definitive edition of the "Journals" of the Lewis and Clark Expedition. Sergeant Ordway's contribution, perhaps laboriously produced, should not be denied a place with the classic narratives of his superiors and companions of the rank and file.

JOHN THOMAS LEE.

Correspondence

IF HUERTA HAD WON AT TORREON.

TO THE EDITOR OF THE NATION:

SIR: In an editorial on "The Man with the Note-Book" in a recent issue, you state that the reporter recognizes that a beating is all in the day's work. Some such treatment is sorely needed for those who write on the Mexican situation. It is said that a crisis in Mexican affairs is reported in the papers whenever there is a lack of news. The other day, the American Club here in Mexico City was surrounded by soldiers, according to the account in one New York paper. One company of soldiers happened to exchange salutes with another in front of the Club, hence the beginning of the story. Countless times, according to similar sources of information, Mexico has been cut off from Vera Cruz and was presently to be surrounded by the enemy. Much has also been made of the anti-American feeling. Of this we have seen no sign whatsoever, nor have we been able to find the "circulars against Americans" which are distributed over the city.

We left for Mexico in November of last year against the advice of the Washington authorities and of almost every one who thought they knew the true state of affairs. We arrived in Vera Cruz and were strongly advised to turn back by Mr. John Lind. We kept on to Mexico City, however, and have been leading a peaceful existence here ever since. We had an impression before arriving that we were doing something courageous, but, conditions being as they are, we fear we cannot assume the rôle of heroes.

We were here when Mexico was under the strong arm of Diaz, again under the vacillating, theosophical Madero, and now under Victoriano Huerta. There is no visible difference in the day life of the city now from that which existed under the two other régimes.

Our work has been archæological. We have been excavating in sites ten miles and more outside the city for over three months. There has been no interruption to our work nor any untoward circumstance. To all appearances Mexico City is entirely normal. The parks are kept up in all their usual beauty, the band concerts are as frequent, and the bull fights as crowded as in former times. It cannot be denied that business men are having a very hard time on account of financial conditions; the Government is spending so much money on the army that it is naturally hard pressed.

Huerta is making a good fight and there are few Americans here who do not wish to see him win. Any American in Mexico whose money is at stake is in the eyes of our Government a capitalist, and his opinion, therefore, is worthless. Our Government, it seems to me, has not taken the trouble to investigate properly the relative state of affairs in Mexico as between the rebels of the North and the Government as organized by Huerta. President Wilson has from the start underestimated Huerta's strength,

ability, and tenacity, and his power to obtain money for the support of his policies.

The Mexican difficulties are in great part due to questions of topography. The country is divided into distinct and often isolated areas. Yucatan is a country quite by itself, with its own ideas and its own industries. There is no way of getting to the peninsula except by sea. Tabasco and Chiapas, again, are marked off from Central Mexico by impassable forests. Here, too, is a people with its own methods of thought and its own industries. Even Oaxaca is in many ways quite apart from Central Mexico. Northern Mexico is divided into distinct areas by large tracts of desert. There is little unity among these different sections. A common feeling would be born only in case of an invasion by a foreign force. Intervention would mean that a separate army would have to be sent into each of these districts with little or no opportunity for coöperation. The battle of Torreon is now (April 1) being fought. If the forces of Huerta win, it is time for Mr. Wilson to realize that his advisers have made a mistake and that recognition is better late than never.

ALFRED M. TOZZER.

Mexico City, April 1.

BALLADRY IN AMERICA.

TO THE EDITOR OF THE NATION:

SIR: On this continent there are survivals and adaptations of Old World ballads to a marked degree, but still more significant is the persistence of the ancient custom of ballad-making. This is a result of the vastness of the country and the conditions which induce men to lead isolated lives in small groups. In his book of "Cowboy Ballads," Professor Lomax has included "The Death of Jack Munroe," which is not a cowboy song at all, but a lumberjack poem. Lumberjack poetry has not yet been collected, so that an expedition into the woods of Michigan or British Columbia during the logging season would yield a rich harvest. Railway life also has many songs and ballads connected with it, and there is a vast amount of hobo poetry, which sometimes creeps into railway magazines, but almost never into the general press. "The Dying Hobo" is as much a classic among tramps, and has as many variants, as "Jack Munroe," the favorite of the "shanty-boys."

Many of the narrative poems pattern after the old Irish come-all-ye's, in having a few words of preface; for example, among lumbermen, one song begins:

> Come all ye shanty-boys and listen while I relate
> About a brave shanty-boy and his untimely fate,

and "Casey Jones," a railway song, which has found its way upon the stage, and into the phonograph record, begins:

> Come all ye rounders if you want to hear
> A story about a brave engineer.

Owing to the persistence of conditions which cause original verse to arise and to be transmitted orally, America will probably have its ballad-literature longer than Europe.

JOSEPH F. GOULD.

Norwood, Mass., April 10.

PROBLEMS OF IMMIGRATION.

TO THE EDITOR OF THE NATION:

SIR: May I be permitted to give expression to my surprise on reading, in your editorial on "The Irish in Our Public Life," in the *Nation* for March 26, the following sentences: "For example he (Professor Ross) has previously given expression to the serious disquietude which many Americans feel to-day in connection with the new-comers from South European countries. But their grandfathers were just as acutely concerned over the Irish emigrants. These were, sixty and seventy years ago, as much disliked and even dreaded as are, by some, Slav and Italian to-day. . . . It may be asked, however, if the large immigration of to-day will not, half a century hence, look as harmless and even desirable as does now the Irish immigration of 1845-55."

The argument that it is wrong to object to the "new immigration" because our forefathers objected just as strongly to the "old immigration," which we now regard as innocuous or even desirable, has four distinct weaknesses, any one of which is sufficient to condemn it. The first is a question of fact. Often as we hear this statement repeated, it is not at all certain that our grandfathers disliked and dreaded the Irish as much as we fear the Slavs and Italians. I have had occasion to examine with great care the evidence on this point furnished by the contemporary writings and discussions, and I have failed to find any widespread sentiment against the Irish comparable to the restrictionist agitation of to-day.

In the second place, such objections to immigration as there were rested on wholly different grounds from those of the present. The antipathy felt in the middle of the nineteenth century was not against the Irish as such, nor was it against a degrading competition in the economic field. It was against paupers, criminals, diseased persons, and Roman Catholics. To treat the opposition to immigration of the twentieth century as if it were analogous to that of this earlier period misses the point completely. An excellent illustration is furnished by the fact that whereas we fear that our present immigrants will not avail themselves of the blessings of American citizenship and will fail to become naturalized, our grandfathers feared that they would become naturalized too easily, and wanted to extend the period of residence required for citizenship to twenty or twenty-five years, or to refuse naturalization altogether.

In the third place, this argument always assumes that none of the evils which our forebears dreaded in connection with the Irish immigration has, in fact, materialized. This assumption is open to serious question. It is, of course, a difficult and hazardous undertaking to assign any of our present-day problems to any specific foreign race. But there is evidence that the Irish are responsible for more than their share of some of our troubles. On the same day in which I read your editorial, my attention was attracted by an editorial in the New York *Times*, which spoke thus of the Irish attitude towards the repeal of the Tolls Exemption law: "The opposition of the Irish-American organizations is characteristically open and vociferous. The motive is far from creditable. . . . [They] have been prompted thereto by their hatred of England. They act on an American question from considerations wholly un-American, which is pretty bad citizenship." The fact that one of our great dailies can speak thus of the Irish after two-thirds of a century of Americanization is at least disquieting. If we turn to more concrete matters, we find that the number of Irish paupers in this country is out of all proportion to their percentage of the total population—46.4 per cent. of the total number of foreign-born paupers in the almshouses in 1903, over one-third (including native-born of Irish fathers) of the total number of charity cases of all nationalities in Bellevue and Allied Hospitals, etc. Among criminals, also, the Irish stand at the head of the foreign-born as regards the total number of offences. Furthermore, it is most significant that in the one aspect of life in which, as your editorial points out, the Irish have displayed the most marked ability, viz., public affairs, the record which they have made—as you also point out—has not been such as wholly to discredit the sagacity of our forefathers when they were uneasy as to the effect of the Irish on American politics.

The fact is that we have become accustomed to those evils of American life which are traceable to the early immigration, and take them for granted. We even go so far as to use them as a means of forestalling unfavorable comparisons between Southeastern Europeans and Americans. An excellent illustration of this is afforded by Dr. Peter Roberts in his book, "The New Immigration," when, in an effort to extenuate the drunkenness and lawlessness of the newcomers, or at least to divide the responsibility, he points out that "with very rare exceptions the men on the bench, in the brewery business, and in politics," who help to create these conditions, "are native-born." He does not stop to consider how many of them are the sons of the Irish and German immigrants of the nineteenth century, whom Dr. Roberts, along with others, regards as so desirable.

Finally, the most significant fact of all is that the one reason why the evil effects of the Irish and German immigration of the forties and fifties are not much more widespread and prominent than they are, is that this very agitation of our forefathers, which we deride, had its effect. To be sure, some of it, particularly that based on religious prejudice, was misguided and unjustifiable according to our lights. But the great agitation against the indiscriminate dumping of foreign paupers and criminals on our shores, and against the horrible shipping conditions which landed swarms of miserable wretches on our docks who had to be hauled away in carts to the hospitals and almshouses, rested on a solid foundation. For decades the wiser spirits of the time fought for laws which would

protect the communities of this country against an intolerable burden of expense in the support of indigent foreigners. We of to-day are reaping the benefit of this agitation, and it ill becomes us to ridicule it from the vantage point of our security. It is doubtful if a half or even a quarter of the Irish immigrants who made up the great migration of 1845-55 would be allowed even to embark from the shores of Ireland, to say nothing of being admitted to the United States, in the year 1914. If we were confronted with an immigration of the sort that our grandfathers had to deal with we should be much more vociferous in our protests than they were.

The immigration problem of the twentieth century is in many ways a wholly new one. No arguments concerning it are more fallacious than those which compare it, without discrimination, with that of the middle of the nineteenth century, and draw conclusions from parallels. And there is no more complete justification for a sober and well-considered protest against the immigration of the present than that afforded by a contemplation of the debt we owe to the agitators of an earlier period.

HENRY P. FAIRCHILD.

Yale University, April 5.

IN PRAISE OF "CHANGE."

TO THE EDITOR OF THE NATION:

SIR: William Butler Yeats has said that the need of the moment was not so much new creative genius as an audience sensitive to talent, trained and ready to recognize creative work. Last January for ten days there was performed right here in New York a play which later generations will be envying us for having seen—when the problems it illumines were alive and real, when the characters it portrays were contemporary. I like to think that New York was not wholly insensitive to its beauty, for its audiences were growing towards the last, but it was unfortunately financed by one "of little faith" and the battle was lost before it was begun. Even the most sensational play at this moment on the boards needed good fighters behind it before it became profitable.

This play "Change," by a Welshman named Francis, has come again largely through the efforts and support of the Drama League.

I wish to pay tribute here to the play first of all as a work of art—a piece of wholly satisfying and impressive dramatic literature; secondly, a document of first-hand observation and conviction; thirdly, a revelation of signal breadth of vision, an unusual combination at once both impassioned and balanced. We usually resign ourselves with what patience we may command to either a work of art which escapes from life into the less exaggerating realism of fantasy or a piece of work—literature, drama, or plastic art—which may be life, but which certainly is not art. But here is a play which demands no compromise—it is Life and it is Art.

Its theme has been used in other plays, the succession of ideas whereby generations make progress, but I know of no other recent play that shows at once the relentless impatience of youth and the essential pathos of old age.

The acting of the Welsh players is sincere and convincing. Every word is uttered with distinction (which includes distinctness), and there is no exploitation of costume or individual. The actors seem to have grasped the fact that the part of the actor is simply to interpret the play. Hence the "team work" is perfection.

ANNIE NATHAN MEYER.

New York, April 4.

THE OPIUM TRAFFIC.

TO THE EDITOR OF THE NATION:

SIR: To free Asia from the vices of opium smoking and opium eating is a serious proposal for a reform that is perfectly feasible. Those European nations ruling in Asia which have established complete monopolies in opium within their frontiers (beginning with England), have only to renounce their profits and close their "Government opium manufactories," and the opium vice would be completely extinguished in the European possessions in Asia. China, with its four hundred millions, has already declared against the vice, and there would remain only the comparatively limited territories of the independent native states, many of which would, no doubt, yield to British influence. It would, of course, be necessary for the European nations indicated to continue their present stringent exclusion of all outside opium from their Asiatic possessions, and thus a regulation, originally intended to protect the profits of their own monopolies, would be turned by them to a great and beneficent purpose. The European empires in Asia would have justified their existence by liberating the Asiatics from a vice which for centuries has paralyzed their energies.

It is hardly necessary to call attention to England's opportunity. If England started the reform, it cannot be doubted that France and Holland would follow. A new conference on the opium question should be summoned.

BERTRAND SHADWELL.

Hongkong, March 11.

IMAGINATION IN COLLEGE.

TO THE EDITOR OF THE NATION:

SIR: If, as the Japanese tell us, imagination is but the indwelling of the past in the present, we may well measure modern education by observing its sense for the past. "Those who forget the past shall in their turn be forgotten," Mr. More has said, and Professor Babbitt applies the rule home when he finds the shallowness of American life chiefly due to our having lost connection with the ages.

The Presidential pronunciamento on imagination, recently printed in the *Nation*, reveals two gods, gods that are almost if not quite the admitted deities of all American education to-day: the god of the practical—Christ called him Mammon—and the god of humanitarianism, so aptly spiritualized in the refrain

Do something for somebody quick.

Thus, the imagination is invoked in the service of smoke-reducers, clay-mixers, gas engines, and the agrarian arts, on the one hand, and in the service of economy, sociology, the abolition of poverty, and "pass prosperity around," on the other. Utilitarian or humanitarian, one or both we are, and the love of man for the love of God is a substitution few despise.

Protests more or less futile arise from several camps. The worshippers of beauty protest in the name of lyrics, music, nature, and the lust for the pretty. Another sect, opposed to the art for art's sake school, protests in the name of research without end, and here range certain historians, philologists, grammarians, economists, bibliomaniacs, researching ever, and without end. The first—who kneel to beauty—should remember Plato, "To desire beauty above virtue, what is that but the utter dishonor of the soul?" and the second—who bow to the enclyclopædic—should learn from the Germans the futility of possession without assimilation.

Where, then, is virtue, and how can we escape the paralysis of the imagination? Chief of studies that aid the imagination are, I presume, philosophy, literature, history, as major studies, with perhaps music, sculpture, painting, architecture, and scientific theories a more or less harmonic minor. These, especially the first three, if wisely used in the service of ideas, furnish severe mental discipline, and incite the imagination to connect the present and the past.

BRUCE WEIRICK.

Ames, Iowa, April 2.

JOHN ALDEN.

TO THE EDITOR OF THE NATION:

SIR: That personality and scholarship are still the qualities most prized in the public-school teacher is the fact shown by the striking tributes paid to the memory of Mr. John Alden, whose death, in the early forties, was recently reported. For the past fifteen years he had been a teacher of Greek in the Portland High School.

A graduate of Harvard in the class of 1893, a thorough scholar who had studied in Greece and taught at his alma mater, Mr. Alden was by temperament and training entirely competent to fill a university post. To some of his acquaintances, indeed, it seemed strange that he should have chosen school work; yet so abundant was the fruit of his labors at the Portland High School that he did more for sound learning and for the classics, at least in his native State, than any other man has done in the last twenty years. His department was Greek; and in Maine, as elsewhere, Greek has for the past few years been declining in popularity. Yet Mr. Alden had often twenty or twenty-five students in his beginners' class, and trained many boys and girls so proficiently in Greek and Latin that college teachers have wondered at their mastery of those subjects. He sent his boys up to colleges and universities with a genuine love for the classics, and as one parent wrote, "College students fitted

at the Portland High School have found to their disappointment and grief that sometimes their professors in the classics have not measured up to the stature of John Alden."

Much of Mr. Alden's success was due to his rare personality; much also to his genuine love of learning. That high-school teaching does not necessarily interfere with the career of the scholar, his life abundantly proved. He was fully abreast of modern technical scholarship; he showed that high-school teachers in certain instances can give as much to college and university men as they receive from them. When he visited Bowdoin College, for example, he left with the college teachers whom he met a desire for a deeper knowledge and for a clearer understanding of the writers and topics that he came to discuss. A person of real erudition, of exact and cultured mind, of ideals as high and as far removed from what is vulgar and cheap as those of the Greeks whom he so ably interpreted, Mr. Alden showed what one man can do to uphold the best traditions of scholarship and culture in a public high school. And his career and influence are an effective answer to those who depreciate the value of discipline in the classics, and who assert that there is no room in the schools for the study of Greek, and for the pursuit of culture.

KENNETH C. M. SILLS.

Bowdoin College, Brunswick, Me., April 10.

Literature

THE GREAT TRIBUNE.

Mirabeau. By Louis Barthou. Illustrated. New York: Dodd, Mead & Co. $3 net.

It is not surprising that a man whose private life was filled with almost incredible family quarrels, love affairs, law-suits, debts, and imprisonments, and whose public life was such that Gambetta used to call him "the most glorious political genius in France since the incomparable Richelieu," should not have suffered for lack of biographers. In English alone, aside from the ill-conceived biographies of Trowbridge, Watson, and Warwick, there are the solid studies of Stern and Von Holst, the excellent brief sketch of Willert, and the first volume of Fling's new work. Was it worth while to add to the list by the translation of a French Prime Minister's biography of the great Tribune? Unhesitatingly, yes. For it is valuable in estimating the great political leader of the Revolutionary Constituent Assembly to know the opinion of a similar twentieth-century leader—of a man like M. Barthou, who has been in the thick of the legislative fight and knows the game of politics by experience in the Chamber, and not merely by study in the closet. He does not, however, make his study of Mirabeau a stalking-horse for political propaganda; he does not, as Frenchmen are too often inclined to do, make his book an occasion for either justifying or condemning the Revolution. Only rarely does he inject his own twentieth-century views, as when he says: "The Marquis was right when he advocated the foundation of a large number of institutions in which unmarried mothers might place their children and have them brought up."

M. Barthou has been criticised by some of his reviewers for giving so much space—half the volume—to Mirabeau's family and early life before 1789, that is, before the beginning of his public life as the commanding figure in the Constituent Assembly. We are not inclined so to criticise him. For, like the Adamses, the Pitts, and the Hohenzollerns, Mirabeau cannot be separated from his ancestry. He came from a race of immemorial antiquity, whose virtues and vices alike culminated in him. He cannot be understood without some knowledge of the sources from which he sprang. It is a family that should prove interesting to students of eugenics; the same tendencies which are found in the great Tribune—gallantry, wit, sensitiveness, amorousness, intellectual ability, love of polemics, and general "tempestuousness"—are also found running back for generations. With the genius of the family went also, as one might expect, a strain of insanity which was augmented from the maternal side. Mirabeau's grandmother, after an irreproachable life, sank in her eightieth year into a horrible form of dementia characterized by outbursts of violently obscene talk. His mother had aberrations which had not the excuse of old age, and which were not limited to her conversation.

In the chapters on Mirabeau's leadership in the Constituent Assembly, M. Barthou brings out more clearly than other writers the multiplicity of subjects on which Mirabeau spoke with fluency and authority, the complexity of his dealings with the Assembly and with the Court, and the wisdom with which he tried to pursue a moderating middle policy. By reconciling the Monarchy and the Revolution, the authority of the King and the liberty of the nation, he would have spared France the Terror, Cæsarism, and invasion. But he was handicapped by the King's lack of confidence, and by the shadow of the scandalous life of his own youth. "Oh!" he cried on his deathbed, "if I had brought to the Revolution a reputation equal to that of Malesherbes! What a mighty destiny I would have assured for my country! What glory I should have attached to my name!" He was not mistaken in his presentiment. He left a great name which is lit up with a legendary glamour, but his destiny was inferior to his genius.

M. Barthou has no footnotes, but it is evident that he has used the best printed material in French. He admires Mirabeau's genius, but he does not attempt to gloss over his vices and weaknesses. One of the most interesting chapters is the last, in which he seeks to elucidate the doubt which always exists as to the paternity of Mirabeau's books and speeches. He shows to what an extraordinary extent Mirabeau coaxed other able men to look up material and write his speeches for him. The chief of these was a Swiss pastor, Reybaz. Not only did Reybaz write some of the main speeches which Mirabeau hurled at the Assembly, but he was expected to be ready with replies, for we find Mirabeau writing to him, "Follow the *Moniteurs* carefully, so that we can be ready for a reply."

The unnamed translator has succeeded admirably in preserving something of the epigrammatic vigor, humor, and brilliancy of M. Barthou's French original.

CURRENT FICTION.

Vandover and the Brute. By Frank Norris. New York: Doubleday, Page & Co.

The great attraction of Frank Norris is that, direct in method, he is finely imaginative in content; but here we have realism in immature roughness. Its intrinsic value is small beside its importance in filling the chief gap in our knowledge of Norris's development. His first completed novel, it was twin in conception with "McTeague," having been begun in 1894, Norris's senior year at the University of California, and finished in 1895 at Harvard. With neither "Vandover" nor "McTeague" was Norris satisfied. He laid the first away indefinitely, and in 1898 completed and published "Moran of the Lady Letty" before he had quite reworked the second. Ideas and ambitions were then crowding fast, and within a twelvemonth after "McTeague" two more novels—"Blix" and "A Man's Woman"—were published; the conception of a tripartite Epic of the Wheat seized him, and in 1901 came "The Octopus"; and in 1902 his death occurred a few months before the issue of "The Pit." Mr. Charles G. Norris tells how this first novel, which still awaited remodelling, was stored in a chest in San Francisco and was miraculously saved from earthquake and fire.

Vandover is a rich, motherless San Francisco youth who studies at Harvard and there explores life, cultivates a dilettantish talent for art, is left his own master by his father's death, sinks ambition and integrity in slothful luxury, goes from stage to stage of riotous living until money and health are lost, and is discovered at the end a dazed, brutish day-laborer, subject to attacks

of lycanthropy, cleaning a row of tenements belonging to a one-time friend who has cheated him of his property. The book begins with the full stage of characters, drawn in ultra-detail, which distinguished "The Pit." There is a girl, Turner Ravis, who is introduced with a care presaging an important part, and disappears in 100 pages; there are young men, friends of Vandover, who similarly drop away; his father is a mere sketch; by the middle of the volume the author's powerful moral theme has run away with his pen, and Vandover is centre of a kaleidoscopic yet fateful action in which the outside world figures hazily.

Yet there is no monotony, and a deepening interest attaches to his course. He begins with self-indulgence, the sensuous pleasures of the stomach and armchair; his great impulse towards evil comes with a surreptitious course in the lower world, and betrayal of one of his girl friends, whose suicide drives him to southern California to recuperate; a wreck is brought in for no reason but the description of brutality and hysteria; he takes a studio on his return, is shunned by his friends, and plunges downward. But the unflinching moral conviction of the book lifts it to a place not far below "McTeague" as a powerful private study.

The World Set Free. By H. G. Wells. New York: E. P. Dutton & Co.

Mr. Wells is always interesting as a prophet, but his stories written in that vein are sharply distinguished from novels like "Mr. Polly," in which human beings move. What he paints here is a world set free from war, competition, government, and personality. And this enfranchisement comes about within our own century. The chief engine of change is a new weapon, the atomic bomb, deadly beyond parallel.

Mr. Wells does not make this up out of his own head. Characteristically, he finds his materials among the most recent speculations of science. The book is inscribed to Frederick Soddy, or rather to his "Interpretation of Radium." Frederick Soddy, though still in his thirties, has been for ten years a lecturer on radio-activity in the University of Glasgow. As early as 1904 he wrote a treatise on "Radio-activity, from the Standpoint of the Disintegration Theory," and upon this theory his later studies have been based. The theory is, in a word, that radio-activity is a process of disintegration or decay. In radium the process is relatively rapid, hence the spectacular release of power involved; but it is probably going on in all matter. Therefore, says the impassioned Edinburgh professor of Mr. Wells's story, all that we need to give us unlimited control of matter is to discover how to hasten the process of disintegration "in all the other elements, where decay is still so slow as to escape our finest measurements. Every scrap of solid matter in the world would become an available reservoir of concentrated force."

Mr. Wells imagines a world in which this has happened. In 1933 a young scientist sets up atomic disintegration in a scrap of bismuth. It explodes, becomes a powerful gas, and goes through a further series of disintegrations, still giving out energy, and resigning from active service, after a period of months, only to become a particle of gold! From this discovery a new civilization is born, by way of a devastating war to which the atomic bomb gives finality. A dozen of these bombs are enough for the destruction of London, Paris, Berlin, Chicago—most of the greatest cities of the world. They make these cities uninhabitable for a generation, since each bomb becomes a centre of very slowly decreasing activity, a small volcano remaining in eruption for years. So war dies; and, with war, nations and races become obsolete, a World-State is formed; nobody has to work and everybody prefers to; the laboratories do not produce the whole food of the world because people still find it fun to potter about in gardens, and have a weakness for fresh vegetables; all atoms are kept under official observation so that there may be no malign use of them for explosive purposes; life is prolonged and therefore sex loses something of its necessary function; men and women cease to be important as males and females and exist "as parts of and contributions to the universal mind of the race": and nobody is nobody and everybody is everybody: and the world is a place that Mr. Wells, for one, would find it very dull to live in, we are sure. Heaven defend us from his Utopias! But we like his explosions.

Anybody but Anne. By Carolyn Wells. Philadelphia: J. B. Lippincott Co.

A wealthy eccentric has conceived the plan—strongly opposed by his young wife and the son and daughter of his first marriage—of putting the bulk of his fortune into a public library. He goes so far as to have the deed of gift drawn up ready for signing—and the next morning is found dead in his study. Apparently he has died by his own hands, for the room is too impregnably barred and bolted on the inside to permit any other explanation than suicide. Yet the ambiguous nature of the wound, the absence of any weapon to account for it, the fact that his wife's pearls are missing from his safe and the deed of gift from his desk, all point another way. The guests of the house suspect his housekeeper and valet, the neighbors his son and the servants his wife—by one of whose admirers the investigation of the mystery is prosecuted in the spirit suggested by the title. There is a seemingly inexplicable tangle of incriminating evidence and only one apparent clue—the one that nobody is willing to follow. The quandary is quite enough to satisfy all lovers of this genre. When the time comes for the solution, this proves rather disappointing on the mechanical side, the preparation in one important particular having been most clumsy. On the psychological side, however, the mystery has been more successfully masked, and the fixing of the guilt comes as a genuine surprise.

The Green Graves of Balgowrie. By Jane Helen Findlater. New York: E. P. Dutton & Co.

Over the Hills. By Mary Findlater. New York: E. P. Dutton & Co.

The plot of the first of these stories is a relic of the period when fiction was full of fair women possessed of a degree of sensibility and a delicacy of constitution impossible to realize in these days of lusty feminism. The green graves were those of two young sisters who departed this life during the last quarter of the eighteenth century. These two poor innocents were reared by a cruelly eccentric mother, in unnatural seclusion. So ill-prepared were they to cope with the problems of life that a single flirtation and a trip to London proved too much for Lucy's frail strength. What with the slight put upon her by fickle Captain Charteris, the mortification of having appeared, in the era of hoop-skirts, hoopless upon the London streets, and her fits of hysterical terror at sight of a drawing-room full of strange faces, was it any wonder that Lucy soon developed a cough and a hectic flush? Henrietta, her bookish sister, was of somewhat tougher fibre, and with the support of her elderly clergyman-lover might have weathered the storms of life with fair success had she not in nursing Lucy taken her malady.

After this attempt to revive an obsolete style of pathos, "Over the Hills" comes as something of a surprise. It is the story of a landless youth who loved a predestined daughter of joy and served a prison term for her theft. The plot is poor enough and smugly imagined in many details, but redeemed by passages here and there which Scotland's own muse must have inspired—a strain of loyalty peculiar to Scottish hearts in the character of Dinah Jerningham and descriptions of places like this of the old house of Glarn:

> It stood solitary on the moor, without fence or garden; and sometimes the cattle straying down from the hills would stand so close to the little windows that their breath dimmed the panes as they huddled shoulder to shoulder gazing in at the fire. In summer too, when the

casements stood open, the sheep cropping the turf about the house would lift their noses to snuff at the window ledges, shying off in alarm at any movement from within; and in the dawn of the morning, before the household was astir, the feet of the beasts might be heard on the very threshold.

We could be grateful for any book that contained a touch like this of artless magic.

NEW BATTLESHIPS FOR OLD.

German Sea-Power: Its Rise, Progress, and Economic Basis. By Archibald Hurd and Henry Castle. New York: Charles Scribner's Sons. $3.50 net.

Free from insular prejudice and without other motive than that of simply telling the facts, these two English authors explain clearly and sympathetically the motives and manner of Germany's extraordinary naval expansion during the past fifteen years. In the appendices they give conveniently for reference numerous statistics comparing English and German sea-power, and also a translation of the more important navy bills by which Admiral von Tirpitz has cleverly built up the German fleet. A couple of maps suggest the cardinal points of German naval strategy.

The authors begin with two chapters on the naval activities of the Hanseatic League in the Middle Ages and of the Great Elector in the seventeenth century. These are well written, to be sure, but it is rather stretching a point to attempt to show these early maritime enterprises as in any way closely related to the present navy movement. These chapters also contain some minor inaccuracies and repeat the old error of the Elizabethan antiquary who derived "sterling" from the honest "Easterling."

The central and most valuable part of the volume is that which describes the rapidity and cleverness with which Von Tirpitz has accomplished, since 1898, the remarkable transformation of the character and size of the navy. Popular imagination, stirred by Emperor William's "Our future lies upon the sea" and by his other dramatic sayings and aquatic doings, has ascribed to William II himself the chief credit (or discredit) for the increase of the fleet. Not so these authors:

> The keen interest of the Emperor William would not have sufficed to bring about the change which has been wrought during the past fifteen years. The decisive personal factors here have been the fixed purpose, the steady will, the unflagging energy, the inexhaustible patience, the profound political insight, and the rare diplomatic skill of Admiral Tirpitz, the nearest approach to a really great man that Germany has produced since Bismarck. He is the true creator of the German fleet that is and is to be.

In the decade before 1898 the Minister of Marine who preceded Von Tirpitz had not been able to increase the fleet at all. He was a military man who did not know how to deal with politicians; he tried to browbeat them and thumped the table in anger when the budget committee shaved down his estimates. Von Tirpitz had other methods. He devoted himself to the education of the people by means of an elaborate Press Bureau and later by his support of the Navy League. He met opposition in the Reichstag with a smiling reasonableness, and set himself to win the support of opponents by good-natured argument. His triumphant result was the Fleet law of 1898. This provided a naval programme of increased construction for a period of six years, and thereby removed in large part the yearly control which the Reichstag had previously exercised at the presentation of the annual budget. Long before the six years were up England went to war with the Boers and raised thereby in Germany a tremendous wave of Anglophobia. Von Tirpitz at once seized the opportunity to throw overboard the law of 1898 and replace it by a new programme providing a battle fleet of about twice the strength of that legalized.

This 1900 programme was to have remained in force until 1917, but it also has been thrice modified, each time in the direction of greater naval expansion. Experience shows that German fleet laws are regarded as fixed and immutable when proposals are made for the limitation of armaments, but are as flexible as though no Fleet law existed, when political circumstances are favorable for making a further effort towards an increase of the navy. In the wording of the laws, by skilfully using generic naval terms in the loose manner of those unfamiliar with their significance, Admiral Von Tirpitz still further restricted the Reichstag's power of interference and gave complete freedom to the Marine Office in transforming the navy. By styling as a "battleship" every ship of slow speed but carrying an armored belt, and by providing that old battleships should be replaced in due course by new ones, he was soon able to replace dummy ships of 4,000 tons by Dreadnoughts of 25,000 tons. In this way the programme to which the Reichstag had given its consent was observed in letter, but by skilful conjuring small coast-defence ships were quietly converted into first-class sea-going battleships ranking with the most formidable ships in the British fleet.

One of the most valuable chapters is that in which the authors explain why Germans in authority want a big navy. It should be read by pacifists, not because they will agree to any of the arguments, but because it sets forth sympathetically the state of mind of the German ruling classes. This state of mind is a fact which cannot be ignored by practical statesmen. In later chapters the authors analyze satisfactorily the comparative resources of England and Germany in regard to naval expansion and equipment. They also give some account of the different political parties in Germany and the attitude of each towards the navy, but betray ignorance of agrarian conditions and of the development of Socialism in Germany. On the whole, however, their book is accurate and trustworthy. It ought to make people understand more clearly why Germany does not accept with open arms the English proposals for a "naval holiday."

SOCIALISTS AND SYNDICALISM.

Violence and the Labor Movement. By Robert Hunter. New York: The Macmillan Co. $1.50.

As an "orthodox" Socialist Mr. Hunter is a firm believer in "political action" as opposed to violence or "direct action" in any form. The first portion of his book is devoted to an historical survey and criticism of terrorism from the days of Bakounin up to the final triumph of Marx and the dissolution of the International. The remainder is devoted to a description of Syndicalism, which Mr. Hunter takes to be the lineal descendant of the early anarchism, and of its inherent antagonism to modern Socialism.

The sketch of Bakounin, his associates, and his activities generally is interesting and instructive. Mr. Hunter leaves on the reader the impression that he is opposed to terrorism and the "propaganda of the deed" mainly because it is ineffective and tends to reaction. For this reason he considers it to be not even "revolutionary" (p. 120). He charges, moreover, that it has been carefully fostered and encouraged by those in power in order to discredit the labor movement (chap. vi). "There can be no doubt," he says, "that the amazing growth of the modern socialistic movement has terrified the powers of industrial and political tyranny. To them it is an incomparable menace, and superhuman efforts have been made to turn it from its path. They have endeavored to divide it, to misinterpret it, to divert it, to corrupt it, and the greatest of all their efforts has been made towards forcing it to become a movement of terrorists in order ultimately to discredit and destroy it" (p. 122).

There is unquestionably a foundation

of truth in this view. When the author comes to the second portion of his book and deals with syndicalism he uses very much the same lines of argument with regard to it. Allowing that there are certain points of difference between syndicalism and anarchism, in that the former is a group-philosophy, while the latter is strictly individualistic (p. 245), he insists upon the basic antagonism between Syndicalism and Socialism, and he calls Syndicalism "the newest anarchism" (chap. x). Syndicalism, he says, "differs from Socialism both in aim and methods. The aim of the latter is the control by the community of the means of production. The aim of Syndicalism is the control by autonomous trade unions of that production carried on by those trades. . . . Furthermore, the syndicalists differ from the Socialists in their conception of the class-struggle. To the Socialist the capitalist is as much the product of our economic system as the worker. No Socialist believes that the capitalist is individually to blame for our economic ills. The Syndicalist dissents from this view. To him the capitalist is an individual enemy. He must be fought and destroyed. . . . Every worker must be inspired with the aim of destruction" (pp. 238-9). "It is inevitable that Syndicalism and Socialism should stand at opposite poles. They are exactly as far apart as Anarchism and Socialism" (p. 266).

All this is doubtless quite true from the point of view of the "modern" Socialist, who believes that the cause is "indissolubly united" with "political democracy" (p. 353), and that the "Co-operative Commonwealth" is to come via "State Socialism" as an intermediate stage. This is the view taken by Mr. Walling in his "Socialism of To-day," and it consorts more or less with the facts as they are. But it is well to note that the Syndicalists of to-day pretty closely represent the "proletariat" as Marx expected it to be—the difference being that instead of the classes intermediate between the small group of swollen capitalists at the top and the labor army at the bottom having become "proletarianized" (if one may make such a word), there has been an increasing differentiation of the middle classes and a shrinking in relative numbers of the true "proletarians." Modern Socialism has become strictly "revisionist" as against Marx; the Syndicalists are more truly Marxian than are their Socialist critics.

Mr. Hunter will do well to verify his references, if another edition of his book is required. It is not safe to rely upon Lombroso for historic facts. Pages 98-100 are full of errors which might have been easily corrected. One would have thought that on writing the title of Mariana's book, "De Rege et Rege Constitutione" (which he does twice), the author would have suspected that there was something wrong somewhere!

THE GREAT MOUNTAIN.

The Ascent of Denali (Mount McKinley). By Hudson Stuck. New York: Charles Scribner's Sons. Illustrated. $1.75 net.

From the explorer's point of view, the blizzard which drove Prof. Herschel C. Parker and Belmore Browne back down the slopes of Mount McKinley when a few minutes more would have placed them on the summit, was a tragedy. Obliged to admit that an absolute victory was not theirs, they had conclusively demonstrated the possibility of such a victory and pointed out the pathway by which it was to be attained. The actual attainment fell to the lot of Archdeacon Hudson Stuck, and was only a year delayed. Favored by an interval of clear weather and a temperature of seven degrees above zero, the party was able to stay on the summit a good part of one afternoon and to get a satisfactory impression of the topography of the surrounding territory. Incidentally, what they saw does not tally well with the description given by Dr. Cook in his account of the alleged ascent of 1906, and thus another blow is struck in the needless task of slaying the slain.

At various points on the mountain were found striking evidences of the earthquake recorded by Parker and Browne two days after their descent. Masses of ice torn loose by the shock and piled in vast confusion constituted the chief obstacle to Archdeacon Stuck's ascent, and in his view Parker and Browne were really fortunate in their inability to remain on the mountain for a second attempt on the summit, since their lives would in all probability have been lost in the avalanches of ice and snow which the earthquake occasioned.

An interesting feature of this volume is a clear and convincing account of the "sourdough" expedition of 1910, featured in a very incorrect and misleading way in a New York Sunday newspaper during the summer of the same year. A group of miners and prospectors, "sourdoughs," undertook to accomplish with no special preparation that in which well-equipped "scientists" had failed, and actually did plant their flagstaff upon one of the two peaks into which the mountain divides towards the summit. They happened to select the wrong peak, though Dr. Stuck readily admits that they could have reached the other had they realized in time that it was the higher.

Dr. Stuck has obligingly compressed his relation within the limit of 190 pages, and has still found room for a great deal of interesting comment on subjects merely suggested by his ascent rather than essential to it. His objection to the name "Mount McKinley" will appeal to many as well grounded. Denali, "the great one," has been and still is the name of the mountain to the great majority of the Indians from whose lands it is visible, and it is certainly a correct principle to retain the native Indian names for such features wherever possible. Denali is accurately descriptive in its meaning and at the same time brief and euphonic. Against this what have we as a basis for the name McKinley? We quote from Belmore Browne: "A few years ago I asked Mr. Dickey why he named the mountain McKinley, and he answered that while they were in the wilderness he and his partner fell in with two prospectors who were rabid champions of free silver, and that after listening to their arguments for many weary days, he retaliated by naming the mountain after the champion of the gold standard." The companion peak to the southwest, christened later on Mount Foraker through association of ideas, is known to the natives as "Denali's Wife." The Board of Geographic Names could do worse than to recognize the Indian title in both cases.

FAMOUS LAWYERS AND JURISTS.

Landmarks of a Lawyer's Lifetime. By Theron G. Strong. Dodd, Mead & Co.

This is a work of a kind in which England is much richer than the United States. The memoirs and recollections of English lawyers and judges bulk large in comparison with our meagre production in that sort. Why this is so, there are some obvious reasons, but a few not so evident. It is no doubt true that the life of a British legal or judicial luminary is fuller and more varied than that of one in America. What is true of English public men, in general, as compared with ours, is true also of lawyers. Across the water they seem to get more easily into contact with things and people worth knowing. But we have not made as full literary use as we might of the material we possess. If William M. Evarts had lived in England, for example, we may be sure that a complete Life of him would have been published, which would have delighted with reminiscence and records of his wit. We Americans a little neglect this field.

The more welcome, then, is this volume by Mr. Strong, of the New York Bar. Rather more than half of the book is taken up with recollections of the most famous lawyers and the greatest jurists of his time—Charles O'Conor, David Dudley Field, Evarts, Carter, Porter, and many others; together with a large number of judges of the highest courts of New York as well as of the

Supreme Court at Washington Mr. Strong writes in an easy and somewhat discursive style, not pretending to make a complete or searching analysis of the men on whom he touches, but glancing pleasantly at one trait after another. Some of his anecdotes are new, and he re-tells the old ones with unfailing zest. His personal chapters are agreeable reading, even if they do not add much to our knowledge of the men with whom he deals. In a more sober vein, but also more instructively, Mr. Strong remarks upon the great changes which have taken place in the legal profession during his lifetime. He plainly does not find all of these desirable or admirable. Some of the ways in which the modern corporation has bound lawyers to its chariot wheels, as well as the organized form of certain kinds of legal practice itself—not to speak of the emergence in the profession of new and not very inspiring types—Mr. Strong makes it evident that he dislikes. But the sustained note of his book is that of geniality; and passing from the subject of fees to that of the lawyer's recreations, he leads the reader to the concluding chapter in excellent temper and with an air of being far as yet from having reached his last landmark.

Notes

Henry Holt & Company announce for publication on May 9 "Russia, the Country of Extremes," by Madame Jarintzoff.

"Whitehead's Conventions of Auction Bridge," by Wilbur C. Whitehead, will be published next month by Frederick A. Stokes Company.

The John Lane Company announces for publication on Saturday: "On the Left of a Throne," by Mrs. Evan Nepean; "Red Wrath," by John Oxenham; "Oh, Mr. Bidgood," by Peter Blundell.

SOME years ago Mr. Bryce, now Viscount Bryce, published two large volumes entitled "Studies in History and Jurisprudence." They included two essays, "The Ancient Roman Empire and the British Empire in India" and "The Diffusion of Roman and English Law Throughout the World," which he has now wisely re-issued in a more accessible volume (Oxford University Press), for those who may not care to procure the larger work. Both essays have been revised throughout and brought up to date by the insertion of the latest statistics and by references to recent legislation. In one essay he draws an instructive parallel between the Roman and British systems of imperial conquest and administration, and in the other a similar parallel between the steady extension of the Roman and British systems of law. Both essays are of value to students and administrators who want to see what light the experience of the English in India may throw upon the general question of the relation of the civilized nations to those less advanced races over whom they are assuming dominion; it is a question for the Americans in the Philippines no less than for the Dutch in Java, the French and Germans in Africa, the Russians on the Amur, or the Japanese in Formosa. In view of the author's large grasp of civil and common law, of his unusual opportunities for obtaining intimate personal opinions from scholars and from administrators in authority, and of his genius for the comparative study of institutions, it would be superfluous to commend these two essays written at the height of his intellectual powers and experience.

MOST of the brief essays in "Monologues," by Richard Middleton (Kennerley), have already seen the light in the *Academy* and *Vanity Fair*. In the first paper on The Decline of the Essay Mr. Middleton defines his task: "To me, essays are such leisurely expressions of a humane and agreeable personality as we find in the works of Charles Lamb." The agreeableness of Mr. Middleton's style may be granted—he is adroit, pungent, unexpected, but he gives the appearance rather of desiring leisure than of possessing it, and his humanity is of a specialized type. In all the essays, whether on the New Sex, New Year's Eve, The Philosophy of Gambling, How to be a Poet, The Virtues of Getting Drunk—the philistine or smug person is the butt. He has rarely been taken so seriously since "Yellow Book" days. Mr. Middleton indulges an apocalyptic vision of a moment when the philistine shall overthrow his mentors and joyously indulge his own tastes. Then shall chromolithographs fill the galleries. The essay is one of the best. A rather old-fashioned romanticism is the staple of the thinking, but the little book is modern enough in its insistent cleverness and love of paradox. The best of the essays are literary journalism of a superior type, and occasionally, as in An Election-tide Dream, our author escapes from cleverness into realms of delightful phantasy. Those who like Mr. Belloc and Mr. Chesterton should read Mr. Middleton also.

THAT popular government in this country is suffering grievously from the multiplication of elective offices is the theme of Albert M. Kales's "Unpopular Government in the United States" (University of Chicago Press). This theme is developed with a reformer's zeal, and, it must be added, with a lawyer's prolixity. The multiplication of elective offices is due to decentralization of governmental powers, combined with the belief that democracy means a maximum of elected officers and a minimum of officers appointed. Mr. Kales scores heavily in his analysis of our long ballots, and he has an impressive illustration of the enforced ignorance of the voter resulting from them in an experiment tried by President Judson, who, four weeks before a regular autumn election in Cook County, asked a graduate class to report at the time of the election such facts as they could ascertain about the candidates. Only a small percentage of even the mature men in the class were able to turn in a satisfactory report. The most original part of Mr. Kales's book is his examination of various proposed methods of dethroning the "politocrats." He holds that the initiative, the referendum, the recall, direct primaries, and the like tend to aggravate the evil by multiplying elections, and thus making the services of party leaders as acceptable as ever. His remedy is the short ballot, a remedy which the *Nation* has long advocated. Mr. Kales, however, overstates the difficulty of getting rid of bosses without this reform.

IN "A Vision and a Voice" (London: Robert Scott), Rev. R. G. Phillip has endeavored, he says, "to paint a picture of the times, with an interpretation." He has not been able to make anything so distinct as a picture, nor is there a perceptible element of timeliness in these pages. We have here rather a series of impressions as to the meaning of life and the needs of his fellow-creatures, as recorded upon a pious but not brilliant mind. "The author writes frankly from the Christian standpoint," says the prefatory note, "but has made it his aim not to forget honest seekers after Truth." The inference is, we suppose, that persons who have achieved the Christian standpoint have found Truth beyond need of search. It is to be noted further that the Christian standpoint means the Evangelical. The gloom and absorption of the older Evangelicalism are, to be sure, disclaimed, and a doctrine of cheerfulness and even laughter laid down. But the good cheer of the author appears to the lay mind a trifle laborious. The book is in effect a plea for a return to older practices, Sabbath-keeping, religious instruction in the schools, family worship, and so on. It is earnest and devout rather than illuminating or even suggestive.

SOME thirty-six years ago Dr. Augustus Jessopp, head master of King Edward the Sixth's School at Norwich, published in a very limited edition his study of "One Generation of a Norfolk House." It attracted attention, and the next year (1879) it was brought out in regular form for the trade. Now a third edition has been issued, by Putnams, incorporating the corrections and additions for which the author had long been collecting material, but which failing health had prevented him from making for himself. The editor, without much labor, might have carried the revision even further. Thus Dr. Jessopp's description of the condition of the Jesuit College at Tournai in 1875 is left without alteration, apparently, though it would have been perfectly easy to learn the present status of the school. As a whole, the book retains its vital interest and its value. It deals directly with the group of cousins of the Walpole family, stanch recusants, who, in the later years of Elizabeth's reign, possessed great estates in Norfolk and the adjacent counties. One of them in particular, Henry Walpole, of Anmer, was a devoted Jesuit under the direction of the famous Parsons, and laid down his life as a missionary to save his country from heresy. He is Dr. Jessopp's chief hero, but there is a vast amount of information in the book about the religious byways of the age. The curious in such

matters may be recommended to read with the present work the life of "Coke of Norfolk," which has recently been brought out in cheaper form. The founder of the Coke family, the great Chief Justice, was a fellow pupil with Henry Walpole at the Norwich School.

L. F. SALZMANN'S "Mediæval Byways" (Houghton Mifflin Co.) is made up of six essays which originally appeared in the *Oxford and Cambridge Review*. These essays are popular articles of the lightest kind on various topics of mediæval life, such as the alchemists, modes of travelling, coronations, etc.—all treated in the most facetious vein. As the author's object is not to instruct, but to amuse, it would be out of place to take his hook seriously. For our own part, we should not go so far afield to he amused. The profuse illustrations which have been supplied by G. E. Kruger remind one of those that adorned Mark Twain's "Innocents Ahroad."

MR. GEORGE E. WOODBERRY'S volume of verse ("The Flight and Other Poems"; Macmillan) has two distinct, even contrasted, appeals. It has an old-world and old-time quality, lapping, so to speak, both the classic and the harbaric shores of the Mediterranean, portraying the Italian vagabond, the boy of Mitylene, or the Tunisian dancer in concrete settings which might have alternately rejoiced Theocritus or inspired Robert Hichens. The poems exhibit not less distinctly the more poignant and elusive abstractions of contemporary philosophy, the vision which claims to comprise and transcend both good and evil, that affiliation of all religions which approaches so perilously to the annihilation of them all, and, above everything else, the train of ghostly ancestors which attends and influences every human being. The combination would suggest a happy equipoise between the antique and the modern, the concrete and the metaphysical, between Gautier—shall we say?—and Maeterlinck; and the chance of success would hardly be diminished by Mr. Woodberry's reliance on a relatively simple and old-fashioned prosody, aiming at color, body, and swiftness in the verse, and keeping itself sanely aloof from the fretfulness and fussiness of our worried latter-day technique. The results hardly come up to these favorable presumptions; there is something vitreous in the lustre of the verse, something granular in its consistence—a want of plasticity referable no doubt to the absence of the heat of passion. The metaphysical themes are poetically conceived, but they are embodied in crepuscular, though stirring, allegories—narrations in which the proportion of meaning to picture is small and the meaning itself is not always clearly elucidated. For instance, the phrase-title, "Beyond Good and Evil," might express a profound truth or mask a malignant sophism, and, whether from defect or excess of art, Mr. Woodberry's twelve caracoling stanzas leave his own attitude on the point in tantalizing ambiguity. We are confirmed in our impression that the desideratum in this work is emotional vitality by the fact that of four poems which stand out in the memory, "The Riding," "Calogero" (a new and happy version of "Le Cheminеau" and "The Beloved Vagabond"), "Comrades," and "In Memoriam" (dedicated to Charles Eliot Norton), three exhibit feelings of exceptional vigor or sincerity. In the other poems we feel that the guns have been trained on the right objects and that their structure is creditable to the gunsmith; the fault lies in the inadequacy of the charge.

CHARLES TENNYSON'S "Cambridge from Within" (Philadelphia: Jacobs) pleasantly supplements Dr. John Venn's recent volume on early Cambridge. Mr. Tennyson's graphic pen describes the collegiate life of the present day in stately Trinity as well as in the smaller colleges, touches upon Newnham and Girton, and in a picturesque way introduces us to the Dons, the freshman, the college cook, the sports and grinds, and the odd characters in and about the old university town. If there is here and there a little too much elaboration of detail, and an exuberance of spirits which betrays the age of the writer, there is also many a felicitous epithet that goes well with the family name. The little book is thoroughly enjoyable, and the illustrations are in harmony with the subject and its treatment.

ONE of the fascinating but perplexing problems in the interpretation of the New Testament is the purpose and theology of the Epistle to the Hebrews. In a recent study, entitled "The Epistle of Priesthood" (imported by Scribners), Prof. Alexander Nairne, of King's College, London, advances the hypothesis that the letter was written "when the Jewish revolt against Rome was beginning, to a small group of friends of like mind and education with the author, who were hesitating to break with their nation, and who felt themselves called in honour to forsake Christ, to adopt unchristian politics, and to take up arms for the old religion" (p. 207). The name of the writer is unknown, but his personality and purpose are evident. He is, in fact, a sacramentalist, that is, as our author interprets the term, a poet who "reaches truth by vision rather than by the severity of logical thought" (p. 291); and he writes with a view to showing "that sublimity only comes by limitation and that recognition of real manhood is the truest way to faith in real Godhead" (p. 229). Having established the date and purpose of the letter, and having explained the fundamental sacramental principle of the author, Mr. Nairne proceeds, in an interesting and readable manner, to interpret the leading ideas of the epistle, closing with an elaborate exposition of the same

OUR Rhodes scholars are not wholly given over to the accumulation of athletic honors. Mr. Frank Aydelotte's "Elizabethan Rogues and Vagabonds," issued as volume one of "Oxford Historical and Literary Studies" (Clarendon Press), is evidence of achievement of quite another kind. This interesting monograph concerns itself not merely with the rogue in literature, already the subject of extended study, but with the real Elizabethan rogue, with the changing conditions of land tenure which filled the country with sturdy beggars, with their methods of getting a living, and with the growth of legislation which, in 1575, by the simple device of getting them to work, destroyed the freedom and excitement which gave zest to the life of "rufflers" and "upright men." Against cozeners of a higher order, however, card sharps, players with false dice, pickpockets, and confidence men of all sorts, who came to he grouped under the name of "conny-catchers," each with his appropriate "law" or method of cheating, legislation accomplished very little beyond devising systems of licensing. In a final chapter is discussed, one wishes at times more at length, the large debt which the writers of the rogue pamphlets (Dekker among them) owe to the first-hand observations of earlier writers like Harman and the author of "A Manifest Detection," and to Robert Greene, who was himself not altogether above reproach in this matter of literary "prigging."

LUCE & CO. are starting a series of translations of Oriental works to be issued in small volumes, and apparently for popular consumption. The first of these has already appeared, and contains a version of "The Satakas, or Wise Sayings of Bhartrihari," from the Sanskrit, by J. M. Kennedy. These centuries ("Satakas," to use Mr. Kennedy's transliteration) consist of three sections of epigrams, or brief lyric poems, dealing respectively with love, practical morality, and mystical faith, and form one of the notable works of Sanskrit literature. They have been often translated into English and other Western languages. Mr. Kennedy's version is clear, but lacks lyrical or epigrammatic nerve. His preface gives a brief survey of the principal Hindu philosophies.

THE "Essays in Legal History," read before the International Congress of Historical Studies held in London last year, have been published by the Oxford University Press, under the editorship of Paul Vinogradoff. It is a polyglot collection, for the papers are printed as they were read, in English, German, French, and Italian. Indeed, the Congress must have had a somewhat Pentecostal flavor, "because that every man heard them speak in his own language." Among the essays in foreign tongues, none will be read with greater interest than that by the late Professor Esmein on the maxim, *Princeps Legibus Solutus Est*. It is one of the last productions from the pen of this distinguished legal historian, and it marshals in an admirable manner the evidence in support of his contention that the maxim exercised a profound influence on the development of the public law in France. Among the English essays the most notable are those by Sir Frederick Pollock, on the Transformation of Equity; by W. Blake Odgers, a sketch of the History of the Four Inns of Court, and by W. S. Holdsworth, on the Influence of Coke on the Development of English Law. The last of these should be examined by every one who has read Judge Gest's eulogy of Coke in "The Lawyer in Literature," lately noticed in these columns. While Mr. Holds-

worth claims for Coke "a place among the great jurists of the world," he concedes Sir Edward's defects both of character and learning. Whether as Attorney-General under Elizabeth or as Draftsman of the Petition of Right under Charles I, "he approached both law and history with the mind of a strenuous advocate." The result is that his history is often inaccurate, and his use of legal precedents is at times inconsistent. Moreover, his partisanship "led him to read into his authorities meanings which they never possessed." Mr. Odgers discourses as entertainingly of the Inns of Court as he has been accustomed to treat of the law of defamation, and Sir Frederick Pollock deals with some recent discoveries in the history of English equity with his usual literary skill. The volume makes a valuable addition to the scholarly side of legal literature.

FOR those who desire a knowledge of the fundamental principles underlying the rate-making policy of railways, and who have not already steeped themselves in the elementary principles of economic theory, there is no better guide than "Outlines of Railway Economics" (Macmillan), by Douglas Knoop. Although written with English conditions almost exclusively in mind, it is in no sense insular in its appeal. In a well-arranged discussion it develops from the simplest principles of demand and supply the more complicated relationships that apply to railway rates—the laws of decreasing and increasing return, determination of price under conditions of monopoly, differential charges, and the influence of cost upon price. What the author has to say concerning regulation and ownership is of special interest to American readers to-day. It appears that recent tendencies in rate regulation are strikingly alike in England and the United States. The requirement in England that railways shall demonstrate the reasonableness of any increase in rates has made them reluctant to reduce rates experimentally, for fear lest, in case the reduction proved unremunerative, they could not again raise them. In other words, inflexibility in rates is one result of more rigid regulation. Again, so far as the decisions of the Railway and Canal Commissioners are concerned, they tend to rest largely, if not entirely, on cost of service. As in this country, rates are established according to one set of principles, and revised according to another.

THE author is doubtful whether State control can continue to develop along present lines. Either the hand of regulation must be lightened to give opportunity for corporate initiative, or the State must go the whole way, and assume a real responsibility through ownership and management. Many interests are demanding the latter alternative, and for many reasons, a number of which are wholly selfish. The author's position is that of a skeptic. He is open to conviction, but insists that without far more exact information than is available at present nationalization would be a leap in the dark. His attitude is that of Mr. Asquith, who replied thus to a committee of the Trade Union Congress, urging State purchase: "However great may be the advantages in the diminution of competition and the coördination of the railway system, I remain of the opinion which I expressed last year, that the burden of proof is upon the shoulders of those who are in favor of the proposal."

ONE of the most popular of French authors of stories of romance and adventure, Pierre Sales, died in Paris on April 9. M. Sales, who was born on December 2, 1856, was originally a bank clerk and later turned his attention to journalism, but for some years he had devoted himself to the writing of novels with a peculiarly Parisian setting, many of which were translated into English, German, Italian, and Spanish. Besides his novels, among the best known of which may be mentioned "Mariage Manqué," "Incendiaire," and "Vipère," M. Sales was the author of two historical works, "Papistes et Parpaillots" and "La Pia dei Tolomei."

NOTES FROM ABROAD.

THE Vienna College of Medicine is discussing various proposals calculated to reduce the number of students of medicine and thus prevent undue competition in the profession. It has already been decided to raise considerably the fees asked of students. They will now pay $1 per lesson, instead of 45 cents, as heretofore. Further, the number of poor students who are allowed to enter the University without paying any fees will be greatly restricted. Until now it was extremely easy for any student who had gone through the gymnasium to obtain permission to undergo a university course without making any payment whatever. The fact that he had passed through the eight years' course with moderately good marks and had obtained certificates of excellent conduct was sufficient to obtain the permission, little trouble being taken to ascertain whether he had talents sufficient to gain a position in a profession where family influence and family wealth play an important part.

A STUDENT will not be accepted if there is a university with a faculty of medicine in the land from whence he comes; thus young men who would wish to benefit by the greater lustre lent by the Vienna diploma will be forced to study in Prague, if they are natives of Bohemia, and will not be permitted to overcrowd the Vienna class-rooms. Foreigners from the Balkans will be admitted as regular students, but the new regulation proposes to exclude all other non-German students of medicine from the regular course. It is proposed at the same time to raise the standard of study and to make the examinations more difficult.

THE *Westminster Review*, once the influential monthly organ of the "philosophic Radicals," has disappeared into the *Ewigkeit*. Founded in 1824, it gained distinction from its association with the two Mills, Sir William Molesworth, Herbert Spencer, Francis Newman, George Eliot, and G. H. Lewes. During John Chapman's editorship of this review, George Eliot was for a time its sub-editor. Of that strange character, Chapman, something may be learned from the "Autobiography of Mark Rutherford." The magazine has retained until the end its peculiar flavor of religious and social heterodoxy, but for a long time it has ceased to be numbered among the influential publications. In recent years any reference to "the *Westminster*" has meant not the *Westminster Review*, but the *Westminster Gazette*, a daily evening paper that has had no connection with it.

A NOTABLE acquisition has been gained by the Rylands Library at Manchester in the MS. of the so-called "Odes of Solomon," discovered a few years ago by Dr. Rendel Harris. A complete photograph of the MS. is to appear shortly in the series of Rylands Library facsimiles. The exact nature of the book has been keenly debated among scholars. Some believe it to be of Jewish origin, but in Dr. Harris's own judgment it is a collection of early Christian hymns. It thus constitutes, as he puts it, "a key to early Christian experience," much as a discovery of the first Methodist hymns—supposing them to have been lost—would furnish a clue to the understanding of the Methodist revival.

THE authorities of the British Museum are making constant and valuable additions to their cheap reproductions, on picture postcards, of some of its treasures. For the small sum of one shilling one can now purchase a set of fifteen cards, with an explanatory leaflet by an expert, reproducing maps of earlier date than the sixteenth century. Laurence Binyon has edited two similar series of Japanese and Chinese works of graphic art, and A. W. Pollard a series of Florentine book illustrations.

IN its new home at Stafford House the London Museum has been drawing large crowds of visitors. The collection itself is twice as large as that which was recently shown at Kensington Palace. It includes 180 pieces of jewellers' and goldsmiths' work, of the early seventeenth century, dug up in a wooden chest in the City about a year ago—presumably the contents of a jeweller's shop hidden away in some emergency. So far as possible, the exhibits are now arranged in chronological order, from the relics of palæolithic London downwards.

THE Mental Deficiency act, passed by a non-party vote last year, has just come into operation in England. Its object is to make better provision for the care of mentally defective persons, who are separately classified as (a) idiots, (b) imbeciles, (c) feeble-minded persons, and (d) moral imbeciles. Hitherto, such mentally defective persons as could not be certified as needing confinement in lunatic asylums have been under insufficient control. The new act secures that they shall be sent to institutions of a suitable type, or otherwise placed under efficient guardianship. The definition of "moral imbeciles" is of special interest in view of its possible application to the hunger-strikers. This

class consists of "persons who from an early age display some permanent mental defect coupled with strong vicious or criminal propensities on which punishment has had little or no deterrent effect." The latter part of the definition clearly fits the case of the arson squad. The likelihood of any perpetrator of the recent outrages being transferred from prison to a home for defectives will therefore depend on the possibility of proving that she has been mentally weak "from an early age."

Science

The first meeting of the International Surgical Association to be held in this country began its proceedings in New York on Monday. More than 250 delegates, among them representatives of almost every country in Europe, attended the first meeting. In the absence of President Wilson, Dr. William C. Gorgas, surgeon-general of the United States army, welcomed the delegates.

The Harris Lectures of Northwestern University were founded "to stimulate scientific research of the highest type and to bring the results of such research before the students and friends of Northwestern University, and through them to the world." Lecture foundations of this kind are important, as through them we may hope to have clear and correct discussions in untechnical language of scientific questions which will counteract the wrong statements frequently made in popular articles. No one is better qualified to state the problems and achievements of modern physics than Professor Ames, of Johns Hopkins, whose lectures for 1913 on the "Constitution of Matter" have now been published by Houghton Mifflin Co. Professor Ames combines with learning the gift of clear exposition. As a result, those who wish to obtain a knowledge of the recent experiments and theories of the nature of matter and electricity, especially those of Lorentz and Thomson, can be sure of finding them stated accurately and simply in this book. The presswork is good, although attention may be called to two mistakes; on page 97, "non-atomic" is used for "monatomic," and "had" for "has" on page 148.

Dr. Henry Smith Williams has published, through Harper's a continuation of his "History of Science," under the title of "Miracles of Science," in which he aims to bring his former work down to most recent times. Dr. Williams has the gift of discrimination and of picking out those scientific achievements which will interest the general reader. He has also the power of presenting the conquests of science in an entertaining fashion. Thus he gives us a picture which in its broad aspects is correct, in spite of the fact that he is frequently wrong in his details. As this carelessness is likely to lessen respect for his work, it is worth while to point out the most obvious of his misstatements. On page 30, he speaks of an airman travelling through space to the planets and stars and being hampered by "the frigidity of empty space." Temperature is, of course, a property of matter. Thus his airman would be cold or hot according as he was far from or near a hot star. On page 37, the text reads as if a spherical mirror brought all rays to the same focus; what is meant is that a mirror has no chromatic aberration. Professor Lebedew confirmed by experiment the pressure of light before the work was undertaken by Professor Nichols (page 110). The alpha particles (page 114) are not helium; they combine to form helium. The impression is given on page 120 *et seq.* that the conclusions of Professor Ramsay on the transmutations of matter are accepted facts; to say the least, they are open to question. Quartz fibres are, of course (page 64), not made from molten glass. On page 124 we have a misprint, "plantinum' for "platinum," and the elements neon and helium which are driven out of electrodes are generally supposed to exist there in an occluded state and not to be driven out of platinum or glass by the disruption of their atoms. Prof. O. B. Richardson is the correct form of the name (page 131). The plane of a swinging pendulum does not rotate through 90 degrees in six hours except at the poles of the earth; at the equator there is no shifting of the plane of the swing, and elsewhere on the earth it is a function of the latitude. More important than these errors is the undue assurance attributed to scientific experiments and hypotheses. Many of these, especially in biology and in medicine, which Dr. Williams relates as proved facts, are matters of controversy.

Possibly we should grant considerable latitude of expression, when an author is presenting the achievements of science as miracles, and is trying to arouse wonder and awe in the public for matters which are calculated to increase the humility of scientists themselves, who stand baffled at the thought of the complexity of their problem, and who realize how little we really know about our surroundings. The macrocosm and the microcosm are wonderful, and we may well feel awed by the incomprehensible mystery of the universe. But in spite of the intricate motions of stars and atoms, they are simple in comparison to the mystery of human thought and human personality. And the earth, small in size, must still maintain its dominating aspect in the universe, until some other place be found which holds beings more intelligent than ourselves. In spite, however, of Dr. Williams's overemphasis, and of his too-ready acceptance of scientific achievements, this book is interesting and shows what science is accomplishing, whether one thinks of it as miraculous or not.

"Glimpses of Indian Birds" (Lane) is the fifth book written by Mr. Douglas Dewar on Indian ornithology. Indian birds are blessed with pronounced individuality; the sombre, dishevelled "seven sisters" tumbling pellmell one after another across the road; the insistent, brain-fever cuckoo, the dynamic dhyal bird, and the house crow—the superlative of impudence. The author presents about forty short sketches of the more common species. Some of these are of interest only to Anglo-Indians, none calls for special mention. In a rather querulous preface the writer says he has taken this opportunity of attacking "the prevalent theories of protective coloration, because it is impossible for the naturalist who uses his eyes to accept these theories." He also attacks Darwinism and the "Wallaceians," mimicry, natural selection, and several other things, some of which we had thought were at least good working hypotheses. He unfortunately does not propose any more acceptable theories. When we read of the rose finch that "the actual coloring of the feathers becomes intensified as the spring approaches," we realize that Mr. Dewar is very human after all, and quite as susceptible to error as those whom he attacks. He has a deft pen, and some of his *petites histoires* are well worth reading, especially by those who have travelled in India. We especially like his chapters on Vultures and Voices of the Night.

Dr. Joseph D. Bryant, who died on April 7, was born on March 12, 1845. He received his degree from Bellevue Hospital Medical College in 1868, and after filling various positions on the faculty of that institution, became in 1883 professor of anatomy and clinical surgery and associate professor of orthopædic surgery, and in 1898 professor of the principles and practice of surgery. In addition to his professorial work, Dr. Bryant engaged in many public activities. He was sanitary inspector in the New York Health Department from 1873 to 1879, and was a Health Commissioner and member of the State Board of Health from 1887 to 1893. He was appointed Surgeon-General of the State in 1882, and held the office under two successive administrations. Dr. Bryant wrote many treatises on medicine and surgery for medical journals, and was the author of two notable works, "Operative Surgery," published in two volumes, and the eight-volume "American System of Surgery," in which he collaborated with Dr. Albert H. Buck. He was among the first of those chosen for fellowship in the recently formed American College of Surgeons, and was a member of various other medical and scientific associations. The degree of LL.D. was conferred on him by New York University in 1908.

Dr. Alexander F. Chamberlain, professor of anthropology at Clark University, who died on April 8, was born in England on January 12, 1865. He graduated from Toronto University in 1886, received his A.M. degree in 1889, and his Ph.D. from Clark University in 1892. In 1891 he made special investigations of the Kootenay Indians in British Columbia, under the auspices of the British Association. From 1900-8 he was editor of the *Journal of American Folk-Lore*, and he was also department editor of the *American Anthropologist*. He was a member of a number of American and foreign anthropological and antiquarian societies, was the author of numerous essays and papers on anthropological and kindred subjects, and had contributed to various encyclopædias. Among his publications were: "Child and Childhood in Folk Thought," 1896; "The Child—A Study in the Evolution of Man," 1900; "Poems," 1904.

Drama

A REVIEW OF THE LONDON SEASON.

[We have arranged with Mr. William Archer for a series of monthly articles on contemporary English drama of which the following is the first.—ED. THE NATION.]

LONDON, March 25.

By far the most interesting drama in London is at present being enacted at the Theatre Royal, Westminster, where a Ministry, self-convicted of having handled a difficult situation with astounding weakness, is fighting for its life. The issue of that fight will doubtless be known to the world before these lines are in print. I mention the matter only to give a historic background to the sketch I am about to offer of the theatrical world of London.

Among many striking resemblances, there is, I think, one characteristic difference between theatrical London and theatrical New York. We are—or I am much mistaken—far more acutely self-conscious than you. We are always feeling our own pulse and recording our own symptoms. We might even be accused of chronic hypochondria, for the bulletins we issue as to the state and prospects of the British drama are almost always despondent. There has been no time within the memory of man when the drama was not going to the dogs. Scarcely a season passes without a discussion in one newspaper or another as to the reasons why the public is deserting the theatre, and why there are no actors, or no actresses, or no authors. Various nostrums, too, are proposed for the remedy of these disastrous conditions—such as a reduction of prices, an alteration in the hours of theatregoing, the permission of smoking in the auditorium, and so forth. Meanwhile, the drama goes its way, sublimely heedless of all these prognostications and prescriptions. Money is still invested in theatres, and money, we cannot doubt, is still made out of them. There are, of course, fluctuations, both financial and artistic. One season is fruitful of noteworthy plays, the next may be comparatively barren. But—though the drama has been going to the dogs all the time—the progress of the past twenty years has in truth been amazing. It is measured by the fact that in, say, 1890 no contemporary English drama existed in readable form, except the plays miserably printed as sixpenny pamphlets for the use of amateurs. To-day we have a rich and flourishing dramatic literature, quite comparable in merit, if not in volume, to that of France or Germany. In a large provincial town, not long ago, I noticed one whole window of a leading bookstore devoted to plays, English, Irish, and Scotch, and books about the theatre. Surely a notable sign of the times!

It must be admitted, however, that there are periods when

> The tired wave, vainly breaking,
> Seems here no painful inch to gain—

—and perhaps this season may be reckoned among them. It has certainly not been fruitful of intellectual achievement. It has given us one new play that may, at a pinch, be called intellectual, though scarcely intelligent—Mr. Chesterton's "Magic"—and, in "A Midsummer Night's Dream," one extremely interesting Shakespearean production. For the rest, it was distinguished by Mr. Granville Barker's very spirited and successful repertory season at the St. James's, which, announced for three weeks, was continued for two months. But otherwise it has been barren of either productions or revivals of outstanding merit. It remains to be seen whether Mr. Shaw's "Pygmalion," to be produced on April 11, will redress the balance.

Yet even such a season gives no reasonable cause for despondency. To repine because brainless vulgarity bulks large in the bills is simply to quarrel with human nature in its present phase of development. The astonishing thing is, not that the stupid public preponderates, but that the comparatively intelligent public contrives to secure so respectable a minority representation. There are this evening some twenty-eight theatres open in the West End of London. Five of them (and doubtless the most successful) are devoted to musical farce, which, I take it, does not here concern us. Four are occupied by melodramas without the smallest literary or artistic pretension, appealing only to the most unsophisticated playgoers. They are cinematograph shows in which the text is spoken instead of being thrown on the screen. There remain nineteen playhouses at which, if the entertainment is despicable, it is so, as it were, by chance. The managers, I mean, have not deliberately renounced all effort to do good work, though infirmity of judgment, or the thirst for success at any price, may for a time have led them astray. It is noteworthy that only three of these theatres are occupied by plays from the French, one of them being that ingenious piece of clockwork, "Diplomacy," adapted forty years ago from Sardou, and now revived with even greater success than it enjoyed at first. This may seem a rather ominous symptom of public taste; but, after all, which of us does not occasionally relish a neat detective story? Has not President Wilson recently confessed to sharing Prince Bismarck's foible for these harmless ingenuities?

No fewer than six out of the nineteen theatres are occupied by plays either of American authorship or originally produced in America. First among them in point of success stands "Within the Law," an amusing melodrama which has filled the Haymarket for nearly a year. On the other side of the street, at His Majesty's, a revival of "The Darling of the Gods" has been but moderately attractive. Then we have "Broadway Jones," and "Kismet," and, on a higher level, "The Land of Promise," by Mr. Somerset Maugham, and "The Melting-Pot," by Mr. Zangwill, with Mr. Walker Whiteside in his original part. This play has given rise to a good deal of discussion. Some people have been blinded by its high purpose and its intensity of feeling to its artistic defects; others have seen only the artistic defects and not the spiritual beauties. For my part, I adhere to the former party, but I understand the position of the latter.

Of the remaining theatres, two are occupied by utterly negligible comedies of the peignoir-and-pyjama type, in which the attraction consists in the delectable spectacle of a lady preparing for bed, while her estranged but adoring husband is hidden in her wardrobe. The almost simultaneous appearance of two plays with the same central situation was a curious coincidence, but nothing more. One of these pieces, "A Pair of Silk Stockings," by Mr. Cyril Harcourt, is written with a certain facile smartness; the other, "Peggy and Her Husband," by Mr. Joseph Keatinge, has not even that merit. Then we have at the St. James's a pleasant, very slight comedy by Mr. Alfred Sutro, entitled "The Two Virtues." In this Sir George Alexander created no small sensation by appearing for the first time in history in a pair of trousers which positively bagged at the knees. Hitherto the fortunes of the theatre have been thought to be indissolubly associated with the flawless crease down the front of these garments. I hope, without too much confidence, that the success of Mr. Sutro's play may give the lie to this superstition. Certainly Sir George's performance of the quaintly ironic bookworm-hero shows that character-acting is well within his range. The name of Mr. Arnold Bennett is on two playbills. "The Great Adventure," at the Kingsway, is well past its 400th performance—a success which is no doubt largely due to the inimitable performance of Miss Wish Wynne as the heroine. At the Vaudeville, Mr. Bennett is only partially responsible for "Helen with the High Hand," adapted by Mr. Richard Pryce from one of his early novels. It is a curiously ill-made play, but contains a couple of clever character-studies.

Passing over one or two sheer trivialities, we return to the one noteworthy novelty of the season, the dramatic first-fruits of the Chestertonian Muse, the much-discussed, much-be-puffed "Magic." Like so much of Mr. Chesterton's other

work, it is a piece of genial, unblushing effrontery. Clever it is, undoubtedly—one might even call it a brilliant improvisation. There is a woolly-headed, inconsequent old duke in it, who, being admirably acted by Mr. Fred Lewis, undoubtedly makes the fortune of the play. He is a creation of real originality and humor. There is also a certain distinction of touch in the dialogue: we feel that we have to do with no mere journeyman of the theatre, but a born writer. And a born thinker? Ah, that is the question! It sometimes seems as though "thought" were a misnomer in relation to Mr. Chesterton's mental processes—as though some new word ought to be invented for his freakish and volatile cerebration. His purpose, here as always, is evidently to cast scorn on rationalism and to put in a plea for miracles. What he actually does is to assert the reality of black magic, and to show how one of its practitioners drives a rationalist mad by performing some puerile tricks with a family portrait and a doctor's red lamp. The rationalist is a ridiculous cub who is supposed to have acquired in America a shallow, dogmatic materialism, which Mr. Chesterton apparently imagines to be a characteristically American attitude of mind. There is a scene, which some people find uncannily impressive, in which the stage is supposed to be crowded with invisible spirits of evil; but I cannot say that its diabolism gave me the smallest physical or mental thrill. Altogether, the play is a piece of "fine confused thinking," helped out by good writing and some humor. In a speech after the fall of the curtain on the first night, Mr. Chesterton protested his sincere belief in the doctrines he had advanced; but what they were precisely, he omitted to say.

Presented at a very small theatre and by a company innocent of stars, "Magic" had a fair success and was nearing its hundredth night when its withdrawal was announced. Then, for some appropriately occult reason, a morning paper, the *Daily Chronicle*, was seized with a violent enthusiasm for the play, declared it a burning shame that such a masterpiece should not have a longer run, and devoted itself day by day for two or three weeks to puffing it into popularity. All sorts of advertising devices were adopted—among them an afternoon debate on miracles, held on the stage of the theatre, in which Mr. Chesterton himself figured as protagonist. Mr. Bernard Shaw was present on the occasion, but did not speak: whereupon every one said that miracles evidently did happen. Then Mr. Shaw came to Mr. Chesterton's aid with a one-act absurdity named "The Music-Cure," which was played before "Magic." By these means the life of the play was prolonged some fifty nights; but as I write its sands are running out. The moral seems to be that for solid success something more is needed than brilliant improvisation.

WILLIAM ARCHER.

"THE TRUTH."

New York is having an opportunity to mend its first impression of Clyde Fitch's domestic comedy, "The Truth," which has been revived by Winthrop Ames at the Little Theatre. Rejected by New York when it was first produced, it was warmly received in other parts of the country and had a run of more than a year in London, where Marie Tempest played the principal part. Broadway's initial offishness towards "The Truth" is significant, for Broadway is the home of "typical" American humor, and this play is neither strongly American in flavor nor humorous. It has the wit of French comedy, on which it was evidently patterned. And though several situations lend themselves to broad farce, on the whole it is the biting dialogue which tells.

"The Truth" is characteristic of Fitch's best, just as it reveals his limitations. He had an opportunity for a rewarding study of a person akin to Becky Sharp and Hedda Gabler, though placed in an airier, lighter sphere. Becky Warder is as prone to tell lies as are the other two to work more grievous evil. Their plight must lead to tragedy, hers at most will flirt with tragedy. She lacks their egotism and hardness, but, like them, lives on the admiration of men, which, of course, furthers her besetting sin. For she will lie rather than admit to her husband the pleasure which such excitement gives her. There need be no great improbability in this character. Only she requires the subtlety which comes from a high-strung temperament. Fitch's Becky, at least as played at the Little Theatre by Grace George, has the naïveté of a child fibbing. This made for sweetness and charm, but destroyed the chance for depth. In part, the author was responsible, for Becky's particular weakness is asserted by him to be inherited, and to that extent she is a puppet.

Yet Becky, even so conceived, is a very absorbing figure, and undergoes at least the development of a naughty child, become repentant, with the added interest which a married woman's responsibility bestows. And in the last two acts, where she has been brought into distress by her folly, one forgets the puppet of the premises, and enters wholeheartedly into the present situation. If he had lived, Clyde Fitch would undoubtedly have done more convincing work. But the promise which he here showed was enormous. We recall no other recent American play which is so clean-cut in outline or so neat in respect to dialogue.

For this revival Mr. Ames has made fortunate selections. Of the original cast only Zelda Sears, as Mrs. Crespigny, remains. But the performance was excellent throughout. Besides Grace George, who replaces the late Clara Bloodgood, the persons in the play include: Isabel Irving, as Eve Lindon; Conway Tearle, as Lindon; Sydney Booth, as Tom Warder; Fanny Hartz, as Laura Fraser; and Ferdinand Gottschalk, as Roland, Becky's father.

F.

"PINAFORE" AT THE HIPPODROME.

Four weeks ago the suggestion was made in an article in the *Nation* that an examination of the texts of the Gilbert and Sullivan operas, conducted in the approved manner of German scholarship, might form an appropriate subject of a thesis for the Ph.D. degree. We can hardly flatter ourselves that our suggestion inspired the Shubert management to undertake the researches which have culminated in the production of "Pinafore" at the New York Hippodrome, for so spectacular an affair must have required considerably more than a month's elaboration; but it is obvious that painful and laborious research must have been expended on the immediate and collateral branches of the family of the Right Hon. Sir Joseph Porter, K.C.B., since the whole fabric of the production is based on the assumption that that ornament of Her Majesty's navy came of a prolific stock, being blessed with "sisters and cousins and aunts" running in quantity into three figures. Four hundred is the number of the chorus; so that if, for the sake of simple arithmetic, we grant equality to the sexes, a conservative estimate of the female relatives of Sir Joseph Porter would put their number at two hundred.

To accommodate two hundred fair visitors and a corresponding number of amorous sailormen naturally presupposes a considerable area of deck space on the good ship Pinafore. Happily the proportions of the Hippodrome arena and the ingenuity of the stage architects are adapted to meet the emergency; so we have a magnificent spectacle of an entire battleship of Her Majesty's fleet, solid and substantial, with masts, and spars, and ropes, and top-gallants, and bunting, and every other nautical appurtenance, all complete, floating, or at least sitting, in real water. If the small craft paddling alongside the battleship left any doubt about the reality of the water, it would be dispelled when the Dick Deadeye of the occasion tumbles in with a side-splitting splash.

As a spectacle there can be nothing but praise for the Hippodrome production; there can be nothing but praise, too, for the management which has afforded a timely demonstration of the fact that over-elaboration of the spectacular cannot be accomplished without loss of qualities that may be of more importance. To build a big ship in a theatre and man real rigging with real sailors is an entirely praiseworthy feat, but why drag in Gilbert and Sullivan? The large chorus is admirably trained, and such ensembles as "He is an Englishman" naturally go with a tremendous swing; but mere volume of sound plays a very unimportant part in the Gilbert and Sullivan operas; their wit and satire are delicate; their comedy is not of the broad variety. In the Hippodrome production the subtlety of Gilbert's lines is inevitably lost; the words of the lyrics, which are as important as the music, are often difficult to catch in the huge auditorium;

the humor must be broadened out of all recognition to gain any effect whatever.

S. W.

NOTES.

Justin Huntly McCarthy has written a romantic drama, "Charlemagne," with the Emperor's early life as its subject. His chief character is described as a blend of Benedick and Petruchio.

Another addition has been made to the list of long runs by the anniversary performance in London of "Diplomacy," which is believed to have created a record for a revival. On its original production, in 1878, this play had the creditable run of 325 performances. It may be recalled that its title was selected by chance. Several suggested titles were put into a hat, and the first that was drawn was adopted.

Edward Knoblauch has selected "My Lady's Dress" as the title of his new play, to be produced by Messrs. Vedrenne and Eadie, at the London Royalty, on April 21. Each of the three acts is divided into three scenes. Details of the cast are withheld, the assumption being that, as in the case of "Milestones," each character plays so many parts that to publish particulars beforehand would be to indicate the trend of the story.

Sir Charles Wyndham, who has just entered his seventy-eighth year, is learning a new part in "Nobody's Widow," which he has had in his possession for some years. He says that he has no present intention of retiring from the stage, but will give no warning when he makes up his mind to do so.

Some progress has been made towards the establishment of a People's Theatre in London upon the plan advocated by Rosina Filippi. She has been able to obtain the old Victoria Theatre, which was opened on Monday for an experimental season of four weeks, during which performances will be given of "The Merchant of Venice," "The School for Scandal," "Romeo and Juliet," and "Candida." Seats will be sold for one penny or two pence. The costumes and scenery have been borrowed and so cost nothing.

The Comédie Française has brought an action against M. Le Bargy to recover damages from him for leaving the National Theatre to play elsewhere contrary to the agreement signed by him when he became *pensionnaire*. The case is now before the First Chamber of the Civil Tribunal of the Seine. M. Le Bargy has turned the tables on the theatre by bringing a counter-action, in which he claims $20,000. The ground of his plaint is that the Comédie Française failed in the engagements entered into with him in 1887, and that therefore the contract is vitiated. Since leaving the Comédie Française, M. Le Bargy has been engaged at the Porte St. Martin Theatre, where he has played, among other parts, that of Cyrano de Bergerac. The Comédie Française now asks the Tribunal to prevent M. Le Bargy by injunction from continuing his engagement at the Porte St. Martin. The fine demanded is $400 for each performance.

Music

THE RUSSIAN DANCERS.

The theory of the Russian dancing is well set forth in a sumptuous volume recently published by Houghton Mifflin ("The Russian Ballet," by A. C. Johnson, illustrated by René Bull, $7.50). Its practice has been exemplified during the past two weeks by the performances of Pavlowa and her company at the Manhattan Opera House, New York. A new ballet, "Amarilla," was presented at the opening performance, a delicate little piece in one act, telling the love of a gypsy maid for a Count, the setting being of a *fête champêtre*. The story is relatively easy to follow, and Mlle. Pavlowa's representation of the alternating despair and passion of Amarilla is beautifully executed. M. Novikoff, *premier danseur classique*, meets with hardly less appreciation than Pavlowa herself. He is a magnificent figure of a man, and his technical skill is remarkable, but he lacks some of the joyous abandon that was characteristic of Mordkin's dancing. The supporting company is made up of finished dancers, only in degree inferior in skill to the principals. One of the most gracious items on the first night's programme, "Moment Musical," was contributed by Mlles. Plaskowieczka, Butsova, and Crombova.

Pavlowa herself, whether in the ballet or in her individual divertissements, remains the supreme exponent of her art. One need not institute comparisons with an artist, for instance, like Genée, supreme in her own sphere, but Pavlowa adds to perfection of technique an impression of the joyfulness and fulness of life which is unmatched by any other dancer, even of the wonderful school in which she herself was trained. She brings to her art the expression of her own personality in the same way that Ellen Terry's own bubbling personality made her Portia so irresistible. S. W.

"The Song Garland" (Macmillan) is a collection of songs for girls of high-school grade which has been made with taste and judgment by Jules S. Joannès. The topical index includes five divisions: Songs Patriotic, Miscellaneous, School, Folk, and Devotional. There are no four-part songs, because of the limited range of the high-school girl's voice. "Improving Songs for Anxious Children" (Schirmer), by John and Rue Carpenter, invokes the aid of colored pictures, partly comic, to get children interested in simple tunes. "Thirty Songs," by Franklin Hopkins (Cecil Mackie), is an ambitious attempt to "foster a real school of English song." Mr. Hopkins believes that the great English poets have been unjustly neglected by song writers, so he comes to the rescue with this "Golden Treasury Set to Music." "Historical Mother Goose" (Schirmer) contains lyrics by Ella Wheeler Wilcox set to music by Louis F. Gottschalk. They were written, we are informed, because the children's songs of a former generation, such as "Hey, diddle, diddle," with their accompanying vapid music, "no longer satisfy discriminating people." Too bad! "Bergerettes" (Ditson) is an interesting collection, by J. B. Wekerlin, of romances and songs of the eighteenth century. As librarian of the Paris Conservatoire, M. Wekerlin had unusual opportunities for selection, and his little volume, which has an introduction by Frederick Martens and English versions, as well as the original French words, may be commended to all who are interested in French music of the time of hoopskirts, powdered wigs, and gold snuff-boxes. "Songs of Britain" (Boosey) is a volume of one hundred English, Welsh, Scotch, and Irish national songs, selected and edited by Frank Kidson and Martin Shaw. Some of the most familiar tunes are omitted, to make room for songs that have not received sufficient attention. "Elizabethan Love Songs," second set (Boosey), contains songs by Dowland, Morley, Bartlett, and other seventeenth-century composers. Albert Spalding is making a name for himself as a composer no less than as a player. The Schirmers have recently printed six of his "Compositions for Violin and Piano" that may be favorably called to the notice of violinists. "Thirty Organ Pieces for Use in Christian Science Churches" (Ditson) contains preludes, offertories, and postludes, selected by Walter E. Young, with special reference to the needs of that church, which calls for music "conforming to the quiet dignity and simplicity of the service, free from display, undue elaboration, or conspicuousness." Besides Guilmant, Dubois, and other organists, some of the greatest masters, including Bach, Saint-Saëns, Schumann, Mendelssohn, and Tchaikovsky, are laid under contribution. Tchaikovsky's music, except at symphony concerts, is not yet as well known as it deserves to be. One welcomes, therefore, a collection of five of his best piano pieces and two songs: "Tchaikovsky" (Stokes). The music is prefaced by a short biographic sketch by Landon Ronald.

The great English tenor, Edward Lloyd, recently celebrated his sixty-ninth birthday. He is in excellent health, says the *Westminster Gazette*, adding that "since his retirement in 1900, an event signalized by a brilliant farewell concert in the Albert Hall, the scene of so many of his past triumphs, Mr. Lloyd has resided in Sussex, and now has his home in Worthing. He emerged from that retirement to sing the solo in Sir F. Bridge's Homage anthem at the King's Coronation, when every one was amazed at the beauty of his singing. Mr. Lloyd has also made many 'records' for the Gramophone Company which will convey to future generations the fine quality of his voice. He is one more example of the healthiness of singing, for his friends, Madame Patti, Sir Charles Santley, and Madame Albani, have all preserved their vocal powers far beyond the usual age for singing. Mr. Lloyd attends concerts occasionally, and sings in private with most of his accustomed vigor."

Stravinsky, reputed the naughtiest of the Russian—if not of all—cacophonists, has perpetrated an opera which is to have its first performance in London during the coming summer. Two other Rus-

sian novelties to be produced by the Beecham Opera Company are Borodin's "Prince Igor" and Rimsky-Korsakoff's "Coq d'Or." The name of Stravinsky's opera is "Le Rossignol." A feature of the London season will be the appearance of Chaliapine as Boris Godounoff. Fourteen Russian ballets are to be presented; also Richard Strauss's new ballet, "The Legend of Joseph," which is to have its première in Paris on May 25.

According to a writer in the London *World*, "quite the most impressive feature of a very impressive season has been the enormous queues, sometimes extending right round the corner of Floral Street, for the later performances of 'Parsifal.' On the first night the gallery was barely full; by about the tenth performance the gallery crowd would have filled the theatre. That is London's way."

Art

OLD PAINTINGS RE-DISCOVERED.

PARIS, April 2.

New finds of old art are not ended, as may be seen from the experience of M. Adrien Mithouard, who is a man of letters and a Paris municipal councillor. He decided at the beginning of March that he would look conscientiously through the all but unknown storehouse of fine art possessions of the city. When the Petit Palais, in the Champs-Elysées, was organized after 1900 as a museum of city collections, it was supposed that the storehouse had been thoroughly explored. It seems now that numerous old paintings from demolished or disaffected churches, stored away and forgotten and veiled by dust, were passed over. In a few hours, the inquisitive Municipal Councillor brought to light five paintings which any collector would be glad to possess:

I. An Adoration of the Shepherds, which an old inventory of art possessions of the city of Paris shows was hanging in the former parish church of Auteuil, where the storehouse is situated. It is set down as of the Venetian school, and M. Mithouard maintains against all comers that it is a genuine Tintoretto. This may not be true, but is quite possible. Curious art students who have looked into the many volumes of the inventory of national art treasures, printed many years ago by the French Government, have been able to make veritable discoveries in obscure chapels and dark corners of churches. Instances as late as Corot and Delacroix have been found in Paris, and an Immaculate Conception of Millet in the French church at Rome. In the ancient churches, paintings of old masters like this new find have been hanging from the contemporary period.

II. Jesus Driving the Money-Changers from the Temple, from the old Church of Foreign Missions. This is a fine work which M. Mithouard attributes to one of the Restouts or to the elder Boulogne—in either case to a comrade of Poussin in Italy.

III. Saint James, curious in style and known to come from the studio which Rubens, according to his wont, established for art production while he was himself turning out paintings for Henry IV.

IV. Saint Isabelle, sister of St. Louis, King of France, and foundress of the celebrated Abbey of Longchamp, of which the mill remains at the Paris racecourse in the Bois de Boulogne—ordinary as painting, though by Philippe de Champaigne, but of historical interest.

V. A Flagellation, of interesting style, by an early German painter under Italian influence. In the old inventory a work of similar style is assigned to the ancient Church of Notre Dame de Bonne Nouvelle, which has given its name to a portion of the Paris Boulevard; but that painting seems to be still hanging in the church.

M. Mithouard says there are at least a dozen equally "honorable" paintings from schools of the old masters which he has not yet had time to extract from these neglected art stores of the city of Paris. One is a Saint Dominic and Pope Honorius, by Cardi, known as Cigoli, who occupies an important place in the genealogy of Italian art from Michelangelo to the School of Bologna. Like Rubens, he was engaged in Paris for the marriage of Henry IV and Marie de Médicis. He is represented at the Louvre and in Brussels, Munich, and Rome, but apparently not in London.

The latest thing they say—not, as in the song, at the Ambassadors' Café, but at the Paris Salon of the Indépendants—concerns the ultra-modern school of "Synthetists," for Cubists and their time belong to ancient history. Its ambition is to create "biological painting," in which it has already made the following discoveries: "color lines, colored zones, the orchestration of these zones and their nutrition, coloring *propagulæ*, associative sensorial perceptions—and the unity of art phenomena." It insists on "the utility of the previous breaking of forms, with an aim to better visual synthesis; on the narrowing of the field of consciousness among non-colorists and the exciting of materialist philosophy among the near-sighted." As to those likely to oppose the new art, its creator and initiator, Alexis Mérodack-Jeaneau, gives them due notice they shall not trouble him, for they are "protozoa of art whom every new effort scares, who take their pleasure in muddy marshes contemplating rotting ruins." And he leaves them to their own "non-conscience."

Those who love Old Paris and dream of some preservation of it, like parts of an historic collection, will be glad to hear that the twelfth-century Church of Saint Julien-le-Pauvre is to be cleared for an outlook across the river Seine to the Cathedral of Notre Dame, whose architecture it illustrates. The buildings towards the river are already torn away and the new School of Decorative Arts is to be built along the Quai. This was the quarter known to Dante, who studied in an adjoining street that still keeps its name—rue du Fouarre—from the "forage" on which students sat and listened to—Sigier,

Who, reading lectures in the Street of Straw,
Did syllogize invidious verities.

S. D.

"The Studio Year Book of Decorative Art" for 1914 and "The Year Book of American Etchings" will be published on Saturday by the John Lane Company.

Houghton Mifflin Company announces the publication of "The Ministry of Art," by Ralph Adams Cram.

Emile Mâle's "L'Art Religieux en France" needs no introduction or praise. For a matter of ten years, it has been an indispensable aid to students and a valued resource for all cultured persons who deal with the Middle Ages. We have merely to note the appearance of a good English translation in large quarto form and fully illustrated (Dent-Dutton, $6 net). The translator, Dora Nussey, has used the third edition and has produced a translation that has the quality of an original piece of literature. It was the peculiar service of Mâle to show that the windows and portals of the great Gothic churches follow step by step approved Latin authorities. Boethius, Honorius of Autun, the vast compilations of Vincent de Beauvais, the Golden Legend, are frequent sources. Thus Gothic art is profoundly systematic and orthodox, not a wildling as Hugo and Viollet-le-Duc had romantically supposed. The skill of the sculptors and glass painters is put to the test to find clear forms for such abstractions as the vices and virtues, the *psychomachia*, the hierarchies of the angels, the months, the church, and the synagogue. What is remarkable about this French art is its persistent symbolism. Sacred history rarely appears in its own right. The most familiar Gospel theme must be flanked by antitypes and moral analogies. Everything means something else. Symbolism assumes a bewildering consistency. Mental meanings take form and semblance of reality. The passion for analogy rules the cathedral builders, and the sculptors follow the theologians with humble skill. In comparison with the Gothic figure design of France, that of Byzantium and Italy seems singularly straightforward and epic. The Bible is taken at its historic face value. Men believe unfancifully. Symbolism yields to mere moral example. We can only indicate thus briefly some of the broader implications of this important and illuminating book. A welcome may be confidently predicted for "Religious Art in France, XIII Century," and many readers will await with real impatience the trans-

lation of M. Mâle's second and concluding volume.

George Bentham, who died on April 8, at the age of sixty-four, was born in the North of Ireland, and came to this country some twenty-five years ago. For many years he was in the employ of the *Century Magazine*, and afterwards was for a long time an artist on the Chicago *Post*. Mr. Bentham was well known as a collector of books, curios, and works of art. He was an authority on porcelains, and was considered the greatest silver-print artist in this country. He was one of the first to recognize the genius of William Morris as a printer, and at one time he made a specialty of collecting the works of Sir Edward FitzGerald, of which he issued a definitive edition in seven volumes from the De Vinne Press.

Finance

ONE HUNDRED YEARS AGO.

Very generally overlooked, for a period when observances of "centennials" and "semi-centennials" are so generally the order of the day, there occurred last week the hundredth anniversary of an event of extraordinary interest, both to the course of history and to the great financial markets of that generation. It was on April 11, 1814, that Napoleon abdicated and assented to his own banishment to Elba. When the present-day course of European politics is so strikingly reflected in the market for British consols (whose present price is 76, as against 71 last year and 113⅞ in 1897), as well as in the "City sentiment" of London, a glance at what happened in those directions at that other date ought to be interesting.

Consols had reached 79 after the Peace of Amiens with Napoleon, early in 1802—a price higher than any touched in the eight preceding years. They fell to 50¼ when war with France was resumed in 1803, and, in the subsequent decade of perpetual fighting and governmental borrowing, ranged between that price and 70. In 1813, when Napoleon, despite his disastrous retreat from Russia, turned on the allied armies and beat them at Dresden, consols got down again to 54½. His overwhelming defeat at Leipzig in the autumn of that year, and the advance of the Allies into France, sent them up to 67½. When news came of the capture of Paris and of Napoleon's abdication, they went with a rush to 72½.

The London *Times*, which fairly reflected "City sentiment" of the day, greeted that epoch-making event with a series of observations, in its leading editorials, which read to-day as strangely as the debates and newspaper editorials on the "Ulster crisis" will possibly read a hundred years from now. Much was naturally said of "the heartfelt and universal joy which pervades this great metropolis" on what seemed to be the end of the ten successive years of war; much of the decoration of London, on the news of April 11, with "the most brilliant illumination ever witnessed." But the broader conclusions drawn from the state of mind which thereupon prevailed may be seen from the following excerpts, both from the *Times's* leading editorials of the period.

Napoleon's proclamation of abdication was, the *Times* assured its readers, "undoubtedly drawn up by the little dirty hypocritical villain himself"; a statement followed by this further reference to the defeated Emperor, in language not perhaps unnatural in view of London's long period of political and financial agony, but highly interesting as an attempt to foreshadow the verdict of later generations:

> After all, this fellow has gone off the stage like a more decided coward than Robespierre himself, the only character in French history who will ever be cited as approaching a parallel with him.

So much for London City opinion of 1814, as a forecast of the opinion of later history. As to its other views of the situation, one might have thought that London and its newspaper organs would have called for assurance of permanent and universal peace. Yet this further and highly interesting attempt at historical perspective is from a leading article in the *Times* of a few days later:

> It is understood that part of our army in France will immediately be transferred to America to finish the war there with the same glory as in Europe. . . . The American Government is in point of fact as much a tyranny (though we are far from saying it is so horrible a one), as was that of Buonaparte, and as we firmly urged the principle of *No Peace with Buonaparte;* so, to be consistent with ourselves, we must in like manner maintain the doctrine of *No Peace with James Madison.*

The *Times* was as accurate in its historical diagnosis as its readers occasionally find it to be to-day. That the editor had been "tipped off" by the Foreign Office as to its purposes in America is probable; for, in point of fact, Gen. Pakenham and 7,000 veterans of Wellington's Peninsular campaign were shortly sent to New Orleans, where the General lost his life and the troops were overwhelmed in Jackson's famous victory. But the Government nevertheless so far disagreed with the *Times's* notions of consistency as to sign at Ghent, on December 24, 1814, the treaty of peace with the American commissioners, which ended our so-called "War of 1812." Nor was this all. In February, 1815, the *Times's* "little dirty hypocritical villain" left Elba, landed in France, reassembled his army, reoccupied Paris, and moved on Belgium to meet Wellington and Blücher. Even the *Times* began to speak of Napoleon with at least more respect for his abilities. French Government 5 per cents fell from 81½ to 55⅛ in the first half of the Hundred Days which followed the return from Elba. In June, on the eve of Waterloo, and on the news of Napoleon's victory at Ligny, British consols were down to 53¾, as against the 72½ on the news of his abdication, fourteen months before.

Waterloo was fought; Napoleon's army annihilated. The Restoration and his permanent imprisonment at St. Helena followed. One might suppose that consols would thereupon have soared to a level higher than any reached in the dozen preceding years of almost unintermittent warfare. But this did not occur. Contrary to the popular belief which surrounds the legend of Rothschild's enormous Stock Exchange operations, based upon early and exclusive news of the result at Waterloo, consols rose scarcely 5 points on the authentic details of that famous contest, and it was two years more before they again touched the price to which they went on the news of April 11, 1814.

Anywhere but in a Stock Exchange community, such absence of dramatically appropriate response would seem utterly paradoxical. But Wall Street and Lombard Street have heard in modern times of such practices as "realizing on good news," and the very recent days of European discouragement over the market's behavior in the face of "new capital issues" gives some clue to the action of the British market of that older period, when the English Government, on top of its prodigious borrowings in the earlier war with France, had to place £24,000,000 new loans in 1814, £54,000,000 in 1815, and when it was 1816 before the enormous public debt reached its maximum of the period.

Ethnography of Central and Oriental Europe.
Military Organization Compared.—Military Navy.
Contemporaneous America and the New Anglo-Saxon Societies.
Political Questions and Economy in Eastern Asia.
Algeria, Tunisia, and Morocco Matters.

GENERAL INFORMATION.

The Instruction given at the School of Political Sciences is the natural crowning accomplishment of every liberal education. In each of its several branches, the pupil acquires the requisite competency for holding high State Offices (Diplomacy, Administration, Finance), and is also trained for Public Life and Great Financial Enterprises, both in France and Abroad.

The Pupils are admitted without examination, with the approbation of the Director and School Board; no University degrees are necessary.

A special Conference is reserved to Foreign Pupils with a view to facilitate their studies.

On completing his studies, every pupil who has successfully passed his examination receives his diploma. Studies can be completed in two years. Pupils will generally find it to their advantage to take three years.

SCHOLAR YEAR 1914-1915.—The Scholar Year commences on 9th November, 1914, and closes on 5th June, 1915. Applications are received at the Secretary's Office from 2nd November, 1914. Application for the whole Course gives right to all the regular and complementary Courses and Conferences, and also access to the Library (about 25,000 Volumes and 160 French and Foreign Reviews and Newspapers).....Per Annum, $70

A Special Pamphlet giving detailed information on the organization of the School and respecting the Professions for which the Pupil receives special training can be had by addressing:

Secrétaire Général de l'Ecole, 27, Rue Saint-Guillaume, Paris (France).

The International Modern Language Series
RACINE'S ANDROMAQUE
Edited, with Introduction, Notes, and Vocabulary, by COLBERT SEARLES, Associate Professor of Romance Languages, Leland Stanford Junior University.
JUST PUBLISHED. **40 Cents**
THIS edition of "Andromaque" emphasizes the literary excellences of the play as the first of those tragedies of pathos that depict the struggles and weaknesses of the human heart in the stress of human passions.
The introduction explains the circumstances of the play's composition and production, offers a brief discussion of Racine's dramatic method, and presents enough of the sources from which he took his material to enable the student to observe how he put that method into practice.
The frontispiece is notable as presenting for the first time to American students the recently identified portrait of Racine in the Museum at Langres. This portrait shows Racine at the age of thirty-six, at the height of his dramatic success, and is therefore much more characteristic than the later and better-known portrait of the dramatist.
GINN AND COMPANY, Publishers
Boston New York Chicago London

RADICAL VIEWS OF THE NEW TESTAMENT. By Dr. G. A. von der Bergh van Eysinga. Translated from the Dutch by S. B. Slack, M.A.
This concise work takes up the question of the historicity of the gospels without dogmatic bias, and states very sharply the difference between so-called liberal Christianity and thoroughgoing scientific method in dealing with historical values in the stories of the gospels.
Cloth, $1.00 net.

The Rise of The American People

By ROLAND G. USHER, Ph.D.
Author of "Pan-Germanism," etc.

A one-volume history of the United States that is different.

A vivid, vigorous account of results, not of processes, which explains the meaning of the facts of national development.

A philosophical interpretation of American history and life, of unique interest and value both to the general reader and the student.

Price $2.00 net, postage 12 cents.

French Civilization in The Nineteenth Century

BY PROFESSOR A. L. GUÉRARD
Author of "French Prophets of Yesterday"

A finely comprehensive and philosophical survey of nineteenth-century France—political, social, and intellectual—supplemented by an interesting study of present-day conditions.

Price $3.00 net, postage 12 cents.
